# WHAT WAS THE MATTER WITH THE AIR SERVICE?

By H. L. SCAIFE

Formerly Captain in the United States Air Service

*The astonishing story, drawn wholly from official records, of one of the most colossal failures in human history—How the United States spent upward of a billion dollars for aircraft production without producing a single fighting plane on the battlefield*

**M**AJOR GEN. MASON M. PATRICK, who was Chief of the Air Service of the American Expeditionary Forces in France, having been duly sworn as a witness in the House investigation, made the startling statement that, when hostilities ceased, our rank in aviation was far behind any of our allies and far below the enemy strength; that so far as the manufacture of pursuit or bombing planes in the United States was concerned, we were in practically the same position as when we entered the war; and that so far as the manufacture of pursuit planes or bombing planes in the United States is concerned, it would probably be eight or nine months from the time they settled on the type before they would produce it in quantities. (House Hearings on Aviation, p. 232.)

What was the matter with our Air Service? Why did the construction end of it fail?

The great achievements of the United States in the World War have passed into history and they will overshadow many shortcomings which were inevitable in so great an undertaking. The story of the loyalty, sacrifices and daring of American aviators will fill thrilling pages. In all the investigations there has been nothing but praise for them; no breath of scandal has touched the American birdmen. Aviation, commercially and as an arm of the military establishment, has come to stay, and millions of dollars of public funds will be appropriated annually for its maintenance and development. If there was anything wrong with the Air Service, instead of throwing a sheet over the corpse, we should go to the bottom of the tragedy and make sure

that the untoward elements in it shall not repeat themselves in our history.

The casualties among our aviators in time of peace, as well as in war, make this branch of the service one where the record ought to be an open book. Because it has become a bone of contention in politics, however, the average man has been bewildered by conflicting statements, and does not know whether our air program in the war merits praise or censure. Neither has the average man an inclination to examine approximately 25,000 pages of testimony to reach a fair and just conclusion.

## THE TASK WE UNDERTOOK

America's part in the interallied war program was "to win the war in the air," and the special undertaking entrusted to us by our allies was to create a fleet of airplanes which, our Government officially announced, would be decisive of the war before an American army could be placed in Europe. England, France, Italy and Germany successfully carried out their air programs, and each of these nations produced enormous quantities of airplanes. When we undertook the production of aircraft, we had the advantage of the experience of our allies; their best experts were sent over to assist and to warn against the mistakes they had made.

Preparations for our aircraft production began in April, 1917, and on July 24, 1917, Congress appropriated \$640,000,000, which was our first outlay, to carry out the aircraft program. The official statistics show that in the nine months from Jan. 1 to Oct. 1, 1918, Great Britain produced 23,509 airplanes, France 18,833, and Italy 2,928, a total of 45,270. (Report of Major Gen.

M. M. Patrick, House Hearings, Aviation, p. 561A.) American production has been a matter of controversy, but the main points can easily be cleared up with proper explanations. It has been stated frequently that an airplane of American make did not reach the battlefield, while, on the other hand, it has been asserted by the War Department that at the time of the signing of the armistice there had been delivered for the use of the army 16,952 airplanes, of which 11,754 were produced by American contractors and 5,198 procured from our allies. Paradoxical as it may appear, in a sense both of these claims may be correct; and at the same time both are misleading and untrue.

#### THE TRUTH IN A SENTENCE

*The simple fact is that no American-made fighting plane reached the battlefield.*

For military purposes there are various types of airplanes, the two great classes being training planes and service planes. Training planes are elementary and advanced. Service planes are divided into four classes—combat or pursuit, observation, day bombers and night bombers. According to the testimony of General William Mitchell of the Air Service, in the House hearings, the plans called for 20,000 airplanes on the line and in reserve by the beginning of 1918, and it was estimated that the losses of machines which reached the line of battle would be 25 per cent. per month. On June 8, 1917, the official announcement was made that a fleet of 25,000 airplanes would be created. The American program called for enormous quantities of bombing planes and fighting planes which could cope with the Germans and, with overwhelming numbers, drive them from the sky.

The 11,754 airplanes of American manufacture, claimed by the War Department, are maximum figures of gross production, regardless of the use, if any, to which these planes might be put. These figures include "penguins," which were not intended to fly; training planes and observation planes, which could not be employed for fighting purposes, and thousands of airplanes, such as the Bristol, the Standard J and various others, which were found to be unsafe and were condemned and junked.

According to the testimony of Colonel Edgar Gorrell and the tables of statistics submitted from the War Department, the total number of American-built airplanes available for use in the American Expeditionary Forces on Nov. 11, 1918, was 798 De Haviland-4s, of which 196 were on the front, 270 were being used for training in flying schools and 332 were in the air depots. (House Hearings, Aviation, p. 3457.) It will thus be seen that the greatest contribution of American aircraft production was the De Haviland-4s, which, as will be shown, could not be used for fighting or pursuit.

The exact number of De Haviland-4s on the front at the time of the signing of the armistice has been officially given by General Pershing and reported by the Frear Committee as 213, which is slightly in excess of the actual number, as shown by the following testimony of Colonel Gorrell in the House hearings (p. 3455):

In all our tabulations in all our records we have used the figure 213 as being the number of DH-4s on our front. That was furnished us by telegram from our front at the time of the armistice. A short time ago the same office that furnished the figure 213 said that 196 was correct instead of 213, previously given to us.

#### OFFICIAL CONFIRMATION

The De Haviland-4s being useless for purposes of combat, the qualified statement that not a single *fighting* plane of American-make reached the front during the period of the war can be accepted as an historic fact. The following testimony of General Pershing before the Committee on Military Affairs of the Senate and House of Representatives on Oct. 31, 1919, (*ibid.*, p. 3968), is both explanatory and conclusive:

Mr. James—How many American fighting planes were there in France at the signing of the armistice?

General Pershing—None. We had the De Haviland-4s.

On Aug. 13, 1918, Hon. John D. Ryan, Director of the Bureau of Aircraft Production, testified as follows before the Senate committee investigating aircraft production (p. 1162):

Senator Reed—That is true, anyway, is it not, that we were capable of quantity production of the 150-horsepower Hispano-Suiza; is that right?

Mr. Ryan—Yes, sir.

*This picture was released for publication on June 16, 1918, by the Committee on Public Information, under the official title: "1937. Aviation: Planes at an American Aviation Field—France." It is a picture of three "penguins," which are low-powered monoplanes with short wings and cannot fly*

Senator Reed—It is also true that that engine works admirably in the Spad machine, which was an up-to-date fighting machine?

Mr. Ryan—I think so.

Senator Reed—It is a machine that is still used by the French and is regarded as one of the best machines?

Mr. Ryan—That is true.

\* \* \*

Senator Reed—As a matter of fact, we have not a single American-made fighting machine anywhere, have we?

Mr. Ryan—I think that is true; that is, <sup>HEY</sup> that is finally accepted.

Although there are, today, persistent official reports to the contrary, the matter as to whether or not we produced a fighting plane might be considered at rest in view of the testimony of Hon. Newton D. Baker, Secretary of War, before the House committee on July 31, 1919, (House Hearings, Aviation, p. 46):

*This picture, released by the Committee on Public Information under the caption: "2339. The Terror of the Air," was further described as "the fastest machine in the world," though it had been discarded by the French because it was forty miles an hour slower than their Spads*

Mr. Frear—And we did not, during the whole period of the war, get a fighting machine or a bombing plane?

Secretary Baker—Not a fighting machine or a bomber of American manufacture.

Notwithstanding their losses, at the time of the armistice the French had on the line 3,321 planes, England, 1,758; Italy, 812, Belgium, 153; the United States, 740; Germany, 2,730, and Austria, 622. The combined strength of enemy planes was 3,352 and that of the Allies 6,784 (House Hearings, Aviation, p. 3462). Of the 740 planes belonging to the American forces, 527 had been furnished by our allies, and the only ones of American manufacture were the 213 De Haviland-4s, which number is reduced to 196 by the testimony of Colonel Gorrell of the War Department, as already shown. The total losses of the American aviation forces during the war, due to action on the part of the enemy, were 290 airplanes and 47 balloons, and one balloon which was blown over the lines (*ibid.*, pp. 3463 and 3464). The relatively small number of casualties, as pointed out in the testimony of General Menoher, was due to the fact that the United States Air Service really entered the aerial warfare at the culmination of activity (*ibid.*, p. 556A). Whatever the significance might be, aviation fatalities in this country reached a much higher figure than those which occurred in Europe.

#### MR. BORGLUM'S INVESTIGATION

The first substantial efforts from the outside to call attention to the fact that the American aircraft program was doomed to failure unless the situation was promptly remedied were those of Gutzon Borglum, the well-known sculptor, who, prior to the war had been interested in aeronautics, and who now deserves to be decorated for his services in attempting, against insurmountable obstacles and humiliations, to prevent the greatest military and financial catastrophe in the history of our country. These words

do not overstate the case, for, considering that the expenditures amounted to three times the cost of the Panama Canal, or about \$10 for every man, woman and child in America, the aircraft fiasco was probably the greatest financial failure in human history. The public funds expended reach a figure which is beyond conception and has been represented as being \$1 for every minute from the birth of Christ to the present time. The purpose of the people who furnished the money was to provide 20,000 airplanes by the beginning of 1918, if it cost a kingdom.

Mr. Borglum's investigations were begun with the consent of the President, and his charges were generally supported in a report by the investigating committee of the Aeronautical Society of America (Congressional Record, vol. 56, pp. 5920 to 5928). Notwithstanding the difficulties he encountered, and the efforts made to discredit him, his work resulted in disclosures and charges

CHARLES EVANS HUGHES

Present Secretary of State, who made the most important investigation of the Air Service

sufficient to attract the attention of the President and the Senate. Finally, the matter was taken up by the Senate, and hearings were begun before what is known as the Thomas Committee, which took 1,226 printed pages of testimony, and its findings were set forth in Senate Report No. 555, 65th Congress, 2d session. The majority of this committee were Democrats;

#### CAPTAIN H. L. SCAIFE

*Entered the army in January, 1918, and was assigned to the Bureau of Aircraft Production, where he remained until October, when he was transferred to the Infantry. He was born in Spartanburg, S. C., in 1872, and is now a lawyer in Washington. He is a member of the American Bar Association, the American Society of International Law and the American Institute of Mining Engineers. During the pre-war preparedness campaign he was an associate member of the Naval Consulting Board and a State Director of the Industrial Survey. He writes the history of the aircraft failure from the viewpoint of a trained investigator who saw happenings close at hand*

the report was made during the war, when politics were adjourned, and the findings were unanimous.

#### WORK OF MR. HUGHES

About the same time an independent investigation was undertaken at the request

#### LIEUTENANT WILLIAM J. FAHEY

*One of the youngest officers in the Bureau of Aircraft Production. When he volunteered for the firing line he was transferred to the Infantry*

of the President by Hon. Charles E. Hughes, recently an Associate Justice of the United States Supreme Court, who has since become Secretary of State. This investigation was undertaken in response to the following letter:

May 13, 1918.

My dear Mr. Hughes:

You have doubtless noticed that very serious charges have been made in connection with the production of aircraft.

Because of the capital importance of this branch of the military service, I feel that these charges should be thoroughly investigated and with as little delay as possible, in order that the guilty, if there be such, may be promptly and vigorously prosecuted and that the reputations of those whose actions have been attacked may be protected, in case the charges are groundless.

I requested the Department of Justice to use every instrumentality at its disposal to investigate these charges, and, with the approval of the Attorney General, I am writing to beg that you will act with him in making this investigation. I feel that it is a matter of very great importance, and I sincerely hope that you will feel that it is possible to contribute your very valuable services in studying and passing upon the questions involved.

Cordially and sincerely yours,

WOODROW WILSON.

Hon. Charles E. Hughes, 9 Broadway, New York City.

In the Hughes investigation about 280 witnesses were examined and over 17,000 typewritten pages of testimony were recorded; the report and findings consisted of 182 printed pages. This investigation was made with the co-operation of the Department of Justice, and the report was submitted, through the Attorney General, to the President. To this work Judge Hughes devoted five months, taking testimony in different parts of the country, and it is said that for his services he refused to accept pay.

### THE FREAR HEARING

The last major investigation of the Air Service was that by the House Committee on Expenditures in the War Department, the testimony taken by the subcommittee on aviation, known as the Frear Committee, comprising more than 4,000 printed pages. Unfortunately, while this committee was sitting, a political campaign was coming on and, in the findings, charges of bias were bandied back and forth. In all the subcommittees investigating war expenditures, majority reports, subscribed by all the Republican members, and minority reports, subscribed by all the Democratic members, were filed. Hon. Clarence F. Lea, the Democratic member of the subcommittee on aviation, frankly made the following statement in the hearings (House Hearings, Aviation, p. 450).

The Hughes investigation was strictly a nonpartisan investigation and as free from political influence as an investigation could be. Here we have a bipartisan investigation. Personally, I am inclined to believe that perhaps Congress made a mistake in making it a bipartisan investigation. I think an investigation similar to the Hughes investigation would have been a preferable method of developing the facts, and the results would have been accepted by the country as a correct disclosure.

### GIST OF THE REPORTS

Political partisanship in a matter which strikes close to the vitals in our national life is, indeed, not an edifying exhibit; nevertheless, political rivalry in such a hearing is not without advantage, as it has a tendency to bring out and develop the facts. If one is dissatisfied with the findings in the conflicting reports, the testimony of the witnesses will be sufficient to furnish a fair conclusion.

*The Senate committee and Judge Hughes reported that efficient planes could have been produced in large quantities.*

On Aug. 22, 1918, the Senate committee reported that as early as October, 1917, we were in possession of the necessary facilities to construct the Caproni, a powerful

GUTZON BORGLUM

*Noted sculptor, who first called attention to the aircraft failure*

and successful bombing plane, approved by both Italian and English aeronautical engineers, and that, although expert Italian engineers had been on the ground to assist, only one experimental machine had been produced up to Aug. 22, 1918, the date of their report (p. 2). They further found that nearly a year had elapsed since we might have begun on these machines, and that they could have been in quantity production. Judge Hughes's report (Congressional Record, bound, vol. 57, p. 898), filed about three weeks before the armistice, stated:

We have not as yet sent from this country to the battlefield a single pursuit or combat plane, as distinguished from the heavy observation or bombing planes, and, after giving

due weight to all explanations, the fact remains that such pursuit planes could have been produced in large quantities many months ago had there been prompt decision and consistent purpose.

Lieutenant Testoni of the Italian Army, an expert in the technical department of aviation, who was sent to this country with a corps of men to assist in the manufacture of the Caproni, was asked by the Senate committee to detail his experiences. He said: "As to the Caproni machine, I know this: that the Government will say, 'We will do it,' and then 'We will not do it'; and then they will say, 'We will do it,' and yet they do not do it." During the interval of delay both of the Italian pilots who were sent to this country to test and fly the Caproni were killed in other machines, and, at the time their report was filed, the Senate committee found that the Caproni program was then awaiting the arrival of other Italian pilots to test the experimental machine.

Seeing that the United States would not produce planes in quantity, early in 1918 France offered to furnish us all the fight-

ing planes we needed, provided we would send over the raw material. Although it was agreed that we would send this material to France, General Kenley testified that we did not live up to the agreement (Senate Report No. 555, p. 9). Lieutenant LaGuardia testified that if we had made good our promise to furnish material to the Italians, they could have given us enough Caproni planes by the middle of 1918 to have bombed Berlin with perfect confidence and ease; but that he had seen the Caproni factory stopped for want of coal; that at another time they stopped because they had no cables for the machines, and that at one time they had no steel (House Hearings, Aviation, p. 125).

It has been stated that one of the best machines used by either side was the German Fokker. Anthony Fokker, a citizen of Holland and the inventor, was quoted by the newspapers in this country on Nov. 12, 1920, as stating that in 1912 he offered these planes to England and America before he turned them over to Germany.

Eddie Rickenbacker, one of America's

(© Harris & Ewing)

Major Gen. George O. Squier, Chief Signal Officer, and Colonel Deeds of the Air Service, examining the red flag of the Zeppelin L-19, presented to the Marine Corps by the French officers who brought the airship down

foremost aces, who had twenty-six victories to his credit, and many decorations, declared that there were no American fighting planes sent over, and he makes the following statement in his book, "Fighting the Flying Circus," Page 14:

The Germans \* \* \* had seen the Spring months pass, and, instead of viewing with alarm the huge fleet of 20,000 airplanes sweeping the sky clear of German Fokkers, they had complacently witnessed the Fokkers occupying the air back of our lines whenever they desired it, with never an American plane to oppose them.

As to the De Haviland-4s, Rickenbacker testified before the House committee that they were obsolete at the time they arrived at the front, and the following reference is made to them in his book, Page 337:

From every side Fokkers were piquing upon the clumsy Liberty machines, which, with their criminally constructed fuel tanks, offered so easy a target to the incendiary bullets of the enemy that their unfortunate pilots called this boasted achievement of our Aviation Department their "flaming coffins." During that one brief flight over Grand Pré I saw three of these crude machines go down in flames, an American pilot and an American gunner in each "flaming coffin" dying this frightful and needless death.

### MISLEADING PUBLICITY

The public was deceived by false and misleading statements given to the press with official sanction. It is not difficult to discover the day this began and the method by which the public was misled into believing that fighting machines were being sent abroad. On this point the report of Judge Hughes may be briefly quoted:

In the face of delays in production a series of misleading public statements were made with official authority.

In February, 1918, Secretary Baker authorized the public statement that "the first American-built battle planes" were en route to France (Aviation, March 1, 1918, p. 175, and other current publications). After the public had been led by various newspaper dispatches to believe that the United States had reached quantity production, the Official Bulletin of March 28, 1918, released for publication in the American press on March 30, 1918, a series of photographs, alleged to be pictures of airplanes and aviation fields in France, and furthering the inference of a large production of American-built airplanes. The

public was invited, through the Government's Official Bulletin, to purchase copies of these pictures at 10 cents each, or stereopticon slides at 15 cents, by sending applications to the Division of Pictures, Committee on Public Information, 10 Jackson Place, Washington, D. C. An inspection of these pictures during the examination of Secretary Baker in the Senate Hearings (Vol. II., Pages 1134 and 1140) disclosed the fact that they were not photographs of American airplanes, but of French training planes, and a closer examination under a glass revealed the foreign names on them; pictures represented to be airplanes in France proved to be "penguins," which could not fly and were not intended to fly, but were made for beginners to run with on the ground as a part of their preliminary training, in which the machines rise a few feet and immediately drop back to the ground.

On March 29, 1918, the day before these pictures were to be released for publication, as announced by the Official Bulletin of the preceding day, there was a storm of protest from members of the Committee on Military Affairs on the floor of the Senate. Members of this committee declared that the Committee on Public Information was proceeding with these publications, although their attention had been called to the fact that the information they were giving out was false, and promise had been made to the Committee on Military Affairs that every newspaper in the country to which these pictures had been sent would be instructed not to publish them. Senator Thomas, of this committee, denounced them on the floor of the Senate as "primarily, secondarily, directly and indirectly a fraud upon the press of the country." (Congressional Record, vol. 56, pp. 4254 to 4256.)

Notwithstanding these protests, misleading information continued to be sent out until the end of the war. Shortly after this episode, when vehement protests were made by Senators of both political parties, an article was published by Secretary Baker, in which it was stated that, "whereas a year ago not a single good battle plane was being turned out in America, now we are producing battle types of the very latest design." (Scientific American, April 6, 1918, p. 320.) Notwithstanding the sworn statements hereinabove cited, including that

of Secretary Baker, that not a fighting plane of American make was produced during the whole period of the war, the Government Printing Office is now offering for sale to the public a book in which it is stated (page 243) that we produced "3,328 fighting planes." (American Munitions, 1917-1918, price \$2.) It is also offering for sale another book in which, under the caption of "Fighting or Service Planes," the statement is made (page 47) that "the actual production of service planes, air-planes built in this country and fully equipped to fight in France, was confined to the De Haviland-4 machines" (United States Army Aircraft Production Facts, Price 10 cents).

As to the persons in the War Department responsible for giving such information to the Committee on Public Information, Judge Hughes reported that it was evident the matter called for immediate investigation and for suitable disciplinary measures, but that no steps were taken "either for correction or punishment" (Congressional Record, vol. 57, pp. 902 and 903).

#### "THE TERROR OF THE AIR"

A sample of the misleading pictures in question is reproduced with the present article. On Feb. 14, 1918, the Committee on Public Information released for publication Photograph No. 2339 of the old Nieuport monoplane, which had been discarded by the French for two years, and which was forty miles an hour slower than the planes they were then using, with the following official description:

##### No. 2339. THE TERROR OF THE AIR.

\* \* \* This Nieuport monoplane, the fastest machine in the world, and used extensively by the French in this war, has been loaned to our forces "Over There" to teach our aviators now in France how to chase and bag retreating German fliers.

In his testimony before the House committee Rickenbacker explained some of the defects of the Nieuport: the wings were liable to collapse, and the gasoline tanks were in a vulnerable position and exposed. Regarding the Spad, for which the French had discarded the Nieuport, he said that in case of fire the machine could dive and the fire would probably be wiped out by the rush of air; but with the Nieuport on fire the only chance was to jump, as the position

of the fire would make escape impossible. As to this Nieuport, officially described as "the terror of the air" and "the fastest machine in the world," Rickenbacker makes this statement on Page 119 of his book:

From the frequency of accidents to our Nieuports it may be wondered why we continued to use them. The answer is simple—we had no others we could use! The American Air Forces were in dire need of machines of all kinds. We were thankful to get any kind that would fly. The French had already discarded the Nieuport for the steadier, stronger Spad, and thus our Government was able to buy from the French a certain number of these out-of-date Nieuport machines for American pilots, or go without. Consequently, our American pilots in France were compelled to venture out in Nieuports against far more experienced pilots in more modern machines. None of us in France could understand what prevented our great country from furnishing machines equal to the best in the world. Many a gallant life was lost to American aviation during those early months of 1918, the responsibility for which must lie heavily upon some guilty conscience.

Judge Hughes reported that there was no question that grossly misleading statements were published with official authority, and he recommended that they deserved the prompt attention of the military authorities.

That a certain number of training planes were produced, and that the Liberty motor reached large quantity production, as well as that many other things were accomplished, there appears to be no doubt; but as to the main thing—the building of planes that could be used in fighting and sweeping the Germans from the sky—it is now established that the score was zero. When the Liberty motor was finally perfected, its value for use in certain types of planes was demonstrated; this was evidenced in the flight across the Atlantic by the NC-4 (designed and built by the navy, and equipped with Liberty motors), but this flight was accomplished by the navy, and not by the War Department.

In October, 1919, several months after the navy had put the NC-4 across the Atlantic, the army undertook a transcontinental race, and this performance, undertaken with conditions of peace, resulted in the death of ten aviators. In this race seventy-three airplanes of different types were used, thirty-nine being unconverted De Haviland-4s and thirty-four converted De Haviland-4s and miscellaneous planes. Nine

of these aviators were killed in the unconverted De Haviland-4s, the type of plane which the War Department had sent to France. General Mitchell, testifying in regard to the transcontinental race, stated that converting the De Haviland-4s would save at least 20 per cent. in fatalities (House Hearings, p. 3017). Meanwhile, newspaper accounts of aviation fatalities have become so commonplace that nobody takes notice except the stricken widows and children, or a broken-hearted mother.

### ENORMOUS EXPENDITURES

In brief, instead of the 20,000 airplanes of American manufacture, which were to decide the war before the arrival of an effective army in Europe, the only planes of American manufacture on the front when the war ended were the 196 De Haviland-4s, America tailing the list, except for the 153 planes of Belgium. Was this due to any lack of money? The report of the House Committee on Expenditures in the War Department (Report No. 637, 66th Congress, 2d session, p. 2) shows that the total amount expended or obligated for Signal Corps and aviation purposes during the nineteen months of war with Germany to June 30, 1919, was \$1,051,511,988, and that the expenditures or commitments for aviation alone amounted to *over one billion dollars*.

Senator McKellar recently made the statement on the floor of the Senate that in round numbers the annual expenditure of Germany for her entire military appropriation—universal training and all—from 1907 to 1911, inclusive, was \$200,000,000; that in 1912 it was \$230,000,000, and in 1913, while preparing for war, she spent \$360,000,000; and that in the year the war began she had authorized an expenditure of \$210,000,000. Measured by this standard, it will be seen that Americans paid for aviation, without producing a fighting plane, about three times the amount that Germany spent on its entire army during the year when she was making ready to enter into a world conflict.

During the last Congress one of the grounds urged for increased appropriations for aviation was that the United States did not have enough fighting planes to compete with Mexico for supremacy of the air on the border, and it was recently published, with apparent official sanction, that all

the airplanes now on hand are to be scrapped. However, it is fair to call attention to the fact that even a first-class airplane will rapidly deteriorate, and, in view of the hazards, the War Department is right in taking no chances with the lives of aviators. The reasons given for the burning of the airplanes in France were that they were worthless and that the parts burned could not be salvaged (House Hearings, pp. 221-224, 2407-2416, 3474-79, 3978-80).

Judge Hughes reported that the *estimated profits* which would be made by several of the large aircraft contractors, if their schedules were carried out, would be as follows: The Ford Motor Company, \$5,375,000; the Lincoln Motor Company (partly owned by the Dayton Metal Products Company), \$11,250,000, and the Packard Motor Car Company, \$15,000,000. Large sums of Government money were advanced to various contractors on which to operate. Judge Hughes stated in the findings that in the case of the Dayton-Wright Airplane Company the paid-in capital was \$1,000,000 invested in the plant, and that advances by the Government to the extent of \$2,500,000 were authorized. The sum of \$10,800,000 was advanced to the Lincoln Motor Company.

### PROFITS OF CONTRACTORS

The profits which the Dayton-Wright Airplane Company would have received under its original contracts were estimated by Judge Hughes to be more than \$6,350,000, not including profits on its experimental contract and its contract for spare parts of De-Haviland-4s, but it was explained that agreements, contained in letters, for the reduction of the bogie price, would make the profits on the De Havilands not less than \$3,500,000. Contracts were made on both the fixed-price and the cost-plus basis, and the report alleges that, while it is probable that large profits were made on the fixed-price contracts, definite information as to their extent would not be available without a survey in detail of manufacturing conditions and costs in a considerable number of plants, an undertaking impracticable in the inquiry. William C. Potter, Assistant Director of the Bureau of Aircraft Production, testified that if planes were defective or if there was bad

workmanship, the Government stood the loss, and that the contractors would still get their percentages (Senate Hearings, Vol. II, p. 1106). As the subject is technical and there are many details, in fairness to the contractors and all concerned, reference should be made to the records and to the full text of the Hughes report (Congressional Record, bound vol. 57, pp. 906-908).

Subjects of criticism in the Hughes findings were business relations of the equipment division, of which Colonel Edward A. Deeds became the active head on Aug. 2, 1917, with former business associates and corporations with which he was connected at the time he entered the Government's service. It was alleged in the findings that a tract of 2,245 acres of land was leased to the Government by the Miami conservancy district, of which Colonel Deeds was the head, and that upward of \$3,000,000 was expended by the Government in its development, although part of the land was found to be marshy and unsuitable for the Government's purposes. The McCook Field, on which \$949,085.35 had been expended by the Government to Aug. 14, 1918, according to the Hughes report, was owned by Colonel Deeds and a business associate to whom Deeds conveyed his interest, after which the land was conveyed to the Dayton Metal Products Company, which then leased the tract to the Government (*ibid.*, pp. 890-893, and Senate Report, pp. 11-13).

The Dayton Metal Products Company, of which it was stated that Deeds originally owned one-fourth of the stock, became variously interested in Government contracts which were under the administration of Colonel Deeds, and it was further reported that Deeds was one of the incorporators of the Dayton-Wright Airplane Company, which was owned by the Dayton Metal Products Company. The specifications of the Liberty Motor called for the installation of the Delco ignition system in the first 20,000 engines; this system, as Judge Hughes stated, had not been used before in an airplane engine. The system was controlled by the Dayton Engineering Laboratories Company, which in turn was owned by the United Motors Corporation, of which Deeds was Vice President and a Director, until Aug. 16, 1917, and

on Oct. 13, 1917, he transferred his holdings in the United Motors Corporation to his wife. Transfers of stock which he held in the Dayton Metal Products Company were reported by Judge Hughes to have been transferred by Deeds "to intimate business associates on their unsecured notes, which are overdue and unpaid save to a small extent," but it was not found that at the time of his official service Colonel Deeds was a stockholder in the concern (*ibid.*, pp. 887-890).

It was further reported in the findings that, in addition to the profits which the Dayton-Wright Airplane Company was to receive and the profits on various other contracts with the concerns with which they were connected, four of the recent business associates of Deeds in charge of the management of these companies—which "had the assurance of very large profits upon a relatively small investment of their own money"—were being allowed salaries amounting in the aggregate to \$253,000, and that this was being charged against the Government as a part of the cost of manufacture. Confidential telegrams passing between Deeds and business associates whom he had recently left to enter the Government's service were set out as a part of the Hughes report.

Another investigation, not connected with the aircraft, recently developed documentary evidence that at the time Colonel Deeds was commissioned in the Army and about the time the first contract was given to the Dayton-Wright Airplane Company, a large sum was being contributed by these interests to be used in Ohio for political purposes.

It was testified by Secretary Baker in the House hearings that he was unaware until this inquiry began that Colonel Deeds had been convicted in the courts of Ohio of a criminal offense, the indictment charging a conspiracy in restraint of trade, including charges of corruption and bribery, the sentence of the court being that he pay the costs of the prosecution and that he be confined in the jail of Miami County, Ohio, for the period of one year. The verdict was filed on Feb. 20, 1913. An appeal was taken, and on the bill of exceptions the case was sent back to the lower court for retrial, but thus far the case has never been retried (*Patterson v. United*

States, 222 Fed., 599). Counts in the indictment, the verdict of the jury and the sentence of the court are set forth in the records of the House Hearings on Aviation, pp. 50-51.

### THE ENGEL AIRCRAFT COMPANY.

Among other contracts which caused comment was that of the Engel Aircraft Company, which was organized in August, 1917, by Harry E. Baker, a brother of the Secretary of War. As reported by Judge Hughes, Mr. Baker testified that this concern was organized with a capital stock of \$1,500,000 (preferred \$500,000 and common \$1,000,000). This company took over the plant of the Engel Airplane and Motor Company and issued its preferred stock therefor at a cost of about \$225,000. The remainder of the preferred stock was sold for cash, and the \$1,000,000 of common stock was issued to Harry E. Baker and his associates for their services in promotion. The company received a contract for 1,200 sets of spare parts at a price of about \$1,000,000. When it came to the attention of the Secretary of War that the company of which his brother was the head had received a non-competitive contract from the Government, the contract was canceled and arrangements were made for his withdrawal from the company upon the payment of his salary and \$15,000 for his promotion services. The contract was then reinstated, and an additional order was given to this concern for 500 sets of spare parts for De Haviland-4s at an estimated cost of \$2,275,000 (Congressional Record, Vol. 57, p. 901, and Senate Hearings, Vol. II, pp. 974-984).

### RECOMMENDATIONS BY HUGHES

In the closing paragraphs of the report by Judge Hughes were the following findings and recommendations, which were submitted to the President, through the Attorney General, on Oct. 25, 1918:

2. The evidence discloses conduct, which, although of a reprehensible character, cannot be regarded as affording a sufficient basis for charges under existing statutes; but there are certain acts shown, not only highly improper in themselves, but of especial significance, which should lead to disciplinary measures. The evidence with respect to Colonel Edward A. Deeds should be presented to the Secretary of War to the end that Colonel Deeds may be tried by court-

martial under articles 95 and 96 of the Articles of War for his conduct (1) in acting as confidential adviser of his former business associate, H. E. Talbott of the Dayton-Wright Airplane Company, and in conveying information to Mr. Talbott in an improper manner with respect to the transaction of business between that company and the division of the Signal Corps of which Colonel Deeds was the head; and (2) in giving to the representatives of the Committee on Public Information a false and misleading statement with respect to the progress of aircraft production for the purpose of publication, with the authority of the Secretary of War.

3. The absence of proper appreciation of the obvious impropriety of transactions by Government officers and agents with firms or corporations in which they are interested compels the conclusion that public policy demands that the statutory provisions bearing upon this conduct should be strictly enforced. It is therefore recommended that the officers found to have had transactions on behalf of the Government with corporations in the pecuniary profits of which they had an interest should be prosecuted under section 41 of the Criminal Code.

On Oct. 31, 1918, Hon. T. W. Gregory, Attorney General, in transmitting this report to the President, stated that at the conclusion of the taking of testimony both he and Judge Hughes, without conference with each other, considered the evidence, and that in this manner each reached his own conclusion and prepared a report; that he found it unnecessary to present the report which had been prepared in the Department of Justice, and that he found himself in accord with the conclusions presented by Judge Hughes on questions of dishonesty and malversation. However, the Attorney General made many carefully guarded and qualified statements, and his report needs to be read at length (House Hearings, Aviation, pp. 3862-68).

### EVERYBODY PARDONED

On Dec. 3, 1918, the announcement was authorized by the President that, on the recommendation of the Attorney General, he had pardoned without trial Lieut. Col. J. G. Vincent, Vice President of the Packard Motor Car Company, and Lieut. Col. George W. Mixter, who had owned a small amount of stock in the Curtiss Airplane and Motor Corporation, and who, according to Judge Hughes's recommendation, was to have been prosecuted under section 41 of the Criminal Code (The New York

Times, Dec. 4, 1918). Later similar action was taken as to the others whom Judge Hughes had named for indictment. This left the case of Colonel Deeds to be disposed of by a military court.

The matter was referred to Brig. Gen. S. T. Ansell, the Acting Judge Advocate General, and a Board of Review, consisting of Miller, Tucker and Keedy, Judge Advocates. On Nov. 11, 1918, General Ansell filed a report, directed to the Chief of Staff, stating that the report of Judge Hughes "so clearly indicates conduct calling for his trial by general court-martial \* \* \*" that "the only adequate disposition of the case as to Colonel Deeds is the preferring of charges against him as above recommended." It was further reported that if Colonel Deeds was under oath when he testified before the Senate committee, and if the statement made by him there, which appeared to be false, was a matter material to the investigation, he was also guilty of perjury and should be court-martialed for that offense (House Hearings, Aviation, pp. 2652, 2664, 2665, 2667). On Nov. 15, 1918, the Secretary of War directed a communication to General Ansell returning his recommendations and requesting him to re-examine the case and to send for Colonel Deeds, his counsel and any other person who could aid in the inquiry (*ibid.*, p. 2653). On Dec. 26, 1918, in a lengthy document, General Ansell reported back to the Secretary of War that "the conclusion of this office is, therefore, that Colonel Edward A. Deeds should not be tried by court-martial on account of any of the transactions discussed in this memorandum" (*ibid.*, pp. 2670-2686).

On Jan. 16, 1919, the Secretary of War transmitted to the Chairman of the Committee on Military Affairs of the House of Representatives a letter detailing the findings of the Board of Review, the letter closing with the following passage:

Inasmuch as the purpose of Judge Hughes's suggestion has been accomplished, I have directed that all the records in this case be filed in the War Department and that this matter be considered as closed (The New York Times, Jan. 17, 1919).

All persons under formal charges having been exonerated under the sanctity of action by Government agencies, no further steps have been taken to bring the guilty,

if there be such, to justice, and no steps have been taken to fix the responsibility.

On Dec. 20, 1918, a few days before the filing of the report of the Board of Review, a banquet was given in honor of Colonel Deeds by associates in the War Department, at which he was given a rising vote of confidence, and at which General Squier, one of the speakers, is alleged to have stated that if Colonel Deeds had not done "irregular" things the United States would not have had an air fighting force worthy of the name (Congressional Record, Vol. 57, p. 1150; House Hearings, Aviation, p. 59).

### ENEMY ALIENS IN FACTORIES

Judge Hughes reported that 650 enemy aliens were employed in the factories of three concerns making aircraft for the Government. He cited the case of one man, who had served for a year in the German Army and had been discharged because of wounds, who was a toolmaker in one of the plants. Another German citizen was placed in charge of the milling department, and later became assistant general foreman of the machine shop. Another German subject, who had a brother in the German Navy, became foreman of the welding department. The head of the drafting department in one of the plants making Liberty motors was a citizen of Germany, and was reported for repeatedly making pro-German remarks. A conference of the management was held, and, according to the minutes of this conference, reports were read "from various members of the drafting department who were in touch with the situation and who felt that the department was practically a pro-German institution." His removal was refused, and later a close personal friend of this man was found with photographs and drawings of the plant and was interned.

Instances were cited in the testimony where enemy aliens making American aircraft would cheer when news was received of German successes in battle. In the Ford plant a man who had reviled and threatened the President was prosecuted and pleaded guilty to the charge. He was fined \$300 and sent back to work. Numerous witnesses testified that they had seen airplane parts tampered with in such a way as to cause accidents. A case was cited

where an aviator went to one of the plants to fly a machine and was told that it was not necessary to look it over, as it already had been examined by twenty men. Notwithstanding these assurances, an inspection was made, and it was found that the wings were wrong; the front struts were on behind, and the control was wrong, which fact alone would have resulted in the death of the aviator.

Numerous witnesses testified that changes in blueprints came in at such a rate that production was impossible. The files in one plant showed that over 2,000 changes had been ordered within a period of three months; in some cases as high as 22,000 castings would be ordered, and work would proceed upon them, when a change would come discarding them in favor of something else. (Senate Hearings, Vol. I, p. 486.) It was testified that two of the concerns having contracts to make airplanes in this country for the Government were financed and controlled by Japanese bankers, and it was remarked by Judge Hughes that in some way these Japanese concerns got hold of a contract for nearly every type of plane that was being built by the American Government and were familiar with every detail of American aircraft plans.

### UNWRITTEN HISTORY

The Senate investigation was an inquiry into the causes of delay in aircraft production. The Hughes investigation was principally directed to the charges of personal dishonesty and official corruption. The investigation by the House committee was concerned with war expenditures. Regardless of the amount of testimony taken, none of these investigations purports to be exhaustive. During the Hughes investigation an order was published in the Bureau of Aircraft Production, appointing an officer in that department as liaison officer between the bureau and the Department of Justice, making it impossible to volunteer information except through the regular military channels without liability to court-martial. A questionnaire sent to all persons who were in, or had been in, the military and civilian personnel, would have afforded an opportunity for the development of further information.

While testimony relating to sabotage and espionage entered into the records of

all of these hearings as collateral matter, not one of these investigations was directed primarily to such subjects, and there were many matters of serious import which were never investigated. Among these was the disappearance of the Liberty motor tests between the testing field and Washington. On one occasion, during the night, the desks of officers in the equipment division were broken into, yet there was no investigation, even by the Air Service. On another occasion a negro employe was found leaving the Air Service Building in Washington with official papers in his possession. His house was searched and a truckload of maps, plans, orders, blueprints and confidential papers from the Air Service and Ordnance Department was found in his home. He was tried in the courts in Washington, convicted and given a prison sentence, but it was never divulged for whom or for what purpose he had collected these documents. Many of those who were employed in the Bureau of Aircraft Production will recall the frequent confusions which resulted from orders for suites of offices to be moved to some other part of the building, soon followed by orders to move again, not a few times but many times.

### MORALE IN THE BUREAU OF AIRCRAFT PRODUCTION

One of the important efforts in war is to destroy the morale of the enemy, and when the morale is gone the battle is lost. The demoralization in the Bureau of Aircraft Production finally reached that stage when there seemed to be in the atmosphere an unspoken order, "to see no evil, hear no evil and speak no evil," and investigations which would be started in the bureau would summarily end. Reports showing that important phases of work had fallen down would be pigeonholed and optimistic reports would be transmitted to higher authorities and to our Allies.

One of the lessons of the war is that the spirit of the draft exemptions should have been more strictly followed, and only the able-bodied with special technical qualifications placed in positions which could have been occupied by civilians beyond the draft age. Young men without business experience were placed in bureau chairs with the rank and power of martinets, and millions of dollars were squandered without respon-

sible supervision. The young man is an optimist, a qualification for the firing line; he does not, however, see bridges ahead which must be crossed and which are apparent to the man of experience.

In Government management there is no complaint department where a man in the service or a private citizen can report an intolerable situation to some responsible official, removed from bureau influences, and demand that vital matters be brought to the attention of some one who has authority to apply a remedy. The 121st article of the Articles of War, giving an enlisted man or an officer in certain cases the inviolable right of appeal direct to the commanding general, has been officially held not to apply to the Bureau of Aircraft Production (House Hearings, Aviation, p. 2557). The only remedy was through the regular military channels, where any man up the line has it in his power to block relief. Men who expressed anxiety lest our program "to win the war in the air and drive German airmen from the sky" was falling down were liable to have their mentality questioned, and to have uncomplimentary notations made in their military records.

#### A DEMORALIZING EPISODE

During the Summer of 1918 the draft age was raised and plans were on foot to create another army to be sent overseas. It was necessary to find men who could officer this army. On Aug. 13, 1918, the Adjutant General of the army sent the call to the Bureau of Aircraft Production inviting men in the grades of Captain and Lieutenants, many of whom had been commissioned from the training camps or had received military training, to make application for transfer to the infantry.

This call for volunteers for the firing line was promulgated in Bulletin No. 30 of the bureau, dated Aug. 15, 1918, and from the entire organization there were seven volunteers. Four of the seven were transferred to the infantry and three of these were assigned to duty with segregated troops afflicted with a venereal disease, one of them being assigned to a company of negro venereals. Many of those who failed to respond were later promoted, and some of them were recommended for the Distinguished Service Medal. The comparison is made for the lesson which it teaches. While

a soldier should gladly perform any service to which he is ordered, such treatment, in the circumstances, might have affected the morale of an entire organization. It should be understood that the call for volunteers had no reference to the Division of Military Aeronautics, which was considered a combatant arm of the service; it was directed to the personnel of the Bureau of Aircraft Production, which was charged with the duty of furnishing the equipment.

#### INJURY TO THE WHOLE PERSONNEL

About this time Eugene Meyer Jr., Director of the War Finance Corporation, testified before Judge Hughes that he was requested by the Secretary of War to investigate and report on the aircraft situation, and that he reported to the Secretary that he did not think he had a man in the whole organization who could be called a man. (Abstract of Aircraft Investigation by Hon. Charles E. Hughes and the Attorney General, p. 292.)

There were many good, honest, faithful, efficient and conscientious men in the Bureau of Aircraft Production, but this sweeping statement, made under oath by a man in a position of high responsibility, shows how tense was the feeling on the part of persons who were in a position to know the situation. The facts regarding the aircraft in this war will be a matter of interest to the historians of the world to the remotest generation, and this branch of our service passes into history under a cloud affecting the reputations of all men who were connected with it. The War Department, with its own conduct under criticism, and in view of the findings of a man fresh from the bench of the highest court of the nation, should have demanded a trial through regular and orderly processes and demanded vindication of the innocent.

In Government affairs there are perfunctory post-mortems and a hurried burial, rather than concern in the establishment of wholesome precedents. Honest mistakes of magnitude were inevitable and ought to be overlooked, but in this colossal failure, which invited military disaster to America and to the world, shall public officials be allowed to wash their hands and tell the people to forget it? The argument that it is of no use to worry about water that has passed over the wheel would be a fit propa-

ganda for the protection of those who, in any war, take advantage of the confusion to pillage the country.

It is a notorious fact that investigations in Washington usually amount to nothing, and that the facts which reach the people are camouflaged by men who place their party above their country, and who prefer to thrash out vital matters on a political dunghill. France, England, Italy and Germany had no failures in their aircraft programs, because it was known too well that the peoples of those countries would not have stood for it. The greatest battle lost in the war was a bloodless bat-

tle, lost by men charged with a duty of inestimable responsibility. They were far behind the battle lines, but it was not a bloodless affair for our aviators, dashed to death by defective machines, or for an untold number of American boys in France who forfeited their lives because of the lack of airplanes. Why did we lose that battle? What was the matter? The official facts that have been assembled in the foregoing pages indicate the direction in which the answer may be sought, but the public, and especially ex-service men who know the truth, are asking, What has become of Justice?

### DEATH OF PRINCE KROPOTKIN

THE death of Peter Alexeivitch, Prince Kropotkin, was announced from Moscow on Jan. 29, 1921. The dispatch stated that Prince Kropotkin had died after a long illness. So ended a long, adventurous and extraordinary career. Born of noble ancestry in Moscow on Dec. 9, 1842, and early appointed to the academy for the sons of nobles, he imbibed the advanced principles of politics current during the liberal revival which followed the Crimean War. On attaining maturity he spent many years in active military service—chiefly in Siberia. He retired from the army in 1867 and devoted himself to scientific research in St. Petersburg. These studies he combined with political agitation, which his early ideas, focused by the abuses of the Czar's régime, forced on him as a matter of principle. A visit to Western Europe in 1871, during which he made common cause with the Socialist and anarchist refugees who had made their headquarters in Switzerland, led to his imprisonment on his return to the Russian capital. During his incarceration he wrote a scientific treatise on the glacial deposits in Finland and Sweden.

He escaped from prison in 1876, and eventually reached London, where he lived by writing scientific reviews and various articles. His strong convictions, however, led him back to Switzerland, where he founded in Geneva an anarchist journal, called *Le Révolté* (The Rebel). After the assassination of Alexander II. he was expelled by the Swiss authorities and returned to England. Later he went to

France, where his anarchistic teachings proved as unwelcome as in Switzerland. He was tried at Lyons in 1883—on a charge of which he is now said to have been innocent—and was sentenced to five years' imprisonment. He was liberated after three years, and in 1886 returned to England, where he lived uneventfully until the outbreak of the Russian revolution. In June, 1917, he went to Russia, but by 1920 he was criticising the Bolshevik régime in his usual outspoken fashion. His last known message to the outside world was this, sent last January through an American correspondent:

Tell the United States that Lenin arrived in Moscow in April, 1917, and I arrived in June of the same year. When I met him first I saw that the country would bleed and suffer. He has brought nothing but disaster. I am too ill and too old to do anything myself, but tell them in America that I wish I could live my life over again, for then I would make it my business to fight Bolshevism to the finish.

Kropotkin spent his last days at Dmitrov, forty miles from Moscow. He intended returning to England, but the Bolshevik authorities refused to let him go. As a thinker, Kropotkin will be known chiefly as the founder of the school of anarchistic communism, the teachings of which envisaged (1) the overthrow of the capitalistic system, (2) the substitution of freely organized human groups for organized government, and (3) the liberation of the race from religious morality, and the substitution of "a free morality, without duties or sanctions, proceeding from the life of the community itself."

# THE KUKLUX KLAN REVIVAL

BY FRANK PARKER STOCKBRIDGE

*An account of the nature and purpose of the secret, oath-bound order, which began in the South, but which is now attempting to extend its activities throughout the United States—Foreigners, Jews, Catholics and negroes barred from membership\**

THE Kuklux Klan crossed Mason and Dixon's line in the Winter of 1920-21. Revived in the South some five years ago, this secret, oath-bound organization that had its origin in the troublous times of the Reconstruction period following the Civil War in America, began during the Winter just past to extend its activities into the North and West, with the avowed intention of uniting native-born white Christians for concerted action in the preservation of American institutions and the supremacy of the white race.

In New York City and in other centres even further distant from the region in which the original Kuklux Klan was active there have been planted nuclei of the revived organization, according to the statements of its officials. How many such centres have been established in the North and West and the extent of the membership are not revealed. As in the original Kuklux Klan, members are known only to each other; the general public is permitted to know only certain national officers connected with the organization.

To the average American the mention of the name suggests terrorism. The mental picture of the Kuklux, to those to whom the words conjure up any mental picture at all, is of a band of white-robed, hooded riders, appearing mysteriously out of the darkness and proceeding, silently and with complete discipline, to execute some extra-legal mission of warning or of private vengeance. That, at least, is the reaction of the average Northern white man, whose knowledge of the Kuklux Klan is derived entirely from reading or the "movies." To him it is something like the Vigilantes of early California days or the "Night Riders" of the Kentucky tobacco war of the early twentieth century; the words carry to his ears an unmistakable flavor of lynch law, and, if he be old enough to have

read the writings of Albion W. Tourgée and other Northern authors who wrote of the South in the Reconstruction period, he cannot escape the implication of lawless oppression of the negro by the white.

## ATTITUDE OF THE NORTH

That substantially the impression set down above is that prevailing in the North, where any impression of the Kuklux Klan at all exists, is probably a conservative statement of the fact. It was doubtless such an impression that led the Mayor of New York to declare, in a public letter, that the entrance of the Kuklux Klan into the metropolis would not be tolerated. An Assistant District Attorney, Alfred J. Talley, since elevated to the bench of the General Sessions, took occasion in the Autumn of 1920, when it was stated in newspaper dispatches that the Klan was about to extend its organization into the North, to write a letter to the newspapers declaring that any attempt on the part of the Kuklux to carry on in the County of New York what he regarded as its customary activities would be the signal for action by the criminal authorities of the county. Mr. Talley undoubtedly voiced the general Northern view, at that time, of the Kuklux Klan.

[Alfred J. Talley, Assistant District Attorney of New York, when informed of the effort to

---

\*NOTE BY THE EDITOR—CURRENT HISTORY MAGAZINE gives space to this curious development of today—as narrated by Mr. Stockbridge, who is a highly reputable and trustworthy contributor to American periodicals—merely as an impartial chronicler of events, notwithstanding the conviction of the editors that the movement as described is thoroughly vicious, dangerous and repugnant to the fundamental traditions and ideals of the American people. This magazine gives space to the subject mainly because it believes that only through a revelation of the purposes of this secret order can the public learn of its essentially dangerous and sinister character.

organize a Kuklux Klan in New York City, expressed himself as follows:

"There is no room in the great, broad-minded State of New York for so un-American an organization as the Kuklux Klan. The pretension that it apparently makes to patriotism enforces Samuel Johnson's definition of patriotism, 'The last refuge of a scoundrel.' No secret oath-bound organization is needed to preserve and perpetuate devotion to the American Government, nor to uphold the laws of the land, and the Constitution upon which our Government is founded."

Mr. Talley referred to the organization as composed of "narrow-minded bigots" and "scareheaded fanatics, who are opposed to everything that Abraham Lincoln stood for. There is no place for them in New York, and the citizens and real Americans will set their faces against them and their wild aspirations."

When this announcement was published on Dec. 17, 1920, William Joseph Simmons of Atlanta, Ga., styling himself "Imperial Wizard of the Kuklux Klan," telegraphed Mr. Talley, asking him whether he had been correctly quoted, whereupon Mr. Talley sent this reply: "I was correctly quoted, and my remarks were directed specifically at your organization."

#### AS VIEWED IN THE SOUTH

To the Southern white man, however, the name of this organization brings up a different picture.

"The Kuklux saved the South" is the expression in which he sums up in a phrase a point of view which has grown into a fixed tradition in the States of the former Confederacy. To the average Southern white man of today the name of the Kuklux Klan, after the lapse of half a century, typifies all that was best and finest in the chivalry of the old South. It conveys to him the impression of valiant men resisting tyranny, of the salvation of the white race from threatened negro domination (with all that that implied socially as well as politically), and of the rescue of the white womanhood of the South from a frightful and ever-present peril.

The purpose of the Kuklux Klan has been sympathetically recorded by Dr. Walter Lynwood Fleming, Professor of History in the Vanderbilt University, who edited Lester and Wilson's "History of the Kuklux Klan" and is the author of several historical books and articles dealing with the Reconstruction period.

"The object [of the Kuklux Klan] was to protect the whites during the disorders that followed the civil war, and to oppose the policy of the North toward the South,"

says Dr. Fleming in an article in the Encyclopaedia Britannica. "The result of the whole movement was a more or less successful revolution against the Reconstruction and an overthrow of the Governments based on negro suffrage."

#### ORIGIN OF THE ORDER

Formed in 1865 at Pulaski, Tenn., as a social club of young white men, with what Dr. Fleming calls "an absurd ritual and a strange uniform," it was soon discovered by the members that "the fear of it had a great influence over the lawless but superstitious blacks." In the difficult situation confronting the conquered South, it was inevitable that this power to terrorize should be availed of. "Soon," says Dr. Fleming, "the club expanded into a great federation of regulators, absorbing numerous local bodies that had been formed in the absence of civil law and partaking of the nature of the old English neighborhood police and the ante-bellum slave patrol."

Among the conditions and causes that enabled the Kuklux Klan to develop in two or three years into the most powerful instrument of regulation in the whole South, Dr. Fleming enumerates these:

"The absence of stable government in the South for several years after the Civil War; the corrupt and tyrannical rule of the alien, renegade and negro; the disfranchisement of whites; the spread of ideas of social and political equality among the negroes; fear of negro insurrections; the arming of the negro militia and the disarming of whites; outrages upon white women by black men; the influence of Northern adventurers in the Freedmen's Bureau and the Union League in alienating the races; the humiliation of Confederate soldiers after they had been paroled—in general, the insecurity felt by Southern whites during the decade after the collapse of the Confederacy."

#### "THE INVISIBLE EMPIRE"

In its perfect organization the old Kuklux Klan had at its head, with the title of Grand Wizard, General Nathan Bedford Forrest, the former Confederate cavalry leader whom General William Tecumseh Sherman characterized as "the most remarkable man the Civil War produced on either side." The Grand Wizard ruled

the "Invisible Empire," which consisted of the entire South. Over each State or "Realm" presided a "Grand Dragon." Counties were "provinces," each with its "Grand Giant"; a group of counties was a "Dominion" ruled by a "Grand Titan" and local units were "dens," over which the "Grand Cyclops" held sway. Staff officers bore such titles as Genii, Hydras, Furies, Goblins, Night Hawks, Magi, Monks and Turks, while individual members were Ghouls.

The constitution of the Kuklux Klan, like that of the similar though larger organization, the Knights of the White Camelia and several smaller groups having the same general purposes, contained certain declarations of principles which Professor Fleming thus summarizes:

"To protect and succor the weak and unfortunate, especially the widows and orphans of Confederate soldiers; to protect members of the white race in life, honor and property from the encroachments of the blacks; to oppose the Radical Republican Party and the Union League; to defend constitutional liberty, to prevent usurpation, to emancipate the whites, maintain peace and order, the laws of God, the principles of 1776 and the political and social supremacy of the white race—in short, to oppose African influence in government and society and to prevent any intermingling of the races."

Native whites, largely disfranchised because of their active participation in the rebellion, formed one moiety of the social structure of the South at the close of the Civil War; the other part was composed of the newly enfranchised blacks, the Northern white men (called "carpet-baggers") who participated in the effort to set up a negro government in the Southern States and a modicum of native whites who cooperated with them, known as "scalawags." The Kuklux movement was an effort of the first class to destroy the control of the second class.

#### SOME OF THE METHODS

"To control the negro," says Professor Fleming, "the Klan played upon his superstitious fears by having night patrols, parades and drills of silent horsemen covered with white sheets, carrying skulls with

coals of fire for eyes, sacks of bones to rattle and wearing hideous masks. \* \* \* Mysterious signs and warnings were sent to disorderly negro politicians. The whites who were responsible for the conduct of the blacks were warned or driven away by social or business ostracism or by violence. Nearly all Southern whites \* \* \* took part in the Kuklux movement. As the work of the societies succeeded they gradually passed out of existence. In some communities they fell into the control of violent men and became simply bands of outlaws \* \* \* and the anarchical aspects of the movement excited the North to vigorous condemnation."

The United States Congress in 1871-72 enacted laws intended to break up the Kuklux and other secret societies; several hundred arrests were made and several convictions followed. Much of the violence was checked, but the movement undoubtedly accomplished its prime purposes of giving protection to the whites, reducing the blacks to order, driving out the "carpet-baggers" and nullifying the laws that had placed the Southern whites under control of the party of the former slaves.

It is easy to see from the above sketch whence both the Northerner and the Southerner derive their contrary impressions of the organization. The former remembers the congressional investigations and trials of the Kuklux leaders, the evidence adduced of violence and law-breaking, of the whipping of negroes and of carpet-baggers and even of men being dragged from their beds and slain; the latter remembers, or has had handed down to him the story of the time when, to quote from Woodrow Wilson's "History of the American People," "adventurers swarmed out of the North, as much the enemies of one race as of the other, to cozen, beguile and use the negroes. The white men were aroused by a mere instinct of self-preservation—until at last there sprung into existence a great Kuklux Klan, a veritable empire of the South, to protect the Southern country."

That the occasion which gave rise to the original Kuklux movement was a real crisis, affecting the welfare and happiness of a whole people, the impartial historian of today may well concede; that in meeting the crisis by the means that were used the South was fighting for the preservation of

what it deemed right, even holy, with the only weapon at its command, is hardly to be controverted.

### KUKLUX KLAN TODAY

What crisis, what menace to the ideals and the civilization of any considerable body of people exists today to give vitality to the revival of the Kuklux Klan after the lapse of fifty years? Unless some satisfying answer can be made to that question, the subject is hardly one to be treated seriously; unless there exists (or it is believed by a great number of persons that there does exist) a real need for the banding together of native-born white Christians in a militant organization for mutual protection, any organization based on such a premise must inevitably fall to pieces of its own weight. And while the original Kuklux Klan was purely sectional in its activities, whereas the revived Kuklux Klan is extending its field to the entire United States, the ground for its existence and continued growth must be sought in national rather than in local conditions.

Part of the answer to the question just propounded is not difficult to deduce from such of the literature of the Kuklux as is permitted to be distributed to those not affiliated with the organization; part of it is contained in statements by high officials of the organization or published with their sanction.

To every inquirer writing to the Klan's headquarters in Atlanta for information is sent a printed form of questionnaire. Of the twenty questions asked on this paper, which must be filled out and signed before further information is vouchsafed, nine seem to be pertinent to the point under consideration. These are:

WERE YOUR PARENTS BORN IN THE UNITED STATES OF AMERICA?

ARE YOU A GENTILE OR A JEW?

ARE YOU OF THE WHITE RACE OR OF A COLORED RACE?

DO YOU BELIEVE IN THE PRINCIPLES OF A PURE AMERICANISM?

DO YOU BELIEVE IN WHITE SUPREMACY?

WHAT IS YOUR POLITICS?

WHAT IS YOUR RELIGIOUS FAITH?

OF WHAT RELIGIOUS FAITH ARE YOUR PARENTS?

DO YOU OWE ANY KIND OF ALLEGIANCE TO ANY FOREIGN NATION, GOVERNMENT, INSTITUTION, SECT, PEOPLE, RULER OR PERSON?

To the inquirer sending in the questionnaire satisfactorily filled out there become

available pamphlets giving details of the organization's present purposes and principles. To quote from one of these pamphlets:

The purpose of the modern Kuklux Klan is to inculcate the sacred principles and noble ideals of chivalry, the development of character, the protection of the home and the chastity of womanhood, the exemplification of a pure and practical patriotism toward our glorious country, the preservation of American ideals and institutions, and the maintenance of white supremacy. \* \* \* Only native-born white American citizens who believe in the tenets of the Christian religion and who owe no allegiance of any degree or nature to any foreign Government or institution, religious or political, or to any sect, people or persons, are eligible for membership.

### CLASSES THAT ARE BARRED

Five classes of persons are at once barred by this pronouncement. They are: (1) negroes, (2) Japanese and other Orientals, (3) Roman Catholics, (4) Jews, (5) all foreign-born persons.

Without questioning the right of the Kuklux or of any other organization to set up its own qualifications for membership and to exclude any individual or any group of individuals, it is of interest to note that the four groups particularly excluded in this instance are, each in degree varying with local conditions, the storm-centres of present-day racial antagonisms in the United States.

Anti-Semitic propaganda is more open and active in America than at any time in recent history.

To the mass mind of America the Irish question is chiefly a religious question; the issue at stake the control of Ireland by the Roman Catholic Church, and the persistent effort of the American supporters of Sinn Fein to arouse antagonism in this country toward England a subtle piece of religious propaganda. Quite regardless of its truth or falsity, there can be no doubt of the wide acceptance of this view by a large proportion of Protestant Americans.

That the Japanese question is a tremendously vital issue west of the Rockies is a familiar fact to every newspaper reader; it is equally true that the anti-Japanese sentiment of the Pacific Coast is shared by a large proportion of Americans in other sections, who have become convinced that the interests of the nation are seriously

menaced by Japanese occupation of California lands and that war with Japan may occur at any time.

### THE NEGRO QUESTION

New impetus has been given to the negro question, more particularly in the South, but to some extent throughout the country, by conditions arising from the war. The great demand for labor during the war brought about the greatest migration in history of negroes from the South to the North. High wages, North and South, raised the negro for a time to unheard-of pinnacles of affluence. Then the sudden slump in business threw back into idleness thousands who had become accustomed to "easy money." Many of these found themselves hundreds of miles from their homes with no means of returning; large fractions of the whole number had forgotten

their old habit of docility in their brief period of financial independence and ventured to assert their rights as citizens in a manner offensive to the dominant white race.

Renewed agitation for the recognition of the negro on the plane of complete equality with the whites was one of the inevitable results of the war conditions that put the negro worker on the same economic plane with the white workman; the negro soldier and officer into the same uniform and the same service as the white soldier. The demands of the National Association for the Advancement of the Colored People for the abolition of segregation of the races in the Government departments at Washington, the reduction of Congressional representation in the Southern States in proportion as the negro is disfranchised, the pardon of the imprisoned soldiers of the Twenty-fourth Infantry held in Leavenworth for

A "DEN" OF THE KUKLUX KLAN IN UNIFORM

the Houston riots, the abolition of "Jim Crow" cars on interstate railroad trains and the appointment of negro Assistant Secretaries of Labor and Agriculture are pointed to by officials of the Kuklux Klan as proof that white supremacy is now acutely and nationally menaced. The N. A. A. C. P., in turn, has included in its published statement of purposes "The defeat, by every legitimate means, of the nefarious Kuklux Klan, both South and North." So the issue here, at least, is squarely joined.

#### NATIONAL EXPANSION SOUGHT

It is on such grounds as those just enumerated that the revived Kuklux Klan bases its expectation of extending beyond the boundaries of the South. It has been in existence, this present-day successor of the old Kuklux, since the latter part of 1915, when it was chartered as a legitimate fraternal organization by the State of Georgia. The originator of the idea of reviving the old institution under the old name was Colonel William Joseph Simmons of Atlanta, now Professor of Southern History in Lanier University. Associated with him in the application for a charter from the State of Georgia were three surviving members of the old Kuklux Klan. By virtue of this fact the new Klan declares itself, in its constitution, to be the only legitimate heir of the original organization, with sole rights to all its signs, symbols, regalia, &c. It is organized on similar lines to the original Kuklux Klan, with similar, though slightly different, titles for its officers. Colonel Simmons is the "Imperial Wizard" or supreme head of the order, the full title of which is "The Invisible Empire, Knights of the Kuklux Klan." The old regalia of white robe and pointed cap covering the face of the wearer is retained by the new organization, which claims to be fully organized throughout the South and to have a considerable number of local nuclei planted in half or more of the States.

#### PRETENDS TO UPHOLD LAW

Co-operation with the authorities of the law is set forth as one of the tenets of the revived Kuklux Klan. "Because certain individuals at various times have committed acts of violence under cover of darkness and shielded by masks and robes some-

what resembling the official regalia of the Kuklux Klan," says one of the organization's official pronouncements, "they have been classed as members of this organization. The Kuklux Klan is a strictly law-abiding organization, and every member is sworn to uphold the law at all times and to assist officers of the law in preserving peace and order whenever the occasion may arise, and any member violating this oath would be banished forever from the organization.

"Among the principles for which this organization stands are: Suppression of graft by public office holders; preventing the causes of mob violence and lynchings; preventing unwarranted strikes by foreign agitators; sensible and patriotic immigration laws; sovereignty of State rights under the Constitution; separation of Church and State, and freedom of speech and press, a freedom such as does not strike at nor imperil our Government or the cherished institutions of our people."

Among the membership of the old Kuklux Klan were many Northern soldiers, members of the Army of Occupation sent into the South after the Civil War to preserve order and maintain the reconstruction governments in power. In the new Kuklux Klan, it is stated, are to be found State, county and municipal officials of every degree, police officers and men, as well as a number of United States officials, Senators and Members of Congress.

#### ONE INSTANCE OF OPERATIONS

How the Klan operates may best be indicated by quoting from statements publicly made by authority of its national officials. Birmingham, Ala., recently had a "wave of crime." The Kuklux Klan offered its services to the city officials to help stamp out evil conditions. The offer was accepted, and the 700 local members directed their efforts, in secret, against criminals and "undesirables" of both races. Their claim that they rendered valuable assistance to the police is supported by the fact that they assert that the Chief of Police of Birmingham sent a telegram to the Chief of Police of Nashville, Tenn., when he learned that a branch of the organization was to be established there, heartily endorsing the Kuklux movement. They claim that many such letters and telegrams of endorse-

ment from Mayors, Sheriffs and Chiefs of Police of Southern cities are on file in the Klan's headquarters.

In Jacksonville, Fla., the method of a public parade at night was adopted. Several hundred members of the Klan, garbed in robes and hoods, rode through the city, scattering printed placards which read:

WARNING—UNDESIRABLES, BOTH WHITE AND BLACK, WE KNOW YOU. THIS LOAFING, THIEVING AND PROWLING AROUND MUST STOP.

KNIGHTS OF THE KUKLUX KLAN.

A high official of the Kuklux Klan told the writer of a dramatic though less spectacular demonstration of the organization's methods. He stated that in one city, in which it was well organized, an investigation into underlying conditions making for crime and disorder indicated that the chief trouble lay in the manner in which one of the city's courts was conducted. A special committee, he says, with an expert investigator employed, spent weeks in drawing up what amounted to an indictment of the Judge of this court. The document was handed to the Judge with a letter, signed by the Kuklux Klan, asking him to read the charges and to realize that his future course would be as carefully scrutinized as his past actions. He stated there was no threat, no demand for his resignation; on the contrary, the belief was expressed that he could and would reform the conditions in his court. "A year later," said the official

who told this story, "I was talking with a very eminent jurist who was familiar with the conditions in this court. He said that the improvement that had been observed in its conduct had been a matter of the greatest gratification to him, and that he had been unable to account for it until I told him how it was brought about."

The power of the Kuklux Klan today, like that of its prototype of half a century ago, lies in the secrecy and mystery with which it and its operations are surrounded. Its members are known only to each other and may not disclose the fact of their membership to outsiders. Outside the Klan none can know whether its warnings are backed by ten men or thousands in any community. To the assertion that there is no need and no room for such an extra-legal institution to enforce law and order, the officers of the Klan point to the newspaper chronicles of crime and disorder in every part of the country. To the charge that they are a negro-whipping organization, thriving on race prejudice, they reply that no law-abiding person of any race, creed or color has anything to fear from them; they assert that they are the friends of every self-respecting man, black or white, but that they maintain the inherent superiority of the Caucasian stock, and that their order intends to use every legitimate means to retain it in control of America.

## SWISS PROTEST HAPSBURG INTRIGUES

[PERIOD ENDED AUGUST 12, 1921]

SWISS newspapers continue revelations concerning the activities of Hapsburg propagandists who take advantage of the right of asylum for purposes of their campaign to restore monarchy in the Danubian lands. The centres of this propaganda are at Prangins Castle, residence of the ex-Emperor Charles, further at Basle, Luzerne, Montreux and Wartegg, where exiled Archdukes and their friends have pitched their tents. There is even an organized exchange for couriers and publicity men at an Ouchy hotel. There are complaints that the Federal authorities countenance these activities and even insure the safety of the arch plotter, the ex-Emperor Charles, by assigning detectives to him to "protect"

him against possible attempts on his life. Special attention is called to the rôle of the Hungarian Prince Windischgraetz, whose political intrigues as well as loose living are an open scandal. Other agents, especially active in the Swiss press, are one Baron Savenau and the Papal Count Voltolini. These intrigues, the papers say, may result in embroiling the world in another war. The Hapsburg ex-monarch was granted the right of asylum on his express promise not to meddle in politics, asserts the Swiss press, and "now he again signs himself, in telegrams addressed to his Budapest partisans, as 'Apostolic King of Hungary.' These conditions ought to be stopped by federal action."

# GERMAN REPARATIONS AND THE TREATY PENALTIES

*Story of the London Conference and the deadlock that led to the allied occupation of more territory on the Rhine—Rejection of Dr. Simons's counter-proposals followed by the seizure of three Rhenish cities—Lloyd George's indictment and Germany's defiance*

[PERIOD ENDED MARCH 12, 1921]

ONCE again German towns on the Rhine are in the grip of French and other allied forces, and Germany faces the seizure of her Rhenish customs to compensate the Entente nations, at least in part, for the losses caused by the war.

The decision by the allied Premiers to put into immediate effect the penalties provided by the Versailles Treaty followed the flat rejection by France and Great Britain of the counter-proposals which Dr. Walter Simons, the German Foreign Minister, presented as an alternative to the demands of the Allies. Dr. Simons declared that Germany had made her best offers, and could do no more. The military forces of France, Great Britain and Belgium, already prepared for the contingency, then moved forward (March 8, 1921), and occupied the Rhine towns of Düsseldorf, Duisburg and Ruhrort, which they still hold, while the home Governments set to work to draft a plan under which all Rhine customs dues could be collected for the benefit of the Allies. The occupation was not resisted, and up to the time when these pages went to press no untoward incidents had occurred. Germany, however, was much incensed, and the French invaders were apprehensive that industrial troubles would arise from the threatened action of the Rhine industrialists, notably Herr Stinnes, to close down all large factories.

The story of how the German delegates to the London conference rejected the allied plans for reparation, and of how their own counter-proposals were bluntly rejected by the allied Premiers, has its dramatic features. Long before the London conference was held Germany had given notice that her delegates, if they went at all, would go only empowered to make counter-proposals, not to accept the demands made by the Allies

some weeks before in Paris. The Allies, on their part, had similarly given notice that they would refuse to dicker, and would put their plans before the Germans unconditionally. As it developed, both parties remained faithful to their respective programs, and the resulting deadlock might easily have been discounted in advance.

## VIEWPOINT OF THE ALLIES

Forced by financial and economic distress at home, especially in the devastated area, France was determined to force Germany to consent to a definite and adequate scheme of reparations. Preliminary dissensions with her ally, England, were resolved, and Premier Briand and Lloyd George were solidly united in principle when the German delegation, headed by Dr. Walter Simons, the German Foreign Minister, arrived in London on Feb. 28. Some 245 notes had been sent to the allied Governments by Germany since the signing of the Treaty of Versailles; these messages, taken together, bulked larger than the treaty itself. Meanwhile, the French alleged, Germany had done but little to fulfill the terms laid down by the pact, and further delays and evasions could not be tolerated. The Germans, on their part, insisted that they had sought faithfully to comply with the conditions laid down, and their attitude was one of defiance to the threats of penalties which the Allies held over their heads.

Ten days before the Germans arrived Lloyd George was attacked on the floor of the House of Commons for the policy which he, with his French colleagues, was preparing to follow. He made vigorous and characteristic reply. He had, he said, promised to make Germany pay, but he had added the words "to the limit of her capacities." What that capacity was the allied experts

had determined. The question that remained was, Would Germany pay?

### THE GERMAN ATTITUDE

Meanwhile in Berlin the German experts were working feverishly to draw up their own scheme of reparations. Before the Federal Economic Council on Feb. 24 Dr. Simons was asked outright by Herr von Braun, the President, what his attitude would be in London. The question was couched as follows:

You are making ready to go to London in the name of this assembly. I ask you, are you determined unflinchingly to uphold the unanimous refusal of the German people to the bitter end necessary, and only make proposals compatible with the necessities of the nation's life?

Amid dead silence Dr. Simons rose, and in a voice hoarse with emotion, replied:

We have done everything within human possibility, especially as far as disarmament is concerned. \* \* \* In a military sense we have literally denuded ourselves. Those who still accuse Germany of aggressive intentions must be mad. As to the Entente reparation demands, they are utterly impossible, and I shall say so in London. Common sense was on strike when they were concocted. \* \* \* I shall go to London, my ears ringing with the cry of all Germany, "Never give in to the impossible!"

This declaration was greeted with wild and enthusiastic cheers. Dr. Simons and his official staff left for London on Feb. 26. For the first time since 1914 the English capital on Feb. 28 became the temporary abiding place of a small army of German officials. The German delegation was made up of about sixty persons, including secretaries and general workers. On their arrival they were met at the station by representatives of the British Foreign Office. There were no public demonstrations, save that the porters refused to carry the Germans' luggage and they were compelled to bear them to the automobiles in waiting with their own hands. The finest suites in the Savoy Hotel had been engaged for them, and the delegation, weary after its journey, retired at once. One exception was General von Seeht, small and dapper, in blue mufti and wearing the monocle so popular with the officers of the Kaiser's régime. The General came down from his room and sat in the hotel lobby, examining with great interest the hotel guests as they came and went.

### FIRST SESSION OF THE CONFERENCE

The first session of the conference took place on March 1 at Lancaster House, better known as the London Museum, instead of at St. James's Palace, which was the scene of a royal levee. Only a small crowd

DR. WALTER SIMONS

*German Foreign Minister, who refused to sign the allied reparation demands at the London Conference.*

witnessed the arrival of the German delegates. Premier Lloyd George, who came on foot, and Premier Briand were both greeted with cheers.

The respective delegations assembled in the dining room. Germany's nine delegates faced sixteen British and French delegates, with Lloyd George in the centre, and the Italian, Japanese and Belgians occupying side tables. The British Premier opened the proceedings briefly. Dr. Simons then arose and submitted what Lloyd George in his preliminary remarks had described as "the German observations on the Paris proposals." These proposals were briefly as follows: That Germany should pay 226,000,000,000 gold marks (about \$56,000,000,-

000) by a system of annual payments extending over a period of forty-two years, and should consent to the payment of a 12 per cent. tax on all German exports.

From the outset of Dr. Simons's exposition it was clear that the proposals which the German delegation had brought with them from Berlin were wholly at variance with the scheme of reparations decided on by the Allies. Dr. Simons said that the German Government was not in a position to accept the Paris proposals, and therefore put forward counter-proposals of its own.

#### THE GERMAN COUNTER-PROPOSALS

Proceeding to definite suggestions, Dr. Simons proposed that the Allies should abandon the scheme for payment over a long series of years, and should consent to an international loan. The amount of this loan he evolved as follows: the sum fixed by the Paris scheme was to be discounted at 8 per cent., leaving a balance, under present rates of exchange, of 50,000,000,000 gold marks, or £2,500,000,000. Against this should be charged considerable payments which the German experts estimated had been made by Germany, and concerning which the Allies and Germany were still in dispute. The German experts held that Germany had already paid 20,000,000,000

marks, on which estimate the remaining obligation would be only 30,000,000,000 marks, or £1,500,000,000. This, said Dr. Simons, was the utmost Germany could pay. She was ready, however, to have a joint commission appointed to examine the value of the reparations which the German experts had calculated as already paid.

Dr. Simons then proposed the floating of an international loan, on the understanding that Germany would undertake to pay interest and sinking fund charges. But the experts agreed that the largest international loan which it would be possible for Germany to float at present would be 8,-

the Allies over the indemnity

000,000,000 marks, or £400,000,000, and to raise even that sum would be possible only if such privileges as freedom from income tax were conceded. In conclusion, the German Foreign Minister declared, his country was willing to engage itself to pay interest and other charges on a loan of 8,000,000,000 marks. The remainder of the estimated 30,000,000,000 marks, which could not be covered by a loan, 22,000,000,000 marks would remain quiescent, Germany, however, engaging herself to pay interest and other charges. As final liquidation, the German

GENERAL DEGOUTTE  
*Commander of the French troops in Germany*

experts thought that Germany would not reach her maximum industrial output until 1926, but they calculated that Germany could pay annually for the five years intervening 1,000,000,000 marks, or £50,000,000, toward liquidation, as well as toward interest and other charges both on the balance debt and on the international loan proposed. In 1926, he concluded, the situation should be reviewed, and a new financial arrangement extending over thirty years could be concluded. As a condition of this whole offer, however, Germany demanded the retention of Upper Silesia, where a plebiscite between the Germans and the Poles was pending.

#### ALLIES' RECEPTION OF GERMAN PROPOSALS

The indignation with which these counter-proposals was received by the allied Premiers was reflected in the speech made by Premier Lloyd George, the text of which is given elsewhere in this issue. After a brief exchange of views with other members of the Supreme Council, Premier Lloyd George said:

The German Government appears to have a complete misunderstanding of the realities of the situation, and the Allies have already agreed that the German proposal is one they cannot examine or discuss as an alternative to the Paris proposal.

The conference was then adjourned.

While Dr. Simons was cabling to his Government for further instructions, the allied Premiers were discussing the application of penalties. Military measures had already been prepared, and the final word was withheld only pending the presentation by the German delegates of a new proposal. The new instructions came on March 4, and Dr. Simons at once set to work on a new German scheme for reparations, as well as on a formal reply to the charges made by Lloyd George in his speech of rejection, especially as regarded Germany's responsibility for the war and the failure of Germany to establish proper taxes, from the revenue of which they could have met their obligations. The pessimism of the German delegates was as plainly apparent as the general public approval of the points made by Lloyd George in his convincing speech. Dr. Simons, pending the second session of the conference, made a public statement (March 5) in which he said:

I must answer Mr. Lloyd George calmly and coolly, dispassionately, and, if possible, impartially. On Tuesday we were both talking through windows. He was talking to the British public, but more especially to the French. I was putting the case of my people. I must point out that by signing the Treaty of Versailles Germany admits that she lost the war. We agree to statements of guilt and to a judgment. We see the justice of this judgment from the Allies' point of view. We admit it. But I must point out that you cannot expect a nation to come into court time and time again loudly proclaiming her guilt. Germany will not stand at Canossa every week. \* \* \* My people will not have the Paris figures. Rather than bring about the economic strangulation of the country they will submit to the sanctions. I have received countless messages from Germany, from people in the towns and areas affected by the sanctions, telling me that they do not mind the Allies' measures.

His position, Dr. Simons continued, was not a happy one. On the one hand, he understood the need of the Allies for large sums of money immediately, the reason for the 42-year period of payment, the danger of a French invasion on the Rhine. On the other hand, he understood the despair of his countrymen on being asked to do the impossible, and was fearful of the allied proposals on the workmen of Germany. He expressed, however, the hope that the Allies would reconsider his proposals at least as a basis for a new provisional arrangement.

The Germans submitted new proposals on the morning of March 5 in a more or less formal session at the house of Lord Curzon. The initiative for this meeting came from Dr. Simons, and was communicated through Premier Briand. Lord Curzon and Lloyd George represented Great Britain, Premier Briand and M. Loucheur, the French Financial Minister, appeared for France, and Dr. Simons brought Herr Bergmann, one of the German experts. When the six delegates had assembled, Lloyd George said to Dr. Simons: "You have said that you have a communication to make to us. We are ready to hear it."

Dr. Simons's opening remarks, disclaiming German responsibility for the war and declaring that the Paris decisions meant the ruin of his country, were received impatiently. Dr. Simons then formulated the new offers. Germany, he said, was disposed to accept the reduction of the figure of 20,000,000,000 marks fixed by the German experts as reparations already made to the sum of 7,000,000,000 marks. He then proposed again the scheme for an international loan, which he advocated increasing from £400,000,000 to £500,000,000. On this basis he suggested increasing the annual payments on the principal in such a way as to complete the payments within thirty years instead of forty-two.

#### REJECTION OF FINAL OFFER

Lloyd George denied that this offer held any new features. The allied experts, however, he added, would go into the matter.

The crisis in the negotiations was reached in formal session at Lancaster House on March 7. At the morning session the German delegates formally presented their new proposals. A second meeting was held late in the afternoon. When all the delegates were seated, Lloyd George rose to make a statement on behalf of the allied Governments. His manner was grave and restrained, and he spoke with evident realization of the serious import of his words.

It was with much regret, he began, that he found himself compelled to say that Dr. Simons's proposal did not represent such an advance on the Germans' first proposals as to justify postponing execution of the sanctions and penalties laid down by the treaty. He and the other allied representatives deeply deplored this necessity. The general

view that a settlement was necessary was justified, but the German proposals completely failed to satisfy the Allies, who wanted to know exactly where they stood. "Until we get proposals from Germany which will be a definite, unchallenged settlement," declared the British Premier, "there can be no peace between us."

Lloyd George then analyzed the German counter-proposals. He pointed out the fact that though the Germans seemed to be making arrangements for the next five years, their appended condition that these arrangements would be contingent on Germany winning the plebiscite in Upper Silesia nullified in effect the whole proposal. If Germany lost the plebiscite, the whole engagement would fall to the ground. "This is not a proposal for five years," declared Lloyd George. "It is a proposal for five weeks."

And even if Upper Silesia went German, said the Premier, there was no proposal made for the period following the specified five years, nothing on which the Allies, hard pressed for money to meet their tremendous post-war expenses, could raise a penny. The German proposals, moreover, held disquieting aspects. In order even to pay the low annual payments which she proposed for that period, Germany would have to borrow, and must borrow on a priority basis, so that after the first payments were made the income of the following years would be mortgaged in advance.

#### ADMISSION OF GUILT FUNDAMENTAL

The British Premier then attacked the German Foreign Minister's denial of German responsibility for the war, which, he declared, was the very basis of the Treaty of Versailles. Not only did Dr. Simons refuse to accept that basis, but he appealed to "history" for a revision of the sentence. When would that appeal begin? He believed Germany's inclination was to make it the limit of the five-year period specified, when an appeal for revision was to be expected. The Allies, he declared, could not negotiate upon this basis. In fact, the admission of responsibility by Germany was fundamental with the Allies. The whole treaty depended upon it, and no amicable relations could be entered into until that admission came.

The Allies insisted, he said, on an immediate settlement of the amount of payments and factors automatically regulating the same. [He referred here to the proposed 12 per cent. tax on German exports, or, if the penalties were applied, 50 per cent. and of the method of payment.] Paper promises were worthless. In the interests of both the Allies and of Germany, a definite settlement was imperative. "Proposals such as we have heard," he declared, "are not a settlement. They simply evade and postpone a settlement."

The British Premier concluded with a telling comparison between the financial burdens forced on France and England and those with which Germany had to cope. Even under the Paris proposals Germany would have to pay only one-fourth of what Great Britain alone must find for war debt charges and pensions, with a million unemployed: only one-ninth of what France must find, although Germany's population was greater than that of either of the two allied nations. And yet Germany spoke of this arrangement as a colossal sacrifice!

Germany, declared the British Premier in conclusion, did not realize the essential facts of the situation; this fact had impressed him more and more as he had attended the sessions of the conference. The difficulty of paying across frontiers he admitted, but this could be overcome by any well-considered arrangement for deducting from the price of German sales to allied countries a proportion of the purchase money.

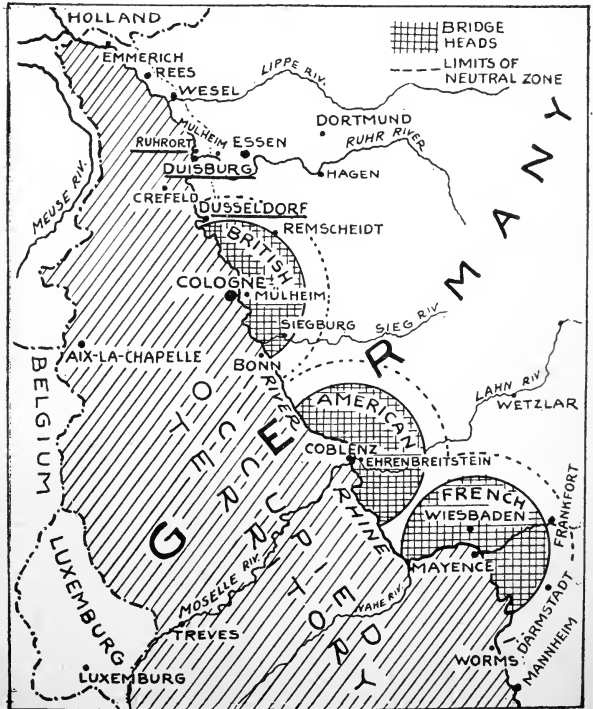

GERMANY'S DEFIANCE

Dr. Simons then asked for a brief adjournment to discuss the Premier's reply with his colleagues. When the conference was resumed he rose and made the following statement:

Germany, said the German Foreign Minister, would agree to the Paris decisions for five years, subject to Upper Silesia remaining German. The allied proposal that allied nationals should pay to their Governments

50 per cent. on what they owed Germany for purchases had been discredited in German eyes by its being included in the penalties. He did not admit the allied contentions regarding German taxation. He laid emphasis on his proposal for an international loan. He reiterated his denial of Germany's war responsibility. He pointed out Germany's poverty, and ended by declaring that Germany would appeal against the Allies' decisions to the League of Nations. He finally placed the blame upon the Allies for the breaking off of the conference. The Allies, he declared, had given Germany no time to bring forward new proposals. "And now," he concluded, "the whole atmosphere of the discussion will be embittered by the penalties."

These were his last words, and the conference at once finally adjourned. Dr. Simons on his return to the Savoy Hotel made a statement which showed considerable bitterness against the French. The five-year proposal, he declared, should have been accepted. The Allies should have given the Germans at least a week in which to frame new proposals. The application of

MAP OF THE RHINE REGION OCCUPIED BY ALLIED FORCES, INCLUDING THE NEW TERRITORY TAKEN OVER AT RUHRORT, DUISBURG AND DUESSELDORF

the sanctions would make all future negotiations impossible. Dr. Simons and his delegation left London on March 8.

Lloyd George, on his part, appeared before the House of Commons at the evening session and made a statement which recapitulated his words at the last meeting of the conference. He admitted that the Allies would have much preferred an amicable settlement, but his observation convinced him that Dr. Simons's hands were tied by German public sentiment to such an extent that he was virtually unable to make a satisfactory offer. The Allies had therefore decided that the penalties must be applied. Instructions had been given Marshal Foch for the occupation of the Rhine towns decided on, which was scheduled to begin the following day. General Degoutte, the French commander, had received secret instructions to advance the day before. The patriotic spirit of the French ran high, and there was general rejoicing in Paris over the invasion order.

#### THE ALLIED OCCUPATION

The three German towns of Düsseldorf, Duisburg and Ruhrort were occupied according to plan by French, British and Belgian troops on March 8. The allied troops were already on the march the night before. The occupation was effected quietly and no resistance was encountered. The French moved from the French zone in the south and the British and Belgians from the east. When dawn came the advance guards, led by tanks and machine-gun corps, moved over the Düsseldorf bridge. British and French planes flew over the city. All the principal squares and strategic points had been occupied by 7 A. M. The British were represented only by two squadrons of cavalry, as their forces had been depleted by the dispatch of three battalions to Upper Silesia. Ten thousand French and 5,000 Belgians were engaged in the movement. Duisburg and Ruhrort were not occupied till the afternoon. The first act of the allied authorities was to post up a proclamation to the people signed by General Degoutte, Commander-in-Chief of the allied forces. This proclamation began as follows:

The official representatives of the German Government have just presented to the London Conference propositions which show that the German Government does not wish to fulfill the engagements it assumed in signing

the treaty of peace. Before this attitude the allied powers are constrained to pass to penalties. Unanimously they have decided to assure themselves new guarantees in order to force the German Government to execute the clauses of the treaty. In consequence, the allied troops have received orders to occupy as guarantees Düsseldorf, Duisburg and Ruhrort. This occupation constitutes in no fashion a measure of hostility toward the population. Under the reserve of strict observance of orders which the military authorities will judge indispensable to promulgate, there will be no interference with the economic life of the region \* \* \* The allied command intends to maintain in the territories newly occupied a régime of liberty and order in which the prosperity of the country can develop.

No demonstrations occurred, and the general attitude of the populace was one of apathy. The Belgians seized Hamborn, the coaling port of the Thyssen iron works, on March 9. Meanwhile the allied experts in Paris set to work to draw up the plans for the other two penalties prescribed—collection of part of the value of German goods sold to allied countries, and the establishment of control over German customs in the Rhine area. A bill to legalize the collection of 50 per cent. on all German exports was drafted for submission to the English Parliament. Friedrich Ebert, the German President, issued a proclamation on March 8, published elsewhere, which rang with defiance toward the Allies, but which urged calmness, and pointed out that the country was defenseless. Great crowds cheered Dr. Simons and his delegation on their return to Berlin. France declared officially that she planned no annexation of the invaded region. In the British Parliament on March 10, Lloyd George predicted that Germany would change her mind. The Germans denied this emphatically, and waited grimly for the result of the Upper Silesian plebiscite. At the time when these pages went to press (March 15) there were evidences of a slackening down of industry in the invaded districts, and the French were apprehensive of a plot, engineered by Hugo Stinnes, the coal magnate of the Ruhr region, to create industrial unrest by closing down all factories.

The attitude of neutrality followed by America was maintained. The American forces already on the Rhine took no part in the new invasion. Meanwhile, following orders issued by President Wilson, all American representatives on the Reparations

Commission were withdrawn. One of the last official acts of Mr. Wilson was the sending of a special message to Congress recommending that Belgium be allowed to pay her pre-armistice debts to the United States by means of German bonds. President Harding has as yet given no intimation of what attitude he will assume in view of the new situation created by the invasion.

The Reparations Commission on March 16 delivered the following official communiqué to the Berlin Government:

Article 235 of the Treaty of Versailles stipulates that Germany shall pay before May 1, 1921, the equivalent of 20,000,000,000 gold marks, this 20,000,000,000 marks going toward payment of the costs of the army of occupation, the feeding of Germany and the supplying of raw materials, and the balance going to the reparations account.

On March 4, 1920, the Commission on Reparations reminded Germany of these obligations, asking if she would use for payment of the food and raw material imports certain securities owned by the German Empire, German States and private individuals in neutral countries. On June 15 the com-

mission inquired again what the German Government could offer as payment of the 20,000,000,000 marks.

The German Government replied to these two communications by a letter dated June 23, in which it was stated that it would later send to the commission a statement showing how the 20,000,000,000 marks gold mentioned in Article 235 had been paid, or would be paid, by Germany before May 1, 1921.

On Jan. 20, 1921, the commission received the German memorandum, which enumerated and valued the deliveries made by Germany to date, and of which the Germans asked that the value be placed to the credit of the reparations account.

In these conditions the Commission on Reparations has notified the German Government: First, that it must acquit between now and May 1 the balance of the 20,000,000,000 gold marks, and, second, that it must before March 23 make a first payment of 1,000,000,000 gold marks on account of the 12,000,000,000 due.

It should be mentioned that this payment of 20,000,000,000 marks is quite distinct from the reparation payments planned in the Paris accord of Jan. 29.

## GERMANY'S MALEFACTIONS

*Address by* DAVID LLOYD GEORGE

Prime Minister of the British Empire

*A summary of the deeds for which the German Nation is being compelled to pay—Ultimatum of the Allies, delivered March 3, 1921, in reply to proposals that had been made by the German delegates at the London Conference*

**D**R. SIMONS and Gentlemen: I have been asked by my colleagues of the British and Allied Governments to make a statement on their behalf in reply to the speech delivered by Dr. Simons and to the document which he subsequently put in.

The Allied Governments consider that the statement made by Dr. Simons on behalf of the German Government constitutes a definite challenge of the fundamental conditions of the Treaty of Versailles and must be dealt with accordingly.

The Paris proposals, following the line of Boulogne and Brussels, involved substantial relaxation of the full demand of the treaty, both in respect of disarmament and of

reparation. These proposals were tendered in a spirit of concession to induce an amicable settlement with Germany. The counter-proposals mock the treaty.

The Allies have come to that conclusion not only from the character of these counter-proposals themselves, but also from perusal of speeches delivered by Dr. Simons in Germany after the Paris proposals and the support accorded to those speeches in the German press and Reichstag. One of the most serious statements made by him was contained in a speech delivered, if I recollect rightly, at Stuttgart, when he repudiated German responsibility for the war. This repudiation was acclaimed throughout Germany and, therefore, may be taken

to represent the real attitude of Germany toward the Treaty of Peace. For the Allies German responsibility for the war is fundamental. It is the basis upon which the structure of the treaty has been erected, and if that acknowledgment is repudiated or abandoned the treaty is destroyed.

The Allies, therefore, feel that they have to take into account the fact that the German Government, with the apparent support of German public opinion, is challenging the very foundation of the Treaty of Versailles. Proposals such as those made by Dr. Simons are simply the necessary corollary of this new attitude. If Germany approaches her obligations in that frame of mind, such proposals are inevitable. We wish, therefore, once and for all to make it quite clear that German responsibility for the war must be treated by the Allies as a chose judée.

The treaty of Frankfort in 1871 was based on the assumption that France was in the wrong and consequently Germany not merely demanded reparation but payment by France of the whole cost of the war. Germany would never permit France to challenge that verdict, and we must insist that the verdict of the late war, supported as it was by the declared assent of almost the whole of the civilized world, must be respected. Until Germany accepts that position and consents to interpret her obligations accordingly, these conferences will be futile.

Perusal of speeches delivered in Germany and of articles appearing in the German press has driven me reluctantly—very reluctantly—to the conclusion that Germany does not realize in the least the true character of the demands made upon her. I followed these very closely. The German people are under the impression that the demands of the Allies are designed to destroy their great people. Let me say at once that we regard a free, contented and prosperous Germany as essential to civilization and that we regard a discontented and enslaved Germany as a menace and a burden to European civilization. We have no desire to oppress Germany. We simply ask that she should discharge obligations she has entered into and repair injuries inflicted by the war which her Imperial Government was responsible for provoking.

Under the treaty of Frankfort she laid down the principle and acted upon it that the nation that was responsible for provoking a war ought to pay the costs of the war. We are not asking the costs of the war, not a penny. We are not going as far as the principle of the treaty of Frankfort. The war charges of the allied countries in the aggregate are so enormous that it would be quite impossible to ask any country, any single country, to bear them. That we realize. In fact, we are each of us groaning under the load of taxation to pay the debts which each of us incurred to defend ourselves in this war, and to place the whole of them upon one country, we fully realize, would be an impossible proposition. We have, therefore, deliberately in the Treaty of Versailles not asked Germany to pay one single paper mark for the cost incurred by the allied countries in defending themselves in this war.

What have we asked, then, of Germany? I think it is important that the German public should thoroughly understand the character of the demand, because I am certain that they are not appreciating it. We have simply insisted that Germany shall pay reparation in respect of the charges cast upon our respective countries by material damages to property and by injuries inflicted upon the lives and limbs of inhabitants. We have asked for no more and we can take no less.

#### THE BURDEN OF FRANCE

These are not imaginary wrongs; they are injuries the reparation of which is imposing a crushing burden at this moment upon the resources of the allied countries. Take France—France has this year to arrange in her budget for an expenditure of 12,000,000,000 francs toward restoring her devastated areas. This is apart from the gigantic sum she has to provide for pensions. This provision will have to be made year by year for at least ten years. What charge is there in the German budget comparable to this?

I feel certain that the people of Germany have no notion of the devastation wrought in the allied countries as the result of the action of the Imperial Government in August, 1914.

Having regard to the incalculable importance of coming to a real understanding

I think it is vital that the German public should be informed as to the character and extent of the devastation wrought. I cannot help thinking that when they realize it their attitude of mind will change. They are under the impression that the Allies are seeking to extort money out of them beyond their needs, and I am quite sure that they have not the least notion of the terrible extent of the ravages inflicted by the war in the allied countries. I will give a few figures which will indicate the extent of the injuries inflicted in France.

Nearly 21,000 factories have been destroyed. The mines in Northern France have been destroyed and it will take ten years or more to re-establish them. The whole of the metallurgical, electrical and mechanical factories in the devastated area have been wiped out. Four thousand textile factories and 4,000 alimentary factories have been destroyed or stripped of their equipment, which was either taken away to Germany or destroyed on the spot.

One thousand six hundred and forty-nine communes or townships have been completely destroyed. Of 707 townships, three-quarters have been destroyed. Of 1,656, at least 50 per cent. have been destroyed.

#### 630,000 HOUSES DAMAGED

Three hundred and nineteen thousand two hundred and sixty-nine houses have been completely destroyed and 313,675 partially destroyed; that is, 630,000 houses were either completely destroyed or partially destroyed. Twenty thousand six hundred and three factories have been destroyed, 8,000 kilometers of railway, nearly 5,000 bridges, 52,000 kilometers of road and 3,800,000 hectares of soil which must be restored to condition, of which 1,740,000 is cultivated soil.

There is a reduction of 50 per cent. of the total coal production of France, 21,000,000 tons instead of 42,000,000, and these figures are the minimum.

I have passed through this devastated area pretty well from one end to the other, and it is perfectly appalling. The very soil is churned up and destroyed. A good deal of this devastation was wrought through bombardments and movements of war, but an incredible amount of damage was done deliberately with a view to de-

stroy essential means of production. This is true both of France and of Belgium.

[Mr. Lloyd George then quoted General von Bissing's statement at the first meeting of the German Economic Mission to Belgium on June 19, 1915, the "object being to provide that Belgium's recovering industry should not prejudice German industry," and told how great factories were wantonly destroyed, the mechanism taken to Germany and apparatus destroyed by oxyhydrogen flames in order to cripple French and Belgian industries and to make it impossible for them to compete with German industries when the war was over. Mr. Lloyd George continued:]

There is a very numerous class of cases where machinery and equipment was broken up in order to furnish Germany with metal. Many of the mines in the North of France were deliberately destroyed with a view to making it impossible to work them for years, not by bombardment but by deliberate acts of destruction. Machinery in many of the textile and other factories was either destroyed or essential equipment taken away.

Take the case of the French flax industry, a most important industry in France. This was practically wiped out by a process of destroying all machinery, so that Germany, which supplied France before the war to the extent of 8.5 per cent., now supplies 50 per cent. of flax products. Take the case of the blast furnaces and rolling mills in Belgium. They were deliberately blown up by dynamite and the place left in ruins, so that when the war was over Belgian industry would take years to be in a position to compete with Germany. I can supply many other cases where factories in Belgium and France, which constituted a menace to their competitors in Germany, were deliberately put out of action.

#### GERMAN FACTORIES ALL INTACT

On the other hand, the houses of Germany, with comparatively few exceptions in East Prussia, have sustained no damage. The factories of Germany are quite intact. The moment the war was over they were free to manufacture their fabrics and to sell them to the world, while their rivals had their factories and workshops destroyed and their machinery removed or broken up. Therefore, unless reparation is made by Germany, it means that the victors will pay the price of defeat and the vanquished will reap the fruits of victory.

I have been informed by the Belgian Ministers who are present that the destruction of Belgian factories and machinery proceeded to such an extent that the German Army in Belgium deported 150,000 Belgian workmen to Germany on the ground that they were unemployed, but this does not represent the whole of the devastation wrought as a result of the war provoked by the German Imperial Government. I have not given the figures for Italy. I have not given the whole of the figures for Great Britain. I have simply taken these as samples of destruction which took place. There is destruction of millions of tons of mercantile shipping. Great Britain, a country more dependent on its shipping than any other, had 8,000,000 tons sent to the bottom of the sea.

### THE HUMAN LOSSES

But this summary is incomplete without reference to the still more poignant and devastating loss inflicted upon the allied countries by the killing and crippling of multitudes of their young and vigorous men in the prime of their strength. France lost 1,400,000 in killed, and has to pay pensions to 3,500,000 people. The British Empire lost 1,000,000 in killed, and the crippled who are drawing pensions number about 1,700,000. I have not by me the figures for Italy and Belgium.

These casualties represent not merely loss in a country of real strength and capacity for wealth production, but a heavy annual burden upon the resources of a country to maintain the dependents and crippled and maimed who cannot earn a living for themselves. France alone, and Great Britain alone, in this respect bear each an annual burden which is almost three times the amount of the whole annual payment now offered by Germany to meet the claim for damages of all kinds.

Germany, no doubt, has suffered from the war, but in the loss of life it is not comparable, in proportion to the population, to that sustained by France, and as to material damage, that in East Prussia is trivial compared with that which has been inflicted on France.

With all this gigantic injury, what is now offered to France, staggering under the load of expenditure cast upon her by war debt and by this wanton destruction which

made of her richest province a hideous wilderness of ruin and despair, with the urgent need that she should rebuild the shattered homes and restore the factories which are the sole means of livelihood for the poor people who had endured for five years the horrors of war in their devastated provinces, and with her enormous pension liabilities added on the rest?

### WHAT GERMANY OFFERS

What is offered to Great Britain, with her gigantic debt and pension list incurred in enforcing a treaty which her King signed with the King of Prussia, but which was broken by the latter's dependents?

What is offered to Italy and to Belgium to relieve their burdens? What is offered? Not one-fourth of the sum required to repair the damage, and that only on conditions that those who need it most find it out of their own pockets first, on highly privileged terms, when they can with difficulty raise the money in their own markets to carry on the essential work of government. That is the offer.

I cannot understand a psychology which permits the representatives of a country whose Government was responsible for the most devastating war the world has ever seen to come solemnly with such terms to a conference with the representatives of the countries that have been the victims of that devastation.

Had the German Government come here with some proposal which indicated a sincere desire to discharge its obligations, we should have given it the fairest and most patient consideration. If they had said "Forty-two years is too lengthy a period," if they had said "The levy of 12 per cent. upon our exports is not the best method of meeting our liabilities or of ascertaining the amount Germany is at a given moment capable of paying, we have other ways which, while they suit us better, will equally meet the case," we should have sat down at these conference tables with the German delegation to examine in perfect good faith their counter-proposals, with a view to arriving at a reasonable accord. These differences perpetuate an atmosphere of disaccord and distrust, and that is fatal to the peace which is so essential to enable the world to renew its normal tasks.

We know that we were prepared to make

all legitimate allowances for the real difficulties under which the German and all other people labor as a result of the war, but these proposals are, frankly, an offense and an exasperation. And as one who is anxious that real peace should be restored in Europe between all its peoples, I deeply deplore that such proposals should ever have been put forward, for they indicate a desire not to perform but to evade the obligations which Germany has incurred, obligations which are far short of those which, according to the precedent she herself set in 1871, we might have imposed.

#### GERMAN TAXATION INADEQUATE

Had the German Government imposed taxation on their people comparable to the taxes laid by the allied countries on their citizens, they would be in a better position to confront us at the conference table. But here again the vanquished insist upon being let off more lightly than the victor. The German debt, nominally high, is not even nominally as heavy in percentage to the population as that of Great Britain. Britain during the war raised £3,000,000,000 in taxation toward the cost of carrying on the war. Germany made no such effort.

Today her apparently gigantic debt has been reduced almost to the amount of her pre-war liabilities by a process of depreciating her currency. She has nominally imposed very heavy direct taxes on wealth, but every one knows that they are not fully collected. Her indirect taxes, which are taxes which affect the bulk of the population, are ridiculously low compared with Great Britain's.

[Lloyd George then gave the figures from which he deduced that Germany's failure to bring up her taxation to the level of the taxes in the allied countries constituted in itself an infringement of the Treaty of Versailles, adding that until she imposed at least an equal taxation she was not in position to plead that she was unable to meet the demands of the Paris proposals. Continuing, the British Premier said:]

Now I come to the conclusion of this statement. As I indicated in a short statement I made on Tuesday as President of this conference, the counter-proposals do not even afford a basis for examination or discussion. They are simply provocative. Further reflection confirms our first impression. It would therefore be a sheer waste of time to devote any sittings to

their consideration. Allies have been conferring upon the whole position and I am now authorized to make this declaration on their behalf:

#### BREACHES OF THE TREATY

The Treaty of Versailles was signed less than two years ago. The German Government has already defaulted in respect of some of its most important provisions—delivery for trial of criminals who have offended against the laws of war, disarmament, payment in cash or in kind of 20,000,000,000 of gold marks, these are some of the provisions.

The Allies have displayed no harsh insistence upon the letter of their bond. They have extended time. They have even modified the character of their demands. But each time the German Government failed them. In spite of the treaty and of the honorable undertaking given at Spa, the criminals have not yet been tried, let alone punished, although the evidence has been in the hands of the German Government for months. Military organizations, some of them open, some clandestine, have been allowed to spring up all over the country, equipped with arms that ought to have been surrendered.

If the German Government had shown, in respect of reparations, a sincere desire to help the Allies to repair the terrible losses inflicted upon them by the act of aggression, of which the German Imperialist Government was guilty, we should still have been ready, as before, to make all allowances for the legitimate difficulties of Germany. But the proposals put forward have reluctantly convinced the Allies either that the German Government does not intend to carry out its treaty obligations or that it has not strength to insist, in face of selfish and shortsighted opposition, upon the necessary sacrifices being made.

If that is due to the fact that German opinion will not permit it, that makes the situation still more serious and renders it all the more necessary that the Allies should bring the leaders of public opinion once more face to face with the facts.

The first essential fact for them to realize is this, that the Allies, while prepared to listen to every reasonable plea arising out of Germany's difficulties, cannot allow any

further paltering with the treaty. We have therefore decided, having regard to the infractions already committed and to the determination indicated in these proposals that Germany means still further to defy and explain away the treaty and to the challenge issued not merely in these proposals but in official statements made in Germany by the German Government, that we must act upon the assumption that the German Government are not merely in default, but deliberately in default; and unless we hear by Monday that Germany is either prepared to accept the Paris decisions or to submit

proposals which in other ways are equally satisfactory to discharge her obligations under the Treaty of Versailles, subject to the concessions made in the Paris proposals, we shall as from that date take the following course under the Treaty of Versailles: The Allies will immediately occupy Duisburg, Ruhrort and Düsseldorf, on the right bank of the Rhine, levy a tax on the sale price of German goods in allied countries and establish a customs line on the Rhine.

*[The full story of the London conference, whose climax was marked by this speech, is told in the preceding article, pages 26-33.]*

## TO INVESTIGATE PHILIPPINE CONDITIONS

**MAJOR GEN. LEONARD WOOD** was requested by President Harding to go to the Philippines as the special representative of the President to investigate and report on the question of independence for these Pacific possessions. The General will be accompanied by a military aid and perhaps by W. Cameron Forbes, former Governor General of the islands. It is expected that the mission will be absent from this country from three to four months. The General, however, will not be relieved of his command of the Sixth Corps area during his absence.

The Trustees of the University of Pennsylvania have offered General Wood the position of Provost at a salary of \$25,000, and it is understood he has decided to accept.

Retiring after eight years of distinguished service as Governor General of the Philippines, Francis Burton Harrison received a demonstrative farewell as he took ship at Manila for home on March 5. Thousands joined in the ceremony, as nearly all the organizations in Manila formed a parade from Malacanang, the Governor's residence, to the House of Representatives. There addresses were delivered in English and Tagalog. In the evening a banquet to him was attended by several thousand persons.

Mr. Harrison's last official message to the Filipino people follows:

My greatest regret on leaving my post is the fact that I will no longer serve the people

of the Philippines as a public official. Wherever I may be, however, I will do everything in my power for the advancement of the Philippine cause. I will work for its sacred ideals. I feel the most profound gratitude for the generosity and sympathy with which my administration was helped by the people of these islands.

Dr. Guy Potter Benton of New York, former President of the University of Vermont, was elected President of the University of the Philippines on March 8, at a yearly salary of \$15,000, with an extra allowance of \$1,500 a year for house rent. Dr. Benton signed a contract for one year, with the privilege of renewing it for nine years more. He arrived in Manila six months ago as an educational consultant for the Philippine district of the United States Army.

Breaking the world's record for long-distance wireless telegraphy, the United States Army on March 8 sent messages from Cavite, Philippine Islands, to Washington, a distance of 10,000 miles. The Cavite station sent test messages 7,000 miles to the wireless station on Goat Island, California, whence they were forwarded to San Diego, and on to Washington. This record makes it possible to do away with the present system of sending cable messages via the Midway Islands, Guam and Honolulu. A new automatic control eliminates all handling of messages between originating and receiving points, making it possible for warships 3,000 miles from a shore station to communicate directly with Washington.

*A dramatic moment of Inauguration Day: President-elect Harding, a few minutes before his own inauguration, is mounting the Senate steps, with Senator Knox and Congressman Cannon, to witness the inauguration of Vice President Coolidge. President Wilson remains alone in the car, being unable to walk up the steps with his successor*

## PRESIDENT HARDING'S INAUGURATION

*Simple but impressive ceremonies mark the beginning of a new Administration—Addresses of the President and Vice President—Personnel of the new Cabinet, with other appointments—How Europe received the policy outlined in the inaugural address*

**E**XACTLY eight years and eight minutes after his predecessor had been inducted into office, Warren Gamaliel Harding became President of the United States, March 4, 1921. In accordance with his wishes, the ceremonies were of the simplest character, and yet lacked nothing of impressiveness. A crowd much smaller than usual saw the retiring and incoming Presidents take the historic ride down Pennsylvania Avenue. The Presidential parade, consisting merely of a troop of cavalry and a dozen automobiles, was greeted with frequent bursts of applause and cheering along the route.

The party proceeded to the Senate Chamber, where President Wilson signed a few belated bills and then departed for his new home, physical weakness preventing him from further participation in the cere-

monies. Mr. Harding stayed long enough to witness the induction into office of Vice President Coolidge and then proceeded to the east portico of the Capitol. There a small kiosk of Corinthian architecture had been erected to shelter the participants in the inauguration exercises.

### SIMPLE CEREMONIES

A great throng had gathered in the plaza. The sky was brilliant and the atmosphere keen, with slightly more than the ordinary tang to it. In front of the kiosk and below it sat the Marine Band, gay in scarlet coats and bright blue trousers, while the steps of the Capitol were guarded by marines with color guards of regulars and sailors. To keep the steps clear, army officers, diplomats and pretty girls were pressed into service and held up long white ribbons to

keep back the spectators on both sides. The band struck up a lively air as Mrs. Harding came down the steps, escorted by a military aid and followed by other women of the new President's family. Then came members of the Cabinet and the Justices of the Supreme Court. Finally, President-elect Harding came down the steps, escorted by Senator Knox, and the band broke into a triumphal march.

After Mr. Harding had reached his allotted central position in the kiosk, Senator King took a position at his left. The Marshal of the Court laid the open Bible on the desk and Mr. Harding faced about, laid one hand on the Book and lifted the other as Chief Justice White administered this oath:

I, Warren Gamaliel Harding, do solemnly swear that I will faithfully execute the office of President of the United States and will to the best of my ability preserve, protect and defend the Constitution of the United States, so help me God.

Mr. Harding repeated the oath slowly and clearly, and when he added the final invocation bent over to kiss the Bible and rose smiling. The crowd cheered and the band struck up "The Star-Spangled Banner."

Then President Harding began the reading of his inaugural address. An amplifier, hidden by a flag spread over the ceiling of the kiosk, carried his words clearly to the furthest parts of the throng. The President spoke with only perfunctory references to his notes, and was listened to with deference and profound attention.

#### INAUGURAL SPEECH

The inaugural address was characterized by solemnity and elevation of tone. It was in the main an appeal for an era of good feeling, a return to normalcy, a policy of non-involvement in European affairs and the cultivation of the home market. There was no definite pronouncement on proposed legislation, nor was this expected, as the President had previously announced that he would commit himself to no specific policy before taking counsel with his advisers.

Perhaps the most decided stand taken by the President was in regard to foreign relations. Concerning these he said in part:

The recorded progress of our Republic, materially and spiritually, in itself proves the wisdom of the inherited policy of non-

involvement in Old World affairs. Confident of our ability to work out our own destiny and jealously guarding our right to do so, we seek no part in directing the destinies of the Old World. We do not mean to be entangled. We will accept no responsibility except as our own conscience and judgment in each instance may determine.

We crave friendship and harbor no hate. But America, our America, the America builded on the foundation laid by the inspired fathers, can be a party to no permanent military alliance. It can enter into no political commitments, nor assume any economic obligations or subject our decisions to any other than our own authority.

We are ready to associate ourselves with the nations of the world, great and small, for conference, for counsel, to seek the expressed views of world opinion, to recommend a way to approximate disarmament and relieve the crushing burdens of military and naval establishments. We elect to participate in suggesting plans for mediation, conciliation and arbitration, and would gladly join in that expressed conscience of progress which seeks to clarify and write the laws of international relationship and

HENRY P. FLETCHER

Former Ambassador to Mexico, now Under Secretary of State

establish a world court for the disposition of such justiciable questions as nations are agreed to submit thereto. But every commitment must be made in the exercise of our national sovereignty.

Since freedom impelled and independence inspired and nationality exalted, a world supergovernment is contrary to everything we cherish and can have no sanction by our Republic. This is not selfishness; it is sanctity. It is not aloofness; it is security. It is not suspicion of others; it is patriotic adherence to the things which made us what we are.

(© Pach Bros.)

**THEODORE ROOSEVELT**

*Assistant Secretary of the Navy, a position once held by his distinguished father*

The concluding paragraph of the address was as follows:

I have taken the solemn oath of office on that passage of Holy Writ wherein it is asked, "What doth the Lord require of thee but to do justly, to love mercy and walk humbly with thy God." This I plight to God and country.

There was a roar of applause as he concluded and turned to receive the congratulations of those near by, Vice President Coolidge being the first to shake hands with him. Then, as the President and Mrs. Harding started to leave the stand for the Capitol, the band played "America."

Following his inauguration President Harding appeared in person in the Senate and presented the nominations of the men

**MISS ALICE M. ROBERTSON**

*Only woman member of the new Congress, elected in Oklahoma*

whom he had selected to head the executive departments. His appearance before an executive session of the Senate revived a custom which Washington started and which Jefferson was the last to follow.

The President was in the Senate not more than fifteen minutes, and himself read the names of the new Cabinet officers in their constitutional order, as follows:

Secretary of State—Charles Evans Hughes of New York.

Secretary of the Treasury—Andrew W. Mellon of Pennsylvania.

Secretary of War—John W. Weeks of Massachusetts.

Attorney General—Harry M. Daugherty of Ohio.

Postmaster General—Will H. Hays of Indiana.

Secretary of the Navy—Edwin Denby of Michigan.

Secretary of the Interior—Albert B. Fall of New Mexico.

Secretary of Agriculture—Henry C. Wallace of Iowa.

Secretary of Commerce—Herbert C. Hoover of California.

Secretary of Labor — James J. Davis of Indiana.

There was no opposition to any of the appointments when they were referred to the appropriate committees, and when finally the nominations were offered to the Senate for confirmation as a whole they were approved unanimously.

Many of the members of the new Cabinet are men of national, and two at least of international, reputation. Secretary Hughes is one of the leading lawyers and jurists of the country. He was twice Governor of New York and for six years was an Associate Justice of the Supreme Court of the United States. In 1916 he was the candidate of the Republican Party for President.

Secretary of the Treasury Mellon is a Pennsylvania banker and reputed to be one of the wealthiest men in America. Besides his banking affiliations, he has large interests in coal, coke, steel and iron enterprises.

Secretary Weeks of the War Department is a graduate of Annapolis and a former United States Senator from Massachusetts. In 1916 he was a candidate for the Presidential nomination.

Attorney General Daugherty is an Ohio lawyer with offices in Columbus, and was convention manager for President Harding.

Postmaster General Hays is the youngest member of the Cabinet, being only 41. He is a lawyer, as are four other Cabinet members. In 1918 he was made Chairman of the Republican National Committee.

Secretary of the Navy Denby has served three terms in the House and was on the Committee on Naval Affairs. He has been an enlisted man in the navy and the Marine Corps.

Secretary of the Interior Fall has been a conspicuous member of the Senate and has taken a large part in debates and legislative action regarding Mexico.

Secretary of Agriculture Wallace is an editor, publisher and practical farmer of Iowa.

Secretary of Labor Davis began life as a tinsmith worker and afterward went into the banking business in Pittsburgh, Pa.

#### VICE PRESIDENT COOLIDGE'S INAUGURATION

Calvin Coolidge was inaugurated as Vice President of the United States in the pres-

ence of a notable gathering, including President-elect Harding. The new Vice President was sworn in at 12:21 o'clock. Mr. Marshall, the retiring Vice President, announced that the Senate of the Sixty-sixth Congress was adjourned sine die, and handed the gavel of authority to his successor. Every one rose to his feet, and there was prolonged applause.

After the chaplain had offered prayer, Mr. Coolidge began the delivery of his inaugural address. He spoke in a deep, rather low voice with a metallic ring, and was clearly heard throughout the chamber.

Mr. Coolidge's address was comparatively brief. He declared that the Senate was a "citadel of liberty" in the constitutional structure of the United States, and that its record for wisdom had never been surpassed by any legislative body.

The valedictory of Mr. Marshall, preceding the speech of his successor, was an expression of deep faith in the American form of government and a warning against hasty reforms. He received an ovation when he concluded.

Prior to the ceremonies, the Senate had spent more than an hour in conducting its closing legislative business, with some diversion due to the occasion of the outgoing of an old and the incoming of a new national Administration.

After the inauguration, the fourteen new Senators and the present members of the Senate who had been re-elected for the new term went forward as their names were called to take the oath. Of the new Senators, eleven were Republicans and three Democrats. They were sworn in by Vice President Coolidge in alphabetical groups.

#### INTERESTING SIDELIGHTS.

The Bible on which President Harding took the oath of office has an interesting history. When Washington was sworn in at New York, April 30, 1789, for his first term, it was found at the last moment that no Bible was at hand on which to take the oath. Jacob Morton, who was Marshal of the parade and at that time Master of St. John's Masonic Lodge, was standing close by, and, seeing the dilemma of the officials, remarked that he could get the Bible of St. John's Lodge, which met at the "Old Coffee House," corner of Water and Wall Streets. Chancellor Livingston begged him to do so.

The Bible was brought and the ceremony proceeded.

When Washington had finished repeating the oath, with his right hand resting on the open book and his head bowed in a reverential manner, he said in a clear and distinct voice: "I swear, so help me God." Then, bowing, he kissed the book. Whereupon Livingston exclaimed: "Long live George Washington, President of the United States."

The same Bible was carried in the procession that took place when Washington was buried. It is considered by Masons as one of the priceless relics in the possession of the order in this country. It was taken to Washington in a private car under special guard, and returned to New York with the same precaution.

#### LOVING CUP TO MARSHALL.

Retiring Vice President Marshall received on Feb. 28 from his "brethren" of the Senate, as he called them, a token of the high esteem and affectionate regard in which he was held by all of them, regardless of party. It was a beautiful loving cup, standing two feet high and bearing the simple legend that it was the gift of all the Senators to the Vice President. It was intended, as Senator Lodge expressed it, to remind him of the feeling of sadness that pervaded the Senate as the hour of parting drew near. The speech of Mr. Marshall in acceptance was the signal for a great demonstration at its conclusion.

#### PRESIDENT WILSON'S EXIT

The departure of President Wilson from official life was dramatic and pathetic. While it had been his sincere desire to participate to the fullest extent as a witness of the swearing in of the new Administration, the closing hours of his own term of office, both in the White House and at the Capitol, had fatigued him to such an extent that at the eleventh hour he decided to forego the inaugural ceremonies, both within the Senate Chamber and on the eastern portico of the Capitol.

The first of these was scheduled to open on the stroke of noon. Five minutes before that hour the President left the President's Room in the Senate wing of the Capitol, was escorted to a private elevator by Sen-

ator Knox, walked with a limp and a cane slowly to a waiting automobile, and, in company with Mrs. Wilson, Admiral Grayson and Secretary Tumulty, was driven to his new home at 2,340 S Street, N. W. There he enjoyed a brief rest, and after luncheon figured in a series of ovations tendered by a throng of several thousand persons who assembled in front of his home when the inauguration ceremonies of his successor had concluded.

#### EX-PRESIDENT TO PRACTICE LAW

Considerable surprise was caused by the announcement, March 3, that Mr. Wilson had planned to form a partnership with Bainbridge Colby, his Secretary of State, and begin the practice of law following his retirement from office. It had been generally thought that he would devote himself to authorship. The White House statement read:

The President made the announcement today that at the conclusion of his term of office he would resume the practice of law, forming a partnership with the Secretary of State, Bainbridge Colby. The firm will have offices in New York and Washington.

No further details were forthcoming. It was believed that the new firm would make a specialty of cases in which international law and relations would play a large part. Mr. Wilson has had a remarkable opportunity to acquaint himself with international relationships, and Mr. Colby, by reason of his work for the Government as a member of the Shipping Board and as Secretary of State, has also had exceptional facilities.

Mr. Wilson was graduated from the Law School of the University of Virginia in 1881 and practiced at Atlanta, Ga., in 1882 and part of 1883. In the latter year he went to Baltimore and took up post-graduate work at the Johns Hopkins University. He had some cases in the courts of Baltimore, but in 1885 he gave up the law to take the Chair of History and Political Economics at Bryn Mawr College, later becoming a professor and President of Princeton University.

#### FOREIGN COMMENT.

Comment abroad was cautious regarding the President's inaugural address, and there was a general disposition to await further

developments before drawing conclusions. In France there was a feeling of disappointment because there was no mention of that country or of the Allies. There was a general agreement of opinion that the President did not intend that the United States should join the League or that America should resume her place as a member of the Allied Supreme Council.

A lesser degree of regret was felt in London, where it was thought that the speech promised American co-operation in the reconstruction of the world, not, to be sure, along the lines of the League of Nations, but according to plans which differ more in form than in substance from those which were rejected by the American people in November.

There was frank chagrin in Germany, where the hope had been clung to that something in the speech would indicate a trend toward the German and against the allied point of view.

Italian organs of opinion agreed that the passing of the Presidential power from Mr. Wilson to Mr. Harding definitely closed the historic period in which the United States collaborated with Europe in a cause which seemed to it world-wide, but which quickly became European again. They hoped, however, that the President would come to understand the impossibility of the United States completely disinterested itself in the affairs of Europe.

The comment of the South American press was in the main cordial, and felicita-

tions were sent by cable from the President of Uruguay to President Harding.

#### NEW APPOINTMENTS

A special session of the Senate was called to act upon nominations to office under the new Administration, and to this the President sent a number of names for confirmation. Among these, the most important were those of Henry P. Fletcher to be Under Secretary of State, Theodore Roosevelt to be Assistant Secretary of the Navy, Elmer D. Ball to be Assistant Secretary of Agriculture, John J. Esch of Wisconsin and Mark W. Potter of New York as members of the Interstate Commerce Commission, and D. R. Crissinger of Marion, Ohio, as Controller of the Currency. All the nominations were confirmed by the Senate. An appointment that did not require the Senate's confirmation was that of Thomas W. Miller, formerly Representative from Delaware, to be Alien Property Custodian. Anthony Caminetti, Commissioner of General Immigration, was replaced by William W. Husband of St. Johnsbury, Vt., whose nomination was promptly confirmed.

The following appointments were made March 14: J. Mayhew Wainwright to be Assistant Secretary of War, Eliot Wadsworth of Boston to be Assistant Secretary of the Treasury, and Eugene Mayer of New York as a Director of the War Finance Corporation. The three were promptly confirmed by the Senate.

#### A SECRET OF THE MARNE VICTORY

A WAR secret unknown to the general public was revealed by Lieut. Col. Fagalde, Military Attaché to the French Embassy in London, in a lecture delivered at the Institut Français du Royaume Uni, on Jan. 21, 1921. In the critical days of the last of August and the beginning of September, 1914, when Fagalde was still a Captain, there was brought to him the satchel of a German Staff officer of the Fifth Cavalry Division, who had been killed in his motor car by a French patrol. In this satchel, destined to become historic, was found a plan giving full details of the advance, beginning Sept. 2, of the whole First German Army under General von Kluck. The position of every column was plainly

marked, with the heads and rear guards, and the hours of departure and arrival at their objectives. Thus for the first time the French learned that the anticipated march into the valley of the Oise had been changed in favor of a direct march on Paris. Captain Fagalde at once telephoned this information to General Headquarters and dispatched the map and other documents by motor car to the French military command. Through this information, General Galliéni was enabled to throw his army on von Kluck's flank, with the resultant victory of the Marne and the German retreat to the Aisne. Paris and France were saved by this unexpected discovery on the very eve of a national catastrophe.

# WOODROW WILSON'S PLACE IN HISTORY

By GENERAL JAN CHRISTIAN SMUTS  
Premier of the Union of South Africa

*A scholarly and eloquent review of the work done at Paris by the former President of the United States, written to the American people by the South African Premier at the instance of the New York Evening Post*

IT has been suggested that I should write a short estimate and appraisal of the work of President Wilson on the termination of his Presidency of the United States of America. I feel I must comply with the suggestion. I feel I may not remain silent when there is an opportunity to say a word of appreciation for the work of one with whom I came into close contact at a great period and who rendered the most signal service to the great human cause.

There is a great saying of Monmsen (I believe) in reference to the close of Hannibal's career in failure and eclipse: "On those whom the gods love they lavish infinite joys and infinite sorrows." It has come back to my mind in reference to the close of Wilson's career. For a few brief moments he was not only the leader of the greatest State in the world; he was raised to far giddier heights and became the centre of the world's hopes. And then he fell, misunderstood and rejected by his own people, and his great career closes apparently in signal and tragic defeat.

## IN A TERRIBLE POSITION

What is the explanation of this tremendous tragedy, which is not solely American, which closely concerns the whole world? Of course, there are purely American elements in the explanation, which I am not competent to speak on. But besides the American quarrel with President Wilson there is something to be said on the great matters in issue. On these I may be permitted to say a few words.

The position occupied by President Wilson in the world's imagination at the close

of the great war and at the beginning of the Peace Conference was terrible in its greatness. It was a terrible position for any mere man to occupy. Probably to no human being in all history did the hopes, the prayers, the aspirations of so many millions of his fellows turn with such poignant intensity as to him at the close of the war. At a time of the deepest darkness and despair he had raised aloft a light to which all eyes had turned. He had spoken divine words of healing and consolation to a broken humanity. His lofty moral idealism seemed for a moment to dominate the brutal passions which had torn the Old World asunder. And he was supposed to possess the secret which would remake the world on fairer lines. The peace which Wilson was bringing to the world was expected to be God's peace. Prussianism lay crushed; brute force had failed utterly. The moral character of the universe had been most signally vindicated. There was a universal vague hope of a great moral peace, of a new world order arising visibly and immediately on the ruins of the old. This hope was not a mere superficial sentiment. It was the intense expression at the end of the war of the inner moral and spiritual force which had upborne the peoples during the dark night of the war and had nerved them to an effort almost beyond human strength. Surely, surely God had been with them in that long night of agony. His was the victory; His should be the peace. And President Wilson was looked upon as the man to make this great peace. He had voiced the great ideals of the new order; his great utterances had become the contractual basis for the armistice and the peace. The idealism of Wilson would surely

become the reality of the new order of things in the Peace Treaty.

### WILSON AND THE TREATY

In this atmosphere of extravagant, almost frenzied expectation, he arrived at the Paris Peace Conference. Without hesitation he plunged into that inferno of human passions. He went down into the pit like a second Heracles to bring back the fair Alcestis of the world's desire. There were six months of agonized waiting, during which the world situation rapidly deteriorated. And then he emerged with the Peace Treaty. It was not a Wilson peace, and he made a fatal mistake in somehow giving the impression that the peace was in accord with his Fourteen Points and his various declarations. Not so the world had understood him. This was a Punic peace, the same sort of peace as the victor had dictated to the vanquished for thousands of years. It was not Alcestis, it was a haggard, unlovely woman, with features distorted with hatred, greed, and selfishness, and the little child that the woman carried was scarcely noticed. Yet it was for the saving of the child that Wilson had labored until he was a physical wreck. Let our other great statesmen and leaders enjoy their well-earned honors for their unquestioned success at Paris. To Woodrow Wilson, the apparent failure, belongs the undying honor, which will grow with the growing centuries, of having saved the "little child that shall lead them yet." No other statesman but Wilson could have done it. And he did it.

The people, the common people of all lands, did not understand the significance of what had happened. They saw only that hard, unlovely Prussian peace, and the great hope died in their hearts. The great disillusionment took its place. The most receptive mood for a new start the world had been in for centuries passed away. Faith in their Governors and leaders was largely destroyed, and the foundations of human government were shaken in a way which will be felt for generations. The Paris peace lost an opportunity as unique as the great war itself. In destroying the moral idealism born of the sacrifices of the war it did almost as much as the war itself in shattering the structure of Western civilization.

### TORN TO PIECES BY HIS OWN PEOPLE

And the odium for all this fell especially on President Wilson. Round him the hopes had centred; round him the disillusion and despair now gathered. Popular opinion largely held him responsible for the bitter disappointment and grievous failure. The cynics scoffed; his friends were silenced in the universal disappointment. Little or nothing had been expected from the other leaders; the whole failure was put to the account of Woodrow Wilson. And finally America for reasons of her own joined the pack and at the end it was his own people who tore him to pieces.

Will this judgment, born of momentary disillusion and disappointment, stand in future, or will it be reversed? The time has not come to pass final judgment on either Wilson or any of the other great actors in the drama at Paris. The personal estimates will depend largely on the interpretation of that drama in the course of time. As one who saw and watched things from the inside, I feel convinced that the present popular estimates are largely superficial and will not stand the searching test of time. And I have no doubt whatever that Wilson has been harshly, unfairly, unjustly dealt with, and that he has been made a scapegoat for the sins of others. Wilson made mistakes, and there were occasions when I ventured to sound a warning note. But it was not his mistakes that caused the failure for which he has been held mainly responsible.

### THE REAL FAILURE

Let us admit the truth, however bitter it is to do so for those who believe in human nature. It was not Wilson who failed. The position is far more serious. It was the human spirit itself that failed at Paris. It is no use passing judgments and making scapegoats of this or that individual statesman or group of statesmen. Idealists make a great mistake in not facing the real facts sincerely and resolutely. They believe in the power of the spirit, in the goodness which is at the heart of things, in the triumph which is in store for the great moral ideals of the race. But this faith only too often leads to an optimism which is sadly and fatally at variance with actual

results. It is the realist and not the idealist who is generally justified by events. We forget that the human spirit, the spirit of goodness and truth in the world, is still only an infant crying in the night, and that

GENERAL JAN CHRISTIAN SMUTS  
*Premier of the Union of South Africa*

the struggle with darkness is as yet mostly an unequal struggle.

Paris proved this terrible truth once more. It was not Wilson who failed there, but humanity itself. It was not the statesmen that failed, so much as the spirit of the peoples behind them. The hope, the aspiration for a new world order of peace and right and justice—however deeply and universally felt—was still only feeble and ineffective in comparison with the dominant national passions which found their expression in the Peace Treaty. Even if Wilson had been one of the great demigods of the human race, he could not have saved the peace. Knowing the Peace Conference as I knew it from within, I feel convinced in my own mind that not the greatest man born of woman in the history of the race

would have saved that situation. The great hope was not the heralding of the coming dawn, as the peoples thought, but only a dim intimation of some far-off event toward which we shall yet have to make many a long weary march. Sincerely as we believed in the moral ideals for which we had fought, the temptation at Paris of a large booty to be divided proved too great. And in the end not only the leaders but the peoples preferred a bit of booty here, a strategic frontier there, a coal field or an oil well, an addition to their population or their resources—to all the faint allurements of the ideal. As I said at the time, the real peace was still to come, and it could only come from a new spirit in the peoples themselves

#### WHERE WILSON TRIUMPHED

What was really saved at Paris was the Child—the Covenant of the League of Nations. The political realists who had their eye on the loot were prepared—however reluctantly—to throw that innocent little sop to President Wilson and his fellow-idealists. After all, there was not much harm in it, it threatened no present national interest, and it gave great pleasure to a number of good, unpractical people in most countries. Above all, President Wilson had to be conciliated, and this was the last and the greatest of the Fourteen Points, on which he had set his heart and by which he was determined to stand or fall. And so he got his way. But it is a fact that only a man of his great power and influence and dogged determination could have carried the covenant through that Peace Conference. Others had seen with him the great vision, others had perhaps given more thought to the elaboration of the great plan. But his was the power and the will that carried it through. The covenant is Wilson's souvenir to the future of the world. No one will ever deny him that honor.

The honor is very great, indeed, for the covenant is one of the great creative documents of human history. The Peace Treaty will fade into merciful oblivion, and its provisions will be gradually obliterated by the great human tides sweeping over the world. But the covenant will stand as sure as fate. Forty-two nations gathered around it at the first meeting of the League at Geneva. And

the day is not far off when all the free peoples of the world will gather round it. It must succeed, because there is no other way for the future of civilization. It does not realize the great hopes born of the war, but it provides the only method and instrument by which in the course of time those hopes can be realized.

Speaking as one who has some right to speak on the fundamental conceptions, objects and methods of the covenant, I feel sure that most of the present criticism is based on misunderstandings. These misunderstandings will clear away, one by one the

peoples still outside the covenant will fall in behind this banner under which the human race is going to march forward to triumphs of peaceful organization and achievement undreamed of by us children of an unhappier era. And the leader who, in spite of apparent failure, succeeded in inscribing the name on that banner has achieved the most enviable and enduring immortality. Americans of the future will yet proudly and gratefully rank him with Washington and Lincoln, and his fame will have a more universal significance than theirs.

### RUSSIAN MENNONITES COMING TO AMERICA

PEOPLE in the United States know something of that peculiar sect, whose religious beliefs are a combination of those of the Baptists and of the Quakers—the Mennonites. Some Mennonities there are among our own so-called "Pennsylvania Dutch," and a well-known novelist has found them worthy of commemoration; in the Middle West, furthermore, they have a considerable colony. A movement is now on foot to increase this American colony by Mennonite emigration from South Russia. Dr. Hylkema, a Mennonite pastor of the colony in Holland, went to England early in February to ask aid there also for his Russian co-religionists, about 75,000 of whom, he said, desire to migrate.

The Mennonites, according to their creed, aim to live the life of Christ apart from the world. They refuse to take oath, to bear arms, or to play any part in the life of the State. Before the great war they were exempted from conscription as "conscientious objectors." By the Czar's decree, however, they were conscripted after the war with Germany began. Many lost their lands. Some were sent to the North to work in the forests, and died from the severe climate. These people, all prosperous peasant proprietors, whose farms lay in South Russia and Siberia, tried to recover their shattered fortunes after the Russian revolution, but the Bolshevik civil wars completed their ruin. They have suffered particularly from

the depredations of robber bands, who have ravaged their farms, ruined their land and sacked their agricultural factories. There is no evidence that the Bolshevik authorities subjected them officially to any persecution. They wish, however, to make a new start in a land where conditions are more favorable, and their friends in America, all well-to-do farmers, are preparing to find them land and to help them to establish a new life.

The Mennonite movement originated in the sixteenth century in Switzerland and South Germany. Menno Simons, an ex-Catholic priest, was the early leader. Persecution drove large numbers into Holland. In the latter half of the eighteenth century many emigrated from Germany to the United States to escape military service. At the end of the century Catherine the Great introduced colonies of Mennonites from Germany to what were then the barren steppes of South Russia. They have never intermarried with the Russians. About fifty years ago a considerable number of these Russian Mennonites migrated to America, where they settled in the Middle West. In Russia they bear a high reputation as farmers, and they did much to develop the Ukraine as the "granary of Europe." They have their own institutions, their banks, their schools, their factories. The total number of the Russian colony is estimated at 100,000.

# THE MONTH IN THE UNITED STATES

*Army reorganization and important tests of battleships and airplanes—Failure of tariff and immigration bills—The Railroad situation—Report of the United States Shipping Board—Wage reductions and Supreme Court decisions*

[PERIOD ENDED MARCH 12, 1921]

**S**ECRETARY OF WAR WEEKS announced on March 8 that the policy of the War Department under the new Administration contemplated the organization of the nation's military forces into one harmonious, well-balanced and effective army, consisting of the Regular Army, the National Guard and the organized Reserves. The two former branches will be developed to the strength authorized by law, the announcement stated, and the reserves would be organized as divisions and auxiliary troops with full officer complement and sufficient enlisted strength to be capable of rapid recruitment to full strength.

The Senate and House came to an agreement March 2 on the Army bill, fixing the figure at 156,666 men. The House had been insisting on an army of 150,000 while the Senate wished the number to be 162,000. The President, on his last day in office, vetoed the bill outright, because he regarded the reduction in military strength as too drastic. He had previously disapproved the bill against further enlistments until the army was reduced to 175,000, but this had been passed over his veto. The matter thus remained to be thrashed out in the first session of the new Congress.

**R**EPRESENTATIVE JAMES W. GOOD of Iowa, Chairman of the Appropriations Committee, denied on Feb. 23 that Congress had not fulfilled its obligations in supplying beds for disabled World War veterans. He charged that Ewing La Porte, Assistant Secretary of the Treasury, and other officials were neglectful in not utilizing nearly four thousand beds in hospitals now available for ex-service men. He showed that there were 24,560 war risk patients in hos-

pitals and that there were 3,858 vacant Government hospital beds.

**T**HE Navy Appropriation bill calling for expenditures of approximately \$500,000,000 failed of passage at the last session of the Sixty-sixth Congress. Determined opposition by Senator Borah and other opponents of the present naval program prevented its coming to a vote. It was stated that it would be one of the first measures discussed at the forthcoming session. President Harding prior to his inauguration had announced his approval of the 1916 naval building program.

**P**LANS for the greatest naval and aerial gun and bombing test ever conducted were announced on Feb. 28 by Secretary Daniels. The purpose was to determine the relative effects of gun and bomb hits on certain types of war vessels.

**F**LIERS TO ATTACK WARSHIPS In these joint army and navy tests, which are to be made at sea between June 1 and July 15 next, the obsolete American battleships Iowa and Kentucky and nine former German war vessels allocated to the United States will be used as targets. It is not the intention to sink the Iowa and the Kentucky. Dummy bombs will be used by the airplanes attacking these warships. All of the former German vessels, however, are expected to be sunk.

The battleship Iowa will be radio-controlled during the tests. She will be attacked by dummy bombs from aircraft at a minimum altitude of 4,000 feet at a point within a zone between fifty and one hundred miles off coast, between Capes Hatteras and Henlopen. The Iowa will try to avoid being struck by the bombs.

The Ordnance Department has been ordered to prepare 298 bombs for use in the attack upon the former German ships. The bombs used will weigh 230, 250, 520, 550, and 1,000 pounds, or even more. One submarine is to be attacked and if possible sunk by bombs dropped from an aircraft, while the other submarines will be subjected to shellfire from destroyers. If none are sunk by bombs they are to be destroyed by depth charges.

One of the three former German destroyers will be attacked by aircraft and the two others by destroyers. If the aircraft and destroyers fail to sink them, they are to be attacked by battleships, and afterward, if still afloat, are to be sunk by depth bombs. The first attack on the Frankfort will be by aircraft using 250-pound bombs; the second by aircraft employing 520-pound bombs. After the army aircraft have their innings, the cruiser, if afloat, will be examined and then will be subjected to gunfire from a division of American destroyers at 5,000 yards range. If both gun and bombing attacks fail, recourse will be had to depth charges.

The most spectacular attack will be directed against the Ostfriesland. The army aviators will attack her with 550 or 1,000 pound or heavier bombs, either singly or in groups. Each attack will be followed by an examination of the battleship, if she is still afloat. Should the aircraft fail, the Ostfriesland will be shelled by an American dreadnought firing fourteen-inch shells at a range of not less than 18,000 yards. Then, if she still floats, she will be sunk by depth bombs.

The ships are not to use machine guns, gas or incendiary or smoke bombs in defense. The result of the experiments and the conclusions drawn are to be held secret by the Navy and War Departments until passed on by the joint board.

**W**AGE cuts during the month were reported from all sections of the country. A conspicuous exception was the United States Steel Corporation, which reduced neither wages nor prices. The Jones & Laughlin Steel Company reduced wages 20 per cent. The larger shipyards in the New York

district made a wage cut of 10 per cent. The Chicago packers restored the ten-hour day and reduced wages from 12½ to 15 per cent. Most striking, and perhaps the most important, of all wage reductions were those announced by most of the great railroads of the country. The average cut was 22½ per cent. and was expected to cut over \$600,000,000 from the payrolls of the railroads. Most of the cuts were to go into effect after a conference with representatives of the workers and were subject to such modifications as might be effected at such conferences. The Erie Railroad, however, was more abrupt, and ordered a cut of 27 per cent. in the pay of certain classes of its employes to go into effect on Feb. 1. This action was reproved by the Railway Labor Board, which ordered the road to restore wages to the rates ordered in the board's wage decision of July, 1920. The Erie at first defied the board, but later, on March 12, announced acquiescence in its decision, pending further action.

**A** UNANIMOUS report of the Special House Committee which investigated the activities of the United States Shipping Board, of which committee Representative

REPORT

ON

SHIPPING BOARD

Joseph Walsh of Massachusetts was Chairman, made public March 2,

recommended that the duties of the board be transferred to an executive department, so that more centralization of administrative authority could be obtained than was possible under a board of seven members.

The investigators found that the work of the board was well performed during the rush period of the war. The report stated that, "considering the program as a whole, the accomplishments in the number of ships constructed, the tonnage secured and the time within which the ships were delivered and completed constitute the most remarkable achievement in shipbuilding that the world has ever seen."

Waste was admitted, but this was palliated in part by the stress of the war. The sale without delay of surplus ships and material still in the hands of the Emergency Fleet Corporation was recommended. Charles M. Schwab was exonerated from any irregularity, and the charge of bribery

against R. W. Bolling, brother-in-law of President Wilson, was declared to be without foundation. It was further urged that until the tremendous fleet of wooden ships should be disposed of, one competent person should be placed in charge of the operations, to be paid a salary commensurate with the responsibility of the position.

On March 11 President Harding wrote to Admiral Benson asking him to continue to function for the present as though the board were fully organized.

**T**HE destroyer Woolsey of the United States Pacific Fleet, commanded by Commander Henry Chalfant Gearing Jr., one of the most modern of the destroyers in the navy, was lost off the Pacific Coast of Panama, Feb. 26, in consequence of a collision with a merchant vessel. The Woolsey was struck

almost amidships by the steamer Steel Inventor, and immediately flooded and sank while in tow. The collision took place while the Pacific Fleet was en route from Panama waters to its California base, after participating in joint manoeuvres with the Atlantic Fleet in Panama waters and along the west coast of South America.

The casualties were one dead, two injured and fifteen missing, while 112 survivors had been taken aboard the destroyers Aaron Ward and the Philip, attached to the Pacific Fleet.

The Woolsey had a normal displacement of 1,154 tons, was 310 feet long and had about 31 feet beam at the load-water line. She was launched Sept. 17, 1918. Her armament consisted of four 4-inch guns, two 3-inch guns and four 21-inch torpedo tubes.

**T**HE Fordney Emergency Tariff bill was vetoed by President Wilson on March 3. The veto, which had been expected, was embodied in a clear and temperate message, in which among other things

**EMERGENCY** the President said:  
**TARIFF BILL** "Clearly this is no time  
**VETOED** for the erection of high tariff barriers. It would strike a blow at large and successful efforts which have been made by many of our great industries to place themselves on an export

basis. It would stand in the way of normal readjustment of business conditions throughout the world, which is vital to the welfare of this country as to that of all the other nations. The United States has a duty to itself as well as to the world, and it can discharge this duty by widening, not by contracting, its world markets."

An attempt to override the veto failed by a vote of 201 to 132, twenty-two votes short of the necessary two-thirds.

**P**RESIDENT WILSON on Feb. 25 approved the Winslow-Townsend bill, thus making available to the railroads about \$370,000,000 due in Government payments which had been held up

**PAYMENT** pending the discussion of the  
**TO** legislation. This action was  
**RAILROADS** taken by the President in the face of protests by railway

employees, who had opposed the payment before the Federal Labor Board. Resolutions also were adopted by the conference of national and international unions affiliated with the Federation of Labor, asking the President to withhold his approval, on the ground that while the railroad executives refused to deal with the employees in the settlement of disputes as to rules and working conditions, they should not receive financial assistance from the Government.

The bill had been submitted by President Wilson to the Treasury Department and the Interstate Commerce Commission and approved by both.

**T**HE House of Representatives on Feb. 24 agreed to a Senate amendment to the Diplomatic and Consular bill to purchase buildings and grounds in allied countries for American diplomats

**PURCHASE** and consuls, and credit the  
**OF** purchase price against the  
**EMBASSIES** money owed to the United States by allied countries.

The amendment concurred in stipulated that buildings and grounds for embassies, legations and consular agents should be obtained in Rome, Brussels, Berlin, Christiania, Athens, Belgrade, Bucharest, Prague, Monrovia, Vienna, Budapest, Canton, Hankow and Amoy, and carried an appropria-

tion of \$300,000 to be used to buy buildings in countries which do not owe money to the United States. In addition, the President was authorized to accept in his discretion on behalf of the United States unconditional gifts of land, buildings, furniture and furnishings, or any of them, for the use of the diplomatic and consular officials as residences.

**R**EPRESENTATIVES of the 109 national and international unions affiliated with the American Federation of Labor, in convention at Chicago, Feb. 23,

**FEDERATION OF LABOR CONVENTION** adopted resolutions declaring war on the "open shop," which they alleged was being fostered by certain groups of employers in order to disrupt trade unionism. They demanded freedom from anti-trust restrictions and declared the right of labor to resist injunctions.

They also issued a sweeping condemnation of the Soviet Government of Russia and called officially on all workers to prevent the spread of Bolshevism. Investigations made of conditions in Russia and reports received from that country from various sources, it was declared, proved that the Soviet rule was a menace to the best interests of the working classes.

**A**N opinion handed down by Attorney General Palmer on March 3, just before he retired from office, held that it was not within the power of the Internal Revenue Bureau through regula-

**RULING ON BEER AS MEDICINE** tions to limit the number of permits which could be issued for the manufacture and sale of spirituous, vinous or malt liquors for medicinal purposes, except that permits for retail sale must be limited to reputable druggists who are pharmacists or who employ a pharmacist.

The Attorney General held further that while the Volstead act fixed at one pint the maximum amount of spirituous liquor which a physician might prescribe for any patient during the period of ten days, no such restriction had been placed upon the

use of beer and wine for medicinal purposes. It was held, however, that regulations could be formulated which would prevent a physician from prescribing at one time a large quantity of the liquor, which might never be needed for the purpose for which it was prescribed.

The ruling was received with strong disapproval by the leaders of the "dry" element, who later brought the matter to the attention of Attorney General Daugherty, with a request for its nullification. Mr. Daugherty promised to give the matter careful consideration.

**T**WO decisions of far-reaching importance were rendered, Feb. 28, by the United States Supreme Court. In the first the court held that the sections of the Lever

**SUPREME COURT DECISIONS** act punishing profiteering were invalid, for the reason that they were not clear to the men indicted under the act, as they did not specify sufficiently the nature of the crime.

In the second case, the right of the Government to exempt from taxation bonds of the farm loan banking system was upheld. Because this right was attacked a year ago, the bonds of the system have been marketable only at much below par in the meantime, and Congress is now preparing to aid the banks by appropriating \$200,000,000 for their support.

**T**HE constitutionality of the rent laws passed at the extraordinary session of the New York State Legislature in 1920 was upheld by the State Court of Appeals, on

**RENT LAWS UPHELD** March 8, in a most sweeping decision. The determination of the Appellate Division, First Department, was reversed, that

court having held that the Legislature could not constitutionally withdraw the right of the landlord to ejectment at the expiration of the term of a lease without impairing the obligation of the tenant's contract to surrender possession. The opinion upheld the right of the State to conserve public welfare under all conditions of life as they arose. It asserted that the Constitution was capable of taking care of any

emergency that might come into being. Contract rights, it was declared, must yield to public welfare when in conflict with the latter.

**R**EPRESENTATIVE Champ Clark of Bowling Green, Mo., died in Washington on March 1. He had been for twenty-four years a member of the House of Representatives, its Speaker

**DEATH** during four Congresses, **OF** minority leader of his **CHAMP CLARK** party in the House during the Sixty-sixth Congress and a candidate in 1912 for the Democratic Presidential nomination. He was born in Anderson County, Ky., on March 7, 1850, and was first elected to Congress in 1892.

On March 5 his body rested in state in the House of Representatives, just below the dais where for so many years he had presided as Speaker. A distinguished audience was present, including House and Senate members, Justices of the Supreme Court and officials of the Diplomatic Corps. Eulogies marked with deep feeling were pronounced by Representative James R. Mann of Illinois and Senator James A. Reed of Missouri. Simple religious ceremonies were held, and then the body was conveyed to Bowling Green, Mo., where it was interred.

**P**RESIDENT WILSON signed on Feb. 28 a bill providing for the return by the Alien Property Custodian of property seized during the war which belonged to

**TO REGAIN** women citizens of the United **ALIEN** States and the Allies, who **PROPERTY** married enemy subjects before the declaration of war.

**A** DECREASE of 3 per cent. in the retail cost of food for the average family in January, as compared with December, was shown in a report issued Feb. 18 by the Bureau of Labor Statistics of the Department of Labor.

**DECREASE** The per cent. was the **IN COST** average of returns of fifty- **OF LIVING.** one cities on forty-four articles of food,

which were "weighted" according to the quantity of each article consumed in the average workingman's family.

As compared with the average cost in 1913, the cost of food in January, 1921, in some of the cities, showed an increase rang-

ing from 76 per cent. in New York to 53 per cent. in Salt Lake City and Seattle.

**T**HE Sixty-sixth Congress came to an end on March 4, 1921. Some of its more important enactments were as follows:

- END OF** Adoption of the suffrage amendment.
- SIXTY-SIXTH** The placing on the statute
- CONGRESS** books of a national prohibition law.
- Enactment of provisions for vocational training and rehabilitation of wounded soldiers.
- The Railway Transportation act.
- The Army Reorganization act.
- Merchant Marine Shipping act.
- Amendments to the Federal Reserve act.
- Civil Service Retirement act.
- Water Power act.
- Appropriation of \$50,000,000 to provide relief for the suffering populations of Europe.

# COSTS OF THE WORLD WAR

*Estimate of the net losses incurred by the United States, Great Britain, France, Italy, Belgium, China and Japan—Final total, allowing for credits, is at \$139,702,269,225*

THE following statement showing the net costs of the war to the countries named was presented to the United States Senate by Senator Spencer of Missouri on March 5, 1921:

	Gross Cost	Credit Indem.	Final Loss.
United States—			
\$44,173,948,225	\$2,300,000,000	\$41,873,948,225	
Great Britain—			
51,052,634,000	9,850,000,000	41,202,634,000	
France—			
54,272,915,000	16,000,000,000	38,272,915,000	
Italy	18,680,847,000	3,500,000,000	15,180,847,000
Belgium—			
8,174,731,000	5,700,000,000	2,474,731,000	
China—			
565,376,000	100,000,000	465,376,000	
Japan—			
481,818,000	250,000,000	231,818,000	
Total—	\$177,402,269,225	\$37,700,000,000	\$139,702,269,225

The accompanying tables show the amount paid out by the various nations:

## TRIAL BALANCE ON BASIS THAT ALL LOANS AND EXTENDED CREDITS AS BETWEEN NATIONS ARE PAID WITH INTEREST

France would charge off a total loss of	\$39,112,915,000
Great Britain.....	32,502,634,000
United States.....	29,788,512,225
Italy .....	19,140,847,000
Belgium .....	2,474,731,000
China .....	265,376,000
Japan .....	31,818,000

### UNITED STATES

Military cost as per Secretary Houston .....	\$24,010,000,000
Extra cost, Government functions.	4,500,000,000
Civilian damages, shipping loss, pensions .....	2,300,000,000
Red Cross contributions.....	978,512,225
Other relief contributions.....	490,000,000
Congressional European relief....	100,000,000
Grain Corporation credit.....	60,375,000
War Department credits.....	50,000,000
Shipping Board credit.....	3,580,000
Credit by American nationals to European nationals .....	1,921,481,000
Government loans to European nations .....	9,760,000,000
Total .....	\$44,173,948,225

It is explained that the United States has received an amount of German shipping as yet unknown, but it is expected that the amount together with other receipts will reach the sum of \$2,300,000,000, which is the amount of civilian loss, pensions, &c.

### INDEMNITIES

The treaty provided that Germany should pay and Germany engaged to pay only three general items of indemnity:

1. Repay Belgium for all foreign loans made by it to prosecute the war, including all fines and taxes imposed by Germany upon Belgian citizens during occupation.
2. All damages to persons and property of civilians.
3. Pension and dependency claims, capitalized on the basis of the French rates.

Ninety-five per cent. of all moneys spent by the United States was for items not coming under any of those three heads. All of the money spent for cost of operation of the War and Navy Departments, relief-work contributions and economic assistance of whatever character is a dead loss. We are only to be reimbursed for a little lost shipping and for pensions and dependency claims, at the French rate, which is considerably less than our own; so that no doubt half or two-thirds of our pension and dependency claims will be a dead loss.

The treaty fixed at the time what was then

##### Credit:

- (a) Coal, 85,500,000 tons, to be delivered within ten years. One-half by rail and one-half by water. German treaty.
- (b) Trentino, Istria, and part of Dalmatia from Austria territory. About 12,000 square miles. Austrian treaty.
- (c) Bonds: An allotment of \$3,000,000,000 of bonds. See Schedule No. 9.

to be. They were given to Japan, whose financial participation in the World War turns out to be thirty million against our thirty billion, or about one-tenth of one per cent. of the participation of the United States.

It was never intended that the United States should participate in any manner in the German indemnity, so that whatever it is, large or small, the amount will have no effect upon the final figures representing the net loss appearing in the last column on the first sheet of this statement. If the amount collected is large, it will be added; and if it is small, it will be deducted from both columns No. 1 and No. 2, and the final difference will be the same.

For the purposes of this statement and more to illustrate the elements that must finally go into the last account we have used the tentative issue of bonds provided for in various parts of the treaty, aggregating \$25,000,000,000 and in distributing the items in Column No. 2 we have used the compilations of Professor J. M. Keynes in his book entitled "Economic Consequences of Peace." In that work he went over the subject of damages to property and persons with great thoroughness, ascertained the original value of the property before invasion, and deducted its value after.

However, as we have shown, any other items or estimates of these damages will not change the fact that the United States has invested \$670,000,000 more in the World War than any other nation.

## THE GERMAN GOLD PAID TO LENIN

ACCORDING to Edward Bernstein, the German Socialist leader, the whole idea of sending Nikolai Lenin into Russia in a sealed railway car—to start a revolution—originated with General Ulrich von Hoffmann, now one of the bitterest enemies of Bolshevism and an advocate of Lenin's overthrow by an interallied army. In a recent manifesto General von Hoffmann frankly admitted that the German Government had sent Lenin into Russia for the purpose stated, but he said nothing about the amount of German gold placed at the disposal of the Red leader. On Jan. 14 Herr Bernstein declared that he had received reliable information from persons in close touch with the German National Treasury regarding the extent to which Germany had subsidized Lenin. The sum was 50,000,000 gold marks, he said, not

80,000,000 gold rubles, as previously reported, and it was paid in installments. Before affixing the seal to Lenin's drawing-room car, said Bernstein, General von Hoffmann, who had gone for that special purpose to Switzerland, had handed over to the Bolshevik agitator several heavy bags filled with thousands of gold "Wilhelms," which were as much coveted by Russians as their own 10-ruble pieces. Another instalment, he had learned, was paid to Lenin at Stockholm, and the last was delivered through Lenin's State Secretary, Menshikov, after the Bolshevik seizure of power. The despotic attitude of von Hoffmann at the Brest-Litovsk Peace Conference, Bernstein adds, was due to the hold which von Hoffmann, Helfferich and Ludendorff had thus acquired over the Red Russian leaders.

AN INTERESTING GROUP OF THE MORE ADVANCED TURKISH WOMEN IN CONSTANTINOPLE, WHO HAVE DISCARDED THE CUSTOMARY VEIL SINCE THE WAR

## LIFE IN A TURKISH HAREM

By LORETTA I. BIGLEY

*The author of this article, an American Red Cross worker from Chicago, recently had charge of a rescue home in Aintab, Turkey, for the unfortunate Christian women who had been forced into Turkish harems during the war and who were freed in 1919 by order of the Peace Conference—Talks with Moslem women in their homes*

"Allah is great; there is but one God,  
and Mohammed is his Prophet."

**F**IVE times daily the Turks turn toward Mecca and repeat the foregoing passage from the Koran. Nowhere in the entire Moslem world is this religious duty more conscientiously performed than among the women of the harems. To them Mohammed and the Koran are oracles, and because of this fact the Turks have been able to keep their women in absolute subjection through the centuries, for the code of Mohammed justifies such subjection of woman to man.

The sixteen months which I spent recently in an official capacity in Turkey familiarized me with many phases—both political and social—of Turkish life. Through several unique experiences I was

enabled to learn much of life in the Turkish harem.

The Turkish woman's education is limited, as she has been deprived of all knowledge which would familiarize her with the outside world. The Turks have realized that it would be a great handicap to them in continuing their unjust and despotic government if they educated their people, and especially their women, in lines other than domestic. Very few of the women of the harems, therefore, can read, write or speak more than one language, though many of the men are masters of several languages. After reaching her eleventh year the Turkish woman is forbidden to appear in public, or in the presence of any man, even in her

(Photo by the Author)

WORKING WOMEN IN TURKEY WASHING WOOL BY THE PRIMITIVE METHOD IN USE SINCE THE TIME OF CHRIST

own home, unless heavily veiled. Her husband is the only man excepted from this rule, and even he is not permitted to see his wife unveiled until the second day after their marriage.

The husband may add any number of

wives to the harem without even consulting those he has already married. The number, however, is determined by his finances. A certain sum, decided upon by the Government, is required for each wife. Therefore, with the exception of those of the Sultan

(Photo by the Author)

TURKISH WOMEN PREPARING WHEAT FOR TABLE USE

(his harem is very large) and some of the Beys and Pashas or very wealthy notables, the Turkish harems are not large. Four is the usual number of wives, and many Turks have only one or two.

Having been responsible for the Christian women of the Turkish harems, I had a keen curiosity to learn something of the Moslem women. As a result of my position, I was rather closely associated with the Turkish officials of the Aintab vilayet in Cilicia, and this constant association sharpened my desire to familiarize myself with the life of the women behind the barred windows, who came forth so heavily veiled. These officials had been active in promoting some of the worst atrocities in Turkey during the war, the records of which, dispatched by

our Consuls and by our Ambassador, and now on file at Washington, compare with no others of former years. In view of this knowledge, I was astonished, here in the "land of the Arabian Nights," to find these Turkish officials so apparently human, so suave, and displaying an exterior courtesy worthy of the most thorough gentlemen.

#### THE INVITATION

It was one day early in June, after I had been in Aintab three months, that I received by first invitation to visit a Turkish harem. In the institution which I had organized for the Christian women released from the harems as the result of an order from the Peace Conference, all women were permitted to return to the harem if they desired, after a week's sojourn. Children could not return under any circumstances. One morning a Turkish woman called. Finding no men present, she raised her veil, and I beheld the pleasant face of a woman of about 40 years. She stated her business at once. A Turkish gendarme—the British military had made the police responsible for the rescued women reaching the institution—had delivered to the Rescue Home a child for whom she had been caring for four years, and she pleaded with me to allow the child to return with her. Vainly I tried to explain to her that she had no claim on this Christian child, and also that military responsibility forbade my disposing of the child otherwise than had previously been ordered. She left as abruptly as she had entered, and not in the best humor. More persistent than the average Turkish woman, she made two more calls before I was able to convince her that I was not personally responsible. As we became more friendly, I took advantage of the opportunity to explain to her why we American women were in Turkey—that we were there as a neutral people, prepared to administer relief among those who were in need, Christian or Moslem, though in the majority of cases the Christians were the beneficiaries. In Aintab the *Muterseraf* (local official) accepted very little, save in emergencies, when he would call on us for relief of all kinds. I finally convinced my Turkish visitor that though it fell to my lot to care for the poor Christian women rescued from the

Miss Bigley, in the dress of a Turkish woman, posed to show how her friends of the harem appeared in their own homes

harems, this did not mean that I was not interested in the Moslem women.

Soon after that my Turkish friend invited me to visit her home. An opportunity of this kind was what I had been waiting for, but, although I was secretly thrilled at the prospect of such an exceptional privilege, I feigned reluctance in accepting. As Americans up to this time had always been respected and protected in Turkey, I felt assured of my personal safety. On the appointed afternoon, accompanied by my interpreter, I started for my first visit to a real Turkish harem.

#### ENTRANCE TO THE HAREM

High stone walls surrounded the harem. My guide tapped at the gate. The heavy door was unbolted, and then was opened very slowly by a beautiful young girl. I beheld a wide courtyard, in the centre of which was a fountain. There were no women in sight when we entered, and my interpreter whispered to me that there is always a hurried exit from the court when a tap is heard at the gate, but that the women can ascertain who the intruders are by peeping unobserved through the little latticed windows. While waiting to be announced I observed that the home, following the prevailing style of architecture in Turkey, consisted of a two-story structure built around a court. I also obtained, through a small passageway, a glimpse of a garden, which later I found to be very beautiful; here the ladies of the harem whiled many hours away with no fear of the gaze of masculine eyes. I also noted that, like many of the better class, they had their private bath. The "Salamlik" (compartments for the male members of the household) are quite separate from the harem.

I was soon ushered into a large compartment, where furniture was conspicuous by its absence. The woodwork was unpolished and beautifully carved, and a number of small cupboards were built into the walls. On all available spaces were hung the choicest Oriental rugs, that on the wall facing Mecca being a prayer rug, before which the Moslem always prays; this rug was later presented to me as a token of our friendship; I prize it highly. The floor also was covered with richly embroid-

ered rugs, as were likewise the long, narrow cushions, which had been placed near the walls.

My call was evidently an event quite out of the ordinary. Instead of three ladies, there were eight, five having been invited for the occasion. My reception was most cordial, each woman insisting upon kissing my hands in token of the sincerity of my welcome. After the preliminaries, we all sat down on the floor. I had refused the proffered cushion, for, as I told my interpreter, I desired to do whatever was customary, in so far as I could. The ladies appeared amused at seeing me on the floor, realizing that it was not an American custom, and I will admit that it was difficult to attain the graceful posture of the harem ladies. They are in this respect real artists.

#### FIRST IMPRESSIONS

They were beautifully dressed in the usual Turkish style. Turkish women wear no tight clothing, and the *messla* (kimona) is the customary outer garment. *Messlas* are often made of the finest silk, embroidered in gold or silver. They are of various colors and most attractive. The women usually choose a style of headdress that will correspond with the *messlas*. A foreign woman rarely visits the Orient without buying a *messla*.

The social rank of the various castes is determined largely by the display of finery. Some wear gold bands around their foreheads and necks, and often around their ankles, although the latter custom is practiced more among the Egyptian ladies. They apply plenty of rouge and employ every means to add to their beauty. Embonpoint seems to be their goal, and this is easily attained, for the diet of the Turkish people would never be prescribed where one desires to reduce one's weight. Many of the women are beautiful, but they mature at a very early age.

Soon a large tray containing native sweets, fruits, the ubiquitous demi-tasse and cigarettes was placed in the centre of the group. It was about 3 o'clock, and during the next two hours (it was quite impossible to limit this to a formal call) there was not a moment's silence. We

talked and ate. Toothpicks were much in vogue.

These Turkish women displayed a keener curiosity in American affairs than I had expected to meet. Any authentic information about the women of the outside world is always appreciated by them, I learned, even though discounted by their husbands. I took special pains not to disclose my curiosity in their affairs, but when the opportunity for obtaining information presented itself I took advantage of it, and evidently without arousing their suspicions, for in the course of our conversation they discussed the innermost secrets of their households.

### SECRETS OF THE HAREM

One of the ladies remarked, "Miss Bigley, why don't you organize a home for Turkish women as you have for the Christian women?" That gave me an opening. I replied that surely the Turkish women were happy in their present surroundings, having no work to do other than that which is really considered a diversion. (Many hours are spent in making beautiful needlework, weaving rugs and preparing sweets. All the undesirable work is done by Christian servants.) I also referred to the fact that no other ladies in the world possessed wardrobes as beautiful as theirs, and that surely, as their husbands were such good providers, they must be very fond of them. This remark caused a unanimous exclamation. How could they be happy and enjoy their husbands with so many women in the harem? From what information I gathered, it seems that the only cases in which the harem women are happy are those where there are only two wives, with a difference of about twenty years between them. We saw an illustration of this in the home of Ali Bey, one of the notables. The younger wife died, and the other was inconsolable.

The ladies in the harems are not always congenial, and there is considerable jealousy. The latest wife is always referred to as "the bride," and she is the "leading lady" until another is added to the list. Few of the women desire the responsibility of a family, and unless a wife is fond of her husband she refuses to raise one, especially as she knows that another "bride" seldom enters the harem until the family

is raised. One reason why Christian women are not liked in the harem is that when one of them enters there is sure to be a family. The Turkish men are very fond of children.

The care of the children interested me. With arms at their sides, they are wrapped very tightly, and with a coin or small bead tied to the hair in front—to keep away the "evil eye"—are placed in this uncomfortable position on a pillow and sometimes allowed to remain for hours. They reminded me of American Indian papooses. Some are so bedecked with jewelry that it is surprising they have any rest at all. Strangely enough, however, they seem never to cry.

### MATRIMONY A BUSINESS INSTITUTION

The ladies showed me a beautiful trousseau belonging to the "bride" of this harem. As they love beautiful things, I knew a demonstration of my appreciation would please them, so I remarked that I would not object to becoming a harem inmate if I could have such wonderful things. One of them took me seriously, and said she was certain her husband could find me an eligible Turk, but added, "Not if you allow him to see you in the suit you are wearing." I will admit that I looked rather severe in my Red Cross nurse's uniform. That amused me. "Well," I replied, "this being all I possess, apparently my case is hopeless." "Oh, no," she insisted, "I will provide the trousseau, and he the jewelry."

I saw that I was getting into deep water, and not desiring to appear trivial, I said: "I am afraid it is quite impossible, because I am a Christian." (I wanted to say "Giaour"—barefaced infidel—as the Christian is called.) But she still insisted: The Turkish men did not consider American women as ordinary Christians. I was even forced to submit to being decorated with the bride's gorgeous headdress, heavily weighted with gold coins.

This little episode illustrates what a bargaining place their matrimonial field is. When a Turkish girl is of marriageable age, that is, after she has reached the age of 11, the parents make her marriage a business proposition, and the highest bidder draws the prize.

## THE HAREM LADY'S TROUSSEAU

The trousseau is provided by the prospective husband, and his contributions are usually made on some important day, generally from four to five times a year. I was amazed at the extensive trousseaux of some of the women, before I was confidentially informed that, as it is customary for the bride to receive no allowance from her husband other than her regular marriage dowry, which is not at her disposal except in case of divorce, they are anxious to accumulate all the beautiful things possible. Afterward, when they need money, they go into the crowded market—we saw many do it, usually early in the morning—and sit in the street with all those who have come from far and near with their wares. And there, amid the bargaining, trading, stealing and fighting of a Turkish market, they dispose of the various articles of their trousseau. This is their only means of obtaining money. The husband may be present and even witness the transaction, but has no means of determining whether it is his wife or not, as the street costumes of all the Turkish women are the same, differing in color only. All aim to have a silk costume for the street, if they have nothing else.

There is one instance in which a Turkish girl's wish is sometimes respected, and that is, after she has been bargained for in the matrimonial market, she is allowed to set the day for her marriage. Divorce rarely occurs, but when a husband desires it he can put away a wife by merely saying, "I divorce you." When this phrase is uttered a second time, a marriage ceremony is again necessary to make the divorced parties man and wife. It is impossible for a woman to divorce her husband. Allah rather favors the men.

## A TURKISH MARRIAGE

I found the wedding ceremonials most interesting. One of the elaborate ones which I attended was heralded for weeks as a social event unparalleled in Aintab in recent years. Both bride and groom were members of prominent Aintab families. The American women had been invited to the wedding reception on the understanding that they would go alone, as this was no place for men. The male members of our

personnel, however, decided to accompany us, with the faint hope of learning something of this mysterious affair. Our methods of transportation were limited; we had to choose whether to go in an "arabe," which would necessitate two trips, or to ride on donkeys, or walk, or go in our never-to-be-forgotten Ford truck. The truck was decided upon, and it took hours of strenuous labor before we were assured that it could negotiate the trip.

The ceremony had been performed the day before. In this the bride and groom stand each behind a door, while the priest says the words that make them man and wife. After this the bride sits on a sort of throne, very elaborately decorated, receiving only her most intimate relatives, and the following day at 3 in the afternoon she is unveiled and presented to her husband. Then the reception begins, and to this we had been invited.

## TREASURES OF THE TROUSSEAU

We were received with great ceremony, and after paying our respects to the bride, a really beautiful girl, and to the groom and the "in-laws," we were ushered into the boudoir. The trousseau, which we had been previously prepared to see, represented a value of 2,200 gold liare (\$11,000); it contained a dress for each day of the year, with a variety of the most inconceivable things. Such a display of wealth! Even dozens of towels were embroidered in gold and silver. We failed to see what would have been appreciated by an American bride, a display of silver and linen. These play no part in the trousseau.

While we were thus engaged the brother of the groom entered. After conversing with him a short time, we found that he, like his brother, was an educated man, who had traveled in Europe and America, and who was well versed in the English language.

The guests were many, and the court and gardens were crowded. At intervals of about twenty minutes the bride excused herself, *arabe* and again, and soon returned each time in a new gown. The music was furnished by some picturesque-looking women, and while several beautiful girls of about 15 entertained us with singing and dancing, these musicians played weird music on their queer-looking instruments.

We were being continually served with native sweets. After the entertainment was over we were ushered into a garden, where the wedding feast was served. The attempt at a modern table was pathetic. A real table with plates and knives and forks was provided for the five Americans present, but the food was placed in two large dishes, as is the custom, in the centre of the table. It was a regular Turkish meal, and, as usual, was of short duration. The brother of the groom entertained the American men until the affair was over, and they participated in the wedding feast in a private garden.

The celebration continued another day, and thus ended the one eventful time in the bride's life.

#### DEATH FOR UNCHASTITY

Any indiscretion on the part of a Turkish wife—and this refers to the Kurds as well—is followed by swift punishment. If there is evidence enough to prove that she has violated her marriage vows, the punishment is death. I had been in Aintab some time when one evening, returning to my rooms from the Rescue Home, I passed a group of Turkish and Kurdish houses. Evidence of trouble was nothing unusual, but a woman's loud shrieks attracted my attention. At first I could get no information from my interpreter, although I knew she could understand all that was being said; when we had almost reached our compound, however, she informed me that the husband of the shrieking woman had discovered that the latter had been sharing her affections with a Kurdish neighbor. As a result of this she must die. There was no escape. The following morning we learned that she had expiated her crime in the presence of several witnesses, the executioner being her husband.

#### ABUNDANT TURKISH FOOD

I have often been asked what the Turkish people eat. It is the quantity rather than the quality that most concerns them. They have good appetites and are especially fond of meat. As many as five or six courses are served at one meal when they can afford it. They consume a vast amount of olive oil and fats. The variety of vegetables, most of which are eaten raw, is

limited. They are fond of fruits and nuts, which are very plentiful. The grapes are delicious—far superior to those grown in California or Florida. Plenty of English walnuts and pistachio nuts are grown there. *Bulgar* (wheat) serves as the basis of all their cooked meals, and a supply for a year is laid in in the Fall, although it is usually obtainable in the markets. The preparation of the *bulgar* and the native sweets is the event of the season, and extremely interesting to those unfamiliar with it.

The women take the wheat to some isolated stream where they can work unveiled without fear of intrusion. It is placed on a rug in the water, and where the stream is at all rapid a sieve is placed at one end to prevent the wheat from floating away. The water passes through the wheat until it is entirely free from dirt. Then it is placed on large pieces of cloth and allowed to dry. After undergoing the necessary process of rolling, it is parboiled, again dried, and ground into flour, fine or coarse, in a very primitive mill.

The women do not eat with their husbands. The husband is served first, and then the women receive what remains. Even in the best families the food is usually served in one or two large dishes, placed in the centre of the room. The Turks always eat on the floor. Not being educated in the use of a knife or fork, they prepare a form of bread which, when moistened and torn into small pieces, is used to convey the food, such as rice and *bulgar*, to the mouth. The rapidity with which it disappears is extraordinary.

One afternoon when I was passing a home which I frequently visited, knowing that it was "native sweet" season, I peeped in and beheld what I had been so anxious to see. They were preparing a variety of which I was very fond. It was made by stringing English walnuts about an inch and a half apart on long threads, possibly a yard or a yard and a half in length. These were dipped into a large kettle in which, over an open fireplace, was boiling a thick syrup made from white grapes. The strings of syrup-coated nut kernels were then hung on a rack to dry. It was most attractive to see dozens of these hanging there at one time. The women make several varieties that are delicious. They depend entirely on charcoal for their fuel.

## LIFE AT THE BATH

A day spent at the Turkish bath is a real social event. Even the finest ladies go to the public bath, regardless of having bath facilities in their homes. The bathhouse is often reserved by associations of friends, who then go in large groups, bringing their lunches and staying all day. It is a very large building, with four or five rooms, and can accommodate as many as a hundred at one time. Each bather provides her own soap and towels, so here a display of highly scented soaps and beautifully embroidered towels counts among the attractions.

The women first enter a small compartment and prepare for the bath, with the aid of numerous Christian attendants. They then enter another large room, very well heated. In the centre of the floor there is an elevation of about six feet, through the many openings of which hot water is flowing continuously; at times it looks like a small fountain. The bath is heated by a fire underneath. In this room all are scrubbed well by the attendants, many times, and they sometimes remain here for hours and perspire. Turkey being a non-alcoholic country, they have nothing to resort to in an emergency. Later they pass into another room, and their bodies are gradually cooled before going into the cold fountain. The system, it will be noted, is different from that of our Turkish baths, where we pass from one extreme to another. After the women eat their lunches they spend the afternoon in gossip, and aim to reach home by sundown, when all the

Moslem world, guided by the criers from hundreds of minarets, offer praise to Allah. Indeed, when I returned to the United States I missed this familiar cry, which I had heard every morning and evening during my many months in the Orient.

## HAREM WOMEN NOT HAPPY

When one finds the women unhappy in the harems of the better class, is it not reasonable to believe that the conditions are even worse among the poor? And the vast majority of the Turkish people are very poor. They dwell in crowded quarters, and live a life of misery. I visited these harems as well as those of the better classes.

The women are not happy—not even those of the Sultan's harem, though the royal Sultanas do not, as in the past, live in constant fear of ending their existence in the Bosphorus. That fatal place always attracts the eye of the tourist as he enters the harbor of the Golden Horn.

Little progress has been made during the centuries. Western civilization has not had the same influence on the Moslem as on the Christian population, the high stone walls proving impenetrable barriers. In the cities—Constantinople, Beirut and others—where employment was available, the economic conditions forced the harem women into the streets during the war, and, as a result, one sees many unveiled in these cities today; but elsewhere throughout Turkey the old and rigid customs prevail unchanged.

## WESTERN CAPITALISM IN BURMA

**F**AR-OFF Burma is known mainly for its products—Burma oil, Burma rubies, &c. Latterly a Burma Corporation has been created, which means that the British capitalists, like other investors, alike European, Chinese and Indian, have got a grip on Burma.

This small principality, situated on the easternmost boundary of India, a part of Indo-China bordering on the vast Mongolian realm, with a coastline on the Indian Ocean, is undergoing the fate of all backward countries possessing rich mineral

and other natural resources. According to Josiah C. Wedgwood, a British member of Parliament with "opposition" proclivities, British capitalism in Burma is employing Indian coolie labor, "and the old Burmese free peasantry, living an easy life on their own rice fields, will pass away into a landless proletariat." Improvident and spendthrift, the Burmese squander lavishly on funerals, on memorial pagodas, on masses sold by mendicant monks, and plaster the statues of Buddha with gold leaf, which takes their substance.

# RETRAINING WAR-DISABLED MEN

By JONH S. CUMMINGS, PH. D.

Formerly of the Harvard Faculty; now Statistician of the Federal Board for Vocational Education.

*What has been done thus far toward making every disabled American soldier and sailor independent and self-supporting—Nearly 69,000 wounded men have received practical training to fit them to enter trades or professions—Facts and figures regarding the rehabilitation work of the Federal Board for Vocational Education*

THE United States has never questioned its special obligation to the brave soldiers, sailors and marines who came out of the war disabled in any way. A program for the treatment and training of all such injured men was drawn up early in the war period by the Federal Board for Vocational Education; the program was approved by Congress, and there has never been any wavering in the popular determination that it should be completely realized—that every disabled man shall have a chance to take such a course of training as will enable him to overcome the handicap of his wounds. The board's latest annual report tells what has thus far been done in this work.

The first thing that the board did was to get the co-operation of as many existing institutions as possible; thus, up to the close of the last fiscal year, about 1,700 schools and colleges had been utilized in giving training to disabled men in courses approved by the Federal board, and more than 8,500 industrial, agricultural and commercial employing agencies had co-operated with the board in providing training "on the job."

For carrying on this work, Congress has appropriated under several acts a total of \$129,000,000. Under the original act of June 27, 1918, the appropriation was \$2,000,000; under the act of July 11, 1919, the Sundry Civil bill and the Deficiency bill of July and November, 1919, and the acts of March 6 and July 5, 1920, there was a total of \$37,000,000 provided; the total for the whole fiscal year of 1920-21 was \$90,000,000. For the year 1921-22 it is estimated that \$78,000,000 will be required.

Total expenditures from June 27, 1918, to June 30, 1920, amounted to \$34,719,196. An analysis of these expenditures shows

that money devoted to salaries and other administrative expenses, including what may be called the "overhead" expenditures of the board, totaled \$7,244,062. Allowances paid to men in training for maintenance of themselves and their families totaled \$23,653,503. Payments on account of tuition amounted to \$2,309,233, and other direct payments to cover travel and subsistence, books, medical attention, &c., amounted to \$1,412,398, giving a total of \$27,475,134 to cover direct payments for all expenses connected with training.

It was inevitable that "overhead" charges should be heavy during the period of organization. Before any large number of men could be placed in training, it was necessary to build up the organization of the board on a nation-wide basis and on a scale adequate to deal rapidly with the thousands of men who had been discharged from the service before the Rehabilitation act was passed, as well as with the thousands still convalescing in hospitals. But the proportion of "overhead" to direct costs of training has steadily declined as the number of men in training has increased.

## GETTING PRACTICAL RESULTS

Every phase of the work at the present time shows a decentralizing tendency, although in the beginning some degree of centralization was unavoidable in order to protect the interests of the disabled men themselves and to make sure that the money appropriated should be spent as Congress intended. Responsibility for getting men into training now rests with the district and local offices of the board, operating within defined areas in every section of the country. At the outset, fourteen districts were mapped out by way of

(© Western Newspaper Union)

*Maimed soldiers studying electrical mechanics by practical methods under the instruction of the Federal Board for Vocational Education.*

preparing for ultimate decentralization, each district office being responsible for carrying on the work within a prescribed area and for directing the work of local offices within the district. To date 114 subordinate local offices have been established. Each local office is directly responsible for placing men in training, for getting subsistence pay to men in training and for continuous "follow-up" work. For the local office each disabled man represents a responsibility for the training of that man until he gets permanent employment; the local office must report achievements, rather than make recommendations to the Central Office in Washington.

At the close of the fiscal year 1920 the staff and clerical force of the Rehabilitation Division of the Federal board numbered 5,536, of whom 947 were in the Central

Office in Washington and 2,589 in district and local offices. On July 1, 1919, the number of employes in this division was 2,152, of whom 786 were in the Central Office and 1,366 in the district offices. The increase of 1,384 in the working force during the year has been largely in the district offices, the increase for the districts being 1,223 and for the Central Office 161. The Central Office staff has increased from 55 to 126 and the district and local office staffs from 375 to 794. The Central Office clerical force has increased from 731 to 821 and the district and local office clerical forces from 991 to 1,795.

It will be clear from the nature of the work that the personnel of the board engaged in this work must be of the highest grade. The success or failure of the program as a whole depends necessarily upon

the success or failure of the board's representatives, who are brought into direct personal contact with the disabled men and who must solve each individual problem of selecting a suitable vocation, arranging a course of training and finally establishing the trained man as an efficient worker.

The average pay of employes, alike staff and clerical, engaged in this work is approximately \$2,000. A serious embarrassment for the board has arisen on account of the difficulty of retaining competent employes in its service under the limitations imposed regarding salaries. Throughout the year the changes in both the staff and clerical forces have been excessive.

#### INCREASE OF APPLICANTS

At the beginning of the last fiscal year, on July 1, 1919, the number of men in training was 3,203. By the end of the year, on June 30, 1920, the number had increased to over 40,000. The total number put into training since the board was organized, up to June 30, 1920, exceeded 46,000. In the first five months of the present fiscal year—from June 30 to Dec. 1, 1920—some 19,000 men entered training. Including these new applicants, the total number of enrollments since the time of organization to Dec. 1 stands at 68,837. The number placed in training each month is equal to the total enrollment of a large educational institution.

As men discover the value of the training offered to them, they are electing to take advantage of it much more freely. Accurate figures for foreign countries are not available, but it may safely be said that the number taking training in the United States very considerably exceeds the number in training in any other country.

To Dec. 1, 1920, a total of over 160,000 disabled men had been approved as eligible for training. Of these, 94,000 had been approved as eligible under Section 2 of the rehabilitation law, which provides tuition and sup-

port of the men and their dependents during the period of training, and 66,000 had been approved as eligible under Section 3 of the law, which provides training without maintenance.

It does not, of course, follow that every man approved as eligible for training will elect to take it. On the part of the disabled soldier, sailor and marine the whole proposition is entirely voluntary. He may refuse training altogether or he may delay enrollment for an indefinite period. In the case of men approved for specific courses, some may be satisfactorily employed and unwilling to give up present employment to enter upon training. Others are in hospitals still convalescing. Where the course of training approved is given at some educational institution, it may be necessary in individual cases to wait for the opening of the school term. Many other conditions may prevent

*Shell-shocked soldiers at St. Elizabeth's Hospital, Washington, D. C., learning the art of toy making as taught by the Knights of Columbus under the Government scheme for vocational training*

immediate entrance upon an approved course, the reasons for deferring or refusing training being different in each case.

### WHAT CONSTITUTES ELIGIBILITY

Misunderstanding has developed among those who have not been correctly informed regarding the board's authority to provide training and support for disabled men. Under the law the board may act when the man is eligible and when such training is feasible, and may be regarded as a means of removing a vocational handicap. The board, however, is authorized to give training and support only to men so disabled that they cannot return to their former occupation or enter successfully upon some other occupation without training.

It will be obvious that, under these limitations, many seriously disabled men are not eligible for training. A man, for example, who has been a typist prior to enlistment may have had one leg shot off. He is seriously disabled and is entitled to compensation during life under an award by the War Risk Insurance Bureau. It may very well be, however, that the wisest course for him to pursue will be to return to his old employment as a typist, for which he requires no sort of vocational training. On the other hand, a violinist who has lost a portion of a finger may be totally disabled as regards his former occupation, and may therefore be declared eligible for vocational training.

Award of compensation for disability is not made by the board in any case. Men who are eligible, under Section 2, for training with maintenance, and who elect to take it, are paid an allowance during the period of training by the board, but this payment is conditioned upon the man's eligibility. Whether or not he is eligible for training, compensation for his disability must be determined by the War Risk Insurance Bureau, which continues these payments during the man's lifetime.

During the past year the board has been putting men into training at the rate of 3,800 each month, or an average of 125 a day. Though the number of men put into training indicates the real achievement of the board, it should be pointed out, nevertheless, that putting a man into training is only one of a long series of services per-

formed by the staff and clerical force of the board.

Before a man can be put into training his eligibility must be determined. Under the law, it must be established that he was honorably discharged from the service, that his disability was incurred in service, that his disability constitutes a vocational handicap, and, finally, that training is feasible. In determining eligibility, the benefit of the doubt, under the broadest interpretation of the law, is in every case given to the soldier; but no interpretation of the law, however liberal, can avoid border-line cases, and it is a rule of the board that no case shall ever be finally closed against a soldier. So long as he lives, he may appeal for reconsideration on any reasonable ground.

Once the soldier has been declared eligible, the problem arises of finding out both what he wants to do and what he can do. In electing a course of training, careful consideration must be given to the man's preferences, to his past experience, to his educational qualifications, to his natural capacity, and, finally, to his disability. When a course has been determined upon in conference with the man, provision must be made for giving him precisely what he requires, which is not the same in the case of any two men. In thousands of instances the fundamental handicap is illiteracy or totally inadequate schooling. This handicap must be removed before specific vocational training can be undertaken. In every case a course of training must be arranged for, either in a school or college, or in an industrial or commercial establishment. Constant "follow-up" work is required during the entire period of training.

Every course has a definite objective, and the man is trained into employment. He may begin in a school and finish in a workshop, where he is placed on the permanent roll of employes; he may begin training "on the job," shift to a school, and shift back to the workshop; or he may be in training part time in school and part time in the shop. Every combination of training is provided according to the individual needs of the man. Every registration of a disabled man constitutes a separate problem for the board. The number of such individual problems, as shown by the records of the board, runs into the hundreds of thousands.

Perhaps the achievement of the board can best be indicated by reducing the work to individual terms. Assuming that all the different activities were performed equally by all employes, the average achievement per employe for the fiscal year would figure out approximately as follows:

#### DETAIL OF STAFF LABORS

Each member of the staff and clerical force of the Rehabilitation Division during the year, on an average salary of about \$2,000, registered or listed 49 new cases, established first contact with 32 cases, conducted 20 vocational surveys, completed 30 medical examinations, determined eligibility in 33 cases, initiated 15 men into training, investigated and dropped from the rolls 6 cases, maintained 7 cases constantly in training during the year, including all "follow-up" work on these cases, and performed all the administrative and clerical work incidental to rendering the services

in question, including payment of allowances for maintenance and payment of other charges incidental to training and all other disbursements.

When the first man entered into training there were necessarily many more employes than there were men in training. At the close of the fiscal year each employe was maintaining approximately ten men in training. On Dec. 1, 1920, the number maintained constantly in training by each member of the clerical force and staff had increased to sixteen.

It will be clear, from the data given, that putting a man into training is only one step in a continuous process which begins in the hospital and ends in the workshop—a process which trains each man into employment. Over 250 different employment objectives have been defined for the 68,000 men placed in training, and more than 10,000 training agencies, including educational organizations, are co-operating with the board in assisting men to obtain these objectives.

### CAMBRIDGE UNIVERSITY REJECTS WOMEN

THE Senate of Cambridge University, England, on Dec. 8, rejected the proposal to admit women to full university membership. The vote was 904 against 712. Many women thronged around the Senate House awaiting the result, and departed very much downcast when the decision was announced. By this vote Cambridge, which was the first English university to admit women to its courses, remains the only one to refuse them full membership. Oxford, with all its conservatism, has already let down the bars.

One cause of the women's defeat, it was said, was the reluctance of the university authorities to swell the already large membership, which even now represents a problem. The alternative suggested—that the women should develop a residential university of their own—was condemned by one of the women leaders as "unthinkable."

None of the new universities, she declared, had been able to create an atmosphere like that of Cambridge. Meanwhile—this leader pointed out—women students were unjustly treated in being denied the right to win degrees, although they followed the same courses of study as the men and accomplished the same results.

The Cambridge authorities, on Feb. 12, rejected a proposal to convert the women's institutions—Girton and Newnham Colleges—into a separate university allied with Cambridge. The vote of the university senate stood 146 to 50.

A compromise movement has already been started, under which the university would be empowered to confer degrees on women, without the right to sit in the senate, while the university would retain the power of limiting the number of women students.

# THE NATIONALIZATION OF INDUSTRIES

By J. ELLIS BARKER  
English Author and Publicist

*An illuminating exhibit of the effects of State ownership and management of industries in Germany, France, Great Britain, Australia and New Zealand, with an analysis of facts that have given pause to former advocates of nationalization in all countries*

**S**Ocialism, communism and syndicalism are as old as history. Since the earliest times dreamers and schemers have striven to introduce into the world an artificial order, based upon compulsion, which was to give equality to all. That unpractical idealist, Plato, devised and recommended a commonwealth in which an all-powerful government was to direct and control all the energies and activities of the citizens. Aristotle, criticising Plato's fantastic schemes, acutely pointed out in his book on "The State" that a government which wishes to regulate and equalize prosperity among the people must necessarily regulate, and, if necessary, restrict, the birth rate as well, while Aristophanes treated the projects of Plato and of his predecessors with well-deserved ridicule in his play "Ecclesiazusae" and showed that communism in material things would logically and inevitably lead to the community of wives. Throughout history we find periods when government regulation and control were greatly exalted. Nationalization, which in the past was advocated and introduced by autocratic rulers and statesmen, is now loudly demanded by agitators who hope to secure absolute power for themselves. However, it seems that their power is waning. The much-lauded policy of nationalization has become utterly discredited during recent years throughout the world.

The policy of nationalization is a policy in which the Government regulates and controls the activities of the citizens. Such regulations and control can be efficiently exercised only by an absolute government. Hence it appeals particularly to men such as Louis XIV. and Napoleon I. of France

and Frederick the Great of Prussia. The world-wide demand for nationalization may be traced to the teachings of Karl Marx. It is not an international policy, but a characteristically Prussian policy. Marx, actuated by philanthropy or by envy, or by both motives combined, wished to destroy the wealth of the wealthy and to divide their property and income among the poor. He recognized that the capitalists are the expert controllers of commerce and industry and that expert direction in economic affairs is indispensable. Looking around, he noticed that the highly trained, conscientious, honest and painstaking Prussian officials were managing various economic undertakings with some success, and he concluded that they might be able to control and direct all economic undertakings, making the hated capitalists superfluous. Marx was a prince of agitators. His shallow, pseudo-scientific teachings, expressed in involved and obscure language, have become discredited even among his adherents, but his doctrine of envy and hatred is still trying to conquer the world, and his demand to replace the expert directors of trade and industry by an all-powerful officialdom has been taken up by countless agitators and by millions of shortsighted workingmen.

## SOCIALISM IN GERMANY

The Russian revolutionaries, and the German revolutionaries as well, are disciples of Karl Marx. The new German Constitution, which was published on Aug. 11, 1919, clearly foreshadowed the gradual expropriation of all private property for the benefit of the community, while the question of compensation to the legitimate owners was

to be left for future consideration. We read in Articles 153-156:

Property is guaranteed by the Constitution. Its extent and limits are defined by the laws. \* \* \* Expropriation may be effected only for the benefit of the whole community and upon the basis of law. It is accompanied by due compensation, unless otherwise determined by Federal law. \* \* \*

The right of inheritance is guaranteed in accordance with the provisions of civil law. The share of the inheritance due to the State is determined according to the laws.

The distribution and use of land is superintended by the State. \* \* \* Landed property, the acquisition of which is necessary to meet the needs of housing, for the furtherance of settlement on the land, and for the purpose of bringing it into cultivation, or for the encouragement of agriculture, may be expropriated. Entails shall be cut off. \* \* \*

The Federation may, by means of law, without prejudice to compensation and with appropriate application of decisions in force for expropriation, convert into public property, private economic concerns and organizations which are suitable for association. It may itself assign to the States or communities a share in the administration of economic concerns or organizations, or otherwise assure to itself decisive influence.

Further, the Federation may, by law, in case of pressing necessity and for objects of public economic interest, combine economic concerns and organizations on the basis of self-government, with the aim of ensuring the co-operation of all sections of productive workers and of interesting employers and employes in the administration. A further aim would be the regulation, upon the principles of public economy of production, collection, distribution, employment and valuation, together with import and export of all economic articles.

Industrial and co-operative societies, and their organizations, shall, upon their request and with due regard to their constitution and special characteristics, be incorporated into the public economic system.

### THE CASE OF THE PRUSSIAN RAILWAYS

It will be noticed that the Socialist rulers of Germany contemplated nationalizing practically all the means of production, exchange and distribution in accordance with the Marxian doctrine, and abolishing capitalizing and the capitalists. They believed, in their shortsightedness, that the policy of nationalization, which had been not unsuccessful under the old Prussian absolutism, would be equally successful under the new democracy.

The Prussian State railways were the pride of all Germany and the great model to the advocates of nationalization throughout the world. Their services were cheap and efficient, and they yielded a financial surplus to the State, as the following record shows:

	Profit of State Railways. Marks.	Amt. Available for Relief of Taxation. Marks.
1895.....	450,200,000	112,200,000
1900.....	527,900,000	146,500,000
1905.....	626,000,000	211,400,000
1910.....	692,600,000	210,300,000
1913.....	772,000,000	234,100,000

The net profits of the State railways, as these figures show, doubled between 1895 and 1913; however, they came on an average only to about \$40,000,000 a year. In view of their huge mileage, their financial result was not worth trumpeting abroad. Besides, the assertion that the success of the German railways and the lowness of their charges were due to the greater efficiency of State management was absolutely unfounded. The success which the German State railways obtained was due, not to the superior ability of bureaucratic management, but to certain factors which were never mentioned by the advocates of nationalization. In the first place, practically all Prussia is a level plain. One can travel from the Rhine to Poland without passing through a single tunnel. Hence the Germans could construct their railroads far more cheaply than the English and French, for in England and France the railway lines run through an unending series of tunnels and deep cuttings. Besides, the all-powerful Prussian State subordinated all other interests to that of its railways. While in England, for instance, railways had to be taken at enormous expense, either high over the existing roads or underneath them, level crossings are general in Germany.

The Prussian State railways and the other industries controlled by the Government were successful because absolute discipline was enforced. The men in the State services formed a highly disciplined army. They were not allowed to combine. They were forbidden to join the Socialist Party. Parliament was powerless, and was not allowed to interfere with the officials who directed the great nationalized undertak-

ings. The State employes did not dare to express their dissatisfaction, and they were satisfied with a pittance, because a pension was attached to it which might be forfeited, and because they were given great social privileges. These conditions could not be reproduced elsewhere. Hence the policy of nationalization was relatively unsuccessful outside of Germany, especially in free democracies, which would have found bureaucratic absolutism quite intolerable.

### EFFECTS OF THE REVOLUTION

Events have shown that the policy of nationalization can be successful only if the directing officials enjoy absolute power and an entire freedom from parliamentary control, as in Prussia previous to the revolution. The German revolution of November, 1918, destroyed not only the monarchy, but also the absolutism of German officialdom, which was far more hateful to the people than the monarchy. Immediately after the revolution the character and the working results of the German State railways and of all the other nationalized undertakings changed completely. The employes combined, joined the Socialist Party, and demanded vastly increased wages and greatly reduced working hours. The democratic Parliament began to take a lively interest in the railway workers and supported their claims. The current expenses grew enormously, while the boasted efficiency of the railways diminished in the most extraordinary manner. According to a recent official estimate made by the Minister in Charge, the German nationalized railways, during the current financial year, will not yield a profit of a few hundred million marks, as they formerly did, but will produce a deficit of 18,000,000,000 marks, a sum equal to the entire capital invested in the German State railways and much larger than the sum total of all the profits made by the railways since their inception.

The advent of democracy has completely altered the character of the German railways and of their staff. The men have become unmanageable. Orders given by those in charge are disregarded. Bad time-keeping, insubordination and thefts have become common. The presiding Minister,

Herr Gröner, stated on Nov. 4, 1919, that the number of men employed on the railways was nearly 50 per cent. larger than in 1913, although the number of passengers and the quantity of freight carried by the railways had shrunk by one-half. He stated that numerous workers drew their wages, though merely putting in an appearance during the eight hours which they were supposed to spend working. The insubordination has become so great that the railway men have repeatedly stopped the conveyance of passengers or of goods of which they did not approve. Their attitude has led to several awkward diplomatic incidents because they have interfered not only with domestic traffic but also with traffic going abroad.

### GNAWING AT GERMANY'S VITALS

The policy of nationalization threatens to destroy Germany. Bureaucracy has become a canker which preys upon Germany's strength. According to the Berliner Tageblatt of Nov. 4, 1920, Germany maintains an army of 2,000,000 officials. If we add to them their dependents, 12 per cent. of Germany's inhabitants are more or less unproductively employed by the State. Even the Socialists are becoming alarmed, for not only the State railways but all the other nationalized and municipalized undertakings of Germany as well are run at a gigantic loss, at a loss which threatens the country with bankruptcy. The principal Socialist journal, the Vorwärts, stated on Oct. 28, 1920:

It is said that at the German Post Office 50,000 officials are employed in excess to the number required, while the number of superfluous officials employed by the State railways is 100,000, according to the Berliner Tageblatt, and from 300,000 to 400,000, according to the Frankfurter Zeitung.

All Germany is alarmed at the scandalous waste and inefficiency which have overtaken the nationalized and municipalized undertakings since the introduction of the democracy, and the demand to place the nationalized undertakings under private capitalistic control, which would ensure both economy and efficiency, has become very insistent. Needless to say, the advocates of nationalization outside of Germany no longer point to the German State railways as an exemplary undertaking.

## NATIONALIZATION IN FRANCE

Democratic France followed the example set by Germany, and, not unnaturally, the policy of nationalization was far less successful in that country than it had been in autocratic, imperial Germany. Railway nationalization proved a lamentable failure, and the attempts of France, and of other democratically governed countries as well, to undertake manufacturing and retailing of the most elementary kind aroused the indignation and contempt of both taxpayers and consumers. France, Italy and various other Governments secured for themselves the monopoly of manufacturing and selling tobacco and matches, which are made largely by unskilled labor. This business, though comparatively simple, is carried on with extraordinary incompetence by Governments practically everywhere. Government tobacco and matches are universally detested. A French paper, *The Atlas*, wrote in April, 1914, with regard to the French tobacco monopoly:

The smoker is obliged to accept with his eyes shut and his purse open everything the State sells him. If the quality is always the same—that is to say, inferior—prices are always on the increase.

Experience has proved that efficiency and bureaucratic control do not go together. Private undertakings are more efficient than those under bureaucratic direction, because free competition mercilessly eliminates the incapable. Business men become prominent by the same means by which race horses or boxers come to the front—by proved ability. Promotion in the civil service goes chiefly by seniority. While private enterprise automatically eliminates the unfit, bureaucratic management automatically promotes them. The essence of all business is progress. The essence of bureaucracy is conservatism, the strict observation of forms and precedents, hostility to progress.

## HOW IT WORKS IN ENGLAND

England has a highly trained, highly paid and most excellent civil service. Nevertheless, the English bureaucracy has shown its utter incompetence for managing economic affairs, and has made itself extremely unpopular with all business men. For

instance, Lord Gainford of Headlam, an eminent business man, who had a great deal of experience of bureaucratic management as President of the Board of Education and as Postmaster General, stated before the English Coal Industry Commission:

Under the influence of State management there is certainly no more inclination on the part of their servants to encourage the rapid adoption of new methods and up-to-date labor-saving appliances than there is in private enterprise concerns, and in my view more hands are required to do the same work under the State. No privately managed firm would find it necessary, for instance, to place behind every five telephone exchange operators a supervisor to stand over and watch them. One reason for the increased cost of State control is the impossibility of a departmental head ever being able to discharge an incompetent but honest civil servant. Once in the service, always in the service until a pension is secured, is the rule. Thus officials grow in numbers and the cost and personnel steadily increase.

The English advocates of nationalization, while deploring the failure and waste of so many departments during and after the war, have frequently boasted of the tremendous success achieved by the British Ministry of Munitions and have described its activities as a triumph of nationalization. However, the success of that organization was not due to the bureaucrats, but to the eminent private business men and engineers who directed its activities, and the majority of these are utterly opposed to management by officialdom. Sir Keith Price, a very able business man, stated before the Coal Industry Commission:

As member of Council "X" during the war, I was responsible for the control of over fifty Government factories and establishments and some eighty explosive stores, the factories representing an expenditure of over £25,000,000 on works and plant. \* \* \*

While maintaining that the Government factories which came within my purview were satisfactorily run during the war, I have the very strongest opinion that in peace time the reverse would be the case. The department had the advantage of having been able to secure some of the leading engineers and chemists of the day to manage and administer the factories. I know that the majority of them would refuse to serve the State during peace time in view of what they consider the irksome and inefficient system with which they have had to contend, quite apart from all questions of remuneration. Under Government control there is, to a large extent, no reward for efficiency, and inefficient can keep their positions under nearly

every circumstance. This cannot lead to the economic administration of industrial concerns.

### A LABOR LEADER'S VIEWS

Before the same commission Havelock Wilson, President of the National Sailors' and Firemen's Union of Great Britain and Ireland, gave evidence. During his long and busy life and in the course of his numerous journeys he had seen a great deal of the working of State control, and his experience had caused him to dislike it. He stated:

I attend today to give evidence against the nationalization of the mines or the nationalization of any industry, as I believe it would mean a great injury to the best interests of the workmen and the interests of the country generally.

I have had many opportunities of judging the effect of State control, and I have formed the opinion that such State control has not been to the benefit of the workers. State control would result in employment of large numbers of high officials on petty duties, continual change of officials from one department to another, restriction on freedom of action, protracted discussion of matters which could be settled in a few hours, control on top of control, no incentive to initiative, and political wire pulling to influence appointments on the management and directorial staffs.

The Labor Exchanges have been a costly failure, and no real benefit to the workers. I am pleased to state that I was the only member of Parliament who opposed their establishment. They are now costing over £1,000,000 a year. The same system of Labor Exchanges was established for seamen over sixty years ago. The inevitable result was that the only place where a seaman could not obtain employment was at the Labor Exchanges established by the Government for the seamen's benefit.

State interference with the liberty and action of the seaman has been a failure, and brought him within measurable distance of slavery. But for his determination to combine he would have been a slave today.

In this statement Mr. Wilson voiced the opinion of the British shipping industry as a whole, for the shipowners have become as disgusted with State management as the thinking sailors and their trade-union representatives. At the last annual meeting of the British Chamber of Shipping W. J. Noble, its President, stated:

Control of trade and industry has not been a success, it has, indeed, been a huge failure. Witness the present chaos in the coal trade, the muddle of the railways, the hopeless tangle of the whole transport system,

the anomalies of shipping "direction," the complications of food control.

We have now had nearly five years of Government control and management of business. Some of us have been behind the scenes, and have been the victims of the soul-destroying and paralyzing system that seems to be inseparable from Government control. What are its characteristics? It is extravagant and wasteful. It destroys all initiative; it stereotypes mediocrity. It is self-satisfied. It scorns advice. The idea of co-ordination is foreign to its nature. As an instance of Government methods, it was recently stated in the press that a ship in St. Katherine's Docks was loaded and unloaded nine times as a result of the conflicting orders of five different Government departments.

The cost is infinitely more than the owner's margin of profit and the cost of management combined. What ought to go to increase of wages is spent on whole armies of officials, whose main duties are to work the card-index system and to prepare statistics to enable ill-informed Ministers to answer silly questions in the House of Commons. It is a very illuminating fact that those trades and industries which have been wholly released from control are already on a fair way toward recovery, while those which still remain in the grip of the State are going from bad to worse.

### AUSTRALIA AND NEW ZEALAND

The advocates of the policy of nationalization frequently tell us of the triumph of that policy in Australia and New Zealand. Both these magnificent new countries possess the most gigantic natural resources; it is, therefore, only natural that the settlers became rich and prosperous. Economic progress was inevitable under any form of management; to ascribe the progress of Australia and New Zealand to the policy of nationalization is not only absurd but dishonest.

While Government management in the antipodes may appear a marvelous success to those who view it through rose-colored spectacles from the other side of the globe, many Australian and New Zealand authorities are far less convinced of the beauties and advantages of nationalization than are those who know its achievements only from hearsay. For instance, the Hon. Sir Charles Wade, the Agent General for New South Wales in England, who has occupied Ministerial positions and has been Prime Minister, and who, therefore, has the greatest practical knowledge of the actual working of nationalization, placed before the British

Coal Industry Commission a long statement in which he said:

Success of State ownership and control depends on the efficiency of labor; that, in turn, depends on an effective method of management and discipline. The greater the pressure that can be brought to bear upon the management, the greater the danger of laxity and inefficiency. If the franchise is enjoyed by the workers, political influence becomes possible. The nearer the franchise approaches manhood suffrage, the greater the pressure that can be exerted. \* \* \*

In New South Wales some railways have been condemned as being unjustifiable on business grounds which have been the result of political pressure. \* \* \* There is the temptation to vote for railways which may help the political party. \* \* \* Efficiency of labor is in inverse proportion to political influence. When a strike takes place in a Government department because a workman has been discharged, the Government's position is difficult. If they resist the demands, votes are in peril. If they yield, discipline is threatened. \* \* \*

State ownership does not stop strikes. In Victoria the State coal mines have struck work on several occasions. In New South Wales the Government railway and tramway workers, who enjoy perhaps the most liberal conditions in the world, have struck, although it is fair to say that a large number, in spite of temptation, remained loyal to the Government. The Commonwealth ship-building yards in Sydney and Melbourne have been the scene of strikes on many occasions. The workers on the Trans-Continental Railway have struck, and the State coal mines in New Zealand cannot claim to be free of strikes.

### WHY STATE CONTROL CREATES INEFFICIENCY

The Hon. Francis Marion Bates Fisher, a former Cabinet Minister of New Zealand, gave before the commission mentioned a very able survey of the advantages and disadvantages of nationalization.

The public service [he said] could never be efficient so long as it is under political control. \* \* \* The departmental regulations rob a man of practically all power of initiative. The principle in Government departments, so far as I have been able to ascertain, is that if you give a man power to make a decision he may make a mistake; therefore, in order to avoid mistakes avoid decisions. Thus we have these interminable and intolerable delays which do so much harm. See how marked a contrast there is between these conditions and those of the ordinary business man who has to be alert and quick witted, who could never prosper if he were hampered by the red tape that en-

tangles the civil servant. \* \* \* The private business man has to pay for his own blunders. The civil servant's blunders are paid by the taxpayers. He is thus shorn of that responsibility which does so much to make the business man efficient.

I hold the view that a State monopoly is even a worse evil than a private monopoly. The latter must be efficient in order to resist private competition on the one hand, and to prevent the demand for State intervention on the other. The State has no such grounds for efficiency. The State as a monopolist has no fear of either of these checks. It has unlimited funds, unlimited credit, no danger of competition and Parliamentary control. It is thus immune.

An additional danger of State monopoly must not be disregarded, for it is all important. It is intensely difficult for the State to initiate industrial or commercial developments. Let it be supposed that the State owns all the railways. If the Minister for Transport builds a new line he depreciates the value of the existing line. He becomes his own competitor. A mere suggestion from him that he is going to build a new line leads to a flood of demands from all over the kingdom for similar treatment. There is a general political scramble all over the country for a share of the expenditure of the public purse.

Private capital will always be found to finance a scheme which it can be shown will pay interest, but development is arrested enormously if the future of development rests with the State. To begin with, the State will not pay for brains. It prefers mediocrity at half the price. It gets mediocre results accordingly.

### UNIONS' ABUSE OF POWER

The State of New South Wales, which, like all the Australian States, has gone in with great energy for the nationalization of industrial and commercial undertakings, has experienced a great deal of trouble with the coal miners. Unrest among them was very great. Strikes occurred unceasingly. The miners' leaders endeavored to make the orderly working of the industry impossible, and proclaimed at every opportunity that widespread dissatisfaction among the workers could not be allayed by wage concessions, that the agitation was due to dissatisfaction with the capitalist system, that peace and order in the coal mining industry could be obtained only by nationalizing them.

The demand for the nationalization of the coal mines was so insistent and the inconvenience of almost continuous strikes was so

great that the New South Wales Government at last appointed a Royal Commission to investigate the position in the coal mining industry. That commission recently published a report that throws a flood of light upon the policy of nationalization, its practical working, and the aims of those who demand its introduction in Australia and elsewhere. The report states:

There cannot logically be denied to any section of the community the right to organize on the lines of self-interest and self-protection, but the nation is vitally concerned to see that such organizations do not develop into political machines or proclaim and seek to enforce against the general community an objective policy which aims at holding up the many for the benefit of the few.

In view of recent experiences of the power—either used or threatened by industrial sections to paralyze the public utilities of food, fuel and transport—the community should be on the way to realize that it has in its concessions to industrial liberty apparently parted with an undue proportion of its communal rights, and that, if it is to preserve its integrity and order, it must resume some of them, or at least take measures to ensure that the arms that were given for defense are not turned into weapons of selfish aggression, controlled and directed by factors that are destitute of all social intelligence and spirit.

The public utilities of food, fuel and transport are fundamental and vital elements of the national existence, and no nation can afford to allow any one of them to become a mere instrumentality of a class or section of the community, capable of being used against the whole in pursuance of a policy of sectional greed or ambition.

### CONDEMNED EVEN BY MINERS.

Thus, in Australia, the land where nationalization has been carried furthest, it is clearly recognized that bureaucratic management is very inferior to individual, or capitalistic, management as regards efficiency. Besides, as the report tells us, bureaucratic control is condemned, not only by the owners but even by the miners themselves. The New South Wales report states:

Nationalization of the [coal] industry is apparently not viewed favorably as a solution of the industrial problem by the employes or their industrial organization, their main objection being that it merely means a change in the identity of the employer and a continuance of all the essential causes of their dissatisfaction with the present system.

The owners as a body are opposed to it,

even on the basis of complete compensation, as depriving the individual of a field of reproductive enterprise in which the individual can operate more efficiently and with better service to the public than bureaucratic administration on the evidence can possibly do. \* \* \*

Apart from the objections emanating from the interests concerned, which cannot be of themselves conclusive, the consensus of informed opinion appears to be against the principle of nationalization, as opposed to true democracy, in which individual initiative and effort are essential and beneficent factors. \* \* \*

Whatever may be the faults of the existing system of ownership and control, it is at least tempered by competition, by the influences of the industrial element, and by public opinion, all of which have hitherto successfully worked to prevent the industry, as a national instrumentality, being used to exploit or oppress the community as a whole. Would that harmless character be preserved under any system which gave control to those who would benefit by its misuse, with public opinion the only tempering influence?

Before an affirmative answer to that question could be reasonably assured, the colliery employes must produce some better records of tenderness for public interest than they have offered to the public up to the present time.

Whatever may be suggested as to the faults of the proprietors, individually or collectively, there remains to the debit of the employes a deplorable record of indifference to the national need of increased production, defiance of the arbitration laws, refusal to accept constitutional means for the adjustment of disputes, a selfish insistence on trivial demands, a conspicuous lack of internal discipline, and a subordination of mind and action on the part of the moderate and serious-minded of the employes to the crude and hectic preachings of an inconsiderable section of their body, alien, for the most part, in origin and spirit, whom they have allowed to attain an ascendancy in council in inverse ratio to their real authority and standing.

Any section of the community asking to be entrusted with a power which could be used effectively to the profit of the user against the rest of the community should not complain if it is asked, first, to graduate in public virtue.

### UNWISE LEADERSHIP

The report calmly and unsparingly points out that the unrest among the miners in Australia is largely because a considerable number of irresponsible boys and youths have been overpaid and have lost all sense of proportion; that doctrinaires and an

anarchistic minority have secured the control of the trade unions, partly by trickery and partly by overawing the steady-going majority. It shows the attitude of the miners by enumerating sixty-one strikes which had taken place between Jan. 15, 1907, and Jan. 12, 1920, at the South Clifton and South Clifton Tunnel collieries. Among the causes of these numerous strikes we find that the miners went on strike because "a shiftman was dismissed for arriving at the mine intoxicated." Another time they went on strike "nominally because of a dampness on the traveling road, the probable reason being that some of the wheelers wanted to attend a race meeting." Then there was a strike because of the "refusal of an employe, who had been absent without leave, to see the manager." A three days' strike occurred because "five clippers were dismissed for deliberately persisting in being late after previous warnings." Several thousand miners struck from July 23 to Aug. 8, 1919, because "a wheeler had been dismissed for ill-treating a horse."

#### POLICY NOW DISCREDITED

The foregoing evidence shows that nationalization has been a universal failure. Up to the war the tide of popular opinion was flowing strongly in its favor; nationalization was favored not only by countless agitators and their followers, but by numerous employers, politicians, authors, &c. Owing to popular clamor, many privately managed undertakings and services were placed under Government control during the war. However, bureaucratic management proved a failure everywhere. It was not only extraordinarily wasteful and incompetent, but it made the system thoroughly hateful to the workers themselves, who had demanded its introduction. The wage earners discovered that the bureaucrat is a far harder taskmaster than the private capitalist, and that no tyranny is greater than that of cast-iron Government regulations.

Both agitators and workers have learned

to detest the policy of nationalization. Many, it is true, still advocate it for the sake of consistency; but most of these are bitterly opposed to bureaucratic management, which they detest at least as much as private capitalism. Though clamoring for nationalization, they are opposed to management by a soulless bureaucracy. Under the cover of nationalization they wish to introduce either syndicalism, which means the confiscation and management of undertakings by the workers engaged in them, or communism, anarchism or guild management. However, these policies cannot be discussed with advantage in the present article.

The British Empire has experimented on a very large scale in applying the policy of nationalization to trade and industry. The result has been thoroughly unsatisfactory. The British telephone and telegraph services are far inferior to those of the United States. For every single telephone in the United Kingdom there are twelve in the United States. The British dominions and colonies have experimented extensively with their railways. In many parts of the empire the railways are State-owned and managed, and in others, such as India, they are State-controlled. The result has been unfortunate. National management and control have stifled railway expansion and railway progress. The unsatisfactory position of the British Empire as regards railway development may be seen at a glance by the following comparison, which relates to the year 1913:

	Sq. Miles of Territory.	Population.	Mileage of Rys.
British Empire.....	12,808,994	439,734,060	134,131
United States.....	3,026,789	97,028,497	251,984

Although, previous to the war, the British Empire was four times as large as the United States, it had only a little more than one-half the mileage of railways. With unrestricted private initiative, the British Empire would probably have possessed a far larger mileage of railways, a far larger number of white citizens, a far greater wealth and far greater power.

# THE SPARTACAN UPRISING IN GERMANY

By RALPH H. LUTZ

Member of the Faculty of Leland Stanford University,  
California\*

*A complete story of the crisis in which Germany narrowly escaped the fate of Russia—How Liebknecht and other communist leaders sought by armed revolt to impose a dictatorship of the proletariat upon the nation—Murder of the chief agitators*

THE defeat of the Imperial German Armies in France, coupled with the sudden collapse of the General Staff, was the immediate cause of the German revolution which overthrew the military and imperial régime and evoked the internal struggle between the Social Democrats and the Spartacan extremists. At the end of September, 1918, when this defeat was fully realized, Prince Max of Baden, on the demand of the Majority leaders of the Reichstag, was appointed Imperial Chancellor. The dismissal of Ludendorff early in October ended the military dictatorship; within two weeks Germany was a republic.

The first step toward this republic was the revolt, commencing Oct. 22, 1918, of the High Seas Fleet, followed by the seizure of the Hanseatic cities by workmen's and soldiers' councils. This was followed by the rising of the Bavarian Independent Socialists under Kurt Eisner, who, denouncing the Southern Pan-Germans as the accomplices of Prussia, proclaimed the Free State of Bavaria. The final phase of the revolt was the overthrow of Prince Max of Baden, the assumption of power by Friedrich Ebert, and the proclamation of the German Republic in Berlin. With the seizure of Berlin on Nov. 9, 1918, by the Socialists, the victory of the German revolution was completed.

It was the great tragedy of the German proletariat that the Socialists, at the moment of their triumph over the autocratic and capitalistic empire, were divided into

hostile groups. They had been so divided since the beginning of the war. The German Nationalists forced the Socialist Party to vote for the war credits. The goal of the Social Democrats then became the control of the Imperial Reichstag. The adoption of this policy led to the break-up of German Social Democracy. Hugo Haase and his supporters in the party caucus of August, 1914, had voted against support of the capitalistic Imperialists, but had finally acquiesced. When, however, in the historic Reichstag session of Dec. 9, 1915, von Bethmann Hollweg showed that the Imperial Government accepted a part of the Pan-German plan of conquest, Haase, as the leader of the minority faction, refused to vote for further war credits. This refusal proved momentous. In March, 1917, this minority party seceded from the Social Democrats and formed the Independent Social Democratic Party. The new party reaffirmed the fundamental principles of Marxian socialism, denounced all compromises, and secretly adopted a revolutionary policy.

## ORIGIN OF SPARTACISM

Scarcely were the Independents organized when there appeared upon their left a revolutionary and communistic group calling itself the Spartacan Alliance. The development of this new school, with its exotic interpretation of Marx, was the direct result of the war and of the rise of Bolshevism. It is the most significant fact in the recent history of German socialism. The sponsor of this movement was Karl Liebknecht, son of a famous father and himself a well-known Social Democrat.

\*This article is based on an address delivered by the author on Dec. 30, 1920, before the American Historical Association at Washington.

Karl Liebknecht was the first German at the outbreak of the war to recognize the empire's responsibility for the conflict and to denounce the moral guilt of the German and Austrian leaders. For his opposition to the traditional solidarity of the Socialists, he was expelled from the party. For summoning the masses to overthrow the criminal Government of Germany, he was promptly arrested and imprisoned. His protests, however, were supported by Rosa Luxemburg, the ablest personality of the woman's socialist movement. As a result of the work of these leaders, a group of communists began to preach the doctrine of immediate socialization of the means of production and distribution and of the world revolution to be effected by the proletariat.

On the fifty-seventh birthday of the former Kaiser the first of a series of open letters signed "Spartacus" appeared in Germany. These letters were addressed to the leaders of the Social Democracy, and advocated the reorganization of all socialistic groups upon an international basis. A letter entitled "Retrospect and Prospect," published Aug. 12, 1916, revealed Liebknecht as the author of the "Spartacus" letters. Notwithstanding police and censor, these letters continued, however, to circulate in the interior of Germany, and even at the front. "Spartacus" openly declared: "Our goal is communism, freedom's golden land of anarchy."

#### INFLUENCE OF BOLSHEVISM

The origins of Spartacism are traceable to the communistic movement within the German Social Democracy. The formulation of its program was, however, the result of the temporary success of Bolshevism in Russia. Lenin's interpretation of Marx was readily accepted by the Spartacans, and the Soviet system was adopted as the fundamental part of their program. "All power to the workmen's and soldiers' councils!" became the slogan of the Spartacans. Rosa Luxemburg drew up a consistent and clear party program, modeled largely on Bolshevism and differentiating Spartacism from Social Democracy. The Social Democrats were denounced as practical politicians opposed to immediate socialization and advocating doctrines of bourgeois democracy and majority rule, while the Independent

Socialists were scorned as opportunists who had abandoned the true gospel according to Marx. Although small in numbers, the Spartacan Alliance was, long before the November revolt, the revolutionary party of Germany. Its ideology was that of the Bolsheviks, and its goal was world revolution. When the November revolution delivered Germany into the hands of the Socialists, the Spartacans were one of three factions capable of establishing a provisional government.

#### A SHORT-LIVED TRIUMPH

On Nov. 9, 1918—day of historic memory—Karl Liebknecht, at the head of a Spartacan group, seized the Royal Palace and the Police Presidency of Berlin. His followers ordered the bells of the illuminated Berlin cathedral to ring in celebration of the proletarian victory. From the balcony of the palace, where in 1907 the Kaiser made his midnight speech announcing the riding down of Social Democracy, Liebknecht proclaimed to the Spartacans that the German proletariat was master of the empire. The Spartacans then promptly seized two of the largest Berlin newspapers, in order to develop their communistic propaganda. Although Liebknecht printed the proclamations of Ebert as Chancellor, he boldly challenged the Social Democrats by writing: "There can be no alliance with those who, during four years of war, have betrayed you." Meanwhile the Spartacans formulated demands which, if fulfilled, would have meant the establishment of a complete dictatorship of the proletariat on the Russian Soviet model.

Liebknecht had been in close touch with the left wing of the Independents and a party to their revolutionary conspiracies. He counted upon Independent Socialist support for the establishment of the dictatorship; consequently the union of the two Social Democratic Parties in a Coalition Government was a blow to his communistic policy. The formation, however, of this Socialist Government, which was hopelessly disunited and without a program, enabled the Spartacans, as the revolutionary party of opposition, to develop rapidly throughout Germany. Spartacus demanded that the socialization of the means of production should be carried out at once and denounced the Social Democratic plan of nationalizing

only those industries which were ready for expropriation by the Commonwealth. Above all, Spartacus opposed the convocation of a National Assembly to express the will of the people, and demanded that the revolution should develop exclusively along Russian lines.

### A STRUGGLE FOR POWER

The history of the first phase of the German revolutionary movement is that of the struggle of the Spartacans and their allies with the Majority Socialists for power. It is a conflict of the forces of communism with those of democracy. The Social Democrats planned to establish a democratic federal republic, elect a National Assembly and conclude peace with the Entente. The Independent Socialists aimed to break with the past, to overthrow the capitalistic bourgeois State, and to erect a socialistic republic. The Spartacans finally advocated the establishment of a communistic State through the dictatorship of the workmen's and soldiers' councils. The Government and

the masses were thus hopelessly divided by the gravest of revolutionary questions. Upon one policy alone all the Socialist factions agreed, namely, that a proletarian congress of the German workers should be summoned in order to save the nation from anarchy.

The meeting in Berlin on Dec. 16, 1918, of the first congress of the workmen's and soldiers' councils was the most important event in Germany since the November revolution. The future of the nation was in the hands of this convention of the victorious proletariat, and for the first time since Nov. 9 the nation had an opportunity to express its opinion upon revolutionary questions. Liebknecht correctly stated that the members of the congress had to decide whether or not they would develop the November revolution into a socialistic revolution of the German proletariat. On the opening day of the congress Liebknecht, addressing a great crowd of striking workmen, denounced the idea of a National Assembly, and demanded the arming of the revolutionary working classes. To the armed strikers he shouted: "Whoever votes for the National Assembly votes for the rape of the working class!"

**ROBERT EICHORN**

**GUSTAV NOSKE**

*Former German War Minister, who crushed the Spartacan revolt*

Within the congress, a parliamentary struggle occurred between Social Democrats, Independents and Spartacans. The Majority Socialists urged the convocation of a National Assembly, while the Spartacans demanded a socialistic dictatorship, the establishment of the councils system, the formation of a Red Army and the immediate socialization of industry. After violent debates, which brought out the imminent danger of the military occupation of Germany by the Entente, the motion to hold the elections for the National Assembly was carried by a vote of 400 to 75. Thus the German proletariat itself, in voting to call a National Assembly, established the principle of democracy above that of class rule.

#### PRELUDE TO CIVIL WAR

This decision of the proletarian Congress of the Workmen's and Soldiers' Councils was the signal for the attack of the Spartacans and Independents on the Social Democrats and the prelude to civil war. Liebknecht, always a man of action, determined now to overthrow by force the entire administrative system of the old police State, which he accused the Social Democrats of

maintaining in power. The Spartacans of the other German industrial centres were in accord with the Berlin leaders. In Hamburg, Bremen, Brunswick, Magdeburg, Leipzig, Dresden and Munich, the communists denounced the calling of the National Assembly as a betrayal of the revolution and the restoration of the old imperial bureaucracy. To gain control of the remnant of the German army, the Spartacans commenced publishing the Rote Soldaten (Red Soldiers) as the official organ of their Soldiers' Alliance. This military propaganda was remarkably effective in winning over thousands of war veterans and republican soldiers to the Spartacan cause.

The sailors stationed in the royal palace at Berlin revolted on Dec. 23, but were suppressed by loyal troops acting under orders from the Socialist Government. At once the Independent Socialists seized upon this act to withdraw from the Government, on the ground that it had ordered reactionary troops to fire upon the people. The Spartacans, who had already issued a call for a party convention, believed that it would

 to overthrow the German Republic

be an easy matter to raise the Berlin masses against the Majority Socialist Government and to establish a genuine proletarian rule. The left wing of the Independents supported the Spartacans, while a considerable portion of German public opinion favored the establishment of a republic of councils.

### THE SPARTACAN CONVENTION VOTES FOR WAR

On Dec. 30 the German Spartacan Party met in convention in Berlin. Its aim was to draw up a communist program and take such measures as were necessary to overthrow the Provisional Government. Karl Radek, the able Russian leader and propagandist, appeared at the convention and pronounced in favor of civil war, if necessary, to establish the dictatorship of the proletariat. Liebknecht, Luxemburg, Mehring and Levy also spoke in favor of immediately completing the work of revolution. The delegates then proceeded to draw up a party platform and to formulate twenty-four military, political, social and economic reforms, which would pave the way for communism. The preamble of the party platform said in part:

The bloody hallucination of the world empire of Prussian militarism vanished on the battlefields of France, and the band of criminals who started the World War, plunged Germany into a sea of blood, and deceived her for four years were decisively defeated. Society was thus placed before the alternative either of continuing the capitalistic system with new wars, chaos and anarchy, or of establishing complete socialism as the only salvation for humanity.

The platform proposed active preparations for the revolutionary rising of the world proletariat. It said of Spartacus:

He is the social conscience of the revolution. "Crucify him!" yelled the secret enemies of the proletariat, the capitalists, the small citizens, the officers, the anti-Semitic press lackeys of the bourgeoisie, the followers of Scheidemann, who, like Judas Iscariot, sold the workmen to the bourgeoisie. Spartacus will seize power only if it is the undisputed wish of the great majority of the proletarian masses in all Germany, who must first accept the aims and battle methods of the Spartacans. The victory of the Spartacan Alliance stands not at the beginning but at the end of the revolution; it is identical with the victory of the millions of the socialistic proletariat. Thumbs in their eyes and knees on their breasts!

More important than the formulating of

this revolutionary platform was the decision concerning the immediate policy of the party toward the national elections. Although Liebknecht at the last moment doubted the success of civil war, the Communist Party voted to prevent the election of a National Assembly. The leaders were convinced that, if the Assembly once met, their program would be defeated and the revolution would be over. Many of the communists sincerely believed that a civil war, which established the dictatorship, would save Germany from her enemies by ushering in the world revolution. Radek boasted to the convention that the Russian proletariat would join with their class-conscious German brethren to fight the menace of Anglo-Saxon capitalism on the Rhine. Liebknecht himself stated that the party goal was international communism, and could be reached only by destroying the capitalistic classes in the Entente States, which alone barred the way toward the world revolution. He believed that it would be necessary to destroy all existing institutions in order to establish communistic society, and saw in the coming revolution the only salvation for Germany. The Spartacans announced that they would lay Germany in ruins, convinced that from the ashes of the empire a new and greater nation would arise.

### OUTBREAK OF REBELLION

Under the military leadership of Robert Eichhorn, Chief of Police of Berlin, the Spartacan rebellion broke out on Jan. 5, 1919, in the capital of Germany. That day the Spartacan and Independent newspapers called for demonstrations in the Siegesallee against the Majority Socialist Government. Enormous crowds of workmen were addressed by Eichhorn, Liebknecht and Ledebour, who described the Majority Socialists as "bloodhounds" and denounced them for convening the National Assembly of the reactionaries. That night the armed forces of Spartacus seized the principal newspaper offices of the city, with the object of preventing the appearance of the Social Democratic and bourgeois press. Everywhere their efforts were successful, and their leaders believed that within twelve hours the Social Democratic Government would cease to exist. Vorwärts, the official paper of the Majority Socialists,

now appeared under Spartacan control and printed a proclamation demanding the disarming of the counter-revolutionists, the arming of the proletariat, the formation of a Red Army, the union of all revolutionary troops with the workers, the seizure of power by the councils, and, finally, the "overthrow of the traitors Ebert and Scheidemann."

Liebknecht*

Gate, the Government printing offices and several barracks and railway stations, the terror began in Berlin. Ledebour, Liebknecht and Scholze formed a provisional Government and sent a detail to seize the Ministry of War. Many Government troops surrendered without fighting, and the marine division declared its neutrality. Had the Spartacans possessed able military leaders and abandoned their speechmaking for fighting, they could easily have overthrown the Socialist Government in the Wilhelmstrasse and established the Soviet system in Berlin. They wasted two valuable days, until the vacillating Socialist Government appointed Noske Commander in Chief in the Marks and Governor of Berlin. The Spartacans, who were supported by the left wing of the Independent Socialists, failed also to win over the Independent party leaders. Yet they almost succeeded in seizing the former capital of militarism from the Majority Socialists. Having completely paralyzed transportation and industry in Berlin, Liebknecht, addressing his followers on Jan. 6, said that the fall of the Government was a matter of hours.

#### DEFEATED BY GOVERNMENT FORCES

Meanwhile, however, Noske gradually drew into the city the skeleton regiments of the old Imperial Army, which were stationed at Potsdam and neighboring camps. On Jan. 8 he announced in a proclamation to Berlin:

Spartacus fights now to secure control of the State. The Government, which will bring about within ten days the free decision of the people concerning their own fate, is to be overthrown by force. The people shall not be allowed to speak. Their voices shall be suppressed. You have seen the results. Where Spartacus rules, all personal security and freedom are abolished. \* \* \* The Government is, therefore, taking the necessary measures to end the reign of terror and prevent its recurrence once for all.

The Government's counter-attack began on Jan. 9, when loyal troops, supported by machine guns, mine-throwers and even howitzers, attacked the Spartacan strongholds. Eichhorn was finally defeated by this remnant of the Prussian guard, fighting under the banner of the Socialist Republic. The Police Presidency on the Alexander Square and at the Silesian Railway Station, the last Spartacan strongholds,

were taken by storm, and the first attempt to establish a dictatorship of the proletariat collapsed. Of this battle the writer was an eyewitness.

The failure of the Spartacans was due primarily to their lack of proper military organization and to their inability to obtain the support of the revolutionary troops stationed in Berlin. They were vanquished by small but disciplined forces equipped with artillery and commanded by able officers of the old army. Nevertheless, it took the weak Socialist Government sixteen days to put down the rising. It is therefore reasonable to conclude that if Liebknecht had carefully prepared a military coup d'état, Bolshevism would have been established in Berlin in January, 1919.

#### MURDER OF LIEBKNECHT AND LUXEMBURG

After their final defeat the Spartacan leaders disappeared. Eichhorn and Radek fled from the capital. A report was circulated that Liebknecht and Luxemburg had gone to Holland. Liebknecht, however, wrote to the Rote Fahne (Red Flag):

We have not fled, we are not defeated, we will remain here, and victory will be ours. For Spartacus is the personification of socialism and world revolution. The Golgotha way of the German revolution is not yet ended, but the day of salvation nears.

On the night of Jan. 15, however, Liebknecht and Rosa Luxemburg were arrested and brought to the headquarters of the Guard Cavalry Division. Rosa Luxemburg was brutally murdered by Government troops and her body thrown into one of the Berlin canals. While being taken to Moabit Prison, Karl Liebknecht was shot by his guards, ostensibly because he tried to escape. Thus political murder ended the revolt which a remnant of the old Imperial Army had suppressed. These murders stamped out the fiery protests of communism against democracy, and the followers of Liebknecht and Luxemburg, deprived of leaders, were promptly scattered. The bourgeoisie and the Social Democrats openly rejoiced over the death of the two communist leaders, who had threatened the peace of the defeated and exhausted Fatherland and had not shrunk from plunging the capital of Germany into civil war. The failure of the German communist rising was the signal for the triumph of German

democracy in the national elections, which were held on Jan. 19.

#### RED AGITATION CONTINUES

The defeat of the Spartacans in Berlin did not, however, end their propaganda in Germany. Munich, Düsseldorf, Duisburg, the Ruhr, Brunswick, Wilhelmshaven and Bremen contained strong groups. The internal condition of Germany, moreover, rapidly altered the situation in their favor. The danger of national starvation was imminent, the industrial life had collapsed, wild strikes and widespread agitation created economic unrest, the National Assembly failed to bring order out of chaos, and the reports from Paris indicated that the final terms of peace would be almost unbearable. Faced by these dangers, large classes of Germans turned to the Spartacans and Independents for salvation. Intellectuals, such as Hans Delbrück, openly threatened the Entente with Bolshevism. Lenin, who had planned to make Germany the first link in his chain of world revolution, had his agents in Berlin working with the Spartacans. Trotzky's slogan, "The failure of communism means that Europe

relapses into barbarism," was placarded on the walls of the capital, while Lenin's dogma, "The Bolshevist theory is a consistent carrying-out of Marxism and strives to re-establish the true teachings of Marx concerning the State," won many converts for the Spartacans among the workers.

By the end of the Winter, the Coalition Government of Majority Socialists, Catholics and Democrats found it increasingly difficult to maintain order in Germany. The National Assembly was unable to agree upon an economic policy that would restore the nation's industrial life. The Independents, enraged by their recent political defeats and by the betrayal of their cause at the hands of the Majority Socialists, now encouraged "direct action." The Spartacans determined, therefore, to strike once more for the dictatorship of the proletariat and to avenge the murder of their former leaders. Aided by the Bolshevist agents and by Russian gold, they planned a revolution for the first week of March, 1919. While their leaders secretly conspired with

the troops of the Berlin garrison, the Independent and Spartacan newspapers openly attacked the Government. For the first time the Spartacans dominated the Berlin workmen's councils, which, as a prelude to rebellion, proclaimed a general strike on March 4.

#### SUPPRESSION OF NEW OUTBREAKS

On the day set the Spartacans again raised the red flag of Bolshevism on the Alexander Square in Berlin. This time they were joined by the Marine Division, the Republican Guards and bands from the criminal classes. Heavy fighting continued for a week between the loyal Government troops and the Spartacans. Machine guns, airplanes and artillery were freely used on both sides. To inflame the people against the communists Noske falsely accused them of a general massacre of prisoners, and on this alleged ground ordered them to be exterminated. So low, however, had the military power of Germany sunk since the ar-

*Mounted guards in Munich charging upon a dense crowd of Spartacan rioters who were tearing up the paving stones*

mistice that the Government could not muster three full divisions to suppress the insurrection. For the second time the Berlin communists were put down by volunteers from the middle classes, who supported the regular troops.

Though twice defeated, the Spartacans did not abandon faith in the method of "direct action." In Bremen and Hamburg disturbances occurred, and attempts were made to establish the Soviet system. In Bavaria, after the murder of Kurt Eisner, the left wing of the Independents united with the communists to establish the dictatorship of the proletariat. On April 6 the Central Council of Bavaria proclaimed to the people:

The decision has been made. Bavaria is a republic of councils. The working people are masters of their fate. \* \* \* The Landtag is dissolved. \* \* \* All co-operation with the contemptible Government of Scheidemann is refused.

Thus the rising which had failed in March temporarily succeeded in April. Here the influence of the Russian Bolsheviki was

more pronounced than in Berlin, and the plan of spreading the revolution throughout Germany was worked out in detail.

#### DEFEAT IN BAVARIA AND ELSEWHERE

Although the extremists triumphed in Munich, the rest of Bavaria soon united against the Spartacans under Levien. Hoffman, the head of the Socialist Government, did not hesitate to summon the armed forces of the several States to destroy Bavarian communism. After severe fighting, the brief Bolshevist reign of terror was ended by Noske's Prussian troops. The proletarian dictatorship of foreign intriguers collapsed and the boasted Soviet Army of Liberation never advanced to the German frontiers.

German communist risings also occurred in the Rhineland, Westphalia, the Hanseatic Republics, Thuringia, Saxony and several industrial centres of Brandenburg and Bavaria. Except in Berlin and Munich, they failed to threaten seriously the Coalition

Government. At the end of Spring, 1919, the national interest was diverted from internal affairs to the drama of Versailles. The communists advocated acceptance of the allied peace terms in the spirit with which the Bolsheviki had received the conditions of peace at Brest-Litovsk. The Social Democrats, however, regarded the treaty, even in its final form, as unbearable. But military resistance to the allied demands was impossible, and the Independents denounced any attempt at passive resistance. After Scheidemann resigned,

Bauer formed a Ministry of Socialists and Catholics, which secured from the National Assembly the ratification of the Treaty of Versailles. With this ratification ended the first and violent phase of the effort to establish Spartacism in Germany, and here this account may close. Though the embers of the conflagration still smoldered, and even threatened at times to burst again into flames, the democratic principle triumphed, and the machinations alike of the Russian Bolsheviki and the German communists came to naught.

## HOW LIEBKNECHT AND ROSA LUXEMBURG WERE MURDERED

*The published confession of a German soldier who says he was ordered to shoot down the communist leaders*

**I**N the German Socialist newspaper Freiheit, on Jan. 9, 1921, appeared a statement signed by "Hussar Otto Runge," which, though vague and elusive on points involving self-incrimination, is in effect a confession revealing a deliberate plot by the military authorities in control of Berlin to shoot down the two Spartacan leaders, Karl Liebknecht and Rosa Luxemburg, at the time when the communist uprising ended with their murder. Runge's story throws no light on the relations, if any, between the murderers and the Government; it may not be wholly true in details, as there are obvious omissions, due to the author's fear of compromising himself; the fact, however, that Runge was one of the soldiers stationed at the door of the Eden Hotel, where the two communist leaders were last seen alive, gives his statement some value as an eyewitness account of what happened. His narrative, when translated, reads as follows:

On Jan. 15, 1919, between 7 and 9 o'clock in the evening, I was stationed as sentry before the chief entrance of the Eden Hotel; Cavalryman Dräger was with me. About 9 o'clock there was a great to-do and excitement; it was rumored that Liebknecht and Luxemburg had been brought in. Several orders were at once given me by officers and Sergeants, and the remark was dropped that

these creatures must not be allowed to leave the hotel alive.

Concerning Liebknecht, I received strict orders from officers to knock the fellow down with the butt of my rifle wherever he emerged. I was new at my job and could not know the officers; but afterward I recognized them as my fellow-accused. As for Frau Luxemburg, officers came to me and said: "I order you to see that Luxemburg doesn't leave the hotel alive; mind you swallow that!" Lieutenant von Pfluck-Hartung made a note of my name and said to me: "First Lieutenant Vogel will send her straight to you; all you'll have to do is to strike hard." When Frau Luxemburg was being dragged into the motor, somebody jumped up behind just as it was driving off and sent a bullet into her head; I could see that very clearly, as I was only a short distance away. He then jumped down and re-entered the Eden Hotel from the Nürnberger Strasse.

The next minute an officer came up to me from the entrance and told me to go up to the fourth floor and clear things up there. "The fellows up there are no good," he said, "they're rotters. Your orders are to shoot the editor of The Red Flag."

A Sergeant met me on the staircase and said I was to come up at once and clear up things. I told him I'd got my orders already and asked him where he got his. He then said: "Captain Pabst gives orders here." When I got upstairs there was one man standing against a wall and another sitting next to him. The Sergeant ordered

me to point my gun, and to shoot when he came back for the third time; that was to be the signal. I had already lifted my rifle, but thought better of it, and lowered it again; the man of The Red Flag also came toward me and said he had a last commission to give. He was led into a room, and as he left an officer said to a Sergeant: "Take the man off and see that nothing happens." I then went back to my sentry duty and Dräger said to me: "Well, I suppose you didn't shoot the fellow upstairs after all; you were such ages about it."

Meanwhile the others had come up and were boasting: "We've done for Liebknecht nicely. A trick was played on him, and so he was induced to try to escape." Chief Lieutenant von Rittgen later repeated that to me when we were in prison; he also said he had heard reports of the pistols. Of Luxemburg it was said: "The old sow is already afloat." [Frau Luxemburg's body was found three weeks later in the canal.]

I have this to say about my flight: At first everybody in the Eden Hotel congratulated me, and I was told that nothing would happen to me. "We'll see to that," they said. "We'll send you to another nice little town and look after you." One evening after sentry duty, when I was walking through the Zoo, Lieutenant Liepmann came up to me with Chasseur Friedrich and said: "Well, my man, I've been a good time looking for you; you've got to get away; you've got to make yourself scarce, or else we'll all be sitting in prison." Various of my superiors in my cavalry regiment also began to urge me to flee. Lieutenant Liepmann then took me from recruiting quarters to the Eighth Hussar Regiment. I told my superiors there about the murder and was instantly hailed as a hero.

One day in January, or the beginning of February, I was cleaning in the courtyard and two children came to me and said: "Hussar Runge is to come into the street

and speak to a soldier." A non-commissioned officer came to me and said: "Runge, I've been ordered to come by President Freiherr von —, Adjutant of the Eighth Hussars. He's got a warrant out against you; you're to be arrested. It can't be allowed. Here's a copy of the warrant." He gave me 240 marks and a military pass for Cologne. I at once told my Captain, got my pay, and was told by Captain Weber to make myself scarce, but to call at the Eden Hotel once more. I did so. At the Eden hotel I was told more: I was told that the order of arrest would not be acted on until I had got clear; 4,000 marks were brought to me in my lodgings, with a written message, telling me to get to Prague and to call on Consul Schwarz at the Consulate and ask for work. I refused, because I had no passport. Then I was kept a prisoner for four days with Lieutenant Liepmann at his place in the Kurfürstenstrasse until people began to smell a rat. I then got a military pass to Flensburg, and false identity papers; these were taken from me when I was arrested.

The examination was a farce. I had several private conversations with Military Judge Jörns and he told me: "Confess to everything without any misgiving; it will only be four months, and you can come to us again afterward if you are in distress." The cell doors were always left open. All the prisoners pretended to be the court; I had to pretend to be the prisoner, and I was told that if I didn't learn my confession off nicely, one fine night I should find a hand grenade in my bed. I was also urged to say that I had got my false papers, which the officers had given me, by buying them from the Spartacists in the Weinmeisterstrasse. The officers often had their girls to visit them up to midnight; there was music and wine. I several times telephoned to the Eden Hotel staff. I had to tell them the exact train I was taking for Flensburg, and what time I should arrive there.

HUSSAR OTTO RUNGE.

## THE UPS AND DOWNS OF RED PROPAGANDA

VIRTUALLY every Government of Europe has had to fight the menace of Bolshevik propaganda, and the United States has had to do the same. New light has been thrown upon the organization and extent of this widely ramified propaganda by a series of documents published in The London Times in February. The documents, vouched for as authentic, consist of "reports actually presented at a congress of Bolshevik Directors of Propaganda in Foreign Countries, which took place in all secrecy toward the end of December in the

neighborhood of a North German city." The city was Bremen; the date of the congress was Dec. 26. The reports presented covered the work of Bolshevik propagandists in England, France, the Iberian Peninsula, Germany, the smaller States of Central Europe and the newly formed countries of the Middle East. In its preliminary explanation The Times says:

The Bremen Congress was a very carefully camouflaged affair. With the exception of Commissar Eliawa, a representative of the Department for Eastern Propaganda in Moscow, all the delegates were men engaged

in the propagation of communist ideas in Western Europe. The agents for England and France were Julius Fachers, Antonowski and Müller. The Iberian Peninsula was represented by Rudan, Germany by La ge, Czechoslovakia by Gutmann, Denmark and Holland by Horenberg. They all entered Germany under assumed names and received, it is stated, new passports on crossing the frontier.

The conference began with a report by Fachers on the progress of the Bolshevik agitators in Great Britain. The results were discouraging—for the revolutionists. England and her democratic Constitution were shielded by the armor of "bourgeois" immobility. The situation, from the Bolshevik standpoint, was better in Scotland and Wales. The Irish Sinn Fein leaders had been alienated from the start by the mistakes of Moscow and a great opportunity had thus been lost of gaining Ireland as a powerful ally. In the whole of England some seventy-nine communist district organizations had been established, distributed over twenty-six areas of agitation. The expenses during the last half a year had amounted to £23,750 monthly, not including the costs of the Krassin Trade Delegation in London. The necessity for doubling these outlays was urged.

The same agent claimed greater efficiency and richer harvests in France.

"Where we are gaining in experience and numbers," said Fachers, "and our legations and representatives do not disturb us, as in other States, we record successes. Paris, Lyons, Chaleroi, Brest and Marseilles are our firm bases."

Dr. Lange, for Germany, reported with great disappointment the "apathy of the German masses." The Spartacists had increased, between March and July last, from 36,000 to 140,000, but the German "small-bourgeois" nature, narrow nationalism, and ingrained fear of the result of a Bolshevik upheaval had brought a serious check to the further growth of the movement in Germany.

Encouraging reports were submitted for Spain, Austria and Czechoslovakia. The greatest progress reported was in the Near and Middle East, in Transcaucasia, Persia and British Indian dominions. Commissar Eliawa was boastful of the Bolshevik achievement in the East. The winning of Turkestan, Azerbaijan, Afghanistan, was triumphantly recorded. By the Autumn of 1920 the map of Transcaucasia was red with the exception of Armenia and Georgia. Since this report was presented, Armenia has been sovietized, and dispatches indicate that Georgia—long resistant—has at last succumbed.

## THE VOICE OF THINKING GERMANY

SOME very remarkable letters, published during 1919 in an important Swiss journal, have now been made accessible to a larger public in book form.\* Friedrich Curtius, the author of these "German Letters," is a son of the famous German historian of ancient Greece. He is a distinguished jurist, who spent thirty-seven years in the civil administration of Alsace and Lorraine, for the most part as Provincial Governor, with a considerable degree of independent power. The letters show that there were Germans in high official positions who stood ethically head and shoulders above the brutal Prussianism displayed at Zabern. Though he is no pacifist, this German Governor shows himself to be an implacable enemy of Prussian militarism, which, in his opinion, made war inevitable.

\* "Deutsche Briefe." By Friedrich Curtius. Frauenfeld: Huber & Co.

He characterizes the invasion of Belgium as "a lasting dishonor to Germany," due wholly to the criminal folly of the military party, and declares that it bore the germ of defeat from the beginning. Though, as a German, he resents the conditions of the allied peace, he is glad that Germany lost the war. His view is expressed in the following quotation:

The war plan was the product of purely military judgment of international problems \* \* \* in defiance of all political and ethical considerations. We must own to ourselves that if that war plan had succeeded we could not, as believers in an ethical view of the world, have rejoiced in the victory. Did England suffer no moral hurt by its triumph over the Boers? Was not the imperialistic policy of Louis XIV. and Napoleon fatal to France? Our people also was in danger of becoming the irredeemable prey of the evil spirit of a cynical national egotism. The German overthrow has saved the German soul.

## UNCLE SAM'S "MANDATE" IN THE PHILIPPINES

*By* O. GARFIELD JONES, PH.D.

Professor of Political Science  
in Toledo University

*The wonderful work accomplished by a heroic band of American school teachers in the Philippines is here described by one who has known many of these educators personally and who has made a close study of the subject for the last twenty years. His article forms a chapter of American achievement, all too little known in this country, worthy to rank with the proudest in the nation's annals*

**E**NGLAND'S administration of India and Egypt has been excellent, but the Filipinos have made more political and social progress in the last twenty years than the people of India or Egypt have made in the last half century. In view of the Oriental environment, the Spanish traditions and culture, and the section of Mohammedan population which occupies almost one-third of the Philippine archipelago, our experience in developing a Filipino State on democratic principles should be illuminating.

As a colonial administrator the American has labored with his usual intensity, and, wonderful to tell, he has inspired the Filipino to work with almost equal zeal. America, despite Kipling's warning, has "hustled the East," and we have accomplished what

we set out to do. These statements may sound somewhat sweeping, but when it is understood how thousands of highly trained Americans, distributed over the Philippine Islands in different kinds of work, strove, by experiment and invention, by individual initiative and by highly organized group effort during twenty long years, to accomplish these results, one tends to become, like the American in the Philippine Government service, not a skeptic as to the results, which are evident, but rather disappointed that so much vigorous, persistent and intelligent effort has not produced even greater results.

### HOME RULE FOR FILIPINOS

Just as soon as civil government was established in 1901, a large measure of au-

tonomy was granted to the City Governments and—in a lesser degree—to the Provincial Governments. The Filipinos naturally made many blunders in exercising these new functions, for which they had had little if any training. The American teachers, of whom some 800 were scattered through the archipelago in 1901, rendered great assistance to these inexperienced municipal officials, while the three Americans in the Provincial Government aided and advised the Filipino Governor and the Filipino Prosecuting Attorney. But the main responsibility for keeping these local Governments going fell upon the Governor General's Under-Secretary, called the Executive Secretary. This office was first filled by Arthur W. Fergusson, who was a man of great executive ability. He advised, admonished, reprimanded, suspended, and, with the consent of Governor Taft, expelled local officials when necessary.

In these early days it was often found that the Municipal President collected funds for the insurrection army instead of taxes for the use of the Municipal Government. It was found necessary to reduce the autonomy of the municipalities in many ways. First, the fiscal and accounting functions were taken from the Municipal President and given to a new officer, the Municipal Treasurer, who was elected by the Council.\* In 1903 this Municipal Treasurer was taken entirely from the control of the Municipal Council, was put under civil service laws and regulations, and was appointed by the Provincial Board from an eligible list.† Next the Municipal Treasurer was made a deputy of the Provincial Treasurer, who at that time was an American and was required to keep a close check on his deputies.

#### EXPERIMENTAL CHANGES

In the first municipalities established after the American occupation, the municipal executive, then called *Alcalde*, had judicial functions.‡ This was soon corrected, however, by the re-establishment of the office of Justice of the Peace,§ a post

which had been established by the Spaniards in 1890. The Justice of the Peace was given concurrent jurisdiction with the Municipal President. Though this change was an improvement over having the Municipal President exercise both executive and judicial functions alone, it was still far from satisfactory. One man was found "guilty of habeas corpus proceedings," and other absurd or arbitrary acts were committed by the newly-appointed Justices. Governor Taft was so discouraged that he recommended the combining of municipalities to form larger judicial districts in order that fewer but abler Justices might be appointed.

Nothing was done, however, except that several of the provincial Judges, who were capable jurists, called the Justices of the Peace of the respective provinces to the provincial capital and gave them lessons in law and court procedure. In 1912 the Justices of the Peace were put on a semi-civil service basis, the fee system of remuneration was abolished, and they were placed on insular salary. Mr. Taft's idea of larger districts was utilized at this time by putting two small municipalities under one Justice of the Peace in several instances. At present the Philippine Justices of the Peace are doing very well, considering their lack of training, the total absence of lawyers in most towns, and the ignorance of the people in regard to any phase of the legal side of government.

At first the police were put entirely under control of the city officials, but this proved so unsatisfactory that by 1903 the provincial boards were required by law to prescribe the number of police for each municipality, the kind of uniform to be worn, and, if need be, to place all the municipal police in the province under the direct control of the chief constabulary officer of the province.\* In 1912 an insular law was passed putting all the municipal police in the archipelago under closer supervision of the constabulary, and placing the office of Chief of Police on a semi-civil service basis.

The Municipal Council was originally quite independent of the Provincial Board. The experiment did not prove a success,

 1913 to 1921*

they thought would work under existing conditions.

The Executive Secretary of the Philippines is the Superintendent of the local Governments. Figuratively speaking, he walks from one local Government to the other to see that each is working as it should, and if he finds one out of adjustment he must put it in running order at once. The success of the local Governments during their formative period was due in a large measure to the executive genius of Arthur W. Fergusson and his successor, Frank W. Carpenter. Both were men of remarkable

 Department of Mindanao and Sulu*

however, and when the Executive Secretary began to be flooded with complaints against the former body he got a law passed giving the Provincial Board, a majority of whom were Americans, supervision over the acts of the Municipal Council.\*

#### THE EXECUTIVE SECRETARY

In the development of these various municipal offices there have been increases in autonomy as well as decreases in autonomy, and the increases in efficiency and initiative have been very marked. It is the purpose of this article to show only that the Executive Secretary and his corps of assistants were the essence of the executive branch of the municipal and provincial Governments, and that when by administrative measures they could no longer make these local Governments work they resorted to legislative action, causing the local Governments to be changed to such a form as

ability for the kind of work they had to perform. Mr. Fergusson died at his post in 1909. Mr. Carpenter was promoted to a still more difficult position in 1914—that of first Civil Governor of the Moro Province—and was given the task of preparing the Moros promptly for complete absorption into the body politic of the Philippines. The Executive Secretaries since 1913 have striven to free the local Governments as much as possible from this close supervision. This is a much simpler problem than the one their predecessors had to face. Time alone will tell whether there has been sufficient progress along all lines to make this abandonment of close super-

\*Act. P. Comm. No. 679.

vision of the local Governments a success. The gross election frauds of Camarines and Capiz Provinces in 1916 tend to show that the executive supervision has become too lax.

### THE PUBLIC SCHOOLS

The Philippine Bureau of Education not only fulfilled the ordinary functions of an educational system, but also played an important part in the establishment of general peace conditions within the archipelago in the development of good local government among the adult population, and in the introduction of modern sanitation and hygiene throughout the islands.

The American soldiers had scarcely completed the occupation of Manila before the military authorities opened the public schools, with soldiers detailed as teachers. This policy was followed by the military commanders in every town they occupied. In 1901 some eight hundred American teachers were brought from the United States and sent all over the archipelago to open primary schools in English; indirectly they served as hostages to the Filipino people, a guarantee of the good intentions of the United States.

In 1901 no organized school system existed. There were only these 800 unsupervised American school teachers in more or less isolated stations. In most cases there were no schoolhouses, and chart classes were held in a rented room with few, if any, benches; the pupils ranged in age from 6 to 36 years. The teachers had no adequate or uniform texts, in some cases no texts at all; no uniform curriculum had been laid down for them, and they had no experience in teaching English to people of a foreign tongue. Some Spanish texts had been inherited from the Spanish era and some had been purchased by the military Government, but it was soon ascertained that not one pupil in twenty knew any more Spanish than English, and that no two sections of the people spoke

even the same native dialect; the necessity, therefore, of teaching English, the only language that the instructors knew how to teach, became evident. By 1901 the Government was definitely launched upon the policy of teaching nothing but English in the schools.

### TEACHERS AS HEALTH OFFICERS

These 800 Americans were primarily teachers of chart-class English. Their other functions were to make friends with the people, assist them in their local Government and serve as local health officers.

A terrible epidemic of Asiatic cholera broke out in 1902, and it took the combined action of almost every branch of the Government to stop it. Those stricken with

(© *Moffett, Chicago*)  
EX-PRESIDENT WILLIAM H. TAFT  
*First Governor General of the Philippines*

cholera had about three hours of the most terrible suffering imaginable, and then died. The disease is an intestinal parasitic contagion and can be contracted only through the mouth; consequently, if the persons dying from the disease are buried in lime to prevent the spread of contamination from their bodies, and if the people of the community cook or boil everything that they eat or drink, the disease cannot spread.

It became the principal duty of these American teachers to see that the sanitary regulations were carried out. This meant the suspension of teaching. When a school teacher finds himself in an ignorant, superstitious community, whose language he speaks poorly, if at all, and whose people are dying off like rats from a frightful disease; when he is responsible for the enforcement of strict sanitary regulations that are new to the people, and has, perhaps, not even a squad of Filipino soldiers to back him up in his work, it is obvious that he has no time for school duties. Nor were his difficulties lightened by the spreading of reports that the disease was caused by poison put into the wells by the Americans.

Such was the situation of many of the American teachers stationed at the 400 or 500 isolated posts in the Philippines in that early period. The people objected to burying their dead immediately without a church ceremony, and in at least one place the priest refused to perform the ceremony at the houses. The American teacher at this place saved the situation by learning the Lord's Prayer in Spanish and reciting it after reading passages from a ritual in English as the bodies were deposited in the cemetery. In this way this one American teacher succeeded in persuading the people to bury their cholera victims immediately, although they did not know a word of the ritual in English, and probably did not understand the Lord's Prayer in Spanish. The satisfactory part of it to them was that he read from a book as the priest did and that he chanted his Spanish prayer in true priestly style.

The strain put upon these early American teachers was so great that it is not surprising to find that quite a number died at their posts, and that a large percentage of the survivors left as soon as possible. It was a veritable "Charge of the Light Brigade"

upon the ignorance and superstition of the Filipinos, and upon the almost insuperable obstacles of tropical climate and Oriental disease. But the commander had not blundered. There was injustice to individuals, of course; it is always, an apparent injustice to send an individual to face the cannon's mouth or to labor among plague-infected people. The only real injustice, however, in the case of Americans in the Philippines is that the people in the United States have allowed political issues to blind them to the fact that the grandest heroism has been displayed by the American civil servants in our Oriental colony, and that this heroism has been largely unnoticed and unrewarded.

### THE EDUCATIONAL CAMPAIGN

What the main lines of our educational policy would have to be was seen almost from the start, and so keen were the army officers for the success of this work that many of them paid from their own pockets the expense of sending Filipino teachers to

the Manila Normal School in April, 1901.\* It is no uncommon occurrence even today for an American official to pay from his own pocket the money needed to make a certain project go when Government funds are lacking or are tied up by red tape. The big problem at the start, however, was not so much one of general policy or of promoting enthusiasm, as it was one of finding out how to develop an effective organization.

It was the task of Dr. Fred W. Atkinson, the first General Superintendent of the Philippine School system, to outline the work to be done. The actual organizing was accomplished by Dr. David P. Barrows, who was Director of the Bureau of Education from 1903 to 1909. The appointment of Dr. Barrows was particularly fortunate, because he had been Superintendent of the Manila Schools in 1900 and 1901, had had experience with Filipino teachers from all over the islands at the Manila Normal School which he reorganized in 1901, and had just spent a year traveling over the archipelago in 1902 as chief of the new Bureau of Non-Christian Tribes, and studying the various tribes of Filipinos, their customs, and social and economic conditions. A young man of vigorous emotions, splendid health and strong body, and educated

both in government and in ethnology, he had just the equipment necessary in 1903 to tackle the formidable task of evolving a compact and efficient organization out of the 800 Americans and more than 2,000 Filipinos who at that time made up the personnel of the Philippine school system.

#### HOW TEACHERS WERE ENCOURAGED

One of Dr. Barrows's most important tasks was to visit the various teachers at their isolated stations, share their hardships, encourage them to persevere, and convince them that in their chief they had a personal friend, who saw and appreciated their good work. By this development of personal loyalty he not only succeeded in retaining the services of valuable teachers and administrators who otherwise would have left, but also succeeded in imposing necessary regulations as to standards of work, curriculum, reports, &c., on these lonesome and weary teachers—regulations which they never would have agreed to had it not been for their loyalty to the chief. By six years of ceaseless effort this Director was able to bequeath to his successor one of the most highly organized school systems in the world.

The defect in this organization in 1909 was that, having developed it by capitalizing personal loyalty, Dr. Barrows refused to desert his friends after they had served

\*House Doc., Vol. 5, Doc. 2, part 2, pp. 349-387.

his purpose. A number of American teachers had become inefficient because of the climate or for other reasons. There being no pension system, Dr. Barrows refused to throw them into the discard after their five or ten years of faithful service. The next Director, Frank R. White, did dismiss these teachers. He was a remarkably keen judge of men, and when he found a teacher or supervisor or superintendent who was no longer able to do his work efficiently, that man was asked to resign. Mr. White had started as a teacher in the field in 1901, and worked his way to the top; consequently, he knew every detail of the system. He compelled every American teacher to live in a good house, wear good clothes, and be in every way an example of intelligent and right living in the community. He perfected the organization and worked so ceaselessly for the development of the industrial work of the schools that he died at his post from general debility and consumption in the Summer of 1913.

#### INTRODUCTION OF ATHLETICS

The next Director, Frank L. Crone, made a specialty of athletic work in the schools, and through the effective personal support of the Governor General, W. Cameron Forbes, and the scientific assistance of E. S. Brown of the Y. M. C. A., the entire athletic activities of the islands were organized into the very efficient Philippine Amateur Athletic Federation. The Far Eastern games were instituted between China, Japan and the Philippines in 1913 to provide the Oriental counterpart of the Occidental Olympiad. The playground movement, which was organized throughout the Philippine Islands by these three Americans in 1912 and 1913, might well serve as a model both as to plan and as to achievement for similar nation-wide movements throughout the world.

Dr. M. W. Marquart, who came to be Director of Education in 1916, had just the combination of thorough education, long experience in the bureau, administrative ability and political keenness to round out the policies of his predecessors, secure the very large appropriations necessary to provide school facilities for every child of school age, and thus complete the grand plan of an adequate education for every Filipino boy and girl. The culmination of this original plan is probably coincident with the

passing of the American Directors. It is highly probable that a Filipino of long experience in the bureau, who received his theoretical training in pedagogy in the United States, will succeed Dr. Marquart as the next Director of Philippine education.

#### TAFT COMMISSION'S PLAN

The report of the Shurman Commission in 1899 gave rather vague generalities regarding an educational system, but by the end of 1900 the Taft Commission, with the assistance of the several educators who had been brought from the United States, formulated a pretty definite outline of what the educational system should be, and this outline has proved so satisfactory that with a few exceptions it is embodied in the school system as it is today. This outline as given in the first report of the Taft Commission on Nov. 30, 1900, is as follows:

1. The system of instruction in the Philippine Islands must be, at least in the beginning, largely centralized. There will be a general Superintendent of Education and as many Assistant Superintendents as there are departments.
2. There will be need for a system of local advisory boards.
3. Textbooks, charts, stationery and English teachers will have to be furnished to municipalities by the Insular Government.
4. As far as possible, school buildings will have to be constructed and native teachers supported by local taxation.
5. All schools supported by public funds must be free and non-sectarian.
6. Emphasis must be placed upon elementary education of the masses.
7. The education furnished must be of a practical utilitarian character. What is attempted in the way of instruction must be done thoroughly, and the aim must be in particular to see that the children acquire in school skill in using their hands and heads in a way to earn a livelihood.
8. Normal, agricultural, commercial and trade schools will early receive attention.
9. Native teachers must be paid more than under Spanish rule, and in every way possible teaching be made a desirable calling. Native teachers in office will be taught a broader and more thorough conception of education. To this end courses of instruction for teachers will be provided. Teachers will be examined, certified and classified.
10. The present educational system will be modernized and secularized and adapted to the needs of a people who have hitherto been deprived of the opportunities of a rational education.\*

\*House Doc., Vol. 12, p. 113, 56th Congress, 2d Session.

The Filipinos were ready for such a reform in their school system, because, in the main, they were thirsting for education for their children. They were very much opposed to the domination of the Spanish friars, of whom they had just been rid, and they looked upon book education as one of the "open sesame" to liberty, prosperity and happiness. As early as the school year of 1899-1900 the Military Government reported as follows:

Great activity is observable in all garrisoned towns in the establishment of schools of primary instruction. The results attained are measurably due to the initiative of local commanding officers, but are to be mainly credited to the people themselves, among whom the desire for educational facilities is everywhere general and unmistakable, and who have expended considerable sums of money for such purposes collected through the medium of municipal taxation and private subscription.

There were 100,000 pupils attending the schools opened by the military commanders at this early period.\*

#### MOST CENTRALIZED SYSTEM

The outline of the Taft Commission was put into operation as rapidly as possible. The system was centralized till today it is the most highly centralized school system in the world. It is very probable that from now on the tendency will be to decentralize it, as the younger, public-school-educated generation of Filipinos takes control of the Municipal and Provincial Governments; the degree of decentralization that characterized the school system of the United States in times past, however, will never be established in the Philippines, because the movement of the entire educational world is toward more, rather than less, centralization. The Philippine school system at present is an extreme form that is justifiable only when the mass of the people are illiterate, inexperienced in school affairs, and under the impelling necessity of rising rapidly to a higher plane of civilization in order to survive in that competition of nations which they can not escape.

The local Advisory Boards that were established from 1900 to 1905 served a useful purpose at first in securing local support, but the total ignorance of the adult popula-

tion with regard to modern education made these local boards more of a nuisance than otherwise, once the school system was organized. They gradually fell into disuse and are a rarity in the islands at the present time. But when the public-school-educated generation comes into control of local affairs it is probable that some form of local school board will be established, and will assume its proper rôle in the public school system.

#### DEVELOPMENT OF NATIVE TEACHERS

After a sufficient number of native teachers had been developed, the American teachers were assigned to the higher grades or were used as supervisors, while the Filipino teachers were given complete charge of the classroom in the lower grades. At the present time American teachers are to be found only in the high schools or in supervisory work, the Filipino teachers, 14,000 in number, having developed sufficiently to do all the teaching of English and other subjects in the primary and intermediate grades. These native instructors are nearly all supported by municipal taxation. The Insular Government provides some 1,800 teachers from insular funds, but four-fifths of these are Filipinos and all are supervising teachers or teachers in the high schools and larger intermediate schools.

There are several provinces where every school official, superintendent, high school principal, supervisor, and teacher, is a Filipino. After the first pioneer work, from 1901 to 1905, when 800 American teachers were sent into the unknown wilderness of the Philippines, the general movement of the American teaching force has been one of retreat before the rising generation of Filipino teachers. Now there are a number of Filipino Superintendents, a Filipino Assistant Director of the Bureau, and a Filipino Under-Secretary of the Department of Public Instruction, who on several occasions has been Acting Secretary of Public Instruction.

The justification of an imperialistic policy, according to Professor Hobson, the English authority on anti-imperialism, is that it shall as rapidly as possible make itself unnecessary. The American educator is rapidly doing this very thing in the Philip-

\*House Doc., Vol. 11, Doc. 2, p. 26, 56th Congress, 2d Session.

pine Islands. Although his retreat has been too rapid at times, there can be no doubt that in a few more years the American educator will be found in the Philippines only as a specialist.

### INDUSTRIAL TRAINING

Elementary education of the masses has been the chief aim of the school system. Nearly all the pupils are in the four primary grades, and nearly all the school money is spent on these grades. A certificate is given for the completion of this four-year primary course, as is done in the United States for the completion of the eighth grade. The four-year primary course has been designed with the idea in mind that relatively few of the pupils would ever go beyond the fourth grade. The Philippine school authorities are ready at any time to revise this course, if it is found that even one-third of the pupils will attend for a fifth or sixth year; but at present not even one-fourth of the pupils take the fourth year, and scarcely one-tenth take the first year of the intermediate grades.\*

The curriculum is as utilitarian as twenty years of steady effort and experience have enabled the school authorities to make it. Splendid normal, agricultural, commercial and trade schools have been established—for advanced pupils. In the primary schools every possible effort has been made to work out a system of industrial training that will equip the mass of Filipinos for earning a better living. Gardening and simple agriculture are taught from the first grade on. So also are the simple handicrafts, so that in the evenings, and when other duties do not need their time, they can, on leaving school, make hats, baskets, mats, slippers and lace, either for their own use or for sale. The girls are taught plain sewing and the rudiments of housekeeping. The boys are taught simple carpentry in wood and bamboo. Without having worked in the Philippine school system itself it is impossible for one to appreciate how conscientiously and vigorously the school teachers and higher authorities have labored to devise by invention, experiment and past experience a curriculum and methods of instruction that will give the Filipino youth in four years of schooling the equipment

he must have to become the provider for a decently supported and happy family, and a good citizen of a self-governing country.

The salary reform recommended by the Taft Commission was not carried out to any great extent prior to 1918, for the simple reason that the money was not available. Up to 1912 it was not uncommon to find a Filipino teaching in a village school regularly day after day without getting one cent of salary. He did it because his year's teaching experience, thus gained, increased very greatly his chance of being appointed as a salaried teacher the next year. The salary paid under the American régime is much greater than that of the Spanish era, but the cost of living is also much higher. It is doubtful if the increase up to 1918 was as great as the increase in prices plus the increase in standard of living. Fortunately the rapidly increasing supply of educated Filipinos and the present financial prosperity of the Government have combined to make the problem of securing good teachers at reasonable salaries a fairly simple one.

### HIGH PITCH OF ENDEAVOR

The Filipino teachers of the last two decades should go down in history as patriots who made their country free, and did not spare themselves to accomplish this liberation. When change is in the air and the feeling is abroad that the future holds great things in store for the people of a certain country that people seems to get keyed up to self-sacrifice and the achievement of great things. This spirit characterized the pioneers ("conquistadores") of colonial Spain in the sixteenth and seventeenth centuries; it made the reign of Elizabeth a golden age for England; it made the Thirteen Colonies rise to superhuman efforts and achievement at the end of the eighteenth century, and did the same for the States of the Middle West in the nineteenth. There is evidence that it is doing the same for the Filipinos today. There may be racial limitations to what they can achieve, but ten years of study have convinced me that the younger generation of Filipinos is being gradually keyed up to the pitch that will make possible achievements that could not be expected of the same people under normal conditions. If this keyed-up energy of self-sacrifice is properly directed it will

\*See *Ann. Rep't Dir. Edu.*, 1910 to 1918.

bring about a change in Philippine conditions that will make unnecessary the continued expenditure of such extraordinary efforts. In the life of a nation, as in that of an individual, it is only at a crisis that great deeds are required.

Filipino teachers have taught primary schools of a hundred or more pupils all day long, then gone home at night and studied with desperation to pass the fifth or sixth grade examination at the end of the year in order not to be barred from teaching the next year by the requirements of the Superintendent's office. When the provincial Normal Institute convened in November these teachers were required to cover in five weeks the work which the regular intermediate schools or high schools took more than four months to cover. And when vacation time came many of them were expected to have saved enough from their pittance of a salary to go to Manila or Iloilo and spend that vacation in a normal school. Nothing was thought of asking and expecting a teacher to walk ten or fifteen miles through the mud or over the mountains to attend a teachers' meeting every week, and, what is more, they did it.

#### AMERICAN EXAMPLE CONTAGIOUS

Fifty years hence, when the Filipinos have found themselves, when change will have ceased to be in the air, and when the cold argument of hopes unrealized will have damped their ardor, it will be useless to try to drive the Filipino school teachers in this extreme manner. But the Filipinos are making their history today, and they feel it, even though they do not realize it. Their strenuous efforts do credit both to them and to those Americans who by their own example and enterprise spurred the natives to this pitch of endeavor.

The example of the Americans, indeed, has made teaching a desirable calling. Like Garibaldi, the American teachers have said, "With me you will find hunger, thirst, cold, heat, no pay. Let whosoever loves his country follow me!" Like Garibaldi, these Americans have had a contagious enthusiasm for their work. They have shown pride at having taught youngsters to read and speak English; the Filipino youth, in consequence has come to think that teaching is a desirable calling for a vigorous, educated person. The Filipino teacher was

averse to soiling his hands in a school-garden, but the high-salaried, fine-looking American teacher, and also the still higher-salaried American Superintendent, seemed to delight in tending the garden, breathing in the fresh odor of new-turned soil, and watching the seeds sprout into plants, the plants burst into bloom, and the blossoms give way to ripening fruit; thus, by the irresistible force of the imitative instinct and the contagion of bubbling enthusiasm, these Filipino teachers came to look upon manual labor as a thing to be proud of, instead of a sign of ignorance and servitude.

In addition to school and home gardening, handicraft work and carpentry work, the pupils of the Philippine public schools have to do all the work of improving the school grounds. It is a part of the classroom program. They clear and level the ground, plant the Bermuda grass joints in rows, build fences, plant also the flowers and shrubbery and keep them in condition and build fences. The Philippine schools can boast of better-kept grounds and athletic fields than can any State School system in America, and it is all due to the manual work of teachers and pupils. There is absolutely no doubt that the American public school system in the Philippines has made manual labor respectable for the younger Filipinos. Such respect for manual labor is absolutely imperative in a country like the Philippine Islands, where prosperity depends on agricultural development. The conversion of the educated Filipino in his attitude toward manual labor has been a wonderful achievement. The English in India said it could not be done. It has been done in the Philippines by means of the public schools. Today the labor supply is more satisfactory where there are schools than where there are no schools. Furthermore, the many Filipino teachers who now do manual labor in the field, in the shop or on road construction during vacation to earn more money, bear witness to the extent to which Filipino ideas have changed regarding education and manual labor.

In accordance with the last item in the original outline of the Taft Commission for Philippine education the schools have been modernized and secularized and adapted to the needs of the people. It is the boast of the Philippine Bureau of Education that "No other school system has been so spe-

cifically adapted to the needs of its people."

### EFFECTS OF THE WAR

By cutting off the supply of European laces and embroideries, the world war enabled the dexterous Filipinos to show what they could do. With their ten years of public school training in lace and embroidery work, the pupils and former pupils began supplying the American demand for hand-made waists and lingerie. Philippine designs became the style, and the export of hand-made waists and lingerie from the Philippine Islands jumped from a few thousand dollars' worth in 1912 to a value of more than \$4,500,000 in 1918. Filipino girls with only a fourth or fifth grade education are now making twice the normal daily wage for manual labor by their skill in lace and embroidery work. The economic independence of Filipino women, gained by skilled labor on a large scale, is bound to have a profound influence on the future social life of the Islands.

The war also gave a great impetus to the gardening and food-production campaign, which the Bureau of Education, in conjunction with the Bureau of Agriculture, had been pushing since 1908. Corn production was quadrupled, rice production was increased, and the growing of wholesome vegetables became general among the families having children in the public schools. The primary schools, which place special emphasis on practical farming, have been the prime factor in civilizing the Moros and in inducing the mountain peoples to

give up their roaming life, to form settled villages, and to become peaceful farmers. The varied diet which now has become general throughout the public-school towns of the archipelago has practically eliminated *beri beri* from these communities.\*

In order to complete the development of this public school system, tried and tested through twenty years of strenuous evolution, Dr. Marquart, the Director of Education, and the Hon. Sergio Osmeña, leader of the Filipino people and Premier of the present administration, in 1918 worked out a new educational program and secured a \$30,000,000 appropriation to put it through. By this plan it is contemplated that primary education for every Filipino child of school age will be a realized fact by 1923. This large sum is a continuing appropriation, in addition to the regular public schools appropriation, which averages \$10,000,000 annually.

So universal education has been attained, and one of the best school systems of the world developed within twenty-five years of the American entrance into these Islands. It is a miracle of American efficiency, American ideals, and Filipino co-operation. The Philippine public school system is the finest fruit of American democracy produced outside the favoring clime of the United States. It was the marvel of the International Educational Congress at the Panama Pacific Exposition of 1915.

\**Beri beri* is a serious dropsical disease caused by eating nothing but polished rice, which lacks phosphorus and other elements essential to proper nutrition.

### A GERMAN VIEW OF BRITISH POWER

ADMIRAL VON TIRPITZ, ex-Minister of the German Navy under the Kaiser, in an interview given in Baden on Feb. 16, 1921, voiced the old German jealousy of England in the form of a warning to the United States. The burden of his warning was: Look out for Japan and England! "It must be considered," he said, "that England has gained absolute supremacy in Europe; that her power covers all Africa, Mesopotamia and India, and that she now holds the keys to the Mediterranean, at Constantinople, the Suez Canal and Gibralt-

tar. This control counterbalances the compactness of America's territory." Furthermore, declared the Admiral, England, regardless of her treaty with Japan and her friendship with America, would turn where her political interests lay in case of a conflict between Japan and the United States.

"The English," he concluded, "would do as they have successfully done for centuries, with the result that Europe is now ruined while England herself, as always, stands there lord of the world."

# MANDATES AND AMERICA'S STAND REGARDING THEM

*President Wilson's warning to the Allies that mandates for ex-German colonies must not be allotted or defined without consulting the United States—Important notes on Mesopotamia and Yap—Text of the typical "C" mandate over German Southwest Africa*

THE question of distributing the former German and Turkish territories among the allied and associated powers has recently acquired new prominence, owing to the attitude of the United States regarding mandates. The Allies had assumed, after our failure to ratify the Peace Treaty, that the Supreme Council possessed the power to allocate mandates—while the League of Nations was to define and control them—without consulting the United States. It was considered that the United States, though it was one of the participants in the victory over Germany, had lost the right of consultation by its rejection of the treaty and its refusal to send representatives to sit in the League Council.

That this was neither the understanding nor the intention of President Wilson was first brought out plainly in a note sent to Earl Curzon, the British Foreign Minister, by Secretary Colby last November. In this note the United States Government put on ~~forward~~ its objections to the British mandate for Mesopotamia. Its contention, referring specifically to oil concessions, was that all mandates should leave an open door of free business opportunity for every nation in the mandated territory. When the British reply arrived in March it rejected this contention, so far as Mesopotamia was concerned, declaring that Great Britain would not "discriminate" against its own nationals there, some of whom had acquired monopolistic rights in Mesopotamia before mandates were conceived, and even before the outbreak of the war. Here the matter still rests, awaiting the action of President Harding and Secretary Hughes.

Meanwhile President Wilson had shown no intention of letting the question drop, as was shown by the attitude of the Government's representatives at the International Congress of Communications, held at Wash-

ington, in sessions several times adjourned and resumed from November to March. The whole question of mandates became acute in the controversy that arose at this congress between the United States and Japan with regard to cable control on the Island of Yap. Japan, supported by both Great Britain and France, declined to give up the absolute sovereignty over this far-off island in the Pacific, which the Supreme Council and the League of Nations had assigned her as mandatory.

The next movement of the United States was to send an official protest to the League Council regarding the allocation of this mandate to Japan, seizing at the same time the opportunity to reassert its right to consultation on mandates before they were submitted to the Council. [The Yap controversy is treated separately in an article on page 108.] The acuteness of the situation was considerably relieved at the beginning of March by the reply of the Council of the League, which showed a conciliatory spirit by promising to defer consideration of the mandates already assigned until such time as the United States should be able to take part in the discussions. Only in respect to the Yap mandate did the Council fail to give the American Government satisfaction. The allocation of mandates, it said, concerned solely the Supreme Council, and the League's function was confined to defining the powers of the mandates assigned. Further action by the United States Government then awaited President Harding's inauguration.

The full text of the American note to the Council of the League of Nations in Paris was made public by Secretary Colby on Feb. 24. It read as follows:

Feb. 21, 1921.

*To the President and Members of the Council  
of the League of Nations.*

Gentlemen: The Government of the United

States has received information that the Council of the League of Nations at its meeting which is to be held in Paris on this date (Feb. 21) proposes to consider at length the subject of mandates, including their terms, provisions and allocation, and accordingly takes this opportunity to deliver to the Council of the League of Nations a copy of its note addressed under date of Nov. 20, 1920, to his Excellency Lord Curzon of Kedleston, the British Secretary of State for Foreign Affairs, in which the views of the United States are quite fully set forth regarding the nature of the responsibilities of mandatory powers.

The attention of the Council of the League of Nations is particularly invited to the request therein made on behalf of this Government that the draft mandate forms intended to be submitted to the League of Nations be communicated to this Government for its consideration before submission to the Council of the League, in order that the Council might thus have before it an expression of the opinion of the Government of the United States on the form of such mandates and a clear indication of the basis upon which the approval of this Government, which is essential to the validity of any determinations which may be reached, might be anticipated and received.

It was furthermore stated in said note that the establishment of the mandate principle, a new principle in international relations and one in which the public opinion of the world is taking special interest, would seem to require the frankest discussion from all pertinent points of view, and the opinion was expressed that suitable publicity should be given to the drafts of mandates which it is the intention to submit to the Council in order that the fullest opportunity might be afforded to consider their terms in relation to the obligations assumed by the mandatory powers and the respective interests of all Governments who deem themselves concerned or affected.

A copy of this note was transmitted to the Governments of France and Italy, requesting an interpretation by each Government of the provisions of the agreement between Great Britain, Italy and France, signed at Sévres on Aug. 10, 1920, relating to the creation of spheres of special interest in Anatolia, in the light of this Government's note to the British Government of Nov. 20, 1920.

A reply has thus far been received only from the French Government, in which attention is directed to Article X. of the so-called Sévres Treaty, which provides in favor of nationals of third powers for all economic purposes free access to the so-called zones of special interest.

#### THE PACIFIC MANDATE

This Government is also in receipt of information that the Council of the League of Nations at its meeting at Geneva on Dec. 17 last approved among other mandates a mandate to Japan embracing "all

the former German islands situated in the Pacific Ocean and lying north of the equator." The text of this mandate to Japan, which was received by this Government, and which, according to available information, was approved by the Council, contains the following statement:

"Whereas, the principals of the Allied and Associated Powers agreed that in accordance with Article XXII., Part 1. (Covenant of the League of Nations) of the said Treaty, a mandate should be conferred upon His Majesty the Emperor of Japan to administer the said islands and have proposed that the mandate should be formulated in the following terms," &c.

The Government of the United States takes this opportunity, respectfully and in the most friendly spirit, to submit to the President and members of the Council of the League that the statement above quoted is incorrect, and is not an accurate recital of the facts.

On the contrary, the United States, which is distinctly included in the very definite and constantly used descriptive phrase "the principal allied and associated powers," has not agreed to the terms or provisions of the mandate which is embodied in this text, nor has it agreed that a mandate should be conferred upon Japan covering all the former German islands situated in the Pacific Ocean and lying north of the equator.

The United States has never given its consent to the inclusion of the Island of Yap in any proposed mandate to Japan, but, on the other hand, at the time of the discussion of a mandate covering the former German islands in the Pacific north of the equator, and in the course of said discussion, President Wilson, acting on behalf of this Government, was particular to stipulate that the question of the disposition of the Island of Yap should be reserved for future consideration.

Subsequently this Government was informed that certain of the principal allied and associated powers were under the impression that the reported decision of the Supreme Council, sometimes described as the Council of Four, taken at its meeting on May 7, 1919, included or inserted the Island of Yap in the proposed mandate to Japan.

This Government, in notes addressed to the Governments of Great Britain, France, Italy and Japan, has set forth at length its contention that Yap had, in fact, been excepted from this proposed mandate, and was not to be included therein. Furthermore, by direction of President Wilson, the respective Governments above mentioned were informed that the Government of the United States could not concur in the reported decision of May 7, 1919, of the Supreme Council.

The information was further conveyed that the reservations which had previously been made by this Government regarding the Island of Yap were based on the view that the Island of Yap necessarily constitutes an indispensable part of any scheme or practicable arrangement of cable communication in the Pacific and that its free and unham-

pered use should not be limited or controlled by any one power.

#### POSITION WAS MADE CLEAR

While this Government has never assented to the inclusion of the Island of Yap in the proposed mandate to Japan, it may be pointed out that even if one or more of the other principal allied and associated powers were under a misapprehension as to the inclusion of this island in the reported decision on May 7, 1919, nevertheless the notes, above mentioned, of the Government of the United States make clear the position of this Government in the matter.

At the time when the several notes were addressed to the respective Governments above mentioned, a final agreement had not been reached as to the terms and allocation of mandates covering the former German islands in the Pacific.

Therefore the position taken in the matter by the President on behalf of this Government and clearly set forth in the notes referred to necessarily had the result of effectively withdrawing any suggestion or implication of asset, mistakenly imputed to this Government, long before Dec. 17, 1920, the date of the council's meeting at Geneva.

As one of the principal allied and associated powers, the United States has an equal concern and an inseparable interest with the other principal allied and associated powers in the overseas possessions of Germany, and concededly an equal voice in their disposition, which it is respectfully submitted cannot be undertaken or effectuated without its assent. The Government of the United States therefore respectfully states that it cannot regard itself as bound by the terms and provisions of said mandate and desires to record its protest against the reported decision of Dec. 17, last, of the Council of the League of Nations in relation thereto, and at the same time to request that the council, having obviously acted under a misapprehension of the facts, should reopen the question for the further consideration which the proper settlement of it clearly requires.

Accept, gentlemen, the assurance of my high consideration.

BAINBRIDGE COLBY,  
*Secretary of State.*

#### THE COUNCIL'S REPLY

The reply of the League Council to Secretary Colby's note was handed to the American Ambassador at Paris on March 1. It conceded the American Government's right to be consulted in the determination of mandates. It reported the League Council's decision to postpone consideration and action on the mandates for Mesopotamia, Syria, Palestine and South Africa until May or June of the present year, in order to enable the United States to set

forth its views on them. The text of the note was as follows:

#### *To the Secretary of State of the United States of America:*

I am directed by the Council of the League of Nations to acknowledge the receipt of your communication of Feb. 21 on certain matters connected with the mandates which under the provisions of the covenant will define the responsibilities and limit the powers of the Governments intrusted with the administration of various territories outside Europe formerly in the possession of Germany and Turkey.

The main points brought out in the American note, if I may be permitted to summarize them, are that the United States must be consulted before any mandates are allotted or defined and that the frankest discussion from all pertinent points of view should be encouraged. In the "A" mandates exception is taken to the possible limitation of commercial opportunity as regards oil in Mesopotamia, and in the "C" mandates to the allocation of the Island of Yap to Japan.

The Council wishes to express its deep satisfaction at the interest shown by your Government in this question, which the Council has long felt to be among the most important assigned to the League. Undoubtedly also it is one of the most difficult, and the Council not only welcomes but feels justified in claiming the sympathy and support of the Governments which devised the scheme which the Council is required to administer.

The most fundamental contention brought forward by the American note is that the "approval of the United States of America is essential to the validity of any determination which may be reached" respecting the mandates which have been or may be submitted to the judgment of the Council. The United States was one of the leading actors both in the war and in the negotiations for peace. The rights which it acquired are not likely to be challenged in any quarter. But the American Government will itself recognize that the situation is complicated by the fact that the United States—for reasons which the Council would be the last to question—has so far abstained from ratifying the Peace Treaty, and has not taken her seat on the Council of the League of Nations.

The Council might easily have dwelt on the controversial aspects of the American note. But this procedure would ill represent their true attitude. They prefer to examine the subject from the broad basis of international co-operation and friendship, in the belief that this course will appeal to the spirit of justice of the Government and people of the United States.

The Council has taken several important decisions with regard to mandates, which it confidently hopes will commend themselves to the American Government.

The Council had already determined on Feb. 21, before the receipt of the American

note, to postpone the consideration of the "A" mandates for former Turkish possessions, including Mesopotamia. No conclusions will, therefore, be reached with regard to "A" mandates until the United States Government has had an opportunity to express its views.

The Council had expected to approve finally at the session now being held the "B" mandates for the former Central African colonies for Germany. In view of the desire expressed by the United States, the Council is, however, deferring its consideration of these mandates until its next session, which will probably take place in May or June. It is hoped that the delay will not hamper the administrative progress of these territories.

The Council invites the United States to take part in the discussions at its forthcoming meeting, when the final decisions as to the "A" and "B" mandates will, it is hoped, be taken. A problem so intricate and involved as that of the mandates can hardly be handled by the interchange of formal notes. It can only be satisfactorily solved by personal contact and by direct exchange of opinion. Not only do such direct negotiations, which correspond to the true spirit of the League of Nations, effect an increase of freedom, flexibility and speed, but they create a spirit of mutual good-will and co-operation among people meeting around the same table.

Regarding the third type of mandates, the "C" group of former German possessions in South Africa and the Pacific, the Council has not the advantage of the same liberty of action as in the "A" and "B" types. The "C" mandates were defined by the Council at its meeting in Geneva on Dec. 17, 1920. The main American objection in this case, it is understood from your Excellency's note, is to the effect that the Island of Yap was included by the Council in the mandate given to Japan, whereas your Excellency states that the United States has on several occasions refused to agree to the allocation of this island to any one State.

The League of Nations Council would remind your Excellency that the allocation of all the mandated territories is a function of the Supreme Council, and not of the Council of the League. The League is concerned not with the allocation, but with the administration of these territories. Having been notified in the name of the allied and associated powers that all the islands north of the equator had been allocated to Japan, the Council of the League merely fulfilled its responsibility of defining the terms of the mandate.

Consequently, if a misunderstanding exists as to the allocation of the Island of Yap, that misunderstanding would seem to be between the principal allied powers rather than between the United States and the League. However, in view of the American contention, the Council of the League has hastened to forward the American note to the Governments of France, Great Britain, Italy and Japan.

The Council hopes that explanations will prove satisfactory to the United States Government, and that reciprocal good-will will find a solution in harmony with the generous spirit which inspired the principle of the mandates.

GASTAO DA CUNHA,

*President of the Council of the League of Nations.*

Paris, March 1, 1921.

### THREE CLASSES OF MANDATES

The three classes of mandates referred to in the foregoing notes—designated as "A," "B" and "C"—are those created by the Treaty of Versailles. Under Article 22, Clauses 3 to 7, the various types of mandate are generally defined. The category that has since become known as "Class A" is there defined as follows:

The character of the mandate must differ according to the stage of the development of the people, the geographical situation of the territory, its economic conditions and other similar circumstances.

Certain communities formerly belonging to the Turkish Empire have reached a stage of development where their existence as independent nations can be provisionally recognized subject to the rendering of administrative advice and assistance by a mandatory until such time as they are able to stand alone. The wishes of these communities must be a principal consideration in the selection of the mandatory.

The category that has since become known as "Class B" is defined in the treaty thus:

Other peoples, especially those of Central Africa, are at such a stage that the mandatory must be responsible for the administration of the territory under conditions that will guarantee freedom of conscience and religion, subject only to the maintenance of public order and morals, the prohibition of abuses such as the slave trade, the arms traffic and the liquor traffic, and the prevention of the establishment of fortifications or military and naval bases and of military training of the natives for other than police purposes and the defense of territory, and will also secure equal opportunities for the trade and commerce of other members of the League.

"Class C" is defined in these terms:

There are territories, such as Southwest Africa and certain of the South Pacific islands, which, owing to the sparseness of their population or their small size, or their remoteness from the centres of civilization; or their geographical contiguity to the territory of the mandatory, and other circumstances, can be best administered under the laws of the mandatory as integral portions of its territory, subject to the safeguards

above mentioned in the interests of the indigenous population.

### DISTRIBUTION OF MANDATES

Types of "Class A" are the British mandate for Mesopotamia and Palestine, and the French mandate for Syria. "B" is represented by the British mandates for Togoland and the Cameroons, the French mandates for part of the same territories, the British mandate for the former German East Africa. Under "Class C" fall all the Pacific group: New Zealand's mandate for Samoa; Australia's mandate for New Guinea, and the other islands south of the equator; Great Britain's mandate for the island of Nauru; South Africa's mandate for Southwest Africa; Japan's mandate for the Pacific islands north of the equator—the Caroline Islands, the Marshall Islands, the Island of Yap, the Ladrone Islands, (except Guam), the Island of Ogasawara.

The mandate drafts for the "Class A" type have not as yet been published, with the exception of the one for Palestine. The refusal of the League Council to make the terms of these mandates public aroused considerable hostility in the Assembly of the League during its recent sessions in Geneva. Recommendations to the Council adopted by the Assembly included one to the effect that "future drafts of mandates should be published before they are decided on by the Council." Six other recommendations were made. The first three dealt with the Permanent Mandates Commission, the creation of which was approved by the Council on Dec. 1, 1920. It was recommended that (1) the members of this commission should not be dismissed without the assent of the majority of the Assembly, (2) the commission should include at least one woman, (3) the mandataries should be asked to present to the commission a report on the recent administration of the territories confided to their care, of which, generally speaking, they have already been in armed occupation. In regard to mandates "A" it was recommended that (1) the mandatary should not be allowed to make use of its position to increase its military strength, (2) the mandatary should not be allowed to use its power under the mandate to exploit for itself or its friends the natural resources of the mandated territory, (3) an organic law should be passed in the man-

dated territories as soon as possible, and before coming into force should be submitted to the League for consideration.

### WATCHFUL WAITING

It was in reference to stipulation (2) in regard to mandates "A" that the Washington Government, in its note sent to the allied powers last November, stated its views regarding the nature of the responsibilities of mandatory powers. In this same communication the United States asked that "the draft mandate forms intended to be submitted to the League of Nations should be communicated to this Government for its consideration before submission to the Council of the League." The dissatisfaction of the United States with the terms of the British mandate for Mesopotamia, according to which outside nations were excluded from the benefits of oil exploitation, was sharpened by official reports received toward the end of February that a part of Syria had been transferred by France to Great Britain under an agreement concluded without reference to the League of Nations. This was interpreted at Washington as an apparent violation of the terms of the Versailles Treaty. Furthermore, this action had been taken without consultation with the United States.

Nor was the apprehension of the American officials diminished by receipt of the terms of the mandates for the African territories taken over by Great Britain, France and Belgium. ("Class B.") These texts revealed that the French mandate in the French part of Togoland and the Cameroons provides that native troops may be raised in these districts at any time for use in Europe or elsewhere. This right is denied to the British and the Belgians in the territories which they will control. Furthermore, the British and Belgian mandate drafts contain an article declaring for the principle of the "open door." This clause reads as follows:

The mandatary will insure to all nationals of States members of the League of Nations, on the same footing as his own nationals, freedom of transit and navigation, and complete economic, commercial and industrial equality; provided that the mandatary shall be free to organize essential public works and services on such terms and conditions as he thinks just.

Concessions for the development of the

national resources of the territory shall be granted by the mandatory without distinction on grounds of nationality between the nationals of all States members of the League of Nations, but on such conditions as will maintain intact the authority of the local Government.

It is said that France obtained the right to levy native troops in her mandated territory only by the strongest representations, and it is believed that the situation thus created will lead to controversy in the next League Assembly. The measure in question is in conflict with the mandate principles laid down by President Wilson in his letter of Nov. 20, 1920. The open-door restrictions, moreover, have a direct bearing upon the rights of the United States as a non-member of the League, and represent a similar violation of the idealistic principles laid down by the American President.

#### TEXT OF THE MANDATE FOR SOUTHWEST AFRICA

The mandate for German Southwest Africa, the full text of which is given below, falls under "Class C" and is of special interest because its provisions are practically the same as those of the Yap mandate, which the United States is contesting. All mandates of this type confer complete sovereignty over the territory assigned under them. The mandate assigning German Southwest Africa to the Union of South Africa (British) makes it an integral part of that Union. The text was published by the League of Nations on Feb. 8, 1921, and the official version in full is as follows:

##### THE COUNCIL OF THE LEAGUE OF NATIONS:

*Whereas* by Article 119 of the Treaty of Peace with Germany signed at Versailles on June 28, 1919, Germany renounced in favor of the Principal Allied and Associated Powers all her rights over her oversea possessions, including therein German Southwest Africa; and

*Whereas* the Principal Allied and Associated Powers agreed that, in accordance with Article 22, Part I (Covenant of the League of Nations) of the said treaty, a mandate should be conferred upon his Britannic Majesty, to be exercised on his behalf by the Government of the Union of South Africa, to administer the territory aforementioned, and have proposed that the mandate should be formulated in the following terms; and

*Whereas* his Britannic Majesty, for and on behalf of the Government of the Union of South Africa, has agreed to accept the mandate in respect of the said territory and

has undertaken to exercise it on behalf of the League of Nations in accordance with the following provisions; and

*Whereas* by the aforementioned Article 22, Paragraph 8, it is provided that the degree of authority, control or administration to be exercised by the mandatory, not having been previously agreed upon by the members of the League, shall be explicitly defined by the Council of the League of Nations:

Confirming the said mandate, defines its terms as follows:

*Article 1*—The territory over which a mandate is conferred upon his Britannic Majesty for and on behalf of the Government of the Union of South Africa (hereinafter called the mandatory) comprises the territory which formerly constituted the German Protectorate of Southwest Africa.

*Article 2*—The mandatory shall have full power of administration and legislation over the territory subject to the present mandate as an integral portion of the Union of South Africa, and may apply the laws of the Union of South Africa to the territory, subject to such local modifications as circumstances may require.

The mandatory shall promote to the utmost the material and moral well-being and the social progress of the inhabitants of the territory subject to the present mandate.

*Article 3*—The mandatory shall see that the slave trade is prohibited, and that no forced labor is permitted, except for essential public works and services, and then only for adequate remuneration.

The mandatory shall also see that the traffic in arms and ammunition is controlled in accordance with principles analogous to those laid down in the Convention relating to the control of the arms traffic, signed on Sept. 10, 1919, or in any convention amending the same.

The furnishing of intoxicating spirits and beverages to the natives shall be prohibited.

*Article 4*—The military training of the natives, otherwise than for purposes of internal police and the local defense of the territory, shall be prohibited. Furthermore, no military or naval bases shall be established or fortifications erected in the territory.

*Article 5*—Subject to the provisions of any local law for the maintenance of public order and public morals, the mandatory shall insure in the territory freedom of conscience and the free exercise of all forms of worship, and shall allow all missionaries nationals of any State member of the League of Nations to enter into, travel and reside in the territory for the purpose of prosecuting their calling.

*Article 6*—The mandatory shall make to the Council of the League of Nations an annual report to the satisfaction of the Council, containing full information with regard to the territory and indicating the measures taken to carry out the obligations assumed under Articles 2, 3, 4 and 5.

*Article 7*—The consent of the Council of the League of Nations is required for any modi-

fication of the terms of the present mandate. The mandatory agrees that, if any dispute whatever should arise between the mandatory and another member of the League of Nations relating to the interpretation or the application of the provisions of the mandate, such dispute, if it cannot be settled by negotiation, shall be submitted to the Permanent Court of International Justice provided for by Article 14 of the Covenant of the League of Nations.

The present declaration shall be deposited in the archives of the League of Nations. Certified copies shall be forwarded by the Secretary General of the League of Nations to all powers signatories of the Treaty of Peace with Germany.

*Made at Geneva the 17th day of December, 1920.*

### JAPAN'S RESERVATION.

Of other mandates assigned under "Class C," that granted to Australia for the former German islands south of the equator—New Guinea, Bismarck Archipelago and the Solomon Islands—was published in London on Feb. 9. On the same date the League of Nations Council also published Japan's declaration regarding "Class C" mandates (See below). Samoa has been assigned to New Zealand. A "White Book" recently issued by Great Britain shows that the New Zealand Government, acting with the approval of the Imperial Government, has not only extended the existing indentures of the coolie laborers, but is preparing to make renewed shipments of coolies under the supervision of British officials in Hong-kong. This is in direct contravention of the principles advocated by the American Government in its November note to the allied powers.

In assenting to the sanction of the South Sea mandates at the meeting of the League of Nations Assembly in Geneva, Japan filed what was tantamount to a protest and reservation affecting all the "Class C" mandates. This reservation was aimed at the Assembly's rejection of the Japanese proposal to insert in "C" mandates a clause guaranteeing equal opportunities for trade and commerce to all outside nations. The reservation was published by the League of Nations. It read as follows:

From the fundamental spirit of the League of Nations and as a question of interpretation of the covenant, his Imperial Japanese Majesty's Government have a firm conviction in the justice of the claim they have hitherto made for the inclusion of a clause concerning the assurance of equal opportunities for trade and commerce in "C" mandates. But from the spirit of conciliation and co-operation and their reluctance to see the question unsettled any longer, they have decided to agree to the issue of the mandate in its present form. That decision, however, should not be considered as an acquiescence on the part of his Imperial Japanese Majesty's Government in the submission of Japanese subjects to a discriminatory and disadvantageous treatment in the mandated territories; nor have they thereby discarded their claim that the rights and interests enjoyed by Japanese subjects in these territories in the past should be fully respected.

By the League Council's reply to the American note the whole mandate issue has been clarified, but the controversy, not only over the Island of Yap and its cable communications, but over the entire question, still remains one of the most important to which President Harding and Secretary Hughes have fallen heir.

### MARKING THE GREAT BATTLEFRONT

A VAST and patriotic enterprise has been undertaken by the Touring Club of France. At its own expense, it is planning to erect a great line of white memorial stones along the famous line where French, Belgian, British and American soldiers outfought and defeated the proud armies of Germany. Marshal Pétain is to

choose the site for each memorial stone. The design chosen was submitted by the sculptor, Paul Moreau Vautier. Pyramidal in form, its only ornament is a soldier's helmet, surrounded by a laurel crown, and bearing the following inscription in French: "Here was stopped the onrush of the barbarians."

## THE CONTROVERSY OVER YAP ISLAND

*Summary of the dispute with Japan, due to the Allies' action in giving away the sovereign rights over a Pacific island in which the United States has vital cable interests*

**T**HE dispute which has arisen between the United States and Japan over the question of cable rights in the Island of Yap, the former German possession in the South Pacific Ocean, was originally but a part of the whole problem of dividing up the ex-German cable lines. It has rapidly broadened, however, into the much more important matter of the United States Government's efforts to establish its rights to consultation on all mandates assigned by the Supreme Council or defined by the Council of the League of Nations.

The history of the case goes back to the Peace Conference in Paris, when the allied

diplomats were drafting the plans for mandates over the former German colonies. It was later alleged by President Wilson that when the question arose of granting a mandate to Japan over certain former German islands north of the equator, he was particular to move an exception in the case of the Island of Yap, on the ground that it represented the terminus of important cable lines necessary to the United States for uninterrupted communication with China and the Far East. It was the President's understanding that the validity of this exception had been admitted, and that Japan would not be given the sovereignty over

Yap when she received the mandate for the other German islands north of the equator.

This was the situation when the international Congress of Communications was called in Washington during the last weeks of 1920. The main function of this congress was to determine the disposition to be made of the cables taken from Germany during the war. The five main powers concerned—Great Britain, France, Italy, Japan and the United States—were represented by official delegates. The sessions of this international conference, it soon developed, were destined to be stormy, subject to repeated interruptions, and, so far as actual achievement up to the present time is concerned, virtually sterile of results, except that of accentuating the discord among all parties concerned.

#### CRUX OF THE CONTROVERSY

The difficulties that arose were due to the insistence of the American delegates, supported by the Washington Government, that the two former German cables connecting New York with Emden, Germany, lines which had been cut and diverted by Great Britain and France during the war, should be returned to the possession of this country, and that the cable lines to the Far East, via the Island of Yap, should be internationalized. One of the two Emden cables had been cut and diverted by France to Brest; the other had been cut and diverted by Great Britain to Halifax. As for the Far Eastern cables, it had been supposed that these would be internationalized in view of President Wilson's reservations at the Peace Conference; to the surprise of the American delegates, however, it appeared that Japan had no intention of internationalizing these cables, and insisted on her right of absolute sovereignty over Yap. This, combined with the refusal of both Great Britain and France to restore the two Emden cables, led to a situation which had in it the possibilities of a very animated quarrel.

The American contention was that the United States could not consent to lose control over its only undersea communications with Germany and the Scandinavian countries, on the one hand, and with China and the Far East, on the other, and that this would be the result if the three lines in question were allowed to remain in the actual ownership of the three other nations

involved. In the first case the British and Italian delegates were inclined to favor the American contentions, but the French and Japanese delegates fought shoulder to shoulder against the demands of the American representatives. After weeks of discussion the congress reached its first decision on Dec. 14, a decision which amounted to declaring that no agreement could be reached at that time; the cables were to be administered jointly until an understanding was reached.

#### CONFLICT OF RIGHTS

The Congress continued, with adjournments and resumptions, until February of 1921, and still the deadlock could not be resolved, both the French and Japanese delegates refusing to alter their position. The dispute with Japan took on a more serious aspect when the Tokio Government announced its intention to stand upon its rights in Yap as defined in the mandates under "Class C," the third mandate type laid down by Article 22 of the Treaty of Versailles. The Washington Government refused in any way to modify its demand that the Yap cables be internationalized; in this it had the full support of the Senate and its Foreign Relations Committee. The Administration took its stand squarely upon the ground that, as one of the belligerent countries, it had won the right of consultation on all mandates to be conferred; that the mandate had been offered to Japan without consulting the United States, that President Wilson had specifically excepted the Island of Yap at the Paris Peace Conference and that the granting of complete sovereignty to Japan could not be admitted.

These contentions were all embodied in the note of protest sent by Secretary Colby to the Council of the League of Nations on Feb. 21. After referring to the note that had been sent to Lord Curzon, Nov. 20, 1920, laying down the American conception of how mandates should be administered, and demanding the "open door" in Mesopotamia, the American note took cognizance of the fact that the Council of the League on Dec. 17, 1920, at Geneva, had approved the mandate to Japan over the Pacific group of islands, and proceeded to give notice that the United States had never given its consent to the inclusion of the Island of Yap in this Japanese mandate; on the contrary,

President Wilson had stipulated that the question of the disposition of Yap should be reserved for future consideration. Secretary Colby also pointed out that the United States Government had given notice of its understanding of this exclusion in official notes sent to the Governments of the other powers involved, in view of which the alleged agreement said to have been reached at the Peace Conference on May 7, 1919, under which Yap was to be included in the mandate of Japan, could not be sanctioned by the United States. This nation, therefore, as one of the "allied and associated powers," which had not agreed that Japan should receive the mandate under Class C for all the islands stated, requested the Council, which had "obviously acted under a misapprehension of the facts," to reopen the question in order that it might have proper settlement.

#### THE PRESENT STATUS

The reply of the Council, received at Washington on March 2, was conciliatory, and admitted the American contention regarding the right of consultation on all mandate drafts. With regard to Yap, however, it declared that the right of allocation pertained only to the Supreme Council,

and that the function of the Council of the League was limited to the definition of the mandates allocated. This left the whole question pending either between the United States and the Supreme Council, or between the United States and Japan directly. Neither the Government headed by President Wilson nor the Imperial Government of Japan showed any intention to modify its position. Japan has pointed out that, in the procès-verbal of the 1919 meeting of the Supreme Council, it has found no evidence of any exception made by President Wilson. The former President insists that the exception was made and clearly understood. The whole attitude of the United States as repeatedly set forth by the press has been that it would be intolerable for Americans to have to submit their cable dispatches to the Philippines and to the countries of the Far East to the official censorship of the Japanese Government. Japan is equally convinced that her right to the sovereignty over Yap is incontestable, inasmuch as it has been conferred by the Supreme Council of the allied and associated powers. The whole problem is one of the many which President Harding will have to solve. [For the documents in the case, see article on "Mandates."]

#### NINE MILLION AUTOMOBILES IN THE UNITED STATES

FIGURES compiled by the American Automobile Association show that there were 9,180,316 passenger and commercial motor vehicles used in the United States during 1920, of which 8,234,490 were passenger cars. The receipts from registration totaled almost \$100,000,000. This means that there is now one motor vehicle for about every eleven persons.

New York, which for many years has led all the other States in the number of automobiles owned within its boundaries, maintains its motor supremacy with a total of 683,919 vehicles, of which 559,521 are passenger cars and 124,893 commercial vehi-

cles. In motor truck use New York is also in the lead. Ohio and Pennsylvania are strong competitors for second place, Ohio leading with 620,600 cars and Pennsylvania coming third with 570,164. Ohio, with 82,600 trucks, is also second in the commercial list. Illinois takes fourth place with 568,914 cars, very close to Pennsylvania, but in the use of commercial cars both Illinois and Massachusetts exceed Pennsylvania, Illinois having 64,674, Massachusetts 51,386, while Pennsylvania's number is 48,329. California is the fifth State in motor use, with a total of 568,892 cars; Iowa sixth, 437,030; Texas seventh, 427,693; Michigan eighth, 412,717.

THE indemnity demanded of Germany by the Allied Governments amounted to \$56,000,000,000, in addition to 12 per cent. duty on exports, the payments to be spread over a period of 42 years. The Germans at the London Conference that began Feb. 28, 1921, offered counter-proposals placing the sum at \$7,500,000,000, of which they declared a third had already been paid. The Allies rejected this offer without ceremony and demanded compliance with the Paris demands, under penalty of having the allied forces occupy Düsseldorf, Duisberg and Ruhrfort, take possession of customs, and tax German exports.

Waiting for Him to Fall

—Rocky Mountain News, Denver

THE plight of Austria and Hungary is perhaps more desperate than that of any other of the vanquished countries. Both have been shorn of their richest provinces and thus deprived of an opportunity for economic rehabilitation. Austria, especially, is in the depths of destitution, and would have fallen a prey to famine except for the food furnished by other nations. In Hungary reaction has assumed an extreme form, and General Horthy's Government is charged with many harsh measures against radicalism.

## LEFT BY THE RECEDING TIDE

© New York Tribune

WHEN the railroads were permitted a 20 per cent. increase in passenger rates in addition to higher tariffs on certain commodities, it was thought that their rehabilitation would be speedy and certain. The industrial depression, in reducing the number of passengers and amount of freight carried, has, however, produced a deficit instead of a surplus in earnings, and the roads are now endeavoring to secure governmental sanction for a reduction in the wages of their employes.

[American Cartoons]

## What Will the Harvest Be?

—San Francisco Chronicle

AS March 15 approaches each year the spare time of the average citizen is engrossed by the task of making out his income tax to the Federal Government, and in some cases an additional tax to the State. Usually it is a painful duty, but the cartoonists, at least, manage to find humorous aspects of the theme. The theory of the tax is that those who have profited most pay the most for the protection and opportunities afforded by the Government. This, of course, presupposes that the returns are honest.

## The Moral Effect of the Income Tax on the Rising Generation

WITH the best intentions in the world, the work of the citizen who tries to find out how much he owes the Government is perplexing, and often entails a severe strain on his temper, to say nothing of his conscience. The forms are intricate, and many items are omitted in the printed blanks. The missing information can, of course, be ascertained at the Internal Revenue office, but this takes time and trouble, adding to the burden. Thus the average taxpayer is in need of all the aid the cartoonist can give him in the way of a smile.

## IT'S A LONG WORM!

—Sacramento Bee

PROHIBITION enforcement has encountered many difficulties in the comparatively short period since the law was enacted. All sorts of evasions have been practiced, especially in the great centres of population, where public feeling has been either apathetic or openly hostile to the amendment. The permissions to withdraw liquor from bonded warehouses for medical and commercial purposes have furnished a fruitful field for violators of the law. Forged permits have secured hundreds of millions of dollars' worth of liquor for illegal uses. Contraband shipments in great quantities have come over the Canadian border. "Home brew" is being made to an extent that can only be guessed, but is without doubt enormous. The work of the law enforcement officials has been made difficult also by the faithlessness of some of their own employes, who have been shown to be working hand in glove with the violators of the law.

## THE SITUATION IN ITALY

—11 420, Florence

PREMIER GIOLITTI (to Mme. Middle-Class): "Disarm at once!"

MME MIDDLE-CLASS: "One moment! First disarm that ruffian, Bolshevist Proletariat; he took to arms first."

ITALY, ever since the war, has been a fertile field for Bolshevism or its close analogue, Syndicalism. Struggles have been frequent between the proletariat and the other classes, resulting in such manifestations as the workmen's seizure of the factories in Turin and the peasants' seizure of lands in Sicily. At times the troubles seemed to have been composed, only to break out again with greater virulence. In some of the industrial centres the streets had to be swept by machine gun bullets before order was restored. As late as March 2 the great Sar. Marco shipyards at Trieste were burned by communists, with a damage of \$5,000,000.

## THE RISING SUN OF JAPAN

—Daily Mail, New York

**Y**AP is only a little island in the Pacific, about seventy-nine square miles in extent and with a population of 8,000, but it has assumed an importance altogether out of proportion to its size, because of the mandate over it given to Japan. This was in accordance with a treaty made between England and Japan before the United States entered the war, which treaty this country has never recognized. The importance of Yap arises from the fact that it is the landing place of three cables formerly owned by the Germans. The three cables are the only means of communication with the Orient in certain circumstances. If Japan were in complete control of the cables she could at any time cut off the United States from the benefit of their use. Strong protests against the mandate have been made by the American Government.

[American Cartoons]

### Of Course Uncle Will Understand How it Is—(?)

THE question of the repayment of allied loans has recently been prominent in the news. About nine billion dollars was lent to the allied nations during the war by the United States, with no very definite guarantee of repayment. At the Paris Conference and on several occasions since then the suggestion was broached that these loans be canceled, so that the nations might start afresh, but the proposition has not been received with favor by this Government. Diplomatic exchanges regarding these loans are still in progress.

# ENGLAND'S ROYAL PAGEANT

*Picturesque scenes attending the opening of Parliament by the King and Queen in a blaze of pre-war magnificence—Cabinet changes and waning strength of Lloyd George*

[PERIOD ENDED MARCH 12, 1921]

IF the sudden breaking down of the London Reparations Conference, with the occupation of additional German territory, was the most momentous event of the month in England, unquestionably the most picturesque event was the formal opening of Parliament by the King on Feb. 15.

For the first time the pageant was restored to its full pre-war splendor, with a noticeable disappearance of the familiar khaki from the military part of the spectacle. The King and Queen proceeded in state from Buckingham Palace to the House of Lords, escorted by detachments of Household Cavalry in gleaming cuirasses and plumed helmets, while the Foot Guards in tunics of British scarlet and huge "bearskins" lined the route. Hardly less of a delight to the populace than the golden magnificence of the old state coach was the reappearance, after years of disuse, of the official coaches of the Ambassadors of France, Italy, Spain and Japan, with coachmen, and with footmen hanging deftly behind, in the liveried gorgeousness of a departed age.

In the House of Lords a half-medieval and half-modern scene awaited the King. The eye swept from the scarlet and ermine robes of the peers, Bishops and Judges—from the brilliant display of jewels among the peeresses—to the everyday attire of the Members of Parliament. In the diplomatic group Herr Sthamer, the German Ambassador—so soon to be recalled—was noticeable for having followed the American custom in wearing plain evening dress, presumed to be a concession to the republican order of things in Germany.

The King entered the House leading the Queen by the hand. He wore a Field Marshal's uniform, over which a crimson robe of state was hung, and a crown blazing with jewels. The Queen's dress was of old brocaded gold. Across her breast was the broad blue ribbon of the Garter, and from her corsage gleamed the Star of South

Africa and other gems. In his speech King George made special references to trade agreement with Russia, the passing of political strife in India, and the relief of Ireland from the misguided people who were attempting by violence to set up an Irish republic. A new democratic note was remarked throughout the whole speech, but especially in the use of the term "our fellow-citizens" instead of the customary "my subjects" or "my people." So far as the record goes, this was the first occasion on which a King of England addressed his subjects as fellow-citizens.

## CABINET CHANGES

It was officially announced on Feb. 14 that the King had accepted the resignations of Viscount Milner, Secretary of State for the Colonies, and Walter H. Long, First Lord of the Admiralty. At the same time the following appointments were approved: Winston Spencer Churchill to be Secretary of State for the Colonies; Sir Lamar Worthington-Evans, Secretary of State for War; Lord Lee of Fareham, First Lord of the Admiralty, and Lieut. Col. Sir Arthur Griffith-Boscawen, Minister of Agriculture and Fisheries.

Indications that the strength of the Coalition Party, both in and outside of Parliament, was less secure in Mr. Lloyd George's hands than formerly was disclosed in a vote on an amendment to the Address to the Throne on Feb. 18, and in the vote to elect a Member of Parliament for Woolwich on March 2. The address amendment, regretting the Government's failure to deal adequately with unemployment, was moved by Mr. J. B. Clynes. The Prime Minister defended the Government, and in closing the debate declared they would never solve the unemployment problem till the workers frankly considered what was best for the interests of the industry in which they were concerned. Mr. Lloyd George added:

To demand that everybody should have the right to work, and then to support the trade union policy which prevents people from getting work when work is available, is a sham and a hypocrisy. They are all interdependent. "Love your neighbor" is not only good Christianity but good business.

In spite of this plea, the vote resulted in a Government majority of only 178. As the normal Unionist vote had been more than 500, in a House of 707 members, it was inferred that a considerable number of the Premier's supporters had followed Lords Robert and Hugh Cecil over to the opposition. At the by-election for Woolwich, a big industrial constituency, the Government narrowly escaped defeat, electing its candidate by a majority of only 684 out of a total vote of 26,764.

"The Tribulations of an M. P." might have been the apt title of a White Paper issued on Feb. 23 detailing the hardships involved in the attempt to live on the official salary of £400 (\$2,000 normal exchange) a year. Among several M. P.'s without private incomes who gave evidence, Mr. Thompson Donald, an Ulster member, complained that he was compelled to travel

third class on the subway to Parliament, holding on to a strap, which, he thought, was beneath the dignity of a Member of Parliament. He believed M. P.'s ought to travel free, first class. Mr. Adamson, another member, said that his first-class pass on the railway cost him £180 yearly, and that his hotel expenses were £160 and his postage £15; he thought the M. P.'s salary should be increased to £800 with a free railway pass.

### HOUSING THE CONFERENCES

In order to accommodate an almost unprecedented number of foreign statesmen and diplomats attending the various conferences in London, the King gave the use of St. James's Palace for their deliberations. No less than twenty-five or thirty countries were to be represented by important missions. For the housing of the 300 members of these delegations—including the German representatives—as guests of the Government, accommodation was provided in various hotels.

In addition to the two conferences on the

**KING GEORGE AND QUEEN MARY**

*In the robing room, on the occasion of the opening of Parliament, Feb. 15, 1921*

**LABOR AND OTHER PROBLEMS**

An estimate of the working days lost by labor through trade disputes in December totaled 429,000. This compared favorably with November, when 3,631,000 days were lost through the coal strikes, and 1,808,000 days in December, 1920, when the iron foundries were out.

The dispute between the farmers and the Government regarding the price of wheat was adjusted in a conference at the Ministry of Agriculture on Feb. 17, when the Government pledged itself to give a maximum price of 95 shillings per quarter of 504 pounds, provided that the c. i. f. cost of imported wheat was the same figure or over, and so long as wheat prices were controlled. This practically signified a year's guarantee.

After considerable criticism from the Laborites, the second reading of the Government bill increasing unemployment in-

**WINSTON SPENCER CHURCHILL**  
*Former British War Minister, now Minister for the Colonies*

Treaty of Sèvres and Reparations there was also fixed for Feb. 27 a conference of Ministers of Commerce and business experts for seventeen countries. Meantime a petition had been received from the Austrian Chancellor for permission to visit London, accompanied by his Ministers of Food and Finance, to discuss allied financial assistance, since the Paris plan for an international bankers' syndicate had failed to materialize. The Supreme Council granted this request on March 7 and invited the Austrian delegation to London immediately.

insurance payments was carried by a closure motion of 148 to 50 on Feb. 23. The new bill raised the benefit from 15 to 18 shillings a week, and allowed twenty-six weeks' pay in each year in place of fifteen. During debates Dr. MacNamara, Minister of Labor, in repelling the charge that the Government had not exercised adequate forethought, gave details of schemes providing useful and productive work for 70,000 men,

including a main roads project involving more than ten millions sterling.

That war control of the railroads by the Government may cost the country £150,000,000 in claims is the opinion of an official investigating committee. The claims are divided as follows: £90,000,000 for arrears in maintenance, £40,000,000 for abnormal wear and tear and £20,000,000 for the replacement of stores.

## HOSTILITIES INCREASE IN IRELAND

*End of the peace negotiations between the Sinn Feiners and the British Government—A brief summary of the month's events in the war of assassinations and reprisals*

[PERIOD ENDED MARCH 12, 1921]

PREMIER LLOYD GEORGE asserted early in March that conditions in Ireland were definitely better; gone, he said, were Sinn Fein patrols and military police, Sinn Fein courts, insults heaped on the Government police, boycotting, &c.; the authority of the Crown was being recovered. Nevertheless, it was maintained by critics of the Government that a mere statistical comparison of the serious outrages credited to both sides during the seven weeks of the Parliamentary recess and any like period in the history of last year was enough to show how groundless would be the pretense that any improvement had taken place. That dissatisfaction with the Government's Irish policy of repression and reprisal was growing among thoughtful Englishmen was evidenced by the statement of the Archbishop of Canterbury in the House of Lords, Feb. 22, that he voiced the feeling of many persons when he vigorously condemned both the Sinn Fein campaign of "murder and outrage" and the reprisals taken by the Crown forces. The resignations of Brig. Gen. Crozier, head of the Auxiliary Cadets, and his Adjutant, Captain McFee, were regarded as indicating that the ruthless activities of the Black and Tans were creating an increasingly bad impression.

An inner history of the recent peace negotiations was cabled from Dublin on Feb. 14, as having been published in the Sinn

Fein Bulletin from a disclosure made by Eamonn de Valera at a recent session of the Dail Eireann. According to this version, Archbishop Clune of Perth, West Australia, was commissioned by Premier Lloyd George to approach Sinn Fein leaders "as official intermediary to arrange a truce." After the Archbishop had made three visits to Ireland and reported to Mr. Lloyd George, the British Cabinet intimated its willingness for a month's truce in certain general terms which had been discussed. These terms were then reduced to a formula and presented by the Archbishop to Dublin Castle on Dec. 16, as follows:

The British Government undertakes that during the truce no raids, arrests, pursuits, burnings, shootings, lootings, demolitions, courts-martial or other acts of violence will be carried out by its forces, and that there will be no enforcement of the terms of martial law proclamations.

We, on our side, undertake to use all possible means to insure that no acts whatever of violence will occur on our side.

During the period of the truce the British Government on its part and we on ours will use our best efforts to bring about the conditions above mentioned, with the object of creating an atmosphere favorable to the meeting of representatives of the Irish people with a view to bringing about a permanent peace.

Up to this point both sides appeared to be approaching an agreement without serious hindrance, but in accepting the formula Dublin Castle added the condition that

(Press Illustrating Service)

*A wrecked cottage in Mellin, Ireland, from which, as usual, the furniture has been removed by the soldiers before destroying the house in reprisal for an assassination*

the Sinn Fein surrender their arms. To this the Sinn Fein leaders objected. Thereupon the Archbishop again intervened and was able to induce the Castle to waive the

condition. In the meantime, however, Premier Lloyd George had become convinced that the arms condition could not be waived, and was supported by Andrew Bonar Law. Upon this obstacle the negotiations broke asunder, although they hung in abeyance until Dec. 30, when they were finally disposed of at a meeting of the British Cabinet and the matter ended.

(Central News Service)

**SIR JAMES CRAIG**

*Unanimously chosen leader of the Ulster Unionists in succession to Sir Edward Carson*

#### IRISH PLOTS IN ENGLAND

Rumors of Sinn Fein activities in England seemed to acquire definite authenticity early in February. Series of fires in Manchester and other parts of Lancashire were credited to Sinn Fein origin. In the important cotton manufacturing centres of Oldham, Failsworth, Royton and Rochdale the outbreaks were of a serious character. In Manchester it was discovered that at least three men were engaged in each outrage, and there was every indication that the plot had been well organized. Broken windows and the finding of beer bottles filled with petrol indicated the method of attacking the factories, which so far had resulted in comparatively slight damage owing to the alertness of the police and fire brigades.

Corroboration of Sinn Fein plans for fires was furnished by Sir Hamar Greenwood in the House of Commons on Feb. 20 from a number of documents seized at Irish Republican Headquarters in Dublin. Producing one of the documents, Sir Hamar read:

Further, the officer in charge [of operations] should not be tied down by instructions as to sparing lives of enemy subjects. \* \* \* For instance, if one train was wrecked it should have the effect of causing considerable alarm to the traveling public. \* \* \* Also if gas works were blown up, no doubt lives would be lost, but it would have the effect of throwing the town into darkness and would encourage looting.

The Sinn Fein had long been trying in Ireland to keep young Irishmen from emigrating to America. On the night of Feb. 18 these measures were extended to English soil when armed bodies of Sinn Feiners raided three Irish boarding houses in Liverpool and at the point of revolvers took from a number of young Irishmen about to sail for America their passports, passage tickets and money.

#### MANIFESTO BY DE VALERA

The long-promised manifesto by Eamonn de Valera, the Irish Republican leader, was issued on March 7 through the Sinn Fein publicity department. It was signed by de Valera and almost all the other members of the Dail Eireann, including Arthur Griffith and several others in jail. It was issued in the form of an address adopted at the January meeting of the Dail Eireann to the representatives of foreign nations.

The manifesto reviewed the Irish struggle for independence from earliest times and recited the circumstances culminating in the declaration of the establishment of the Irish Republic. Denunciatory and often violent in tone against British rule, it made use of such appeals to passion as that "ex-convicts and degenerates from the trenches could be depended upon to have few qualms in dealing with their victims. \* \* \* An orgy of murder and robbery began, neither age, sex nor profession was respected. \* \* \* English jails are filled with our countrymen, some have been murdered, others tortured therein."

The manifesto declared that the Irish people demanded self-determination, and concluded:

We, their official spokesmen and their elected Parliament, call upon mankind to witness that our people have ever been ready to welcome peace with England that has a just basis. No other basis of peace is possible. We have pledged ourselves and people faithful to the cause until death. You representatives of sister nations cannot be insensible to the issue.

#### A BIT OF REAL WARFARE

The most elaborate military operation that had yet taken place in Ireland was the investment of the Dingle Peninsula in West Kerry early in February. The object was to round up a number of rebels "on the run" and search their possible hiding places. As a Sinn Fein stronghold the locality could hardly have afforded better advantage, since the peninsula occupies a wild tongue of mountainous and rugged land, sparsely populated, and jutting out thirty miles into the Atlantic Ocean. After the occupation of Tralee, at the base of the peninsula, by the British military, a strict blockade of the district was enforced, entry into which was prohibited. Since then little news from either Dingle or Tralee has been received. A station master on the Tralee & Dingle Railroad, however, telegraphed on Feb. 14 that supplies were exhausted and the women and children on the verge of starvation. This the military denied, but on March 4 a Dublin dispatch stated that the Crown forces were carrying out their threat to reduce the district to submission by hunger, and that on the previous day two bridges were blown up by them, cutting off Tralee from the district which supplied provisions.

#### OUTRAGES AND REPRISALS

Again a long list of acts of violence, of which a few of the most conspicuous follow: On Feb. 15 the 9:30 A. M. Cork-Bantry train, carrying military reinforcements, had just shut off power at Upton when practically every compartment was swept by a shower of bullets. Two commercial travelers were killed with the first volley. The soldiers promptly returned the fire of the ambushers, and a short but brisk engagement ensued, during which the passengers huddled together on the floors of the carriages. When the attacking party had been driven off it was found that eight civilians and two Sinn Feiners were slain, and five civilians and six soldiers wounded.

Hundreds of troops supported by tanks and armored cars cordoned a section of central Dublin on Feb. 18 for the purpose of making a house-to-house search for "wanted" men. The method adopted was to surround the whole area with barbed wire entanglements, to pass through which required a special permit. No newspapers

(Colonial Press Service)

*In the martial law area of Ireland the head of each household is compelled by law to nail on his door a list describing every member of his family*

were allowed inside the prohibited space, and there were no postal deliveries. If residents desired to make purchases outside the cordon they were escorted to the shops by armed pickets. Ladders were used to search the roofs, while in certain windows machine guns were posted to command the thoroughfares. In each street it was the rule to parade all male residents under military guard for inspection by special service agents. In Ballybunion, County Kerry, more than twenty private and public houses were burned on Feb. 23 in retaliation for the shooting of two constables.

A two hours' battle in the open occurred on Feb. 20 near Middleton, County Cork, in the martial law area. A party of the Hampshire Regiment came into conflict with armed civilians, with the result that thirteen civilians were killed and eight captured, three of whom were wounded. Another fight which extended over five miles of country and lasted for five hours took place near Macroom, Feb. 25. From the point of view of numbers engaged it was said to have been the largest engagement that had yet taken place. It commenced with an intensive rifle fire and bombing attack upon a convoy commanded by Major Seafield

Grant, and developed a general engagement as reinforcements were hurried to the support of both sides. At one time the Government troops were nearly surrounded, but they finally succeeded in compelling the Republicans to retreat, apparently in good order, into a wild territory.

As a result of the shooting of six soldiers and the wounding of six others in Dublin on the night of Feb. 31 the curfew was advanced to 6 o'clock. The attacks began punctually at 7 P. M., the soldiers, unarmed and on walking-out passes, being shot down in such crowded thoroughfares as Patrick Street and the Grand Parade. Pedestrians fled in a panic and the assassins escaped. On the night of March 4 police lorries escorting prisoners to Dublin Castle were fired on along the north quays, and subsequently subjected to a fusillade of bullets on reaching Grantham Bridge. In returning the fire the police killed three persons and wounded several. In an ambush of a military convoy at Clonbanin, West Cork, March 5, Brig. Gen. H. R. Cumming, D. S. O., in control of a Kerry Brigade, was shot and instantly killed when leaving his car to direct the fight against the ambushers.

A tragedy which recalled similar events

in Cork occurred in Limerick early in the morning of March 7. A band of assassins forced their way into the house of ex-Mayor O'Callaghan, and in spite of the heroic efforts of his wife to protect him, they mortally wounded the ex-Mayor. The assassins then proceeded to Mayor George Clancy's residence, and, gaining an entrance, fired several shots into the Mayor's body after wounding his wife. Both the Mayor and the ex-Mayor died later. The third house visited was that of a resident named

O'Donoghue, whose lifeless body was found in a nearby field.

It was announced on March 11 that the General Officer Commanding in Chief had confirmed the court-martial death sentences on Bernard Ryan, Patrick Doyle, Thomas Bryan, Frank Flood and Dermot O'Sullivan, tried for high treason and levying war on the British Crown. In the case of O'Sullivan, who was 17 years old, the Lord Lieutenant commuted the sentence to penal servitude for life.

## CANADA AND OTHER BRITISH DOMINIONS

*Britain's wartime embargo on cattle a live issue in the Canadian Parliament—Recent developments in Australia—Freedom for Egypt urged by Lord Milner's report*

[PERIOD ENDED MARCH 12, 1920]

IN the course of a lively debate in the Canadian House of Commons on March 9, Premier Meighen stated that the Government was maintaining its protests against the British cattle embargo. The Government rested its case upon the promise made in 1917 to Sir Robert Borden, who was then Premier, that the embargo would be abolished after the war. Several cattle breeders, members of the Commons, were of the opinion that the embargo could be turned to advantage in connection with fostering a big trade in meat. This view was not concurred in by the majority of the House. Possible restriction of the United States market was urged by some members as a reason for persistent efforts to get the British Government to change its attitude. The Hon. Manning Doherty, Ontario's Minister of Agriculture, is in Britain at this writing in the hope of assisting in bringing about that change. Many critics of the embargo voice opposition against Mr. Doherty's presence in England, arguing that Canada should be content with dignified protests made through the regular channels by the Federal Government.

For expenditures in the fiscal year beginning April 1, Canada will require \$582,062,698, according to the main estimates presented by Sir Henry Drayton, Minister

of Finance. This is less by \$31,000,000 than the total appropriations for the closing fiscal year. Of the required amount \$226,757,087 comes under war expenditure headings, including \$140,613,163 for interest on debt, \$31,816,923 on pensions, \$35,017,000 on soldiers' land settlement and \$19,310,000 on the re-establishment of soldiers in civil life. It is, however, in regard to the operation of Government-owned railways that the estimates have aroused most discussion. The vote asked for this is roughly \$179,000,000, of which \$49,250,000 is to meet deficits on operation and interest account. This is \$11,000,000 less than the rumored deficit. Supporters of Government ownership urge that there should be some readjustment as between operating costs and support from the public Treasury. The Toronto Globe, arguing that on both sides of the Canadian-United States border operating costs—especially for labor—are too high, says that the question of railway finance is the greatest that confronts the people of the Dominion today.

In the first division in the House of Commons, taken on March 4, the Government had a majority of 25, one less than in June, 1920, the final test of the last session.

A judicial decision on a test case is to

the effect that the Province of Ontario has no power to enact legislation prohibiting betting on race tracks licensed by the Province, the inference being that this authority rests with the Federal Government.

The Rev. William Ivens, John Queen and George Armstrong, three of the leaders of the great Winnipeg strike, who have served their full term of one year in prison—less one month off for good conduct—took their seats in the Manitoba Legislature on Feb. 28. They were elected to the Legislature while in prison.

The Federal Government is taking precautions to prevent tragedies in connection with the expected rush to the newly discovered oil regions in the Mackenzie district. Airplanes and river steamers, specially constructed, will play a considerable part in the rush. Claim holders must do their own locating. Claims, it is understood, are to be restricted to 640 acres, one-half of which is to be held by the Government as a reserve.

Leases are 50 cents per acre for the first year and \$1 per acre thereafter, according to present indications. The ninety square miles located around Fort Norman by the original discovering company and others will not come under these proposed new regulations. The Government will, however, collect from these and from other claims taken up a royalty of 5 per cent. of the value of the oil at the point of production for the first five years, and thereafter 10 per cent.

#### FREEDOM FOR EGYPT URGED

Lord Milner's report urging negotiations for a treaty according self-government to Egypt, a summary of which was published in *CURRENT HISTORY* for January (p. 92), was at last laid before Parliament on Feb. 18. After stating that the spirit of Nationalist Egypt cannot be extinguished, and that fulfillment of the promise of self-government cannot be postponed, it adds:

There are formidable difficulties, however, in a sudden and complete transfer of all powers of Government to Egyptian hands. It is essential to insure that independent Egypt does not pursue a foreign policy hostile or prejudicial to the interests of the British Empire. It is also imperative to insure the safety and protect the rights of foreign residents. We hold that in fact, as well as in theory, Egypt should be governed by Egyptians. We have sufficient faith in the

reform work of the last forty years to believe that such a course now can be followed with good prospects of success, but it must be adopted whole-heartedly, and in a spirit of hopefulness and sympathy.

We do not attempt to conceal our conviction that Egypt is not yet in a position to dispense with British assistance in her internal administration. We are greatly fortified in the belief that the Egyptians will acquiesce in this view by our own experience in dealing with representatives of the Egyptians with whom we have come in such intimate contact. We are not discouraged by the fact that they are not all as yet prepared to commit themselves unreservedly to every point in a settlement they collaborated with us in devising.

Despite Lord Milner's recommendation that negotiations be entered into without delay, it was decided, according to *The Daily Mail*, that representatives of the British Dominions, who will meet in London next Summer, will be asked to express their views on the subject, and their decision will have great weight. Their right to a voice in the matter is argued from the fact that so many Dominion troops fell while fighting to preserve the Suez Canal and the Egyptian hinterland. Lord Milner's ideas are not approved by all his former colleagues in the Cabinet, especially by Winston Spencer Churchill, the new Colonial Secretary. It was stated, however, in the House of Commons on Feb. 28 by Premier Lloyd George that Mr. Churchill would not have charge of Egyptian affairs, Egypt, the Sudan and the Hedjaz remaining under control of the Foreign Office.

Nevertheless, the impression prevailed in Egypt that the new Secretary would have charge of Egyptian affairs. Mr. Churchill arrived in Cairo on March 10, accompanied by War Office representatives, in connection with Arab and Palestine affairs. He avoided a hostile demonstration of students who were awaiting him at the station by leaving the train a few miles outside the city and motoring to his hotel. Police in Alexandria attempted to break up an anti-Churchill demonstration on March 11, but were stoned and compelled to flee. Twenty policemen were injured by stones and nine rioters received bullet wounds.

#### PREMIER HUGHES INJURED

AUSTRALIA—William Morris Hughes, Premier of Australia, was seriously injured

in the back while playing in a departmental cricket match at Sydney on Feb. 17.

Alexander Poynton, Australian Minister of Home Affairs and Territories, on March 11 renewed a protest to Washington against a charge of \$10 which Australians are compelled to pay to land at Honolulu or Manila, according to a dispatch from Melbourne of that date.

Australia's shipping strike continues to disorganize business and increase unemployment. Steel and iron works are discharging large numbers of men, and curtailment of gas, electric light, railway and tramway services continues. The Queensland railway men voted by a large majority in favor of a strike for increased wages.

A dispatch from Perth, dated March 13, stated that Mrs. Cowan, a candidate in the West Australia elections, had defeated the Attorney General for his seat in the Australian Parliament, of which she becomes the first woman member.

**SOUTH AFRICA**—Prospects of improved trade have given a more optimistic undercurrent to business in South Africa, although the general situation is far from normal. A drop in the gold premium has caused some concern, owing to its probable effect on low-grade mines, and the slump in the price of diamonds has caused many diggers to abandon their claims. A dispatch from Johannesburg, dated Feb. 14, announced that there was a three-to-one majority against a strike of the amalgamated engineers and a majority of fifty to one in favor of acceptance of the Chamber of Mines offer to continue wages at the prevailing rate until the end of the year. The offer, however, excluded members of the Mine Workers' Union, owing to the heavy losses wantonly forced on the industry by the unconstitutional action of the strikers in violation of agreements with the Chamber.

## IRELAND THE UNKNOWN.

BY WILLIAM WATSON

[In The London Times, Jan. 29, 1921]

Thou whom ten thousand searchlights leave  
obscure;

The white foam's sister, as the white foam  
pure;

The dark storm's daughter, guarding long  
and late

That far-descended heirloom, ancient  
hate;—

I cannot say: "In all things that concerned  
Thee and thy hopes I never swerved or  
turned,

Or held with stumbling mind a wavering  
creed."

But this at least I can declare indeed:  
Through days with tempest packed, with  
thunder piled,

My dream is of an Ireland Reconciled;  
Not mocked and thwarted, conquering some  
vain goal

That only baulks the hunger of the soul;  
Not still uncheered, and in fierce mood un-  
changed,

The spouse whom wedlock hath the more  
estranged,

Whom bonds have the more direly wrenched  
apart;

But after that long solitude of heart,  
And all the dissonance of the loveless Past,  
An Ireland willing to be loved at last;  
An Ireland healed with a more sovereign  
balm

Than the old deep hurts have known, and  
in blest calm

Risen from a hundred shatterings, great  
and new.

Oh, that the dream might even now come  
true!

# INDIA'S NEW PARLIAMENT AT DELHI

*Opening of the Advisory Assembly by Queen Victoria's son in the ancient capital of the Moguls marks the first great step toward giving India self-government—Impressive addresses and solemn pledges in the presence of the panoplied Princes*

[PERIOD ENDED MARCH 12, 1921]

GREAT BRITAIN'S love of historical continuity and her genius for impressive stage-setting never found better scope than in the recent ceremonies at Delhi, when, before a picturesque throng of gorgeously robed native princes, the splendid buildings constructed for the deliberations of the new Advisory Assembly were thrown open amid impressive ceremonies. The importance which this event assumed in the minds of the British rulers was evidenced by the fact that they sent Queen Victoria's only surviving son, the Duke of Connaught, to make the opening address.

This new Parliament embodies tangibly, as well as spiritually, the latest stage in Great Britain's endeavor to adapt an originally autocratic rule to a developing people. Sixteen years ago, under Lord Curzon, then Viceroy, the partition of Bengal set the match to Indian discontent. Lord Morley, a great Liberal, as Secretary of State saw that the times had moved, and, against the opposition of the superannuated Indian officials, pushed through the so-called Morley-Minto reforms. Then came the war, with its disturbing aftermath of Bolshevism, and the growth of Indian nationalism, headed by Mr. Gandhi, in alliance with the Moslems and naturally in sympathy with the Turks. The moving finger wrote, and Lord Montagu, the present Indian Secretary, read its message. Four years ago the investigation on Indian soil was begun which has culminated in the Indian Home Rule bill. The opening of the magnificent Parliamentary buildings at Delhi was the first step in the execution of the measures to be initiated under that bill.

While Lord Reading, after resigning from the Lord Chief Justiceship, was preparing in England for his long journey to the East,

there to assume new duties as Viceroy and to bring his cool, detached judgment and great administrative ability to bear on the new problems, in India the old régime was being ushered out, and the first step toward Indian *Swaraj* (Home Rule) was being formally celebrated.

## A PICTURESQUE CEREMONY

The great hall of audience of the Mogul Emperors on Feb. 8 witnessed one of the most beautiful and impressive ceremonies it had ever beheld. Beneath the canopy of the red stone arcades of the *Diwan-i-Am*, and the great *shamiana* upheld over the semicircular amphitheatre built out from the floor of the hall, the dais was spread with crimson and gold. On the dais stood two golden thrones, one for the Viceroy and one for the Duke of Connaught.

For the first time in their history the Princes and ruling chiefs of India met as a consultative body. They were robed and adorned in all their panoply. There was the Maharaja of Kashmir, old and feeble, yet full of dignity; the Prince of Scindia, in the uniform of a General, but with the robes of the Order of the Star of India; Alwar and Kapurthala, in the splendid blue of the Order of the Indian Empire; Bikanir, "King of the Desert"; the Sikh Prince, Patiala, wrapped in paler silk, with jeweled headdress. The most conspicuous was the envoy from Nepal, with a huge bird of paradise rising from the emeralds and diamonds of his coronet.

The ceremony began with a flourish of trumpets, and the vast audience, which contained representatives of the Indian Government, as well as five British Generals headed by General Lord Rawlinson, rose to greet the Duke of Connaught, who entered

robed in the mantle of the Garter, in company with the Viceroy, who wore the robes of the senior Indian order.

Sir A. B. Wood, Joint Foreign Secretary, read the proclamation of the British Emperor, which made the Chamber of Princes an auxiliary and guide at the side of the Government of India, to advance the interests common to their territories and to British India. The Viceroy then rose and, in a carefully framed speech, explained the steps by which the Chamber had been brought into being, tracing briefly the various stages of progressive legislation of which the new Parliament was the culmination. He pointed out the regulations which had been devised to insure the smooth working of the future deliberations and to bring the several States into direct relations with the Central Government.

#### THE DUKE'S HISTORIC SPEECH

In a felicitous speech the Duke of Connaught conveyed the greetings of the British King to the new Assembly. Despite the original autocratic principles on which British rule in India was based, he said, the desire of his mother, the late Queen Victoria, and of England's successive rulers, had been to work for the contentment and prosperity of the Indian people. The autocratic principle was now definitely abandoned as "inconsistent with the legitimate demands and aspirations of the Indian people and the stage of political development which they have attained." Henceforth India would have to bear her own burdens. These were not light. A contagious ferment of skepticism and unrest was seething everywhere in the hearts of men, and its workings were plainly visible in India.

And India had also her special problems. She must overcome political inexperience, the ignorance of the electorates, the difficulties of handling questions of race, religion and custom. The new Indian Parliament must feel its responsibility. On the way in which this responsibility was faced depended the progress of India toward the goal of complete self-government. As contrasted with the upper chamber, a true Senate of elder statesmen, the Assembly would be called upon to voice more directly the needs of the people. Soldier and trader, owners of land and dwellers in cities, Hindu and Mohammedan, Sikh and Christian, all

classes and communities would have their share of representation. Strong differences of opinion would make themselves felt. At this point the Duke of Connaught made an earnest plea for moderation and self-control, which he declared would be the best pledge of enduring success. After a brief but eloquent tribute to the retiring Viceroy, he declared the Council of State and the Legislative Assembly open under the Government of India act of 1919.

#### A PERSONAL PLEA

The Duke added to this formal speech a few personal words which made a deep impression on the assembled Princes. In these words he appealed to them to forget old grudges:

Since I landed [he said] I have felt around me bitterness and estrangement between those who have been and should be friends. The shadow of Amritsar has lengthened over the fair face of India. I know how deep is the concern felt by his Majesty the King-Emperor at the terrible chapter of events in the Punjab. No one can deplore those events more intensely than I do myself. I have reached a time of life when I most desire to heal wounds, and to reunite those who have been disunited. In what must be, I fear, my last visit to the India I love so well, here in the new capital inaugurating a Constitution, I am moved to make you a personal appeal, put in simple words that come from my heart, not to be coldly and critically interpreted. My experience tells me that misunderstandings usually mean mistakes on either side. As an old friend of India, I appeal to you all, British and Indians, to bury along with the dead past the mistakes and misunderstandings of the past, to forgive where you have to forgive, and to join hands and to work together to realize the hopes that arise from today.

The Duke was followed by the Prince of Scindia, who thanked the British for the inauguration of the new Parliament, and promised on behalf of his fellow-Princes that they would prove their loyalty by their use of this great privilege. Several other Princes spoke in similar vein, and the ceremonies were ended. Other ceremonies and receptions were attended by the Duke in the next few days. When he departed many of the shops which had been closed by the non-co-operationist adherents of Mr. Gandhi still remained barred and shuttered, mute symbols of the undercurrent of distrust and hostility to British rule felt among the masses of the Indian people today.

The first meeting of the new Council of State was held on Feb. 14. The session was mainly devoted to a resolution proposing a committee to consider the repealing or modifying of "repressive laws." The debate showed the effect of Connaught's appeal for moderation. The resolution was supported by all sections and was accepted by the Government. The proposer of the resolution, Mr. Sastri, argued that the repressive laws engendered discontent. An amendment to demand the repeal of the Press act and the Seditious Meetings act was rejected. The Indian members of both houses showed intense interest in the Fisher report and in the whole question of military expenditure. Replying to interpellations, General Lord Rawlinson stated that the British regular troops garrisoned in India totaled 8,353 officers and 62,393 other ranks. The Indian officers and other ranks aggregated 253,651. He further said that there were no troops, British or Indian, in Mesopotamia, Asiatic Turkey or on the East Coast of Africa which were maintained on the revenues of India. It was indicated that the military authorities believed the army reduction agreed to by the Government represented the maximum consistent with India's safety.

At the session of Feb. 15 the Legislative Assembly unanimously adopted a resolution, moved by Mr. Jamnadas Dwarkadas, recommending the Governor in Council to declare for the principle of racial equality, to express regret that the martial law administration in the Punjab had departed from this principle, and to see that adequate compensation should be paid the families of Indians killed at Amritsar on an equal scale to that paid to the families of Europeans killed at the same place. A proposal to obtain punishment for the officers guilty of the excesses referred to was rejected by General Lord Rawlinson on the ground that this question had already been decided by a higher military authority.

#### FRUITS OF MONTAGU BILL

The consequences of the act under which this new Council has begun to function, like those of the Home Rule act for Ireland, represent a great advance toward autonomy. The law creates electorates where none existed before. It gives to each Province a qualified autonomy like that en-

joyed by each American State. For each it sets up an Executive and a Legislature into which the native and elected element is introduced. It provides arrangements for increasing year by year the responsibilities of these Legislatures as they gain in experience. It still leaves the franchise narrow. The separate vote to be allowed the Sikhs and other special groups is anomalous. It puts no check on the power of the native rulers who, by support of Great Britain, may hold back the tide of progress in their respective realms. Yet the Montague bill marks an era in the history of India, and the best earnest of the future lies in the fact that it will come up every ten years for revision and extension. Its ultimate success will depend in great part on its acceptance by the Indian intellectuals, and it is here that the influence of Mr. Gandhi, with his preachment of boycott and non-cooperation, may prove most dangerous. It will be the task of Lord Reading, as Viceroy, to allay the deep resentment and hostility felt by great masses of Indian people over the Amritsar massacres and the repressive measures adopted under the Rowlatt laws. The mind in which Lord Reading will attack the problems facing him was revealed by him at a dinner organized by the English-Speaking Union in London on Feb. 12, when he declared his belief that "the people of India will make the same warm response to generous treatment as our own people," and that "in India, as here, justice must reign supreme."

Important changes of practice were announced on Feb. 12 regarding the settlement of disputes between the Indian Government and the native Princes. Cases of local misrule in future are to be referred to a Commission of Investigation, unless the safety of the State is involved, when the State reserves its right of immediate action. Disputes are to be settled henceforth by a Court of Arbitration. A standing committee of the new Chamber of Princes is also to be instituted, to include representatives from Western India, Central India, Rajputana and the Punjab. Its function will be to consider all questions referred to it by the Viceroy and to advise him concerning them. This standing committee will also consult with the Political Secretary in framing agenda for the Chamber.

# JAPAN'S DOMESTIC TROUBLES

*Continued opposition to the Government's policies in Siberia and Korea—A growing movement for reforms and for the elimination of "Invisible" Government—Apology to the United States for the murder of an American officer*

[PERIOD ENDED MARCH 12, 1921]

**T**HE Siberian and Korean policies of the Japanese Cabinet are extremely unpopular among an ever-growing opposition element at home. The onslaughts against them are by no means confined to the floor of the Diet. Viscount Kato's recent attacks have shown clearly enough that the Government's continued occupation of Siberia, as well as its course in Korea, is strongly disapproved by the powerful Kenseikai, or Opposition Party. The dissatisfaction extends to the whole policy relating to the war, from which Japan is alleged to have come out second best, and to the relations with America. According to Viscount Kato's speeches, there is a general feeling that under Premier Hara Japan has lost prestige.

The Government has thus far held firm against these onslaughts, but its position is by no means enviable. The expedition to Chentao, ostensibly to put down Korean Bolshevist uprisings on the Manchurian border, brought an aftermath of the most bitter attacks both abroad and at home. What must be the feelings of sensitive Japanese when they read such words as those spoken, for instance, by the Rev. R. P. Mackay of Toronto before the opening session of the American Section of the Executive Commission of the Reformed Churches of the World, held in Washington, Pa., on Feb. 16? Dr. Mackay, who is Secretary of the Board of Foreign Missions of the Canadian Presbyterian Church, said in part:

The brutality of Japan's treatment of the Koreans is unique in modern times. It is comparable only to Turkish massacres in Armenia. One illustration of such barbarity will suffice. It is from a missionary who speaks from personal knowledge.

The scene is Manchuria, in Chinese territory, to which many Koreans had migrated in order to escape Japanese tyranny in their own country. Against earnest protests from China, Japan sent 15,000 men with the seeming purpose of wiping out the whole Korean community, especially young men. Village after village was methodically burned and

the young men were shot. This method was simple. At daybreak a complete cordon of Japanese infantry surrounded a village, set fire to immense stacks of unthrashed millet, barley and straw, and then ordered the inhabitants of the houses outside.

In each case, as soon as father and son appeared, they were shot at sight, and as they fell on their faces, wounded and dead alike, they were covered with burning straw. The missionary saw with his own eyes the bloodstains caused by bayonet thrusts inflicted upon wounded men as they strove to rise from the flames.

The missionary quoted states that he had in his possession the names and accurate reports of thirty-two villages subjected to such fiendish inhumanity. In one village 144 men were killed, houses burned, women and children perishing in the flames. In one village fourteen men were made to stand in front of a large open grave, shot, and their bodies consumed with wood and oil.

These are but typical cases. Such a reign of terror prevailed and prevails still at the hands of a nation that claims and resents any lack of recognition among civilized nations. Such was her conduct at home, even when her representatives sat as members of the Council of the League of Nations.

## GOVERNMENT ATTACKED ON KOREA

Such a statement goes far toward explaining the bitterness of the Opposition attacks in the Japanese Diet. One of the latest of these was delivered by Representative Ichiro Kiyose of the Kokumin-to, or Nationalist Party, before the Diet on March 2. The Representative mentioned especially the destruction by Japanese troops of Christian churches and schools at Chentao. Reports abroad, he declared, had made the Japanese appear "in the rôle of blood-thirsty devils."

Admiral Saito, Governor of Korea, on the other hand, in a statement to the press issued on the same date, denied that the Japanese troops had singled out Christian converts in Manchuria for persecution and death, and charged that many Koreans had adopted the Christian religion merely as a cloak to cover anti-Japanese agitation. He

also charged that many Koreans had made untruthful reports, on the basis of which a number of innocent people had been executed. Orders had now been issued to all troop commanders not to accept false Korean testimony.

The hatred of the Koreans for any compatriot who sanctioned the Japanese policy of forcible assimilation was dramatically emphasized on Feb. 18, when Bingen Shoku, a native Korean, who was a strong advocate of this policy, was assassinated in a hotel at Tokio. Mr. Yamagata, editor of the semi-official Seoul Press, then in Tokio, stated that Bingen Shoku was the most hated man in Korea because he supported the Japanese administration. Other Korean leaders of this type, as well as prominent Japanese officials, had been marked for death, said Mr. Yamagata.

At various sessions of the Diet the Government's policy in Siberia was also made the object of attack, and the withdrawal of the Japanese forces was demanded. The

Government maintained its view that the withdrawal could not be effected until a stable Siberian Government existed. The relations between the military command in Siberia and the semi-Bolshevist Chita Government continued to be strained, and the Japanese protection accorded the former anti-Bolshevist General, Semenov, in Harbin, was much resented. The Chita Government charged in a long note sent to Tokio in January that Semenov was preparing to launch a new onslaught on the Russians, and declared that the whole policy of the Japanese was one of encouragement of bandit attacks upon the Russian inhabitants.

REJECTION OF DISARMAMENT

Fear of the proposed intention of the United States to expand its navy led to rejection of a resolution offered by Yukio Ozaki, an Opposition leader, before the Japanese House of Representatives on Feb. 10,

*(Times Wide World Photos)*

HIROHITO SHINNO

*Crown Prince of Japan, who recently married the oldest daughter of Prince Kuni*

PRINCESS NAGAKO

*Bride of the Crown Prince of Japan*

calling for a curtailment of Japan's naval armament. General Tsuda, on behalf of the Government, declared that conditions in China and Siberia were unsatisfactory, and on this account Japan could not check her proposed military and naval growth. Undiscouraged by this rejection, Representative Ozaki continued his campaign for disarmament, and formed several associations to promote the movement. Leading men of Osaka, Japan's great industrial centre, agreed to form a league for this purpose and to get the co-operation of business communities in other parts of the country.

The whole movement was regarded in Tokio as a serious attempt to control the policies of the militarists, and to do away with the "invisible Government" which they exercised. It has been asserted by students of modern Japan that there are in reality three Governments, the Cabinet, the Militarists, and the Capitalists. The Militarists impose their will more or less openly, and it is they who are responsible for the Korean and Siberian policies; their interests coincide with those of the capitalists, with whom several eminent Japanese statesmen are allied. One of the main reasons for the opposition to the military-capitalistic policies is the desire to save some of the enormous costs of armaments and to use the funds so saved for internal economic and educational improvements, of which the country is sorely in need.

A crisis between the Oppositionists and the Cabinet came on Feb. 19, when the former offered a resolution of lack of confidence in the Government. The session was extremely turbulent, the galleries crowded, and the police reserves were stationed both within and outside the building. Speakers on both sides were hooted alike from the galleries and from the floor. Tokitoshi Taketomi, former Minister of Finance, spoke for the Kenseikai or Opposition Party. He declared that the Government had failed in its efforts at home, and that it had brought disgrace to Japan abroad. Mr. Moka, former Speaker of the Chamber, defended the Government. The Opposition resolution was defeated in the House by a vote of 259 to 141. Following this vote, violent demonstrations began outside the Diet. The police intervened and made many arrests. At simultaneous meetings in various city parks the resignation of the

Government was demanded. At a mass meeting attended by at least 20,000 people a resolution was passed declaring that the people had no confidence in the Government.

## RELATIONS WITH AMERICA

Regarding California's anti-Japanese legislation, the attitude of the Japanese Government is one of watchful waiting. The treaty negotiations at Washington have not yet been completed. Japan's main demand has been that the application of the new land-ownership laws in California should not be discriminatory in her case alone. The dispute between the United States and Japan over the island of Yap has grown into a serious issue, which is treated fully elsewhere. [Pages 101-110.]

The complication caused by the act of a Japanese sentry at Vladivostok in shooting and killing Lieutenant W. H. Langdon, an American naval officer, early in January, was settled when Japan, on Feb. 22, sent to the American Embassy at Tokio a full apology, together with a report on the findings of the court-martial instituted. Major Gen. Nishihara, commander of the Japanese garrison at Vladivostok, had been found primarily responsible for the fact that the sentry had been improperly trained and that his instructions had been unclear; the General had been removed from active service. Other officers had been punished by suspension. The sentry, Toshigora Ogasawara, had been exonerated of ill intention, but had been punished for deception in giving his version of what had occurred. The facts were that the sentry had challenged the officer three times on seeing him approach in the early hours of the morning with a pocket lamp; receiving no answer, he had run after him and asked him in Russian if he was an American; not understanding the answer, he had tried to seize the light, had thought himself threatened, and had fired when the officer moved away. The Government's note of apology expressed "deep regret" and offered to make all possible reparation. Secretary Colby praised Japan's action as prompt and sincere, and declared that it would be appreciated in the United States.

All the larger islands of the Caroline group, in the Pacific, of which Japan has

become the mandatory under the League of Nations, joined in a celebration Feb. 11 of the anniversary of the foundation of the Japanese dynasty. Games and other exercises were closed by the singing of the Japanese national anthem. The Japanese navy was represented. Similar celebrations occurred in the Marshall Islands.

Announcement of the resignation of Prince Yamagata as President of the Privy

Council coincided with the official announcement of the betrothal of the Japanese heir-apparent, Hirohito, to Princess Nagako. Prince Hirohito was planning a visit to England—a project which had met with opposition in the press. Prince Yamagata, who is over 83 years old, has long been condemned by a section of the Japanese public and press as the ruling spirit of the military party.

## THE CURSE OF MILITARISM IN CHINA

*Helplessness of the people under the burden and lootings of the provincial Governors' armies—Millions still facing death by starvation—America's contributions for relief*

[PERIOD ENDED MARCH 12, 1921]

(© Harris & Ewing)

DR. ALFRED SAO SZE

*New Chinese Minister to the United States,  
succeeding Wellington Koo*

THE woes of China suffer no abatement. Sun Yat-sen, the first President of the Chinese Republic, has remained with his adherents encamped in the southern city of Canton, irreconcilably hostile to the Peking Government, which the Canton faction continues to denounce as unspeakably corrupt and in sympathy with the Japanese exploiters. Active hostilities between the Northern and Southern forces have momentarily died down, but the ills of the years of protracted strife are rampant in the life of the nation everywhere.

The combined military forces in all the provinces have been estimated at over a million and a half. What is most needed is disbandment, for which the Tuchuns, or Military Governors, of the respective provinces show no inclination. Counting long arrears of pay, the cost of disbanding the armies would probably exceed the vast sum of \$100,000,000, and the Chinese Government is bankrupt. Meanwhile the long-suffering people are compelled to endure the lootings, incendiarism and murder perpetrated by the lawless and discontented soldiers, and the richest cities are forced to pay tribute for their support—in sums euphemistically called "loans." In certain districts—notably in Kweichow, Szechuan and Fukien—the militarists have been forcing the farmers to cultivate again the prohibited poppy, to provide opium for the soldiers, inflicting drastic punishment on all

who refuse. So military anarchy reigns, and the Chinese people have no redress, as the Peking Government has no power over the arrogant and powerful Tuchuns, who rule only for their own advantage.

China, it appears, is again to lose Mongolia. Outraged by the lawless actions of the 10,000 Chinese soldiers garrisoning Urga, the Mongols called in some 2,000 "White" Russians, under Baron Ungern, one of Semenov's former Generals, and besieged the Mongol capital for three months. On Feb. 14 the Chinese soldiers gave way before the incessant shellfire and evacuated Urga, bag and baggage. The Chinese were said to be in a serious position, for the whole breadth of the Gobi Desert, open to the operations of the Mongol cavalry, lay between them and their base. Since the coup d'état in November, 1919, the Mongols had been awaiting an opportunity to recover their lost dominion.

The Chinese famine still threatens death to millions, but the inpour of relief has been having some effect since February. The funds in sight on Feb. 18 amounted to about \$10,000,000, which included contributions from America amounting to \$6,000,000. Sums approximating \$4,000,000 had been contributed by the Rockefellers alone. The American Red Cross had accomplished miracles in road building and direct relief measures. Many rich Chinese had also responded. It was estimated that \$7,000,000 additional would be necessary to take care of the famine-stricken areas until the coming harvest. Official figures quoted by Senator Kenyon of Iowa on Feb. 25, in presenting his Senate bill for relief, indicated that 14,000,000 Chinese were then facing starvation, and that the daily death toll was about 7,000. The Senate voted a grant of

\$500,000 to defray the cost of moving across the ocean grain given by the American farmers. Statements made by Thomas W. Lamont, Chairman of the American committee, showed that American churches had contributed more than \$3,000,000.

Alfred Sao Sze, the new Minister of the Chinese Republic, arrived in New York on Feb. 24. Mr. Sze spoke optimistically of conditions in his country. He admitted that unrest and political disturbance existed in China, but declared that such conditions always prevailed for a time in every country where a fundamental change in the life of the people had taken place. New parliamentary machinery was being worked out in China, he said, by men trained under the old system. It was a question of training, not of racial incapacity or faults of character. The eventual peaceful development of China was a certainty, he declared, if that development were not deflected by foreign agencies into channels of militarism. The Chinese were adaptable, and would survive, not as an ancient, dying race, but as "a great, coherent body of 400,000,000 people."

A note dispatched by the Washington Government to Peking on Feb. 16 declared that the United States would regard as an unfriendly act the cancellation by the Chinese Government of a contract made with the Federal Telegraph Company, an American company, to erect a high-power wireless plant at Shanghai. This note followed receipt of information that a British Marconi company, supported by the British Minister to Peking, was endeavoring to have the American company's contract abrogated. The United States also sent a note on the subject to the British Government, insisting on the maintenance of "the open door."

# MEXICAN RECOGNITION DELAYED

*Demand that Mexico sign a written agreement to protect American lives and property likely to hinder resumption of relations indefinitely—Status of the oil question*

[PERIOD ENDED MARCH 12, 1921]

SENATOR ALBERT B. FALL, in a letter written a few days before he was appointed Secretary of the Interior by President Harding, said: "So long as I have anything to do with the Mexican question, no Government in Mexico will be recognized, with my consent, which Government does not first enter into a written agreement promising to protect American citizens and their property rights in Mexico." Should Mexico refuse to enter into such an agreement, he added, "then the question would arise as to whether the United States should simply pursue a silent policy of inaction or whether it should take immediately other action."

This letter was written to the National Association for the Protection of American Rights in Mexico, and that body made it public on March 1, announcing that it was "a concise and comprehensive statement of the policy for which this association stands." Although recognition would come from the State Department and not from the Secretary of the Interior, Mr. Fall's position of close intimacy with President Harding is sufficient to indicate the possibility that the United States may not recognize the Mexican Government during the present Administration. On the other hand, the Mexican Foreign Office, according to a dispatch dated March 5, announced that Mexico would appoint no Ambassador to the United States until recognition was tendered by the American Government. Thus there is a deadlock on both sides.

Virtually all the American oil companies are in agreement with Secretary Fall's policy, according to Guy Stevens, a Director of the Association of Producers of Petroleum in Mexico. Mr. Stevens says that the property of American petroleum producers is menaced by the threat of confiscation contained in the new Mexican Constitution and the Carranza decrees. A new organization, called the American Association of Mexico, takes up practically the same cry,

demanding that Mexico rewrite her Constitution, eliminating particularly clauses against foreigners holding land—clauses somewhat similar to those which California is enforcing against the Japanese.

## PRESIDENT OBREGON REASSURED

President Obregon, who had sent a telegram of congratulation to President Harding, told a group of newspaper men on March 5 that he believed the new Administration would be fair and just. He thought the naming of Mr. Fletcher as Under Secretary of State was a guarantee to Latin America, as Mr. Fletcher was in sympathy with Latin-American countries. President Obregon had not made efforts for recognition, as he thought the United States would recognize Mexico when most convenient to the interests of the United States.

Mexico was not seeking a loan, the President said, but expected to make arrangements with creditors to settle her debts. An invitation had been sent to creditors to discuss the manner to regulate all debts. During the three months of his Administration the budget had been equalized, expenses reduced and the agrarian problem had been expanded. The country was at peace with herself for the first time since 1910, and reconstruction was proceeding rapidly. The railroad situation, he predicted, would be normal within six months.

Regarding the oil question, President Obregon declined to make a statement pending action by Congress. The American State Department in February inquired of the Chargé d'Affaires in Mexico City concerning reports that the Obregon Government had put into force a provision that drilling permits would be granted only to such companies as had registered their properties. It was intimated that the Aguilar, a British company, was the only one complying with the law, which, it was alleged, favored British interests. The Chargé d'Affaires replied on Feb. 22, quoting the Mexican De-

partment of Industry as declaring that applicants for permits to drill oil wells "are only required to prove with authentic documents that they own or rent the lands on which they wish to drill."

A plot to capture Tampico by forces headed by Humberto Barros and Velasco Rus was frustrated on Feb. 18, both leaders fleeing. Mexican newspapers accused the American oil companies in the Tampico and Tuxpam fields of being back of the abortive revolt and of furnishing arms to American workmen. As a precautionary measure, the Government on Feb. 23 ordered that all arms and ammunition at Tampico be seized.

### NATURE MAY SETTLE THE OIL QUESTION

There is a possibility that the oil controversy will be settled without any serious trouble by Nature herself through the failing of the oil wells. Ralph Arnold, Chairman of the petroleum and gas section of the American Institute of Mining and Metallurgical Engineers, at its annual meeting stated that at the present rate of production the latter part of 1922 would see the end to the proved big oil fields of Mexico. About two-thirds of Mexico's production was coming from Los Naranjos, a pool which probably would be extinct by early Summer on account of the encroachment of salt water.

Reports from Tampico on Feb. 17 stated that the oil districts of Amatitlan were showing signs of exhaustion, due to the companies forcing production, and a large number of wells were coming into salt water.

The oil companies of the Tampico region have announced a cut of 20 per cent. in wages and are about to reduce their forces.

A new record for export of oil from Mexico, however, was made in January, when twenty companies shipped 18,481,137 barrels. Despite Mexico's large production, amounting to 87,073,000 in 1919, it was only 16 per cent. of the world output of 544,885,000 barrels. Of this total America produced 377,719,000, standing first with 69 per cent.

A general strike was begun on the National Railroad lines on Feb. 22. A long section of the Colima road to the west coast was torn up, telegraph stations were entered and instruments destroyed. President Obregon replied by stationing troops in the railway offices in Mexico City and dispatching others to take possession of outlying stations. More than 10,000 volunteer strike-breakers applied for jobs, and by Feb. 25 trains were operated on all railroads, despite the fact that more than 125,000 employes had joined the strike. Two days later all trains were being operated on only slightly reduced schedules.

The strikers who remained out then resorted to violence, causing a wreck on the Tampico line and the killing of twelve passengers, besides the injury of twenty. The War Department ordered the Chief of Operations to proceed against the authors of the wreck, treating them as common highwaymen and subject to immediate execution. On the road between Monterey and San Luis Potosi fifteen belligerent strikers were captured and executed summarily. Evidence is accumulating that the railroad strike was largely political in its inception, and was an attempt to embarrass the Administration.

Four sailors, said to be Americans, part of the crew of the Norwegian ship *Sazon*, were killed in Tampico on March 11, according to newspaper dispatches received in Mexico City. They were attacked, as they were boarding a launch, by five masked men in another launch.

American, German and Russian agitators have been busy in Mexico City urging overthrow of the Government and the establishment of a Soviet régime, but have received no encouragement from Mexican labor. Concerning all such activities perhaps the best comment is that of William G. McAdoo, who said on his return from Mexico City: "Under President Obregon the prospects of clean, efficient and stable Government in Mexico is better than at any time since the revolution began ten years ago."

# DR. ZAYAS ELECTED PRESIDENT OF CUBA

*Elections held in four Provinces to settle the dispute regarding the Presidency result in confirming the claim of the Conservative candidate*

[PERIOD ENDED MARCH 16, 1921]

GENERAL CROWDER succeeded in bringing together José Miguel Gomez, who was defeated for the Presidency last Autumn, and President Menocal, who favored the candidacy of Alfredo Zayas, who was elected on the face of the returns. He asked them to agree to abide by the secondary elections in places where fraud was charged, which were postponed to March 15. A pact of honor was effected at a meeting of all political factions on Feb. 26. President Menocal agreed to refrain from nominating military supervisors, and it was decided to have an Inspector for each voting district to represent the Central Electoral Board.

Nevertheless, feeling was very bitter, and it was said the Miguelistas, or adherents of Gomez, were determined to force American intervention if they could not win, and the Liguistas, or Conservative-Zayas coalition, were no less determined that Gomez should not be President. Matters came to a head at Colon, in Matanzas Province, on March 9 as the result of a gunfight in the City Hall between partisans of Mayor Sotolongo and members of the police force. Three hundred shots were fired, the Chief of Police was seriously wounded, and the Assistant Chief killed. When the new elections were held in four provinces on March 15 the Liberal Party stayed away from the polls. The returns reported next day showed that Dr. Zayas had again been elected President of Cuba by a substantial majority.

President Menocal has signed a bill to create a selling commission to handle the 1920-21 sugar crop, and the commission was organized on Feb. 24. Manuel Rienda of the Cuba Cane Sugar Corporation and R. B. Hawley of the Cuban-American Company, representing the large producers; J. M. Tarafa and Manuel Aspuru, representing the independents; Porfirio Franca of the National City Bank, Frank J. Beatty of the Royal Bank of Canada, and General Eu-

genio Agramonte, Cuban Secretary of Agriculture, representing the Government, form the commission. No shipments of sugar are to be made from Cuba except upon its authorization. It will fix prices, which will be changed from time to time, with due regard to market conditions, and will make sales to be distributed pro rata among the holders of sugar.

Cuba is bidding for Chinese labor to work in the cane fields. The steamship Penza, plying between Asiatic and Cuban ports, left Honolulu with 700 Chinese immigrants aboard, according to a dispatch from Havana on Feb. 19.

## SANTO DOMINGO

A Dominican commission, authorized in the proclamation of Dec. 23, 1920, promulgated as the first step in the direction of eventual withdrawal of the American forces from Santo Domingo, it was announced by Secretary Colby on Feb. 18, had been appointed by Admiral Snowden as Military Governor of the Dominican Republic, and had organized for business, with Judge Ostrand of the Dominican Land Court acting temporarily as technical adviser to the commission. It is composed of seven members, headed by Mgr. Adolfo A. Nouel, former President of the Dominican Republic and Archbishop of Santo Domingo.

## BRITISH WEST INDIAN FEDERATION

A movement to unite all the British colonies in the West Indies, including the Bahamas and Bermuda, British Guiana and British Honduras, is making rapid progress. A West Indian Court of Appeal has been formed and first steps have been taken to bring about uniform laws. A West Indian university, a uniform currency and a regular line of steamers are among the projects favored. Aviation will play its part in welding together West Indian interests. Bermuda and the Bahamas are today centres of flying, and a base will soon be

established at Trinidad for an extension of a mail air route from Canada to South America via Bermuda, the Bahamas and Trinidad.

Quick response was given by the British Foreign Office to a resolution introduced by Senator Reed on Feb. 18, requesting the President to "ascertain whether Great Britain is willing to consider the cession by it to the United States of all or any part of its possessions in the West Indies" in return for cancellation of war debts. On Feb. 19 the British Foreign Office announced that the Government's attitude had not changed from that of a year before, when Lloyd George announced that Great Britain had not the slightest intention of bartering or selling any part of the West Indies. The London Daily Telegraph on March 9 tersely summed up the question by quoting the Prince of Wales's remark

at Trinidad last year: "British subjects are not for sale."

#### MIAMI-BARBADOS CABLE

United States Subchaser 154, on March 5, fired a shot across the bow of the Western Union cable ship Robert C. Clowry off Miami to prevent her from connecting the Barbados cable with the mainland. This was in pursuance of the policy of the Wilson Administration opposing the linking of the cable with a British line having a monopoly on the coast of Brazil. The Clowry was ordered to Miami, where it berthed in the municipal dock with the Subchaser 154 watching her, aided by the Subchaser 320, sent from Key West. Secretary Hughes maintains the attitude of the previous Administration, and efforts are being made to obtain a speedy decision from the Supreme Court.

## COSTA RICA INVADES PANAMA

*An old boundary dispute develops suddenly into a small war, but Costa Rica withdraws her troops when the United States intervenes and offers mediation*

[PERIOD ENDED MARCH 15, 1921]

WITHOUT warning, on the evening of Monday, Feb. 21, Colonel Mora of the Costa Rican Army arrived at Coto, Panama, aboard a vessel with 100 soldiers and commanded Manuel Pinzon, the Panaman Police Inspector, to surrender the town to him. Pinzon refused, but offered no resistance, and telegraphed the news of the invasion to David, capital of Chiriqui Province, whence it was relayed to Panama. The district thus invaded is at the extreme western end of Panama on the Pacific Coast, nearly 250 miles from the City of Panama. Costa Rica has a population of 441,000 and an army of 1,000 men. Panama has a population of 401,000 and no army, her only protection being a police system organized on military lines.

The boundary between Costa Rica and Panama, which had been in dispute for many years, was fixed by the arbitration of President Loubet of France in 1900. It begins at Monkey (Mona) Point on the At-

lantic, follows a ridge of hills overlooking the Valley of the Sixola River, westward to Mount Chirripo and Mount Pando. Thence the line strikes southeast along the crests of the Talamanca Mountains as far as 9 degrees north latitude, where it turns sharply south to Burica Point, cutting Burica Peninsula in half.

West of this peninsula is the Golfito River, near the mouth of which is Coto. The territory had been in possession of Panama ever since the republic was founded and of Colombia before that. The Golfito River empties into the Golfo Dulce about thirty miles west of Burica Point ridge, and the point where its headwaters rise is fifty miles inland. The river, the ridge and the gulf coast form a triangle which is the Coto territory in dispute. It was awarded to Costa Rica by President Loubet in compensation for a considerable area of land awarded to Panama on the Atlantic side between the Sixola River and the ridge north

Map of Costa Rica and Panama: The black area on the Pacific side indicates the main issue over which the dispute arose. The boundary on the Atlantic side should show a deeper angle into Costa Rican territory, where another phase of the conflicting claims is located

of its valley extending west to Mount Chirripo.

Nevertheless, Costa Rica, ever since 1881, has occupied the Sixola River wedge despite President Loubet's decision, and on Feb. 21 invaded the Coto triangle that Panama had been holding. Panama asserted that the Loubet award was not clear, and Chief Justice White of the United States Supreme Court was asked to render a legal interpretation of it, which he did in 1914. This decision did not end the dispute, Panama declining to accept it, on the ground that the Chief Justice had covered more territory than was included in the portion in dispute. Costa Rica continued to hold the Sixola watershed and Panama retained the Coto triangle until the recent invasion.

#### PANAMA PREPARES TO RESIST

There was great excitement in Panama on Feb. 24, when news of the capture of Coto reached that city. An angry crowd tore the coat of arms from the Costa Rican Consulate, and President Porras dispatched an armed mission to the region by way of David, where civilian troops were being mobilized. At the same time he asked the United States to use its good offices to prevent bloodshed. A proclamation was issued calling on the people to maintain the national dignity, followed by a Presidential decree on Feb. 26, reciting the necessity of

expelling the invaders, declaring martial law, calling on all Panamans between 18 and 40 years old to register for military service, and convoking the National Assembly in special session, beginning March 1. At the same time President Porras prepared a declaration of war.

More than 2,000 men enrolled in Panama for military service and enlisting elsewhere was brisk. About 500 men, consisting of national police and volunteers, started for the Costa Rican frontier. They made short work of Colonel Mora and his hundred men, recapturing Coto and taking prisoner the entire Costa Rican contingent on Feb. 27. In the afternoon the Panamans captured Costa Rican reinforcements arriving in the gasoline motor vessel Sultana, taking the boat after an hour's fighting, in which the enemy lost four men killed and nine wounded.

President Porras, having remarked in an interview that war between Panama and Costa Rica over valueless land was an absurdity, was waited on by a committee on Feb. 28, who demanded his resignation, bent on forcing more aggressive action. The President refused and a mob broke into the palace. Guards fired upon and dispersed the crowd, killing one and wounding several persons. As a result 200 American soldiers from the Canal Zone appeared in the city in the afternoon to keep order.

## PANAMA ASSEMBLY MEETS

The special session of the Panama Assembly met on March 1 and defensive measures were proposed, including one that authorized President Porras to organize an army of whatever strength he might deem necessary. A message from the President was read reciting recent events, but making no mention of a declaration of war.

Costa Rica, meanwhile, had sent 2,500 men to the Panaman frontier, the action of the Government having been approved by the Chamber of Deputies in session at San José. Fighting was renewed in the Coto region on March 1, and another motor vessel with 100 men was captured by the Panamans.

Julio Acosta, President of Costa Rica, set forth the attitude of his country in a dispatch dated San José, March 3, in which he said that Panama was violating its own Constitution, which established the same limit that Costa Rica claimed.

Defeated on the Pacific side, Costa Rica next turned her efforts to the Atlantic end of the boundary along the Sixola River, first reinforcing her garrisons there, and then crossing the frontier. This threatened to involve the United States, as the United Fruit Company owns extensive banana plantations there and has railroads extending southerly from Puerto Limon, Costa Rica, into Panama. Almirante, in the Province of Bocas del Toro, was the objective of this second attack. Guabito was first taken without serious resistance on March 4. The Panamans retired toward Bocas del Toro, leaving behind eighteen dead and many wounded. The Costa Ricans occupied the Almirante Railroad and advanced on Almirante, taking it, and later Bocas del Toro.

## UNITED STATES MOVES

Naturally, the United States had been appealed to at the start of the trouble, being by treaty bound to protect the integrity of Panama. The first request was for arms to repel invasion, as the country had been disarmed by General Clarence Edwards of the United States Army in 1915, when disorders were threatened. The request for arms was denied.

Secretary Colby, instead, sent two notes to Costa Rica and Panama on Feb. 28, expressing the United States Government's

strong disapproval of the effort to settle the dispute by force. Replies were received in Washington on March 5. That from Panama expressed a willingness to accept the good offices of the United

(© Keystone View Co.)

JULIO ACOSTA  
President of Costa Rica

States, but the message from Costa Rica was described as unsatisfactory. A few hours later, after consulting with President Harding, Mr. Hughes, the new Secretary of State, sent identical notes to Panama and Costa Rica, which, while not suggesting mediation, conveyed the impression that the United States stood ready to enforce, if necessary, a peaceful solution.

Both countries were called upon for an immediate suspension of hostilities, and United States warships were ordered by the Navy Department to the disputed areas on both sides of the Isthmus. The cruiser Sacramento was sent to Almirante to protect American property, and instructions were given to Rear Admiral Bryan, commanding a special Central American squadron, that if the authorities could not protect American lives and property he was to use his discretion in disposing of his vessels and armed forces. The Sacramento arrived at Almirante on March 5, and

Commander Bingham invited the commander of the Costa Rican troops to lunch on board, and an armistice with the Panamanians was suggested.

President Porras on March 6 announced that Panama was willing to accept mediation by the United States on condition that Costa Rica withdraw her troops to the left bank of the Sixola River and refrain from attacking the Panaman forces, which had reoccupied Coto. He offered to submit the

## PEACE AT LAST

Prompt action by the United States had its effect on both belligerents. On March 7 it was announced that Costa Rica had ordered the withdrawal of her forces beyond the Sixola River and had halted the troops, which had advanced into the Coto region on the Pacific side. Panama recalled her troops from the Bocas del Toro region and also those from Coto, but announced her intention to keep the civil and police authorities in the latter district. An armistice was arranged and put into effect along the whole frontier, thus reverting to the condition of affairs before the invasion and leaving the settlement open to further negotiation.

Threatened complications between the United States Government and the League of Nations over the affair were cleverly avoided by the League after brief consideration. Sir Eric Drummond, Secretary General of the League, on Feb. 28 had instructed the political advisers of the League Council to investigate the differences between Panama and Costa Rica, basing his action on the fact that both countries were members of the League. The Council, which was meeting in Paris, sent a cable dispatch to the foreign Ministers of both countries on March 4, reminding them of their obligations as members. A few hours later the Secretary received a dispatch from the Government of Panama giving a history of the Costa Rican attack and subsequent developments. On its receipt the Council was called together again and the following cable was sent to Panama:

(© Harris & Ewing)  
DR. BELISARIO PORRAS  
*President of Panama*

dispute to the A B C Commission of Argentina, Chile and Brazil, to the League of Nations tribunal, to a council of international law professors from American universities, or to three international lawyers, one from an American university, one from Chile and the other from an Argentine, Uruguayan, Peruvian or Brazilian university.

Meanwhile the National Assembly had passed bills appropriating \$100,000 to buy arms, authorizing the President to organize a national army, and authorizing a loan of \$500,000 for ten years at 7 per cent. President Porras named a Defense Council of five to select men for the Panaman Army.

Your telegram of March 3 has been communicated to the Council of the League of Nations, which regrets that the reports of differences between Panama and Costa Rica are well founded, but it is happy to know that the United States Government has offered its good offices, and that these have been accepted by the Government of Panama. The Council would be glad to be kept informed of the development of the situation.

In an official communication on the subject the phrase used with regard to American action was: "The Council has decided to await the result of this happy intervention." A note sent to Panama by Secretary Hughes on March 14 put an end to the possibility of League action in the case by calling attention to a treaty signed

in 1915, whereby Panama and Costa Rica agreed to submit disputes to the United States as mediator. The United States therefore will act as arbitrator in negotiations looking to a settlement of the boundary dispute, using the decisions of Chief Justice White in 1914 and President Loubet in 1900 as a basis.

**PANAMA CANAL ZONE**—The United States naval fleets returned from the west coast of South America to Panama on Feb. 14, and on Feb. 24 the Atlantic fleet passed through the canal on the way to Guantanamo.

Vessels flying the American flag led all others in setting a new record of canal traffic in 1920. Of the 2,814 merchant ships using the canal, 1,281 were American; Great Britain came next with 867, and Japan was third with 122.

**NICARAGUA**—The twenty-one American marines who, on Feb. 9, wrecked the offices of the Tribuna of Managua, a news paper which they charged with defaming some of their number, were tried by court-martial and found guilty, according to a report from Rear Admiral Henry F. Bryan. They all pleaded guilty and were sentenced to dishonorable discharge and confinement for five years, but upon recommendation of clemency by the court the prison term was reduced in each case to two years.

Nicaragua's refusal to join the Central

American Union was approved at a joint session of the House and Senate in Managua on Feb. 22. President Chamorro was authorized to continue negotiations, but was intrusted not to sacrifice any Nicaraguan rights or infringe upon any of the country's international obligations. She will not join the Central American Union unless the other members agree to respect her existing treaties with the United States.

The Nicaraguan Senate, on March 12, rejected a motion to request the United States to withdraw the American troops stationed in Managua.

**SALVADOR**—A seditious movement occurred in San Salvador, capital of Salvador, on Feb. 28, but was put down by the police after several casualties on both sides. The National Congress met and declared martial law, but quiet was restored by March 4. The movement, which was local in character, is said to have been a form of protest against the union of Central American republics.

On March 9 it was announced that immigration of Chinese to Salvador is prohibited under terms of the alien law, which does not, however, apply to Chinese who are already residents of the country.

The Salvadorean Cabinet, headed by Dr. Francisco Juan Paredes, together with all Under Secretaries, resigned on March 11, but President Melendez refused to accept their resignations.

## AMERICAN LOAN OPENS A NEW ERA FOR LIBERIA

**C**HARLES DUNBAR KING, President of Liberia, arrived in New York on March 6, 1921, on his way to Washington to conclude negotiations with the United States for a credit of \$5,000,000, which was agreed upon in September, 1918. With him, as members of a Plenary Mission, were E. R. Johnson, Associate Justice of the Supreme Court; John L. Morris, formerly Secretary of the Treasury, and Gabriel L. Dennis, a prominent business man of the African republic.

The purpose of the loan is to begin

an extensive program of harbor improvements, road construction, installing telephone and telegraph facilities and opening industrial schools. Mr. King was elected President of Liberia in 1919, taking office on Jan. 1, 1920, for the term of four years. The loan will open a new era for Liberia, paving the way for development by American interests, which are cordially invited. Recent reports indicate important discoveries of gold and tin, and there are vast forests of valuable timber in Liberia's great and wealthy interior.

# PACT OF THE CENTRAL AMERICAN UNION

*Text of the treaty creating the union of Costa Rica, Honduras, Salvador and Guatemala, to be known as the Federation of Central America—Details of the agreement that establishes a new State of 5,000,000 people—Nicaragua alone stays out of the Federation*

CURRENT HISTORY presents herewith the full text of the important compact that now binds Guatemala, Salvador, Honduras and Costa Rica into one federated republic, to be known as the Federation of Central America, and to be administered under a single President. The treaty, according to its own statement, was signed by the delegates of the four countries at San José, Costa Rica, on Jan. 19, 1921. (The press dispatches gave Jan. 22 as the date of actual completion.) The delegates of the fifth Central American Republic—Nicaragua—acting on instructions from their Government, refused to sign, on the ground that Nicaragua did not wish to relinquish treaty-making powers in view of her arrangement with the United States regarding a possible Nicaragua Canal. A provision was inserted in the compact to permit Nicaragua's admission at any time she may desire it. The refusal of the delegates to sign was approved by the House and Senate of Nicaragua on Feb. 22, but all comments during debate were friendly to the new Federation, and President Chamorro was authorized to negotiate for admission at any time when such action could be taken without curtailing Nicaragua's international rights and obligations.

According to the terms of the agreement, the ratification of three of the signatory powers will suffice to put it in operation. Before the end of February, Honduras and Salvador had ratified the pact, and there was every indication that the other two would soon follow suit.

The agreement that now goes into force provides for the creation of a Provisional Council, which will meet at Tegucigalpa,

Honduras, thirty days after the third ratification, and which is commissioned to call a Constituent Assembly. This assembly is to meet not later than Sept. 15, 1921, and is to have full power to draw up a permanent and binding Constitution for the new State, based on the general principles laid down in the preliminary pact. The Federation of Central America is to be governed by an Executive Council, with the collaboration of a Senate and a Chamber of Deputies. The Provisional Council that is to call the Constituent Assembly is empowered to issue orders for the election of the permanent Councilors, Senators, and Deputies, after which it will hand over its functions to the Federal Council and terminate its existence.

The new federated republic, which has more than 5,000,000 inhabitants, is the culmination of a long-enduring sense of solidarity among the States now united, a neighborliness that has always made their

*Map of Central America, showing the States which—excepting Nicaragua—have united to form the new Federation of Central America*

those between the States of the United States. When these Central American republics cut loose from Spain in 1821, indeed, they formed a federal republic at first, but since 1840 they have been separate; the new union practically reconstructs the original federation on more modern lines. Though its scheme of government is modeled largely on that of the United States, a reading of the pact will disclose many interesting variations from the model; the Federal Council, for instance, which is to wield the executive power, will consist of one Councilor elected by each State for a five-year term. The President and Vice President, who will hold office for only one year, are to be chosen by the Federal Council. The treaty guarantees freedom of conscience, provides for compulsory education, and refuses to recognize any federated State whose head has come into power through a revolution.

#### TEXT OF THE COMPACT

The official text of the compact of union, in the translation sent to the State Department at Washington, is as follows:

**Preamble**—The Governments of the Republics of Guatemala, Salvador, Honduras and Costa Rica, regarding it as a high patriotic duty to bring about as far as possible the reconstruction of the Federal Republic of Central America upon bases of justice and equality that will guarantee peace, maintain harmony among the States, insure the benefits of liberty, and promote the general progress and welfare, have seen fit to conclude a Treaty of Union achieving that end, and to that effect have appointed as plenipotentiary delegates, namely:

The Government of Guatemala—The Most Excellent Licentiate, Don Salvador Falla and Don Carlos Salazar;

The Government of Salvador—The Most Excellent Doctors, Don Reyes Arrieta Rossi and Don Miguel T. Molina;

The Government of Honduras—The Most Excellent Doctors, Don Alberto Uclés and Don Mariano Vásquez;

And the Government of Costa Rica—The Most Excellent Licentiate, Don Alejandro Alvarado Quiros and Don Cleto González Víquez.

Who, after communicating to one another their respective full powers, which they found to be in good and due form, have agreed upon the following stipulations:

**ARTICLE 1**—The Republics of Guatemala, Salvador, Honduras and Costa Rica join in a perpetual and indissoluble union, and will henceforth constitute a sovereign and independent nation, whose name shall be Federation of Central America.

It will be the right and duty of the Federal power to maintain the union, and in accordance with the Federal Constitution, internal order in the States.

**ARTICLE 2**—The four States will convene through Deputies in a Constituent National Assembly, and here and now accept as the supreme law the Constitution that may be framed by the said Assembly in accordance with the stipulations of this treaty.

**ARTICLE 3**—In so far as it may be consistent with the Federal Constitution, each State will preserve its autonomy and independence in the handling and direction of its domestic affairs, and likewise all the powers that are not vested in the Federation by the Federal Constitution.

The Constitutions of the States will remain in force in so far as they do not conflict with the provisions of the Federal Constitution.

**ARTICLE 4**—So long as the Federal Government through diplomatic action shall not have obtained the modification, denunciation or substitution of the treaties in force between the States of the Federation and foreign nations, each State shall respect and continue faithfully to observe the treaties that bind it to any one foreign nation or more to the full extent implied in the existing agreements.

**ARTICLE 5**—The Constituent National Assembly in framing the Federal Constitution will respect the following bases:

a. There shall be a Federal district under the direct rule of the Federal Government. The Assembly will designate and mark out the territory that is constituted, and within that area will designate the town or place that is to be the political capital of the Federation. The State or States from which territory is taken to constitute the Federal district here and now convey it gratuitously to the Federation.

b. The Government of the Federation will be republican, popular, representative and responsible. Sovereignty will reside in the nation. The public powers shall be limited, and must be exercised in accordance with the Constitution. There will be three powers—the executive, legislative and judiciary.

c. The executive power shall be exercised by a Federal Council composed of delegates elected by the people. Each State will elect a principal and an alternate of 40 years of age or more, and native citizens of the State which elects them. The term of the Council will be five years.

The delegates and their alternates shall reside in the Federal capital. The alternates will attend the meetings of the Council without vote, but they shall cast their vote, however, whenever the meeting is not attended by their principals.

In order to impart validity to the action of the Council it is necessary that all the States be represented therein. The decisions are arrived at by a plurality vote, except in cases where the Constitution may call for a greater majority. In case of a tie the President will cast two votes.

The Council will elect from among the delegates a President and a Vice President, whose term of office will be one year. The President

of the Council cannot be re-elected for the year immediately following.

The President of the Council will be regarded as President of the Federation, but he will always act in the name and by a resolution or direction of the Federal Council.

The Council will apportion among its members in the manner it may deem most appropriate the handling of public affairs, and may put any one of the alternates or more in charge of a department or more that it may deem expedient. The Constitution will determine the form in which foreign relations are to be conducted and will complete the organization of the executive power.

d. The legislative power will be vested in two houses—the Senate and the Chamber of Deputies. The Senate will consist of three Senators from each State, elected by the Congress thereof. The Senators shall be 40 years of age or more and citizens of any one of the States. Their term will be six years, and they will be renewed every other year in thirds. The Chamber of Deputies will consist of Representatives elected by the people, one Deputy for every 100,000 inhabitants or fraction of more than 50,000. The Constituent Assembly will determine the number of Deputies to be elected by each State until a general census of the Federation is taken.

Senators and Deputies may be re-elected indefinitely. In each house three-fourths of the whole number of members will form the quorum.

No law will be valid unless it has been approved in the separate houses by a plurality of votes in the Chamber of Deputies and by two-thirds of the votes of the Senators, and unless it has been sanctioned by the Executive as the Federal Constitution may provide.

c. The judicial power shall be exercised by a Supreme Court of Justice and by the lower courts that may be established by law. The Senate, from a list of twenty-one names submitted by the Federal Executive, will elect seven incumbent Magistrates, who will constitute the court, and three alternates to fill the temporary absence of the incumbents. Vacancies will be filled by new elections of incumbents or alternates. The Magistrates shall not be removed from office unless the removal be authorized by a judicial sentence.

The Supreme Court will have jurisdiction in disputes to which the Federation is a party, the legal controversies that may arise between two or more States, the conflicts that may occur between the power of any one State or of the Federation as to the constitutionality of their acts, and of all other matters which may be referred to it by the Federal Constitution or the organic law.

The States having pending questions among themselves as to boundaries or the validity or execution of judgments or awards made before the date of this treaty will be at liberty to refer them to arbitration. The Federal court may take cognizance of such questions in the capacity of arbitrator, if the States concerned should refer to its decision.

f. The Federation guarantees to every inhabitant freedom of thought and conscience.

There shall be no legislation on religious subjects. In all the States toleration of cults that are not against morals or public policy shall be an obligatory principle.

g. The Federation recognizes the principle that human life is inviolable as to political and like offenses, and guarantees all men equality before the law and the protection that the States must grant to destitute classes as also to the proletariat.

h. The Federation guarantees the freedom of teaching.

Primary instruction shall be compulsory and that which is given in public schools shall be free, under the direction and at the expense of the States.

Colleges of secondary instruction may be founded and supported by the Federation, the States, municipal Governments and private persons.

The Federation will create as soon as possible a national university and will give preference, with regard to their early establishment, to the sections of agriculture, industry, commerce and mathematical sciences.

i. The Federation likewise guarantees in every State the respect of individual rights as also the freedom of suffrage and the rotation in power.

j. The army is an institution intended for national defense and the maintenance of peace and public order; it is essentially a passive body and may not engage in debates.

Soldiers on active duty shall have no right to vote.

The army will be exclusively under the orders of the Federal Council. The States shall not maintain any force other than of police for the maintenance of public order.

The garrisons which may be kept permanently or temporarily by the Federation in any State will be under the command of national chiefs that the Council shall freely appoint and remove; but if in any State there should occur a subversive movement or serious grounds may exist to apprehend a grave disturbance, those forces shall place themselves at the command of the Government of the State. If those forces should be insufficient to suppress the rebellion, the Government of the State will ask for, and the Council will supply, adequate reinforcements.

Military service, garrison duty and military instructions will be regulated by law so as to be governed by fixed rules.

The Council shall have the free disposal of the armament and war material that may now exist in the States after those States shall have been supplied with the amount needed for the police force.

The States acknowledge it to be necessary and expedient that the Federation should reduce armaments and armies to the strictly necessary so as to return hands to farming and manufacturing and restoring and promoting to common advantage the excessive amounts taken by that branch.

l. The Federal Government will administer the national public finances which will be different from those of the States.

The law will create Federal revenues and taxes.

m. The States will continue the service of their present domestic and foreign debts. It will be the duty of the Federal Government to see that the service is faithfully performed and that the revenues pledged for that purpose be applied thereto.

Henceforward none of the States shall contract for or issue foreign loans without being authorized by a law of the State ratified by a Federal law, nor shall it enter into contracts that may in any way compromise its sovereignty or independence or the integrity of its territory.

n. The Federation shall not contract for or issue foreign loans without being authorized to do so by law approved by two-thirds of the votes in the Chamber of Deputies and three-fourths of the votes in the Senate.

o. The Constitution may set a term after which the ability to read and write may be set up as an essential requisite for the exercise of the right of suffrage in the elections of Federal authorities.

p. The Constitution will lay down the course through which amendments of its dispositions may be ordered. However, if the reform should make any change in any one of the bases set forth in this article, it will be absolutely necessary, in addition to the other general requirements of the Constitution, that the Legislatures of all the States shall give their consent.

q. The Constitution will determine and specify the subjects that shall be exclusive matter for Federal legislation.

The Constituent National Assembly, in framing the Constitution, will complete the plan and purpose of the said Constitution, developing the foregoing bases, but in no case conflicting with them.

Immediately after the enactment of the Constitution the Assembly will pass the complementary laws concerning the freedom of the press, habeas corpus, and state of siege, which shall be held as part of the Federal Constitution.

**ARTICLE 6**—The Constituent National Assembly referred to in Article 2 of this treaty will consist of fifteen Deputies for each State, who shall be elected by their respective Congresses. In order to be a Deputy one must be 25 years old or more and a citizen of any one of the five States of Central America.

The Deputies shall enjoy immunity for their persons and property from the moment when they are declared elected by the Congress of a State until one month after the sessions of the Assembly are closed.

**ARTICLE 7**—Three-fifths of the total number of Deputies will form a quorum of the Assembly. The vote will be cast by States. If one or more Deputies of one State should be absent, the Deputy or Deputies present will assume the complete representation of the State.

If the Deputies of one State should disagree, the vote of the majority of the Deputies will be regarded as the vote of the State, and in case of a tie, it will be regarded as concurring in the majority vote of the other States; or, if there should be a tie among those States themselves, that which agrees with the majority

of the personal votes of the Deputies. The decisions of the Assembly will be taken on a majority vote of the State.

**ARTICLE 8**—For the performance of these stipulations, there is instituted here and now a Provisional Federal Council, consisting of a delegate from each State. The said Council will take charge of the duty of ordering all the measures preliminary to the organization of the Federation of its initial Government, and especially that of calling the Constituent National Assembly; of promulgating the Constitution, constituent laws and other resolutions passed by the Assembly; to issue appropriate orders to have States elect in good time their delegates to the Council, Senate and Chamber of Deputies; and, finally, to give possession to the Federal Council, whereupon its functions will terminate.

**ARTICLE 9**—Delegates to the Provisional Council must be 40 years old or more and citizens of the State by which they are elected. They shall enjoy immunity for their persons and property from the moment they are elected until one month after they retire from their office. They shall in addition enjoy in the State where they perform their duties all the privileges and immunities which by law or usage are granted to the heads of diplomatic missions.

**ARTICLE 10**—The Congress of each State, immediately upon approving this treaty, shall elect the delegate that belongs to it in the Provisional Council, and through the proper channel give notice of that election to the Central American International Office. That office in turn will communicate to the Governments and also to the elected delegates the fact of its having received the ratification of three States, to the end that within the time stated hereafter the delegates may meet and begin their labors.

**ARTICLE 11**—The Provisional Federal Council will meet in the City of Tegucigalpa, capital of Honduras, not later than 30 days after the third ratification of this covenant shall have been deposited in the Central American International Office.

**ARTICLE 12**—In order to impart validity to the acts of the Provisional Council, the presence of not less than three delegates will be required.

**ARTICLE 13**—The Provisional Council will elect a President and a Secretary, who will sign all the papers needed. The correspondence shall be conducted by the Secretary.

**ARTICLE 14**—When the fourth ratification takes place the Central American International Office or the Provisional Federal Council, if still in session, will call upon the delegates concerned to join the Provisional Council.

**ARTICLE 15**—The Congress of each State at the same time it elects its delegate to the Provisional Council, in accordance with the provision in Article 10 of this treaty, will elect the Deputies to the Constituent Assembly that belong to the State.

**ARTICLE 16**—After the Deputies to the Constituent Assembly shall have been elected the Minister of Foreign Relations of the State concerned will so notify the Central American International Office, and issue the proper credentials to the Deputies that have been elected.

**ARTICLE 17**—After the Central American International Office shall have informed the Provisional Federal Council of the election of the Deputies by three States at least, the Provisional Federal Council shall call the Constituent National Assembly, so that it may organize in the City of Tegucigalpa on the date set by the decree calling the Assembly, which shall be made known by telegraph to the Ministry of Foreign Relations of each State and to each Deputy individually not less than thirty days in advance. The Provisional Council shall see that the Constituent Assembly shall organize not later than the 15th of September, 1921, which is the centennial of the political emancipation of Central America.

**ARTICLE 18**—It will be sufficient that three of the contracting States ratify this treaty to have it considered as final and binding among them and to have it carried into effect. The State that should not approve the covenant may, however, join the Federation at any time it applies therefor, and the Federation will admit it without any other formality than the presenting of a law approving this treaty, the Federal Constitution and constituent laws. In that event the Federal Council and the two legislative houses will be enlarged in the proper degree.

**ARTICLE 19**—The contracting States are sin-

cerely sorry that the sister Republic of Nicaragua does not desire to join the Federation of Central America. If the said republic should later decide to join the union, the Federation will extend the greatest facilities for its joining in the treaty that may be made for that purpose.

In any event, the Federation will continue to consider and treat her as a part of the Central American family, just as it will any State that for some reason or other should not ratify this covenant.

**ARTICLE 20**—Each State shall deliver to the Provisional Council the moneys that may be named by it to defray the expenses incurred in the discharge of its mission, and will determine and pay their salaries to the several constituent Deputies.

**ARTICLE 21**—The present treaty shall be submitted in each State as soon as possible to the legislative approval that its Constitution may require, and the ratification shall be immediately notified to the Central American International Office, to which a copy will be sent in the customary form. On receipt of the copy of that ratification the aforesaid office will so advise the other States, and the notice will be held and will have the same value as an exchange.

*Done at San José, Costa Rica, in quadruplicate on the 19th day of January, 1921.*

## GERMANY REGAINING SOUTH AMERICAN MARKETS

*Apparently she will become the chief competitor of the United States, while Britain and Italy are losing*

[PERIOD ENDED MARCH 12, 1921]

**P**EACEFUL penetration of South America has been begun by the Krupps, the great German iron and steel manufacturers, who are making serious inroads upon United States trade in machinery, pipe, railroad equipment and similar products. Germany has recovered considerable South American trade, and evidently is destined to become the chief competitor of the United States. Two German engineers recently purchased in Chile 25,000 acres of land as a site for a great industrial plant, and other deals are in progress for similar establishments in Argentina and Brazil.

A contract for 10,000 car wheels in Argentina was recently awarded to the Krupps at a price far below the lowest bid by Uni-

ted States manufacturers. In many lines of goods Germans are underselling American firms by an average of 60 per cent. in Brazil, 40 to 60 per cent. in Argentina and 20 per cent. in Chile. In Argentina German hardware is being sold from 15 to 30 per cent. cheaper than similar American goods, but deliveries are slow and uncertain. In Chile German salesmen are increasing and are offering silver-plated and nickel goods, pottery and enamel ware below American prices, but not yet in large quantities.

Professor Vittorio Orlando, formerly Premier of Italy, who recently returned to Rome after an extended visit to South American countries, on Feb. 20 addressed an audience of 6,000 persons on conditions

there. Germany, he said, was trying to regain her South American markets, while Italian trade was diminishing in favor of the United States. Italian goods were not pushed sufficiently by exporters, especially automobiles, which were in good demand. He urged the necessity of a direct cable to Italy, and said Italians in South America purposed raising funds to lay one. British trade was falling off as well as Italian.

Bolivia, Colombia, Peru, Nicaragua, Honduras, Cuba and the United States made a convention with Spain at the recent Postal Union Congress in Madrid by which domestic rates on newspapers, books and other printed matter were extended to all the signatory countries, so that books and commercial samples may flow back and forth between the United States and South America or Spain with the same facility and at the same cost as between New York and Philadelphia. The enormous advantage accruing to American advertising and business is evident. A one-cent stamp will carry a postcard to any of the member countries, and the maximum weight limit for printed matter is raised.

So many American vessels are now operating in South American trade that owners are planning exclusive routes to prevent cutthroat competition between the different lines. Negotiations are in progress for the Munson Line to stay out of Cuban and Porto Rican trade, while the Ward Line will leave Brazil and the River Plate routes to the Munson Company. A dispatch from Buenos Aires of Feb. 20 said the Ward Line offices there were about to be closed in pursuance of this plan.

Less commercialized projects are under way for the organization of an Institute for Research in Tropical America to promote investigation in fauna, flora, geology, soils and climate to aid in the development of South America. The Smithsonian Institution, the National Geographic Society, the Museum of Natural History and a number of similar scientific establishments have united for the work. An organization of a Pan-American association along social and cultural lines, to have branches in twenty-one American republics, has also been tentatively formed by John Barrett, former Director General of the Pan American Union and a group of men representative of the United States and South America.

**ARGENTINA**—A request of the Allies that Argentina take measures to prevent German exports of war material in violation of the Treaty of Versailles was rather coldly refused, the Argentine Government replying that it was not concerned in the stipulations of a treaty between other nations. [See Germany.]

Five German steamers belonging to the Hamburg-South American Company were transferred to the Argentine flag in January, and the charge was made in the British House of Commons on March 2 that the Argentine company which took them over was formed to avoid their surrender to the Reparations Commission. This was denied by Antonio Delfino, agent of the line, who said he received a power of attorney in 1911 to dispose of the ships.

The Argentine steamer Bahia Blanca was received with great rejoicing on its arrival at Hamburg on Feb. 22. The Hamburg Senate and Chamber of Commerce made addresses of welcome, referring to Argentina's sympathy during the war and the cordial relations existing. The vessel took 7,000 tons of foodstuffs, a gift to Austria from Argentina.

**BOLIVIA**—The Bolivian Government, headed by Bautista Saavedra, was recognized by the United States on Feb. 10. A regiment of the Bolivian Army mutinied on March 3, but was soon overpowered.

**BRAZIL**—A loan of £6,000,000 was floated in February by the Brazilian State of Sao Paulo, of which £2,000,000 were offered in London, 18,000,000 guilders in Amsterdam and \$10,000,000 in New York. The loan consists of fifteen-year 8 per cent. sinking fund gold bonds, due Jan. 15, 1936, issued at 97½. The bonds are secured by a first charge on the surtax of five francs a bag on all coffee exported from the State.

A decree raising the Brazilian Legation in Brussels to an embassy was signed by President Pessoa on Feb. 24.

**CHILE**—Under the patronage of six large American banking houses a loan of \$24,000,000 8 per cent. twenty-year sinking fund gold bonds was successfully floated in February. The money will be expended on road building and public works and will do much to restore Chilean exchange.

Chile has increased import duties 50 per

cent., a bill to that effect receiving the approval of the Council of State on Feb. 24. It is expected to yield 30,000,000 pesos a year. Exempted from its provisions are rice, coffee, sugar, burlap, gasoline, locomotives and industrial machinery.

**COLOMBIA**—General Rafael Reyes, former President of Colombia, who carried through a measure for the separation of Church and State, died in Bogota on Feb. 19.

President Harding, on March 9, sent to the United States Senate a message urging ratification of the long-delayed treaty with Colombia in the interest of cordial relations. It appropriates \$25,000,000 to be paid to Colombia in consideration of the loss of Panama when that province was pried loose from the mother State and erected into a separate republic. The expression of regret that anything should have occurred to mar friendly relations has been eliminated in deference to the friends of President Roosevelt. Thus amended, the treaty was reported favorably on March 7, but twenty-one Republican Senators were said to be opposed to it and the matter was postponed until the extra session of Congress in April.

**ECUADOR**—Export duties must be paid in gold, according to a decree issued by the Government of Ecuador on March 8.

Dr. Leon Becerra, Chief Health Officer of Guayaquil and a member of the commission of the Rockefeller Institute studying the yellow fever situation, died in Guayaquil on March 3, owing to injuries received in a street-car accident.

**PARAGUAY**—The general moratorium in Paraguay has been extended to April 11, and that of the Banco Mercantil to May 16.

**PERU**—Addition of a medical mission to the Peruvian Embassy in Washington was announced on Feb. 13.

**URUGUAY**—Many merchants of Montevideo have refused to accept delivery of American goods consigned to them because, instead of arriving boxed as requested, they came in bales and many articles were broken. Such occurrences, one newspaper said, lead to strained commercial relations, adding: "The difference in exchange rates and the irritation which accumulated during the war, when American manufacturers took advantage of having no competitors, appear to be bearing fruit," alluding to the steady recovery of European trade.

**VENEZUELA**—The Government of Venezuela has decided to send a special mission to the unveiling of the monument to Simon Bolivar in Central Park, New York, on April 19.

## "GERMANY DELIVERS ALL HER CANARIES"

**T**HE following specimen of German humor, translated from *Jugend* and published by The London Morning Post at the end of January, is aimed at the long delays and vacillating policy of the allied Premiers in settling the boundaries in the Near East. It also takes a fling at the alleged non-pacific nature of the League of Nations, which the Germans, like the Russian Bolsheviki, interpret as an agency of Entente "imperialism." The German belief that the allied powers are bent on stripping Germany of everything is embodied in the satirical coda with which each paragraph concludes:

### EPOCHS IN THE WORLD'S HISTORY

1950—Allied Conference in London. Thrace is taken away from the Turks and handed over to the Jugoslavs. Armenia is placed under Belgian protection; Smyrna becomes English. Germany delivers all her thoroughbred dogs up to France.

1955—Allied Conference in Paris. Thrace is returned to the Greeks; Armenia is incorporated in the Caucasian Republic; Anatolia becomes French; Smyrna is to be transformed into a fortified port for the League of Nations. Germany delivers all her cats up to the Allies.

1960—Allied Conference in Brussels. Thrace becomes Chinese territory; Armenia is assigned to the Kingdom of Honolulu; Smyrna is placed under Polish protectorate. Germany delivers all her canaries up to the Allies.

# GERMANY'S "WATCHFUL WAITING"

*Dr. Simons warmly welcomed on his return from the London Conference, which had ended in allied invasion—People of the occupied Ruhr district remain calm—Reactionaries and revolutionists gain at the expense of moderate elements in the Prussian Diet elections*

[PERIOD ENDED MARCH 12, 1921]

WHEN Dr. Walter Simons, the German Foreign Minister, arrived in Berlin the evening of March 9 from the London Conference [a detailed report of which is printed elsewhere in this issue] the large crowd at the railroad station greeted him as a conquering hero rather than as an unsuccessful diplomat. "Deutschland über Alles" and other patriotic airs were sung, and there was an insistent demand for a speech by Dr. Simons, who was congratulated by Chancellor Fehrenbach for his "courageous attitude" at the conference. The next day the Cabinet unanimously approved Dr. Simons's work in London.

This was followed, on March 12, by the passage by the Reichstag of a resolution approving Dr. Simons's stand by a vote of 268 to 49, only the Communists and some of the Independent Socialists opposing it. In his Reichstag speech, the Foreign Minister, while maintaining that the penalties were illegal, expressed his opposition to breaking off relations with the Allies, and said:

"I must say that when one comes face to face with our opponents in London, when one hears what the situation is in their countries and under what distress and cares they themselves are laboring, it becomes clear that their demands are not inspired merely by the intoxication of victory or lust for power, but that, on the contrary, they are the result of extraordinarily heavy troubles and distress in their own countries."

Dr. Simons declared that the Treaty of Versailles had not been voided and that Germany must try to carry out its terms as far as possible.

On March 14 Berlin addressed a note to the Secretariat of the League of Nations protesting against the Allies' penalties.

Meanwhile, Düsseldorf, Duisburg and

Ruhrort, the three cities in the Ruhr district, the "heart of the German coal, steel and iron industry," had been occupied by French, Belgian and British troops on March 8 as the first step toward imposing the penalties incurred through the German refusal to meet the Allies' reparation terms, and the population was calmly accepting the situation, with apparently little regret and an attitude of watchful waiting. In fact, with the exception of some of the Junker reactionaries and the Communists, the German people seemed content to await developments, evidently believing that conditions could not get much worse and might possibly be improved by a change of heart on the part of the Allies should the occupation fail to produce the desired results.

The Berlin Communists, in holding a protest meeting in the Lustgarten, declared that a new world catastrophe was at hand, and urged a military alliance with Soviet Russia as the only means of salvation for the German proletariat. The responsible German labor leaders refused to heed the Communist call for a general strike. General Gaucher, commanding the French troops in Düsseldorf, was informed by the local union leaders that they regarded the occupying forces not as enemies, but rather as "bailiffs come to collect a legal debt."

German official resentment at the result of the London Conference was shown by the recall of the German Ambassadors from London, Paris and Brussels on March 8. On the same day, addressing the Reichstag, Chancellor Fehrenbach said: "The Allies have already begun to put the penalties into effect. This, in plain German, means an act of violence, for penalties have nothing to do with the usual principles of right. The conditions imposed upon us are to be secured by force. This rupture can neither be disguised nor justified by legal decep-

tion." President Friedrich Ebert's official proclamation, issued on March 8, read:

Fellow-Citizens: Our opponents in the World War imposed upon us unheard-of demands, both in money and kind, impossible of fulfillment. Not only ourselves, but our children and grandchildren, would have become the work-slaves of our adversaries by our signature. We were called upon to seal a contract which even the work of a generation would not have sufficed to carry out.

We must not, and we can not, comply with it. Our honor and self-respect forbid it.

With an open breach of the Peace Treaty of Versailles, our opponents are advancing to the occupation of more German territory.

We, however, are not in a position to oppose force with force. We are defenseless. Nevertheless, we can cry out so all who still recognize the voice of righteousness may hear.

Right is being downtrodden by might. The whole German people is suffering with those of our citizens who are forced to endure domination. With firm bonds must this sorrow unite us in one sentiment, one will.

Fellow-citizens, meet this foreign domination with grave dignity. Maintain an upright demeanor. Do not allow yourself to be driven into committing ill-considered acts. Be patient and have faith. The National Government will not rest until the foreign power yields before our right.

This defiant note was re-echoed in the press of all political shades. Some of the reactionary papers even expressed satisfaction at what they called the smashing of the Versailles Treaty by the Allies and the saving of Germany from a great calamity. While the Liberal and Socialist papers were inclined to censure Dr. Simons and his associates for not having shown better bargaining ability at London, none of them was offended at his refusal to accept the Allies' terms. Nevertheless, neither the Majority Socialists nor the Independent Socialists were disposed to enter the Fehrenbach Cabinet and co-operate with Hugo Stinnes and his "big business" party (the People's Party) in handling the situation created by the Government's defiance.

The occupation of the three Ruhr cities was effected by 10,000 French, 5,000 Belgian and two squadrons of British troops, all under the command of General Degoutte, in the midst of a real or affected apathy on the part of the inhabitants. The official proclamation posted up by the allied authorities read as follows:

#### TO THE POPULATION:

The official representatives of the German Government have just presented to the Lon-

don Conference propositions which show that the German Government does not wish to fulfill the engagements it assumed in signing the Treaty of Peace.

Before this attitude the allied powers are constrained to pass to penalties. Unanimously they have decided to assure themselves new guarantees in order to force the German Government to execute the clauses of the treaty.

In consequence, the allied troops have received orders to occupy as guarantees Düsseldorf, Duisburg and Ruhrort.

This occupation constitutes in no fashion a measure of hostility toward the population. Under the reserve of strict observance of orders, which the military authority will judge indispensable to promulgate, there will be no interference with the economic life of the region.

Not only will the working population have all facilities for work, but the allied authorities are willing to help them to better their situation and in particular to assure their food supply.

The allied command intends to maintain in the territories newly occupied a régime of liberty and order in which the prosperity of the country can develop.

DEGOUTTE,

Commander-in-Chief of the Allied Forces of Occupation.

Another proclamation informed the population that a state of siege would be maintained, with press and mail and telegraph censorship, and that severe penalties would be imposed for sabotage and carrying arms. Strikes in public utilities were forbidden. The day after the occupation the French began opening soup kitchens in the poor quarters of Düsseldorf. General Gaucher received the notables of the city and told them the conditions of occupation would be as lenient as was compatible with security. On March 10 a report to a Brussels newspaper told of the wounding of a Belgian guard in Duisburg by a shot fired by an unknown person.

Fearing trouble between the so-called Security Police and the forces of occupation, as well as possible clashes between this body of State police and the workers of the Ruhr district who consider them as nothing but "White Guards" ready to suppress labor uprisings, General Degoutte ordered the Security policemen in the occupied district to disband and leave on March 12. The local traffic police was to continue in service and was counted upon to co-operate with the occupying troops in maintaining order.

The taking over of the Custom Houses

along the Rhine was effected on March 8 without difficulty. The American troops of occupation took no part in these new activities of the allied forces.

On March 14 the Reparations Commission called upon Germany to prepare to pay by May 1 the balance of the 20,000,000,000 gold marks then due under the terms of the Versailles Treaty. This balance has been estimated at 12,000,000,000 marks and the commission said 1,000,000,000 of it must be paid by March 23.

### MOVE TOWARD DISARMAMENT

Against stubborn opposition by the seven representatives of Bavaria, the Federal Council voted on March 12 to approve the draft of a law intended to meet the demand of the Allies for disarmament legislation carrying out the articles in the Versailles Treaty prohibiting the maintaining of war-like organizations, and two days later the bill was introduced in the Reichstag and referred to a special committee. Alarmed at the possibility of seeing the wiping out of its reactionary "Orgesch," the organization embracing hundreds of thousands of armed farmers and bourgeois counted upon to hold down any revolutionary uprising by the Bavarian working people, the Bavarian Government, headed by Dr. von Kahr, ordered its supporters in the Reichstag to fight the bill to the limit and even, according to a Munich report, asked them to withdraw their support from the Fehrenbach coalition Cabinet.

To a request by the Allies that Argentina stop the German exportation of war materials to that country, the Argentine Government replied that it had nothing to do with treaties negotiated between other nations, so it must deny the request; but on Feb. 22 Dr. Julio Morone, the Argentine Minister of War, stated that Argentina had made no purchases whatever of war materials in Germany since the war, nor was it negotiating for any such purchases. The Allied Control Commissions in Germany, it was announced in British official circles, will see to it that no shipments of war materials are made from Germany to any neutral country.

The contrast between governmental poverty on the one hand and the increase in prosperity by the huge business concerns on

the other continued to grow sharper during the period. This was accentuated by semi-official reports showing that about 4,000,000 Germans were out of work, or working only part time. Of these 432,000 were drawing unemployment benefits in February, an increase of 32,000 over December. The State pawnshops reported a great increase during the last few months in the number of middle class persons obliged to pawn their least necessary possessions in order to keep alive. The Leipsic Fair opened on March 6, with 15,000 exhibitors and 100,000 visitors from twenty-five countries, and furnished further evidence of German determination to try to regain foreign trade, in spite of all handicaps. A Treasury statement for the eleven months ended Feb. 28 showed a deficit of 70,100,000,000 marks, receipts having been only 24,500,000,000. The deficit included a loss of 15,500,000,000 marks on railroad operation, and brought the floating debt up to 161,670,000,000 marks.

Reports from Berlin and Buenos Aires told of the Chilean Government's granting to the Krupp Company a thirty-year concession for 350,000 acres of land in the Province of Llanquihue, upon which to erect the biggest steel and munitions plant in South America. The North German Lloyd stockholders on March 5 voted annual dividends of 8 per cent. for 1919 and 1920 and increased capitalization by 250,000,000 marks. The tonnage of the oceangoing vessels entering Hamburg in February totaled 672,278, a gain of 16,831 tons over January. German exports to Great Britain in the last quarter of 1920 had amounted to £10,494,000, against £8,743,000 in the preceding quarter, and had contributed somewhat to the depression of the British labor market.

An appropriation of 4,700,000,000 marks to indemnify German shipping companies for war losses was voted by the Reichstag on March 12, bringing the total voted for that purpose up to about 12,000,000,000 marks. The companies pledge themselves to build at least one-third of Germany's pre-war tonnage within the next ten years, or about 2,500,000 tons.

### THE PRUSSIAN ELECTIONS

The elections to the first regular Prussian Diet on Feb. 20 followed the same lines as those for the National Reichstag last June, i. e., a strong drift to the two extremes of

reaction and revolution, with the exception of a gain in votes by the Majority Socialists. This did not offset, however, that party's loss in Deputies, compared with its strength in the Prussian Constitutional Assembly chosen on Jan. 26, 1919. The new Diet is made up of 428 Deputies, apportioned at the rate of one for about every 40,000 votes. The old Assembly had 401 members. The results, as announced by the semi-official Wolff Telegraph Bureau on Feb. 23 and compared with the former Assembly, were as follows:

	New Diet.	Old Assembly.
Majority Socialists .....	114	144
Centrists .....	92	94
Democrats .....	26	66
Nationalists .....	75	50
People's Party .....	58	23
Independent Socialists .....	29	24
Communists .....	30	..
Middle-Class Party .....	4	..

The eleven Guelphs (Hanoverian Separatists) in the new Diet, as well as their six brethren in the old Assembly, are counted with the Centrists, as they generally work together on important questions. One of the Democrats from Slesvig-Holstein in the old Assembly was officially known as a Farmer Democrat.

Although the majority in the Diet controlled by the Government, composed of Majority Socialists, Centrists and Democrats, has been heavily reduced, it is still enough to work with, especially as there is little possibility that its opponents of the Right and Left can unite for its overthrow. So it appears likely that Otto Braun, a Socialist, will remain at the head of the Cabinet, although the formality of resigning was gone through on March 10. The People's Party (Hugo Stinnes's big-business political group), backed by the reactionary Junker Nationalists, is anxious to get places in the Government, but it is not expected that the Majority Socialists will let in its representatives, unless a defection by the Democrats or Centrists absolutely necessitates it. There were by-elections on Feb. 20 in Slesvig and East-Prussian Reichstag districts. Count Bernstorff was elected as a Democrat from Slesvig.

The result of these by-elections was again for the Right and Left in the Reichstag and an increase in the total number of Deputies from 466 to 469. The Nationalists increased from 66 to 71, the People's Party from 62 to 65, the Communists from

24 to 26, the Independent Socialists from 59 to 61, and the Centre from 67 to 68, while the Democrats fell from 45 to 40 and the Majority Socialists from 113 to 108. The minor parties were not affected.

The Independents were the hardest hit in the popular Diet vote, compared with the Reichstag vote of last June, losing heavily to the new United Communist Party and to the Majority Socialists. In new Greater Berlin the vote was as follows: Majority Socialists, 427,300; Independents, 332,500; Communists, 194,900; Democrats, 147,800; Nationalists, 329,000; People's Party, 301,300; Centrists, 74,500; Middle Class Economic League, 98,300.

During the period there were the usual stories of plotting by the Junkers for the restoration of the monarchy and by the Communists for the setting up of a Soviet régime, but up to March 15 nothing serious along that line had developed.

Some excitement was caused by the publication in Holland and Germany of excerpts from a book said to have been written by ex-Kaiser Wilhelm for private distribution among his friends, in which he reviewed the causes of the World War and tried to shift the blame for its outbreak to Great Britain. Some of the Socialist and Liberal papers remarked that the ex-Kaiser was evidently trying to rehabilitate himself in the eyes of the monarchist element with the view of staging a "come-back" in the not distant future.

#### VOTERS RUSHED TO SILESIA

The days immediately preceding the plebiscite in Upper Silesia on March 20 were utilized to the limit by the Germans for rushing German voters to the district from every part of the Fatherland, under the direction of the German Defense League and a special railroad division headed by General Groener, wartime manager of the military railroad lines. Arrangements were made for 227 special trains to carry 200,000 German Silesians, resident in other districts, back to their old home, free of charge. These voters were to receive pay for lost time and free board and lodging while away.

Over the votes of the Independents and the Communists the Reichstag increased President Ebert's salary from 100,000 to 150,000 marks and his allowances for offi-

cial expenses from 200,000 to 250,000. The exchange value of a mark during the last few weeks has ranged from 1½ to 1¾ cents. A Berlin cablegram of Feb. 23 told of a shot, fired from the building opposite President Ebert's residence, which wounded a sentry on duty there.

There was an outburst of anti-Semitism in Berlin on Sunday, Feb. 27, when a mob of students raided the Jewish quarter and beat hundreds of Jews badly, despite the presence of many policemen, the latter confining their activities, according to a cabled report, to trying to pull the victims into trucks, out of reach of their assailants.

The campaign against the use of colored French troops in the occupied territory, begun many months ago by the Junker press and supported by some of the German Lib-

eral papers, although deprecated by the Socialist and Communist press, continued, both in Germany and the United States, with renewed vigor. An official report by Major Gen. Henry T. Allen, commanding the American troops on the Rhine, submitted to the Senate on Feb. 19, showed that this campaign was largely based on exaggerated reports of outrages committed by the colored troops; these troops, he said, were under good discipline, and only sixty-six cases of alleged assault upon women had been officially reported to the French military authorities from the beginning of the occupation in 1918 to June 1, 1920. Of these only twenty-eight were proved and the culprits punished, while the results of twenty-three trials had not yet been made public.

## FRANCE UNITED ON MAKING GERMANY PAY

*Determined support of all the people given to the Briand Government in its invasion of the Rhine region—French Communism and how the authorities are dealing with it—Industrial depression makes the indemnity problem more acute*

[PERIOD ENDED MARCH 12, 1921]

THE Briand Government, in its determination to make Germany pay for the damage she has wrought—a determination grimly evidenced in the early days of March by the invasion of Rhenish Germany—has the satisfaction of knowing that the whole nation is solidly behind it. A strong wind of impatience has long been blowing from the devastated regions of the North, where the people have become weary of waiting for reparations that never come, while their homes remain in ruins for lack of funds and building material. "Even where our factories have been rebuilt," said one of the victims of the German invasion, "they are empty. Why not make Germany give us back our looms and lace frames, so that we can get to work again?" The industrial depression visible in many parts of France has increased the feeling of beligerency, and keen observers have reported

that, from the colliers of the north to the farmers of Alsace, the whole population is prepared to support the demand, "Make Germany pay!" French farmers everywhere, though now far more prosperous than the dwellers in the towns, as many of the peasant class have acquired new landholdings since the war, have no desire to give up their accumulated savings to a Government in financial straits while Germany evades the responsibilities of its wrongdoing. To the strength of this universal feeling were due the fall of the Leygues Ministry, the rise of Aristide Briand as Premier and the policy of "blood and iron" which that experienced statesman has conducted in closest co-operation with the taciturn but determined President Millerand.

Opposition to the new policy of drastic measures has come almost entirely from

the Socialist and Communist elements, which have been active in attack upon the Government since the seizure of the German towns upon the Rhine. An important part of the propaganda which their organs spread was based on the old charges that France was maintaining black troops in the German area, and that many outrages had been committed by the blacks, and by the French troops in general. It was also declared that the American Government was wholly opposed to the new invasion, and that the failure of the American troops in Germany to join the invaders was proof of this. To counteract this pro-German propaganda, Stephane Lausanne, editor of the *Matin*, and one of the most energetic advocates of a strong policy in regard to German reparations, went to Coblenz early in March to interview General Allen, the American General in command on the Rhine. Questioned, General Allen replied as follows:

It is shoulder to shoulder we march; it is heart to heart. In everything we are in accord. \* \* \* Moreover, there is uniformity of action in the four sectors occupied by the four allied nations. There is not any French régime, American régime, British régime or Belgian régime. There is only one allied régime, which we apply in perfect harmony. This is the first time the American troops do not do the same thing as their brothers in arms. But the American troops are not far away. They are quite ready and our flag still flies on the banks of the Rhine beside the French flag. For myself, I hope that it will fly there as long as the occupation lasts.

Regarding the black soldiers and the charge against them, General Allen said:

On my honor, it is absolutely false. I have sent the State Department a report which tells the whole story. Whatever the Germans or excited Irish in America say in their campaign, facts are facts. These facts are that since many months there have been no black soldiers in the Rhineland, and that these soldiers when they were here committed no atrocities. \* \* \* Only thirteen crimes were established, and these were severely punished.

#### VIVIANI'S NEW MISSION.

To counteract this propaganda more effectively, the French Government decided early in March to send, on an official mission to the United States, M. René Viviani, former Premier of France, noted for his efforts on behalf of the League of Nations. The appointment was officially announced

on March 7, with the explanation that M. Viviani, better than any one else, "was fitted to bear witness to the pacific purpose of France, \* \* \* and to prevent by disarmament a repetition of Germany's crime against civilization and liberty."

The story of the allied invasion of Germany is told elsewhere in these pages. Military and naval plans were making for the future. Though the Commission of the Chamber of Deputies reduced the proposed war budget for the year by a little over 1,000,000 francs, the sum actually reported by the commission totaled 5,144,000,000 francs. Furthermore, the naval program announced by M. Guisthau, the new Secretary of the Navy, called for a fleet able to defeat any fleet Germany might send to sea until the terms of the Versailles Treaty were fulfilled. Reports that Germany was already building new cruisers, reported to be of high speed and long cruising radius, were the explanation of this new French program, which called for six fast cruisers adapted to carry out a blockade, should it prove necessary.

The appointment of three new Marshals of France was announced on Feb. 20. The men so honored were General Lyautey, renowned for his activities as Resident General of Morocco; General Franchet d'Esperey, whose war record in France and in the Balkans was one of great brilliancy, and General Fayolle, who with his reserve army barred the way to Paris in 1918, who for a year was in command of the French Armies of Occupation along the Rhine. The appointment of these three new Marshals aroused a storm from the friends of other Generals not so honored, and it was said at the end of February that a bill introduced by these factions provided for the elevation of six more Generals to the rank of Marshal.

#### REPRESSION OF COMMUNISTS

The French Government continued to show a strong hand in checking the seditious activities of the Communists. Though the General Confederation of Labor had shown a strong tendency to drive out all those who advocated the application of the doctrines of Lenin, the plotters against the Government continued their underground activities. The arrest of the Russian agitator Abramovitch and his French accom-

plices showed that the French Intelligence Department was keeping its eyes open. The effect of the Communist teaching was brought into strong relief toward the end of February, when 800 workmen in an electrical factory at Argenteuil, a Paris suburb, hoisted red and black flags over the factory buildings and planned to take possession of the plant upon a Soviet basis. The police forestalled this plan, and the insurgents were paid off and new men sought to fill their places. Hundreds of gendarmes and Republican Guards patrolled the works and repelled a rush of the Red workmen across the bridge. No one was seriously injured.

Meanwhile the Government on Feb. 27 arraigned for trial ten Communist leaders implicated in the plots of last May to overthrow the Government by means of a general strike. Eighty witnesses were called to testify. The prosecution charged that the strikes were fully prepared with the intention of seizing supreme power and establishing a Soviet rule.

#### COMMERCIAL DEPRESSION

Unemployment remained one of the great domestic problems with which the Government had to deal. One favorable feature was the downward trend in the price of coal. Daniel Vincent, the new Minister of Labor, explained to the Chamber in February the efforts being made to remedy the situation. Places were being found for men unemployed. Former agriculturists were being encouraged to return to the land; over 50,000 had responded to this appeal within a year. An increase of the Government allowance for those without work was advocated, and municipal and departmental work was being pushed, especially in the devastated area, to provide work for those unemployed. M. Vincent proposed some form of effective and intelligent control of

immigration to diminish foreign competition.

Falling prices and commercial depression, however, were undeniable. Fear of a bank crash toward the end of February aroused serious proposals to launch what was called a "tacit moratorium" in Paris. Every one was trying to sell values, and no one was willing to buy. Debts could not be paid, and the situation was one that aroused alarm in business and financial circles. The Government, on its part, was doing all it could to recoup its shattered finances by means of taxation, which, as the French Government has shown, weighs much more heavily on the French than similar taxation on the Germans. One considerable source of tax income, the imposts levied on goods sent up the Rhine from Antwerp to Strasbourg, had aroused discontent in the latter city, and a strong Alsatian movement was on foot to induce the Central Government to remove these taxes, which, it was contended, were preventing Strasbourg from assuming its rightful place as the main seaport on the Rhine.

A new census of France was begun on March 5. The last French census was taken in 1911. In deaths on the battlefield France lost 1,700,000, but many causes combined to make the loss still greater. It is generally estimated that there are 3,000,000 fewer French than the 38,000,000 shown in the last census. Paris and the Mediterranean cities have received an influx of immigrants from the disturbed countries of Europe. It is estimated that there are 100,000 Russian refugees in Paris alone. The French method of taking the new census consists of determining who spent the night of March 5-6 in every house of France. The general results are expected to be published early in April.

# CZECHOSLOVAKIA VETOES THE HAPSBURGS

*Foreign Minister Benes warns Hungary that the restoration of the former reigning house would mean war—The schools desecularized*

[PERIOD ENDED MARCH 12, 1921]

**S**PEAKING before the House of Representatives, Foreign Minister Benes of the Czechoslovak Republic announced that the purpose of his visit to Rome was to discuss with the Italian Government the questions of Austria and Hungary and of Hapsburg restoration. He declared he knew the Italian attitude to be in full accord with that of the Little Entente States. As to Austria, the Minister said, the union with Germany is impossible under the Treaty of St. Germain; moreover, Germany could not assume the contingent financial burden. The Minister then added that the republic had no conflict whatever with Germany, and continued:

"I wish to emphasize that we are willing to negotiate with the Magyars on every important question. But the Magyars must change their mentality and stop their insane propaganda in America, England and France, directed, first of all, against our State."

The Minister then pointed out the contrast between the domestic policies of Czechoslovakia and Hungary. In the former country, he said, the nobility, the anti-democratic upper hierarchy and the hereditary bureaucracy are wiped out; the affairs of the State are directed by the parties of the people. In Hungary, on the other hand, the social revolution which has taken place in Czechoslovakia was never achieved. That accounts for the utter difference in outlook, domestic and foreign; that is the obstacle to co-operation and rapprochement. The Minister proceeded:

Even more important is the issue of the form of government in Hungary. The return of the ex-King Charles to Hungary would mean for the neighbor countries an actual and justified *casus belli*. The elevation to the throne of a foreign dynasty or a Magyar noble house is neither timely nor possible, for internal reasons. As to the selection of another Hapsburg King, especially that of the Archduke Joseph, it was the Czechoslovak Government which after the overthrow of Bela Kun caused the retirement of Archduke Joseph from the regency; it was supported by the Yugoslav and Rumanian,

as well as by the French, British and Italian Governments.

In accordance with the decision of the Council of Ambassadors, the return of the Hapsburg dynasty to any Central European throne, in any form and in the person of any Archduke, is precluded. The Czechoslovak Government adheres to this standpoint consistently and unconditionally. If the Hungarians attempt to challenge this determination of ours, we, together with our friends, would fight them with all means at our disposal, for we are convinced that the return of the Hapsburgs would endanger the new mid-European order. The Czechoslovak Government claims no right to interfere with the domestic affairs of other countries, and the question of the form of government in Hungary belongs to these domestic affairs. On the other hand, it cannot be doubted that the democratic principles of Hungary's neighbors are very valuable safeguards of peace, stability and the final restoration of friendly co-operation. If the Hungarian people would conceive of its political and national problem in this light it would find out soon what would be the best solution of its inner crisis.

## NO GRUDGE AGAINST REPUBLIC

Ninety-five per cent. of the difficulties outstanding between Hungary and her neighbors would be eliminated if we could see that Hungary is developing in the direction of republicanism and democracy. Without wishing to interfere with Hungary's domestic affairs, we declare that as soon as Hungary decides for a republic the question of rapprochement, of friendship and co-operation, even of assistance, becomes timely at once.

In the Hungarian question we and our allies are in full accord. We are prepared for any emergency and have agreed as to the necessary action. We cannot imagine to shut ourselves off from Hungary, politically and economically, for any length of time. History teaches us that we cannot live in continued enmity with the Magyars.

Mr. Benes then said that Czechoslovakia did not object to a Polish-Hungarian entente, but expected loyalty from her ally, Poland. As to Russia, he said, after the débâcle of Wrangel nobody could think of intervention. Russia must stop her propaganda in and against the Western countries. Bolshevism in its present form is doomed, but the process of healing will be long, and

Russia in the meantime will not occupy the place due to her in the European ensemble. Czechoslovakia's attitude toward Jugoslavia and Rumania was defined by the policy of the Little Entente, Mr. Benes said, and concluded: "Our policy is that of peace, democracy and progress."

The Prague press reports that instruction in religion will cease in all Czechoslovak

schools within the immediate future. Parents who wish that their children be instructed in religion may make arrangements with the priest or minister of their denomination, such arrangements to be supervised by the State. In the public schools ethics will supplant the classes in religion. All denominational schools are dissolved unless they give up their religious character.

## RELIGIOUS FEUDS DIVIDE HUNGARY

*The Horthy regime being opposed by the Protestants—Intrigues for restoration of the Hapsburgs—Anti-Jewish discrimination.*

[PERIOD ENDED MARCH 12, 1921]

CHAOTIC conditions which have characterized Hungarian political life for the last two years continued throughout the first quarter of the year. Attempts by leading politicians to form new alignments merely served to bring into relief the lack of a constructive program and the dread of definite issues that mark the National Assembly of the Horthy régime. Notwithstanding the desperate economic situation of the country, with its Government bankrupt in all but name, its production completely paralyzed and its currency sunk to one-hundredth of its pre-war value, a sterile discussion of the problem of succession to the throne continued as the sole preoccupation of political leaders. The endeavor of Count Julius Andrássy, one of the main pillars of the old régime, to form a new "Christian national" party out of the governmental bloc, the pro-Hapsburg dissenters of the Farmers' Party, the "Democratic" followers of the exiled boss of Budapest municipal politics, Vazonyi and a few free lance politicians who under the old order belonged to the bodyguard of Premier Tisza, ended in complete failure owing to personal feuds and the refusal of the Count to profess his true colors, gleefully exploited by his opponents.

It was generally understood that Count Andrássy intended to issue from his retirement as the leader of the "Carlist" element, to champion the return of King Charles IV. He and his lieutenants insisted,

however, that they wished to postpone the settlement of the succession issue "until all other problems of domestic and foreign policy will have been solved." This ambiguous statement did not satisfy the Carlists or legitimists, and alienated the anti-Hapsburg partisans.

In the meantime Mr. Rubinek and other leaders of the Farmers' Party made an effort to commit that group formally to the principle of electing a new King. Their failure, like that of Count Andrássy, is explained by the Vienna Hungarian Gazette on the ground that the whole issue concerning succession is an artificial one, as the majority of the people want a republic.

Much more important and promising than the bickerings of the Budapest politicians appears to that newspaper as well as to others the organization of a new Party of Independence by the Calvinist Bishop Balthazar at Debreczen. This event is generally interpreted as the declaration of war of Magyar Protestantism on the Horthy régime. Disagreement between the Catholic Clerical supporters of the Government and the Calvinist element, whose centre is Debreczen, nicknamed the Calvinistic Rome, had been manifest for several months. Calvinists were discriminated against, frequently crowded out from public office, and Calvinist sentiment was constantly and deliberately insulted by the Governor, Mr. Huberth, and his retinue, the local branch of the Society of Awakening Hungarians, cor-

responding to the Black Hundreds of Czaristic Russia. Bad feeling was accentuated by the arrival in Debreczen of the Hejjas detachment, most dreaded of Admiral Horthy's terror troops, billeted on the population as an express warning to behave and do the bidding of the Governor. The Municipal Council repeatedly requested the Governor's recall, but without success.

The climax came when the Calvinist "Main Church," highest shrine of Magyar Protestantism, was defiled in the most disgusting manner by "unidentified malefactors," known by everybody to be members of the Awakening Hungarians and partisans of Governor Huberth. The angered citizens demanded instant prosecution of the guilty, but no action was taken by the authorities. Instead, a few days later, when another Calvinist congregation was preparing to hold a musical fête in its church, the Governor sent a detachment of police to dissolve the crowd as an illicit political gathering. A riot was barely averted as the minister, in the last moment, announced that a religious service would be held in lieu of the musical exercises, and dared the police to interfere. These events stirred to the utmost Protestant sentiment in Debreczen and elsewhere, and the developments culminated in the organization of the new party by Bishop Balthazar, with the express purpose of rallying all the liberal and progressive elements of the country in opposition, not only to the present Ministry, but to the Horthy régime in general. Old time radical independents like Count Theodore Batthyanyi, Samuel Bakonyi, John Benedek and others immediately joined the Bishop and the movement is gaining strength. It is understood that the new party demands cessation of the persecution of liberals and Jews, disbandment of the terrorist army, renunciation of all monarchist plans and a democratic reorganization of the State.

#### PEASANTS AGAINST MONARCHY

A characteristic episode, throwing light on the anti-monarchist sentiment of the Magyar peasantry, occurred at the convention at Gyoma of the National Agricultural

Federation. This body is the Hungarian branch of the notorious "Green International," founded by partisans of Wittelsbach and Hapsburg restoration. One of the speakers referred to the question of succession, whereupon the audience, about 3,000 strong, broke out in cries like "Down with the Hapsburgs!" "We want no King!" "Let's have a republic again!"

According to recently enacted law partially restoring old-time disabilities, enrolment of Jews in the universities is limited to 5 per cent. of the total number of enrolments, that percentage representing the proportion of Jews in the country's population. Even such rights, however, as are enjoyed by Jews under this measure are nullified by the action of the Faculty at Budapest in organizing "Committees on Credentials," consisting of professors and students. These committees pass upon the political reliability and general desirability of applicants, and under their rulings practically all Jews, however well qualified, were refused admission to the university. Special committees investigate the political soundness of professors. All these committees are controlled by the Society of Awakening Hungarians, and professors of Jewish race or advanced political views are relentlessly discriminated against. Thus Professor Alexander, noted philosopher, was removed in spite of almost half a century of distinguished service record; he now occupies a chair in the University of Geneva. Professor Marczali, greatest of Magyar historians, has been pensioned; Professors Beke, mathematician; Kövesligethy, physicist; Schmidt, Indologist and Revesz, psychologist, all men of European repute, are suspended.

A new fashion has been inaugurated at Budapest with governmental sanction; the greetings good morning, good evening and the like are to be supplemented by a new patriotic exclamation. Acquaintances meeting on the street call out to one another, "Magyar!" the response being, "For the Magyar." The reform is compulsory; those disregarding it are threatened with social ostracism and were in several instances mishandled by "Awakening Hungarians."

# AUSTRIA RESENTS MAGYAR CLAIMS

[PERIOD ENDED MARCH 12, 1921]

COMMENTING on a statement by the new Magyar Foreign Minister, Dr. Gratz, to the fact that the Austrian Constitution guarantees a plebiscite to the population of Western Hungary, ceded to Austria in the Treaty of Trianon, a semi-official declaration published in the Vienna press says that such interpretation of the Austrian Constitution is wholly erroneous. All Austrian parties agree that the question of Western Hungary is finally settled, and that no plebiscite is necessary or even permissible. According to the second clause of the Constitution—containing the only reference to the district—the territory in question becomes one of the Austrian Federal States, under its ancient German name of Burgenland.

Vienna papers publish a price list on rifles, machine guns, cannon and ammunition, the document having been found on the person of an arrested Hungarian agent engaged in the smuggling of arms. The list

contains, among other items, 162 field guns, quoted at 50,000 kronen each; 100 howitzers, at 120,000 kronen each, and three of the famous 30½ centimeter mortars, at 460,000 kronen each. It is reported that another large scale expedition for the smuggling of arms and ammunition has been organized by the Hungarian Government, and six officers of the Magyar Army have arrived in Vienna to negotiate and execute the matter. Vienna papers greet with satisfaction the demand of the Entente to deliver war material under the peace treaty, as such material merely serves as a temptation to the Horthy Government and usually finds its way across the Magyar border. The danger to Austria is obvious.

The meeting of the Austrian Anti-Semitic Association at Vienna on March 14 was followed by anti-Semitic demonstrations, which were subdued by the police without bloodshed; the demonstrators charged that the Jews were guilty of profiteering.

# RUMANIA IN A NEW TRIPLE PACT

*Inspired by France, she links up with Poland and Hungary  
against the Bolsheviki, with gratifying domestic results*

[PERIOD ENDED MARCH 12, 1921]

THE Rumanian statesman Take Jhescu may be considered the Father of "The Little Entente," yet when Prague and Belgrade failed to agree to the anti-Bolshevist provisions demanded by him (on the advice of France) he allowed Dr. Edouard Benès, the Foreign Minister of Czechoslovakia, to complete the work while he himself sought approval for his anti-Bolshevist policy at Warsaw and Budapest. There is absolutely no doubt of the Franco-Polish declaration negotiated by the Polish President, Marshal Pilsudski, at Paris, on Feb. 3, which paved the way to a realization of M. Jhescu's policy elsewhere, for we have the text of that declaration, issued Feb. 6, which reads:

The two Governments of France and Poland, equally anxious to safeguard their security and the peace of Europe, have once

more recognized the community of interests which unite the two friendly countries. They have agreed to confirm their will to co-ordinate their efforts and, with this aim in view, to maintain close contact for the defense of these higher interests.

Then, as we saw last month, M. Take Jhescu was able to bring his country into closer communion with France, via the Polish-Rumanian Treaty negotiated at Warsaw. In a series of articles, interviews and addresses he showed that the utmost goodwill existed between Bucharest and Budapest, which gave promise of closer relations between Rumania and Hungary. This attitude was cordially reciprocated by M. Praznowsky, the Hungarian delegate at Paris. Thus, the ground having been prepared, the Polish-Rumanian Treaty was

supplemented by the signing on March 2 at Budapest of a formal alliance against Bolshevism by Poland, Rumania and Hungary. Colonel Starzea signed for Rumania and Count Dembinsky for Poland.

A formidable barrier was thereby presented to Bolshevism in Central Europe, the dominating figure of which, on account of the Franco-Polish declaration of Feb. 3, is undoubtedly France—actually a defensive triple alliance of Poland, Rumania and Hungary against Soviet Russia—directed from Paris. The benefits to Hungary in her present economic distress are expected to be great, while it will probably demonstrate the futility of all attempts of the reactionaries at Budapest in their propaganda for a return of the Hapsburgs and a new union with Austria. This should give satisfaction to France, Italy and to "The Little Entente," and allay the fears of Dr. Benès, communicated last month to Italian statesmen in Rome. Indeed, in a way, it may be said measurably to strengthen "The Little Entente," the ultimate conception of which was to stop all attempts at a restoration of the Hapsburg régime, either at Vienna or Budapest.

The foregoing had an encouraging effect immediately in financial and industrial circles at Bucharest, where, although no official budget had been issued, the expenses of the State were 400,000,000 lei monthly

and the receipts only half as much, with a deficit for 1920 of 2,400,000,000 lei, a consolidated debt of 4,486,000,000 lei, and a floating debt of 7,162,400,000. Added to the total national debt was the 5,000,000,000 lei paid for kronen of Transylvania and the rubles of Bessarabia, the annexed regions, in an attempt to unify the currency. The effect of the news from Budapest was to bring the lei nearer the franc.

Rumania recently purchased a number of British locomotives and by the end of the year order had been restored to the chaotic operation of the railways left by the Germans. This was a great asset for agriculture, as the peasants had found it more profitable to use their cattle in hauling products to towns than employing them in cultivating the soil. The rise of the lei also caused them to disgorge their hoardings, which had seriously embarrassed the Government, for the purchase of new stock and agricultural implements. As soon as the agricultural situation has become sufficiently stabilized, it is expected that the agrarian reforms, the expropriations of the large estates, will gradually go into effect as the peasants' ability and means for enlarging their areas of cultivation become manifest. Two syndicates, one British and one French, have undertaken to keep the railways and their rolling stock in repair.

## BULGARIA COUNTS ON NEW SEVRES TREATY

[PERIOD ENDED MARCH 12, 1921]

**B**ELIEVING that the new position of Greece, the strength of the Kemalists in Turkey, and the changed attitude of France and Italy would impress Great Britain with the necessity of modifying the Treaty of Sèvres, at the Near East Conference begun in London on Feb. 21, Bulgaria spared no pains to revive her claims to Thrace and Macedonia. A large mass meeting was held in the hall of the Military Club in Sofia, which adopted a resolution to be sent to the London Conference demanding that Eastern Thrace, or that part of it which was not to be restored to Turkey, be given Bulgaria. At the same time the Executive Committee of Macedonian So-

cieties in Bulgaria sent a manifesto to the Council of the League of Nations, attempting to reopen that subject on ethnic and historic grounds. All the old propaganda of the armistice days was revived in the press, where the Napred and the Proporetz called attention to the fact that Bulgaria, although her interests were as great as those of Turkey or Greece, had not been invited to the London Conference.

This attitude produced almost no repercussions at Athens, and consequently the Bulgar-Greek Immigration Commission sitting at Sofia to arrange a method under the Neuilly Treaty, by which minorities of Bulgars in Greek majority communities

might be taken care of, continued in the best of humor. However, there were repercussions in Belgrade, and the Serbian Government sent Sofia an ultimatum on Feb. 15, insisting on the execution of that article in the treaty in which Bulgaria had undertaken to return so many head of cattle to Serbia. The reply to the ultimatum was a good-natured document asking, in effect, that Serbia have patience, as Bulgaria was doing her best.

The Mir praised the good taste of the reply; the Zora declared that the Serbs were growing day by day more exacting; the Preporetz advised the Government, if the exactions of the Serbs were to continue, to appeal to the League of Nations. All three repudiated the charge made by the press of Belgrade that Bulgaria was getting ready to denounce the Treaty of Neuilly on the field of battle if she did not obtain what she desired from the London Conference.

Only second in interest to the foregoing question was the great meeting of 15,000 farmers and farm hands, which began in the hippodrome of the Military School at Sofia, Feb. 15. This was called the Agricultural Congress, and the chief importance of the gathering was its attitude toward Premier Stambolisky's program for a "Green International." The doings of this Congress, the particulars of which have not yet reached America, should be viewed in two aspects: The political and the agricultural. The present Sobranje, or Parliament, is made up of 216 Deputies, ranged as follows: Peas-

ants, 110; Communists, 42; Democrats, 21; Popular Progressives, 21; Radical Democrats, 8; Social Democrats, 8, and National Liberals, 6. The rural representation is not astonishing when it is considered that 80 per cent. of the present Bulgar population of 5,001,000 are peasants, but that the urban population of the remaining 20 per cent. should have returned so large a representation of Communists has been of grave concern to the Government.

The decorations of the hippodrome were such as to lend emphasis to the new "Green International." Some of the placards were against the "Red International"; some against the "White International"—against the Bolsheviki on the one hand and against the reactionaries and militarists on the other. The largest placards read:

Long live the International, which shall consecrate the brotherhood of European peoples and suppress the dictatorship of the minorities! In union there is strength. Farmers: Reach out your hands; the plow and the spade nourish the world. Render to the hangman those guilty of catastrophe and the militarists.

Between the speeches, the chief one of which was naturally made by M. Stambolisky, the delegates and their supporters viewed—through moving pictures—scenes of rural life and the way in which the new agricultural machinery from America was operated. The press of the capital grew very enthusiastic over the congress, said that Bulgaria's strength lay in her fields, and advised it to spread the gospel of the "Green International" abroad.

## PERSIA'S COUP D'ETAT

[PERIOD ENDED MARCH 12, 1921]

WHILE the Shah's Government was still wavering between the demands of the Moscow Government and the appeals of the Teheran merchants to defy Lenin and the Soviets, on Sunday night, Feb. 20, the Persian General Reza Khan, with 2,500 National Cossacks, took possession of the capital and deposed the Siphadar Cabinet, replaced its officials by Cossack officers, and sent agents to the British troops requesting them not to withdraw to the south. The coup, however, was made from Kasvin, which is the British headquarters.

In the following days the Cossacks made several arrests among the pro-Bolshevist agitators, and even certain Nationalists with anti-British proclivities were not overlooked. Guards were given to important foreigners, not propagandists, and their dwellings picketed for protection. There was no counter-rising whatever.

The new Cossack administration declared that it is only temporary, that it is loyal to the Shah, but will in the future direct how he shall negotiate with the Soviet Government.

# JUGOSLAVIA COMPLAINS ABOUT BULGARIA

*Formal charges that the treaty of Neuilly is violated are filed with the Supreme Council  
—Death of ex-King Nicholas helps to end Montenegrin propaganda*

[PERIOD ENDED MARCH 12, 1921]

JUGOSLAVIA on Feb. 15 formally complained to the Supreme Council that Bulgaria was not carrying out the terms of the Treaty of Neuilly, particularly those clauses relating to restitutions to be made to Serbia. It was also pointed out, in a note to the Council of the League of Nations, that no sooner had Bulgaria's position as a member of the League been assured than, by a new application of the Law for Compulsory Labor, she had repudiated Article 65 of the treaty, which abolished compulsory military training, and by a ministerial decree issued Dec. 29, 1920, had transgressed Articles 66 and 67, which stipulated respectively that the Bulgar Army should be limited to 20,000 men and that the largest military unit should be the division. Belgrade alleged that the army had grown to 45,000 men, that the country had been divided into three military regions, each of which contained a division, officially scheduled as a "regiment."

It was also alleged that Article 78, which limits fortified places, had been violated. Bulgaria never had any fortified places, but hastened, it is said, to create five, now armed by heavy field and mountain artillery, which, according to Article 77, should have been handed over to the Allies. In the same way 110,000 rifles were retained when the treaty permits only 37,950.

The Politika of Belgrade in a series of articles has spread its doubts of the sincerity of the Bulgar Premier, Stambolisky, and even charged that he was not the firm friend of the Allies he pretended to be during the war. Although there have been no revelations from Sofia on this point, the Politika of Belgrade affirms that at a recent sitting of the Bulgarian Sobranje Professor Dansiloff, one of the leaders of the Democratic Party, produced and read a secret letter, dated Sept. 20, 1917, which had been sent by representatives of the Peasant (Stambolisky) Party to General Zhekoff, Commander in Chief of the Bulgarian Armies, expressing the readiness of the party to support the pro-German Govern-

ment and continue the war, and asking certain political concessions in return. The Politika continued:

The reading of the letter caused a sensation in Sofia and consternation in the ranks of the Government. The Minister for the Interior immediately had a search made in the houses of the two Democratic leaders, Danailoff and Vasilieff, with a view to seizing the original. \* \* \*

Thereupon the Bulgarian Minister at Belgrade, M. Todoroff, undertook to explain matters. He did not deny the authenticity of the letter, but he urged that M. Stambolisky had wished to avail himself of the misunderstanding that had arisen between the Supreme Command and the Radoslavoff Cabinet, in order to pull down the latter and set up a government under Malinoff. The secret aim of this new Government was to be a reversal of "Czar" Ferdinand's policy, while they maintained at the same time a show of friendship toward Germany in order to deceive the "Czar" and his entourage. In reply to this explanation the Politika said:

The policy of M. Stambolisky and his party is of a duplicity unexampled outside Bulgaria. It is impossible to tell when they are speaking the truth and when, in their hearts, they conceal something totally different from that which they have on their lips.

Two events occurred which have gone far to remove the Montenegrin question from being a thorn in the side of the Belgrade Government, particularly among its enemies abroad—the death of the dethroned King Nicholas and the reports of the British Commissioners, Roland Bryce and Major L. E. Otterley, in regard to the elections in Montenegro.

As long as King Nicholas lived he could not help but have a following, particularly among the older Montenegrins, who had regarded him as the natural head of the Serbo-Montenegrin people—an opinion, however, which will not descend to his sons, Danilo and Paul (Mirko, the third son, is believed to be dead). To advance the interests of the Serbo-Montenegrins he mar-

ried two of his daughters to German Princes and two to Russian Grand Dukes, one into the then exiled Karageorgovitch house of Serbia, one into its rival, the Obrenovitch dynasty, and finally one to the then heir apparent to the Italian throne, now Victor Emmanuel III.

Although he declared war on Austria-Hungary shortly after Vienna had declared war on Serbia, his negotiations for a separate peace with the enemy show that he believed the cause of the Allies to be lost. There are documents in existence even betraying his lack of sincerity toward the

Entente. Since the armistice he had been a pensioner of the French Government at Antibes, where he conducted a propaganda for the recovery of his throne until his death there, on March 1.

It is now expected that the Nationalist Party in Montenegro, which has been campaigning for independence, but without a restoration, will gradually cease hostilities toward the established Government, and that the Supreme Council will finally define the actual status of Montenegro as a part of the monarchy of the Croats, Serbs and Slovenes—Jugoslavia.

## GREECE AND THE CONFERENCE ON THE TURKISH TREATY

[PERIOD ENDED MARCH 12, 1921]

**D**URING the Near Eastern Conference at London, from Feb. 21 to March 12, the Greek Bulé (Parliament) several times adopted resolutions directing the conduct of the Greek delegates, M. Kalogeropoulos, Premier and Foreign Minister, and M. Gounaris, Minister of War. Former Premier Venizelos was not present at the convention officially. He went to London from Nice to advise and lend his moral support to the Greek delegates, if requested and required, because, to use his own words: "I believe Greece capable of carrying out the requirements asked of her in the Treaty of Sèvres, and I love Greece more than I dislike Constantine."

During the absence of the delegates from Athens, M. Baltazzis acted as Foreign Minister. The entire Cabinet, reconstructed by M. Kalogeropoulos on the eve of his departure, was as follows, aside from his own portfolio and that of M. Gounaris:

Agriculture .....	M. Baltazzis
Justice .....	M. Theotokis
Finance .....	M. Protapadakis
Marine .....	M. John Rhallis
Education .....	M. Theodore Zaimis
Interior and Communications.	M. Tsaldaris

All were drawn from the personal party of M. Gounaris, and all, with emphasis on the leader, who was the faithful friend of Professor Streit, King Constantine's Kaiserlich adviser, had been noted for their pro-

German tendencies. In passing through Paris, on Feb. 17, M. Kalogeropoulos, following the example of other visiting statesmen, placed a wreath on the tomb of "the unknown hero," which act was bitterly resented by the Paris press. Then the Greek Premier explained his mission as follows:

We shall wait the first move from Turkey. I understand that the Turkish delegations will come forward with demands for the revision of the Treaty of Sèvres, which it would be impossible for my Government to accept.

All the treaties, and the Treaty of Sèvres in particular, have given freedom to peoples who have heavily and brutally suffered under the foreign yoke, and I cannot humanly imagine that the great powers will dream of allowing these redeemed peoples to go back to foreign enemy domination. Greece stands entirely by the Treaty of Sèvres as it exists today. She has absolute confidence in her ability to make it respected by Turkey to its full and entire extent.

As Greece is fighting a common struggle, which also affects the position of the allied powers in the East, we consider it to be just that no hindrance shall be placed in our way, but that assistance shall be granted us. When I say assistance, I mean that Greece will be very pleased to do everything humanly in her power for the common cause and to offer all her assistance to the great allied powers.

On March 2 he sent a dispatch to his Government giving the Lloyd George-Briand plan for relieving Greece of some of her responsibility under the Sèvres

Treaty. The proposals principally concerned the Smyrna district, now occupied by the Greeks. This was to be converted into a semi-independent province, administered by Christian Governors appointed for terms of five years, the Turks retaining the civil and military control, but the judiciary and finances to be under an international commission, and with a police force composed of both Greeks and Turks.

This plan was rejected by the Athens *Bulé* in a dispatch to M. Kalogeropoulos two days later. About the same time the Greek delegation received resolutions adopted by the Committee of Unredeemed Greeks at Constantinople and from various Greek bodies abroad, many of which, while condemning King Constantine and praising Venizelos, still implored M. Kalogeropoulos to stand by the treaty. The *Bulé* voted that to accept the proposals would be "equivalent to the surrender of rights definitely established by endless sacrifices made by the Greek Nation in common with her great allies."

The *Bulé* presented a united front on this question and is preparing to legalize certain, although not all, acts of the former Government, by which means the Constantine Government hopes to obtain the balance of the \$50,000,000 American loan contracted by Venizelos. However, the duel has already begun between the only two organized bodies in the *Bulé*—the followers of Gounaris, who number 70, and those of Venizelos, who number 110—for the remaining 185 Deputies. Many of these are believed ready to go over to the Venizelos side should a crisis arrive in which the honor of the nation would be at stake—as, for example, too great a curtailment of Greek rights in the Treaty of Sèvres.

Although M. Gounaris had declared before he left Athens that the censorship of the press, posts and telegraphs would not be restored, things are happening in the capital which reach foreign lands only through travelers from Greece. The wide sweep made of the supporters of Venizelos in the civil service, particularly in the judiciary and the schools, was mentioned last month, but there are the strikes in the city transport service and on the provincial railways. In many services the places of the strikers have been taken by soldiers and marines. Delegations of strikers interview King Con-

stantine every day with a more and more determined air. He listens quietly, bids them be patient and usually sends them away in good humor. Yet the conditions of which they complain are not changed; so they come again.

#### CONSTANTINE'S DUAL ATTITUDE

This is one phase of the Constantine attitude—the approachable, democratic phase. There is another—the autocratic. It will be noticed that the cable dispatches speak of the *Bulé*, or one-chamber Parliament, as the "Assembly." That is because the King has proclaimed it to be the "National Assembly." There appears to be a grave question whether he could constitutionally do this. Outside the *Bulé* and his Government there is no power adequate to call him to account; within, there is no disposition to do so, for this reason: As a National Assembly, the present *Bulé* is the supreme authority in the State; it directed the Greek delegates at London; it can revise the Constitution, rescind laws and annul all local legislation. It does not, like other Parliaments, come to an end after a definite term, although, as the *Bulé*, it was elected last November for four years. It pronounces its own dissolution and so can sit as long as it desires, unless, indeed, the King should meanwhile declare it to be what it probably legally is, the *Bulé*, and so be able to dissolve it or allow it to run its legal term.

The matrimonial alliances just formed between the reigning houses of Rumania and Greece—of German and British origin on one side, and German, Russian and Danish on the other—are viewed much more seriously in Athens than they are in Bucharest. There Emperor Charles's note to King Ferdinand advising him to surrender, and adding, "We Kings must stick together," is still jeered at. At least some of the Athenians believe that what prestige they may lose with the Allies will be more than counterbalanced by their new gains through the royal alliances.

The weddings took place as per schedule: That of Prince George, Duke of Sparta, heir apparent to the Greek throne, and Princess Elizabeth of Rumania, at Bucharest on Feb. 27; that of Crown Prince Carol of Rumania to Princess Helen of Greece on March 10 at Athens.

# REVISING THE TURKISH TREATY

*Delegates from Greece and from the two rival Governments of Turkey meet with the Supreme Council in London—What each delegation seeks*

[PERIOD ENDED MARCH 12, 1921]

THE eagerly awaited New East conference, to which the Supreme Council had invited delegates from Greece and from the two Turkish Governments—the Constantinople and the Angora—to debate the expediency of maintaining the Treaty of Sèvres in its present form, was held in London, Feb. 21 to March 12. By the latter date the Greek delegates had reluctantly taken under advisement the proposal of the Supreme Council to accept certain changes in the status of Thrace and Smyrna, now occupied by Greece, while the Turkish delegation had agreed to accept these changes and other concessions, provided they "be adapted to conditions indispensable to the existence of free and independent Turkey."

Then while the Constantinople delegation awaited the Sultan's verdict on the rapprochement it had made with the Angora delegation of Nationalists, the latter went to Paris to negotiate directly with the French Government that portion of the agreement which pertained to the French occupation of Syria and Cilicia and peace with France.

While the conference met at St. James's Palace as often as the health of the Turkish Grand Vizier permitted, the Supreme Council interviewed the delegations separately at the British Foreign Office, 10 Downing Street. At the palace the delegations also had meetings when the Supreme Council was not present in an attempt to effect a *modus vivendi*.

## THE CHIEF CONFEREES

On the Supreme Council the British Prime Minister usually represented Great Britain, although at times the empire's representative was either Lord Curzon, Secretary for Foreign Affairs, or Robert G. Vansittart of the Foreign Office. France was usually represented by Premier Briand, with Philippe Berthelot as second French delegate, and Count de Saint-Aulaire, the present French Ambassador at London, as third.

Count Carlo Sforza, the Italian Foreign Minister, represented Italy. Baron Gonsuke Hayashi, completing the Supreme Council, represented Japan.

The Greek delegation was headed by the new Prime Minister, M. Kalogeropoulos, and with him was M. Gounaris, the Greek War Minister. Armed Tewfik Pasha, the Grand Vizier, headed the Sultan's delegation from Constantinople, while Bekir Sami Bey headed the delegation sent by Mustapha Kemal Pasha from the Turkish Nationalist capital at Angora. At certain meetings were heard Nubar Pasha, who spoke for the Armenians of Anatolia, and A. Haronian, who spoke for those of the Transcaucasia.

The influences which finally induced the British Prime Minister to call the Near East conference had been at work ever since Greece exchanged Venizelos for King Constantine last December, and since the continued resistance of the Nationalist Turks made it apparent that the Treaty of Sèvres could not be executed except through a prolonged struggle. Thus France, who was not willing that King Constantine should undertake to carry out the pledges given by Venizelos, began to negotiate a separate peace with the Turkish Nationalists, and expressed her willingness to have the terms of the treaty modified in favor of Turkey. Italy, who had been forced to surrender much to Venizelos, saw a chance to recover some of her prestige, if not her concessions in the Levant, also urged a review of the treaty.

The British Prime Minister, when he consented to the conference, however, declared to the House of Commons that the British Government could not repudiate the Constantinople Government, which it had brought into being, nor the Greek mandates, which it had aided in bestowing; suggestions for changes must come from others. Both the Turkish Governments were naturally ready to suggest these changes, while the Greek Government was just as naturally adverse to any change at all.

The above map shows the area left to the Turks in Europe and in Asia Minor by the Treaty of Sèvres, together with the Armenian frontier as laid down by President Wilson in accordance with the treaty. It also shows the territories within which France and Italy, in virtue of the Tripartite Agreement signed at Sèvres on Aug. 10, 1920, enjoy preferential claims to supply the staff required for the assistance of the Porte in organizing the local administration or police. The contracting powers in that agreement have undertaken not to apply for, nor to make or support, applications on behalf of their nationals for industrial concessions in the areas allotted to another power. In the Greek area—Ionia—the Greek Government is to enjoy administrative privileges for five years, and at the end of that time a plebiscite is to decide whether or not Ionia is to be annexed to Greece. For the zone of the Straits a special international régime is prescribed.

The treaty of peace between the allied powers and Turkey, which was signed at the porcelain establishment at Sèvres, France, Aug. 10, 1920, has never been ratified. When the draft was handed to the Sultan's representatives in Paris on May 11, 1920, it was described as designed, first, to set forth the conditions upon which the allied powers would make peace with Turkey, and, secondly, to establish those international arrangements which the Allies had devised for more stable and equitable conditions among the conflicting races of the old Turkish Empire.

### THE SULTAN AND KEMAL

The Sultan, importuned by the French and Italian members of the Inter-allied Commission, and, it is understood, so secretly advised by the British, was about again to importune Mustapha Kemal Pasha that the delegates from Constantinople and Angora to the London Conference form one Pan-Islamic body. Then he heard that the Turkish Nationalists had offered his throne with the Caliphate to his cousin, Osman Fouard Effendi. Osman Fouard is a grandson of Murad V. and his wife, who was the daughter of Abbas Hilmi, Khedive

of Egypt. Ordered to the Palace, where the Sultan is said to have expressed great anger, Osman Fouard said that he was sorry at the precipitate action of the Nationalists in calling him; but they could hardly be blamed, as all they desired was union, also moderation in order to secure peace. He added that he had several times declined importunities to go to Angora, believing that the interests of Turkey urged that he remain in Constantinople.

With the interview, however, had ended all hopes of a joint Turkish delegation to London. On Feb. 16, the Constantinople delegation departed, traveling by way of Paris. It was composed of Ahmed Tewfik Pasha, the Grand Vizier; Sefa Bey, a former Foreign Minister, and, on the way, was to pick up Osman Nizami Pasha, Minister at Rome. On the same day the Angora delegation, led by a man of great eloquence and learning, Bekir Sami Bey, was reported at Brindisi, on the Italian coast, having come from Adalia, the Italian zone port in Asia Minor. It should be remembered that the Italians, on account of their having been obliged to surrender much to the Greeks by the Treaty of Sèvres, were even more anxious to have the treaty revised

than were the French. The latter, aside from their hatred of the Constantine Greeks for their massacre of French soldiers at Athens in 1916, also desired peace with the Nationalists, whose supremacy at Constantinople would greatly weaken the prestige of the British, by whom alone the Sultan's Government had been created and kept in power.

### WHAT THE SULTAN WANTS

Both delegations came loaded with data and accompanied by a corps of secretaries. It was reported that the Sultan's delegation bore demands based on what they understood were Kemal Pasha's desires. The demands of the Sultan's party were these:

1. The economic independence of Turkey, without limiting its national and natural frontiers.
2. The Turks undertake to bestow upon the minority Christians all the guarantees of protection capable of safeguarding their liberty and their religion.
3. The Turks ask a modification of the clauses of the Treaty of Sèvres on certain economic, financial, naval and military questions.
4. The Turks ask for the financial aid of the Allies in rehabilitating Turkey.

Kemal's delegation was ordered to secure peace without surrendering in principle any of the Nationalist former demands; if possible in conjunction with the Sultan's delegation, and if not in London, then in Paris. There the Nationalists were prepared to concede to France economic, educational and constructive demands in Syria, provided the French evacuated Cilicia, surrendered Aintab and Ourfa, acknowledged full Turkish sovereignty over the Port of Alexandretta and the mutual use of the Hedjaz railway. This road, however, would be operated by the French under a mixed directorate. Their proposals to be presented at London, and to form the basis of their negotiations at Paris, were as follows:

### WHAT KEMAL WANTS.

1. That all countries inhabited by the Turks, excluding those in which Arabs are in the majority, should remain part of Turkey, and that within those areas the Turkish nation should exercise full sovereign rights.
2. That the Turks are willing to concede to minorities the same rights as are provided for in the minority clauses of other treaties, subject to themselves receiving similar rights in countries in which they are in a minority.
3. That the Turks are prepared to concede

freedom of navigation to all nations through the straits provided that Turkish sovereignty be unaffected.

Just before the departure of the Angora delegation it was reported in Constantinople that Enver Pasha had returned from negotiating with the Bolsheviki in Transcaucasia and had declared that they were not to be trusted. Kemal is reputed to have replied that he, too, distrusted Moscow, but that they suited his own policy well enough for the time being. He sent this message by Bekir Sami Bey to the London Conference:

In participating in the Conference of London we do not permit ourselves to prejudice the friendly relations existing between Turkey and Russia.

That does not mean that we adopt the principles of communism, for social conditions in Turkey do not permit of their application. The parties which were recently organized among us with this end in view have comprehended this truth and have ceased their activity.

A Pan-Turkish Congress was quietly held in Rome on the eve of the London Conference. Here secret delegates from both the Constantinople and the Angora Governments were present. A note containing the six resolutions adopted by the Congress was handed to the French Ambassador at Rome, M. Barrère, with the request that it be transmitted to M. Briand. This was done. A copy of the note was given to Count Sforza, the Italian Foreign Minister, on his departure for London. At Paris he and Briand are said to have viewed the joint demands favorably, although with reservations. The text of the six resolutions has not been revealed, but the preamble is known to state that they were adopted after complete understanding had been established between the Constantinople and Angora delegates.

Talaat Pasha, former Grand Vizier and Minister of Finance of Turkey, was assassinated in Charlottenburg, a suburb of Berlin, March 15. He was shot to death. The murderer, an Armenian student, who accosted Talaat in the street and then fired the fatal shot, was arrested. He also wounded Talaat's wife.

Talaat Pasha was walking with his wife when he was spoken to by the student, who approached him from behind. As Talaat turned to return the greeting the stranger fired at the former Grand Vizer's head, kill-

ing him instantly. A second shot struck Talaat's wife. The assassin threw away his weapon and attempted to escape, but a crowd of pedestrians captured him, beat him severely and then turned him over to the police. His name is said to be Salomon Teilirian.

Responsibility for the massacres of Armenians was thrown on Talaat Pasha and soon after his arrival in Berlin it was reported the Turkish Government would demand his extradition, along with that of other Turkish Generals.

## STABLE CONDITIONS IN SCANDINAVIA

*A temporary Cabinet crisis in Sweden—Swedish exchange rates the highest in Europe, in spite of a decline in business activities—Developments in Norway and Denmark*

[PERIOD ENDED MARCH 12, 1921]

THE political deadlock in Sweden prevented the formation of a Cabinet to take the place of the De Geer Ministry, which resigned in February on losing its support in both Chambers of the Riksdag. First, M. Goeste Tamm, Minister of Finance, resigned as a protest against the rejection by both Chambers of a bill to increase the import duty on coffee. The other Ministers soon followed, owing to the Government's failure to cope with the situation left by the Hjalmar Branting Cabinet of Socialists in October, 1920. The Swedish press assigned as reasons for this failure the futility of Baron de Geer's efforts to form a Government on a parliamentary basis, the appropriations of his Government for socialistic purposes, such as socialization of juries and establishing the eight-hour law and the neglect of measures to better the economic and trade situation.

King Gustav applied to Hjalmar Branting to form a new Ministry, but he declined, declaring his inability to do so with the Liberal minority left in the Riksdag by the defeat of the Socialists last Fall. Then the King requested, in turn, Admiral Lindman, leader of the Conservatives, and Professor Eden, leader of the Liberals, to undertake the task, but they also declined. Henning Elmquist, the outgoing Minister of Social Welfare, also was a candidate, but was opposed by the powerful Peasant Party in the Riksdag. Finally, King Gustav asked M. von Sydow, the Governor of Gothenburg, to form a new Cabinet, and he was expected to succeed in reconstructing the old Cabinet. It was understood that he would probably replace the former Minister

of Finance by M. Beskow, a bank Director, or by M. Knut Dahlberg, a Stockholm Alderman.

The exchange rate of the Swedish krone on March 12 was 22.70 cents, as against 20 cents a year ago; that of the Danish krone was 17.20 cents, as against 17 cents a year ago, and that of the Norwegian was 16. In all Scandinavian countries the par value of the krone is 26.8 cents. In Norway the krone is only a little lower proportionally than the Swiss franc; otherwise the Scandinavian rates are all proportionally higher than those of any other European coins. The German mark is almost at the lowest exchange rate; though its normal value is 23.8 cents, it is now quoted at 1.62 cents, as against 1.32 cents a year ago.

The low rate for the German mark is considered the key to the general depression of exchange for all European countries, and not until the indemnity question is settled does much rise in trade appear probable for other lands. The fact that the German mark has greater purchasing power at home than its exchange rate abroad and the cheapness of German labor have had a depressing effect on the trade and industry of Sweden and the other Scandinavian countries.

The "dumping" of German goods on Sweden, strangely enough, has caused Sweden to import more steel and pig iron than she has exported in the past year. This accounts for the closing down of many factories, slumps in business and financial stringency in Sweden toward the end of 1920, in contrast with the lively markets and great commercial activity that marked

the first half of the same year. Trade was hampered by falling prices for most articles of native manufacture, uncompensated by any fall in the price of labor and general costs. Increasing scarcity and dearness of money reduced purchasing power. Backed by cheaper labor and lower general costs, German goods could compete with Swedish even in the Swedish markets.

The monthly returns of the Board of Trade in London showed for the last half of 1920 an excess in the value of Swedish imports over exports which resulted in an unfavorable trade balance of increasing importance. The difficulty of financing this trade deficit, which was expected to reach about 1,000,000,000 kroner (£55,500,000), has been the chief cause of the financial strain in Sweden. The banks were selling credit for the purpose of meeting the indebtedness of the trade to foreign markets. Special cable reports recently received at the National City Bank of New York, however, show continued prosperity for Scandinavian banks.

Meanwhile many Swedish foundries had to close down or keep short hours, owing to the fact that German foundries could convert exported Swedish iron ore into pig iron and steel more cheaply and undersell the native product in Swedish markets. Scarcity and dearness of coal further hampered Swedish industry, necessitating the laying under contribution of the Swedish coal mines in Spitzbergen, and importation of coal from America, South Africa and Australia on account of the limitation of coal exports from England.

Negotiations continue for a trade agreement with Soviet Russia, but the education and intelligence of the middle classes have balked Bolshevism in Sweden, according to Professor Per Hugo, a delegate of the Swedish Royal Board of Education, sent recently to study conditions in the United States.

**DENMARK**—King Christian and Queen Alexandrina will visit the Faroe Islands, the Kingdom of Iceland, and the Colony of Greenland at the end of June, according to an official announcement. The visit to Iceland was arranged for last Summer, but had to be postponed because of the injury the King received when thrown from his horse before the solemn entry into Haderslev, in Danish Slesvig. The visit to Greenland is to celebrate the bicentenary of the

resettlement of that Dominion, in June, 1721, when the Norwegian missionary, Hans Egede, was surprised to find only Eskimos there, not knowing that Eskimos, in the sixteenth century, had destroyed the descendants of the colony of Eric the Red, who settled there in the ninth century. No Danish King has yet visited Greenland. Iceland was visited by King Christian IX. in 1874, when the millenary of the old Norse settlement of Iceland was celebrated, and the Icelanders were granted the Althing, their local Parliament. Later King Frederick VIII., with members of the Danish Rigsdag, went to Reykjavik in 1907, when the revision of the relationship between Denmark and Iceland began to be seriously discussed. Queen Alexandrina will be the first Danish Queen to visit those far northern countries known as Danish America.

For the last thirty years no criminal has undergone capital punishment in Denmark, though Danish courts may impose death sentences. Owing to the recent increase of murders, there is a growing public demand for more drastic penalties. Minister of Justice Rytter announced in March that hereafter justice will be meted out, in accordance with the strictest reading of the laws, to persons guilty of violence, robbery and similar crimes.

According to a cable received at Washington from Copenhagen, March 14, the Danes in Central Slesvig polled a very considerable number of votes in the elections March 13 to the German Reichstag and Landtag. In the city of Flensburg the Danes polled 3,670 votes out of 28,000, and in the city and county of Flensburg there was a total of 4,300 Danish votes. A Dane has been elected to the Council of the Flensburg County District. The Danish newspaper Flensburg Avis says that even the Danish optimists were not disappointed by the result of the election.

In the plebiscite in Central Slesvig last year the territory voted to remain under German rule, but there was a considerable Danish minority, especially in Flensburg and the northern rural districts.

**NORWAY**—In a general way, Norway's export trade had a satisfactory year in 1920. Sections of the electro-chemical industry prospered, owing to the immense resources of hydro-electricity, but mining and canning industries suffered. The rising

quotations in whale oil made the whaling industry satisfactory, but the other fisheries underwent depression, owing to the loss during the war of the South European markets. Norway's exports were sufficient to force up the exchange value of the krone. Lumber and wood pulp made considerable increases. In the middle of February a ship-

ping crisis was reported; vessels aggregating 700,000 tons, one-fifth of the total tonnage, were laid up. One-tenth of the national capital of Norway is invested in shipping, and the owners were appealing to the State, the banks and other organizations interested to aid in removing the difficulties.

## COUNTER-REVOLUTION IN RED RUSSIA

*Menace to Soviet Dictatorship in serious Outbreaks in Petrograd and Disaffection of the Baltic Fortress of Kronstadt—Desperate Food and Fuel Situation a Factor in Growing Spirit of Revolt—Crisis faced by Bolsheviks from the Inside*

[PERIOD ENDED MARCH 12, 1921]

WITH the defeat and rout of the armies of General Baron Peter Wrangel, the Moscow dictators believed Red Russia's military troubles were over, affording a breathing space in which to prepare the gigantic work of economic reconstruction. The events of the first two weeks of March, however, indicated that the Soviet's way to absolute power was not yet clear, and that the new enemy, coming from within, was more formidable than any before encountered. General strikes in Petrograd and Moscow led to serious street fighting, in which many were killed and injured. The Petrograd workers were joined by sailors from Kronstadt, and the holders of that important fortress on the Neva, a city in itself, finally arrested the Bolshevik commissaries within its walls, hoisted the flag of revolt, and declared war on the Soviet régime. The small fort across the river, known as Krasnaya Gorka (Red Mountain) at first threw in its lot with Kronstadt, but was finally recaptured by the Bolshevik forces, and its guns turned on Kronstadt. Battle by bombardment was still continuing when these pages went to press. Though the dictators at first belittled the insurrection, they finally realized the seriousness of the situation, especially as the counter-revolutionary movement was spreading all over European Russia and into Siberia. The Moscow rulers were taking extraordinary measures to

crush the movement, without any appreciable success.

The first intimation of revolt reached Riga (Latvia) on Feb. 25. Some 14,000 Government workers in Petrograd, including the printers, had gone on strike the day before. They demanded an increase bread ration, the convocation of a Constituent Assembly, and the right of free trade. Disorders followed, which Government troops were called out to suppress. Machine guns were turned on the demonstrators. The number of the strikers killed or wounded was estimated at 150. Deserters from the Red Army joined the revolt. Serious fighting lasted for several days. Then the strikers were joined by a detachment of sailors who had come up from Kronstadt on an icebreaker. Food troubles had already alienated the Kronstadt garrison, which on Feb. 26 revolted and seized the local Bolshevik commissaries as hostages. At the same time news came of a general strike in Moscow, which, as in Petrograd, had developed into a pitched battle, in which many persons had been killed and hundreds wounded.

The Soviet authorities, threatened with the overthrow of their power, took active steps to fortify both Moscow and Petrograd, and Lenin promised in a proclamation that the Government would use every possible means to relieve the food-shortage.

A proclamation issued by the Moscow Soviet and published in the official press blamed the trouble on the Socialists, the Russian aristocracy, and the capitalists and foreign bankers, all of whom it accused of plotting to overthrow the Government by fomenting uprisings in Siberia and the Ukraine, in order to paralyze the forwarding of food supplies to the proper centres.

### THE KRONSTADT REVOLT

Though M. Tchitcherin, the Bolshevist Foreign Minister, minimized the reports of the uprisings in wireless notes from the Kremlin to Litvinov, head of the Soviet Embassy at Reval (Esthonia), the seriousness of the situation soon became apparent. The revolt of the Kronstadt sailors was not suppressed, and the garrison of Krasnaya Gorka, across the river, joined the revolvers. All classes of citizens in Kronstadt were united in the uprising against the Soviet Government. A revolutionary committee had been organized, which later became a Provisional Government, chosen wholly from sailors and workmen without political affiliations. The Kronstadt leader was said to be a sailor named Petresenko. The Kronstadters and the garrison of Krasnaya Gorka turned their guns on the Petrograd-Moscow railway line around March 7. Eight ships of the Baltic fleet participated in the firing. Subsequently the Red forces regained possession of Krasnaya Gorka and bombarded Kronstadt. The bombardment was still continuing on March 15. The Revolutionary Committee in Kronstadt declared that it would fight until the Soviet rule was overthrown. Trotzky was preparing plans to blockade Kronstadt in spite of the presence in the fortress of large numbers of women and children.

Prominent Russians in Paris, who recently organized a new Constituent Assembly made up of delegates to the Assembly dispersed by the Bolsheviki, declared that this revolt heralded a formidable explosion which would sweep the Bolshevist dictators away. The latter were showing feverish energy. The famous Red cavalry leader, Budenny, had been ordered to bring his forces from the South. Infantry regiments from the South could not arrive without considerable delay, owing to the stoppage of the railway service. The Bolshevist

commanders were forcing unwilling soldiers to march against Kronstadt at the point of the bayonet. Fighting was still going on in parts of Petrograd on March 15. Several thousand Red soldiers had marched from the fortress of Oranienbaum and joined the besieged sailors. Food supplies were getting lower in Kronstadt, but hopes were entertained of procuring supplies from the American Red Cross at Viborg, Finland.

Interviewed in Moscow on March 13 by a correspondent of *The New York Herald*, Lenin called the Kronstadt revolt "foolish." Lenin's point of view was brought out as follows:

To seize an icebound island, containing very little food and absolutely dependent for all its supplies on Russia, was a foolish thing to do, although, to be sure, it was only part of a much larger plot which missed fire everywhere else. \* \* \* What can they do if they take Petrograd? Only one thing—starve. They will have a big, foodless city on their hands and we shall have more food for Moscow, as more supplies are coming in from Kuban and Siberia, and for a short time we will no longer have to feed Petrograd, which of late has been a strain on our resources owing to its remoteness from the grain districts. \* \* \* An advance on Moscow over the melting snow and swampy ground, and because of the torn-up railroads and devastated country, is impossible. The sailors at the head of this foolish mutiny at Kronstadt will be out of their element as soon as they lose sight of the Gulf of Finland. \* \* \* If they accept supplies from foreign powers they will brand themselves at once as traitors to Russia and the whole country will rise against them, just as it rose against Denikin and Kolchak. \* \* \* This Kronstadt affair in itself is a very petty incident. It no more threatens to break up the Soviet Government than the Irish disorders are threatening to break up the British Empire. It is simply a case of discontent among some foolish sailors, and this discontent is being utilized by some Czarist officers, reactionaries, Mensheviki, social revolutionaries and foreign powers.

### TRADE PACT SIGNED WITH BRITAIN

The long desired trade compact with Great Britain was signed in London on March 16. Certain clauses which had prevented agreement had been rewritten.

The agreement is essentially the same as the draft taken to Moscow by Leonid Krasin, Soviet Minister of Trade and Commerce, in January, the most important terms of which follow:

Each party agrees to refrain from hostile action or propaganda outside its borders

against the other's institutions or giving assistance or encouragement to any propaganda outside its own borders. The Soviet Government particularly agrees to refrain from any encouragement of Asiatic peoples to action against British interests, especially in Asia Minor, Persia, Afghanistan and India.

British subjects in Russia and Russians in Great Britain will be permitted to return to their homes if they so desire.

Each agrees not to impose any form of blockade against the other or any discriminations against trade not imposed on other foreign countries.

Ships in each other's harbors shall receive the treatment usually accorded foreign merchant ships by commercial nations.

The agreement provides for the clearance of mines from the Baltic and the approaches

to Russia, and the exchange of information regarding mines.

It provides for the admission to both countries of persons appointed to carry out the agreement, with the right to restrict them to specified areas and the exclusion of any who are persona non grata, and also free communication and exemption from taxation.

A renewal of telegraphic and postal facilities, including parcel post, will be arranged.

With regard to the seizure of Russian gold exported from Russia as payment for imports, the British Government does not concede the Soviet claim that such gold should be regarded as immune from seizure to pay British claims. The agreement leaves this as a matter to be settled by ordinary court procedure.

## ITALY MOVING SLOWLY FORWARD

[PERIOD ENDED MARCH 12, 1921]

**D**EBATES in the Chamber on the bread subsidy and the Government bill for checking up the "controllo" of the big businesses by the workers continued with gains for Signor Giolitti, the Premier, in the first, and a growing opposition organized and led by his predecessor, Signor Nitti, in the second. There was a project to reduce but not to abolish the bread subsidy, by having two grades of bread, one for the rich and one for the poor, as even the Socialists realized that to continue the subsidy at its present figure would mean national ruin.

The "controllo" bill pleases neither the workers nor the owners. Under its delay the workers in the big metallurgic plants, notably the F. I. A. T., became restive and refused to work on war material, although it had been ordered from abroad. The "controllo" allows the workers to know the destination of their work.

In the politico-labor field, the resolutions of the Federation of Labor, adopted at the Leghorn Congress condemning communism and unnecessary strikes, went far toward pacifying the smaller industries not to be affected by the "controllo."

The riots between the Communists and the Fascisti centred in the towns of Tuscany. There, however, early in March, the Communists were reported to have been frightened into obeying the laws, and so the Fascisti marched the streets in vain.

In the southern Province of Bari, though, the peasants attempted to do what the metallurgic workers did last Autumn. They seized farms instead of plants. This caused a rising of the Fascisti in the rural districts which was with difficulty put down by the carabinieri.

On March 13 the Government of Fiume solemnly informed Wilbur Keblinger, the American Consul accredited there, that it could not receive him, as the United States had not yet recognized the independence of the State of Fiume, which President Wilson labored so hard to place on the map.

**THE VATICAN**—At a secret consistory on March 7 the Pope announced the creation of six new Cardinals. One was Dennis J. Dougherty, Archbishop of Philadelphia, who succeeded the late Cardinal John Farley of New York. The others were Monsignor Francisco Vidal Barraquer, Archbishop of Tarragona, Spain; Juan Benoloch y Vivo, Archbishop of Burgos, Spain; Josef Schulte, Archbishop of Cologne; Michael von Fauhaber, Archbishop of Munich, and Francesco Ragoesi, Papal Nuncio at Madrid.

The Pope delivered an allocution on universal peace. He said, among other things, that such peace was impossible without renewal of the private life of individuals, as witness the disastrous civil strife [in Italy]

and the new seeds of discord sown by racial strifes [in Upper Silesia, Lithuania, Ukraina, Poland and other small countries]. He condemned crimes against morality and humanity concomitant to the renewal of

ancient struggles [alluding to Ireland]. He concluded that treaties would be futile unless citizens become permeated with sentiments of the justice and charity inculcated by Christian doctrines.

## SPAIN'S PREMIER ASSASSINATED

*Victim of the Sindicato Unico in revenge for General Anido's success in bringing its members to justice*

[PERIOD ENDED MARCH 12, 1921]

WHILE returning home from the Chamber, where he had been threatened with defeat, Premier Dato was shot dead by two members of the Sindicato Unico, Spain's terrible society of coercion by assassination, the character of which has several times been described in CURRENT HISTORY. This was on March 8. On the 13th one of his assailants, Pedro Mateo, was arrested and next day confessed the crime, naming Ramon Cassanova as his accomplice. The deed is supposed to have been a premature act in a great conspiracy embracing not only the Sindicato Unico of Spain but Communist bodies in France and Italy for the removal of the heads of State in all three countries on May 1.

A Paris dispatch dated Feb. 14 said that documents revealing such a conspiracy had been seized in Paris, Barcelona and Madrid; also that among the documents had been found "checks emanating from Berlin, and paid through an American transportation company." A more direct cause for the murder, however, it is believed, may be found in the fact that last Autumn Premier Dato sent General Martinez Anido as Military Governor to Barcelona. Anido was successful in uncovering the secret head of the Sindicato Unico, in sending thirty-six prominent to prison, and in scattering its rank and file. Shortly after the shadow of the dread society fell upon the capital, and the press united in demanding that Anido be made military dictator of the kingdom until he had stamped out the band of assassins.

The death of Señor Dato left politics in a confused state. Being Minister of Marine and not Minister of the Interior, he had lost many Deputies at the last election. For the

time he is succeeded as Premier by the Minister of the Interior, Count de Bugallal; although, on March 14, it was said that the King would ask the veteran Antonio Maura to form a Ministry.

The Spanish Cortes is made up of personal factions. In it Señor Dato, with 127 Deputies, had been principally opposed by Señor Maura with 22 and Juan de la Cierva, also with 22. All are nominally Conservatives. Then there are the Liberal leaders: Count Romanones with 21, the Marquis de Albuemas-Prietistas with 43, and Santiago Alba with 29. Then come a dozen personal factions, with one or two Deputies, and the Catalonian Regionalists with 17. The Cortes has been in session since Feb. 22; during the previous session Señor Dato had a total of 215 out of 409 members.

PORTUGAL—The Cabinet formed by Liberato Pinto on Dec. 2 resigned on Feb. 18. It had been weakened by the withdrawal of Julio Martins, Minister of Marine, but more especially by that of Cunha Leal, who had attempted to solve the distressing problem of national finance in a fantastic way. Senhor Leal's resignation was simply due to a point of order raised between himself and the President of the Chamber.

From Feb. 13 until Feb. 23 the President of the republic, Senhor Almeida, tried in vain to find Pinto's successor. The difficulty lay in the group divisions of Parliament. He then summoned a Council of State to discuss a dissolution. At the conference on Feb. 24 several names were put forward as Prime Minister, but all were objected to by one party or another. At length Senhor Bernardino Machado was proposed and accepted by all the party leaders.

**COLONEL GEORGE HARVEY**

*United States Ambassador to Great Britain, succeeding Mr. John W. Davis*

(© Harris & Ewing)

PRESIDENT HARDING DELIVERING HIS FIRST MESSAGE BEFORE THE JOINT SESSION OF CONGRESS, IN THE HOUSE OF REPRESENTATIVES, APRIL 12, 1921. BEHIND HIM ARE SEATED VICE PRESIDENT COOLIDGE (LEFT) AND SPEAKER GILLETT

# FOREIGN POLICY OF THE UNITED STATES

*Soviet Russia rebuffed—Germany's responsibility toward Mandates—League of Nations rejected—State of war with Germany to cease—Revised treaty to be negotiated*

**A**MONG the problems inherited by the Harding Administration few involved a severer tax on statesmanship than those bearing on foreign relations. Grave questions were at issue with Russia, Japan and Great Britain; the United States was still technically at war with Germany and Austria-Hungary; its exact attitude remained to be defined toward a host of issues springing from the World War.

The Russian Soviet Government on March 20 sent to the United States Government a formal appeal for the conclusion of a trade compact by negotiation. From the point of view of the Soviet authorities the message was adroitly timed. It was an attempt to break down American hostility to the re-opening of relations by an appeal to the new Administration, which, it was assumed, might be readily inclined to reverse the policy of its predecessor. Moreover, it was thought that the ratification by Great Britain of the trade treaty negotiated by Leonid Krassin and Lloyd George would favorably influence President Harding.

The text of the Russian note follows:

Reval, March 21, 1921.

TO THE CONGRESS OF THE UNITED STATES AND  
HIS EXCELLENCY, PRESIDENT HARDING, WASHINGTON:

*I have the honor to transmit, as instructed by my Government, the following message.*

LITVINOV, Plenipotentiary,  
Representative of Russian Republic to Esthonia.

March 20, 1921.

From the first days of her existence Soviet Russia had nourished the hope of the possibility of a speedy establishment of friendly relations with the great Republic of North America and had firmly expected that intimate and solid ties would be created between the two republics to the greater advantage of both. At the time when the Entente Powers had begun their invasion of Soviet Russia unprovoked and without declaration of war the Soviet Government repeatedly addressed itself to the American Government with the proposal to adopt measures for the cessation of bloodshed. Even when the American troops, together with the

others, participated in the attack upon Soviet Russia the Government of the Russian Republic still expressed the hope of a speedy change of America's policy toward her, and demonstrated this by its particularly considerate treatment of the Americans in Russia. But President Wilson, who, without cause and without any declaration of war, had attacked the Russian Republic, showed during his whole administration a growing hostility towards the Russian Republic. Soviet Russia hopes that the American Republic will not persist in obdurately following this path and that the new American Government will clearly see the great advantage for the two republics of the re-establishment of business relations and will consider the interests of both peoples which imperatively demand that the wall existing between them should be removed. The Soviet Republic, entirely absorbed in the work of internal reconstruction and of building up its economic life, has not the intention of intervening in the internal affairs of America, and the All Russian Central Executive Committee makes herewith a categorical declaration to this effect. At the present time, after Soviet Russia has concluded treaties and established regular relations with numerous States, the absence of such relations with America seems to Soviet Russia particularly abnormal and harmful to both peoples. The All Russian Central Executive Committee addresses to you the formal proposal of opening trade relations between Russia and America, and for that purpose the relations between the two republics have to be on the whole regularized.

The All Russian Central Executive Committee therefore proposes to send a special delegation to America which will negotiate upon this matter with the American Government in order to solve the question of business relations and of resumption of trade between Russia and America.

M. KALENIN,  
President of the All Russian Executive Committee.

P. ZALUTSKY, Secretary.

## REPLY FROM WASHINGTON

Secretary of State Hughes on March 25 sent by cable to the American Consul at Reval, for transmission by him to Litvinov, the following reply:

The Government of the United States views

with deep sympathy and grave concern the plight of the people of Russia and desires to aid by every appropriate means in promoting proper opportunities through which commerce can be established upon a sound basis. It is manifest to this Government that in existing circumstances there is no assurance for the development of trade, as the supplies which Russia might now be able to obtain would be wholly inadequate to meet her needs, and no lasting good can result so long as the present causes of progressive impoverishment continue to operate. It is only in the productivity of Russia that there is any hope for the Russian people, and it is idle to expect resumption of trade until the economic bases of production are securely established. Production is conditioned upon the safety of life, the recognition by firm guarantees of private property, the sanctity of contract and the rights of free labor.

If fundamental changes are contemplated, involving due regard for the protection of persons and property and the establishment of conditions essential to the maintenance of commerce, this Government will be glad to have convincing evidence of the consummation of such changes, and until this evidence is supplied this Government is unable to perceive that there is any proper basis for considering trade relations.

This reply by the new American administration was an obvious rebuff, and was accepted as such by the Bolshevik leaders. One comment made by Jaan Antonovitch Behrein, Soviet Minister to Finland since the conclusion of Moscow's treaty with Finland, declared that, undiscouraged by this rejection, his Government would continue its efforts for trade with America. It was planned to secure the support of prominent American business men desirous of concessions. New overtures would be made officially whenever it became apparent that the attitude of the American Government had undergone a change. Whatever came, he declared, Russia would never give up communism and revert to the old system of private property.

Leonid Krassin, the Bolshevik envoy at London, expressed confidence that as soon as America became convinced that "the very existence of the Russian Soviet Republic is not propaganda, we will be able to establish relations to the mutual interest."

So confident had the Russian authorities been of the success of their overtures that, it was reported, large quantities of Russian gold were in transit to the United States to cover expected trade transactions. This was said to be in the form of gold ingots,

stamped with the official seal of the Swedish Mint.

Raymond T. Baker, Director of the Mint of the United States, upon hearing of the gold shipment, stated that the policy of the United States Mint and Assay Offices had undergone no change. Gold stamped with the seal of the Mint of any friendly country could not be rejected, but Russian gold would still be refused.

The reply of Secretary Hughes to the Soviet proposal was hailed in Paris with gratification.

### VIVIANI'S MISSION

An event of importance in its bearing on our foreign relations with the official visit to this country—as Envoy Extraordinary of France—of René Viviani, ex-Premier, who reached New York, March 28. The ostensible purpose of his visit was to present his country's respects to President Harding. Developments indicated that M. Viviani was deeply concerned on behalf of his Government in securing the moral support of this country in the matter of the German reparations. It was also apparent that he viewed with apprehension the prospect that the United States might make a separate peace with Germany. Evidence was given that France would view with gratification this country's ratification of the Treaty of Versailles with almost any modifications and reservations that it might think proper, and that, in any event, our co-operation was earnestly desired in the effort to bring Europe out of the chaos that the World War had produced. He met with a warm reception and his views were given careful consideration, but the policy of the Administration with respect to foreign affairs had been formulated before his arrival and his visit effected no apparent change.

### GERMANY

Immediately preceding the arrival of M. Viviani a note was dispatched by Secretary Hughes on March 29 to the American Commissioner in Berlin to be communicated to Dr. Walter Simons, the German Minister for Foreign Affairs. The note was in the nature of a reply to an informal memorandum of Dr. Simons, which had been telegraphed to the State Department by the

American Commissioner, Loring Dresel, under date of March 23.

Secretary Hughes's note follows:

The American Government is pleased to note in the informal memorandum of Dr. Simons the unequivocal expression on the part of the German Government of its desire to afford reparation up to the limit of German ability to pay. This Government stands with the Governments of the Allies in holding Germany responsible for the war and therefore morally bound to make reparation, so far as may be possible. The recognition of this obligation, implied in the memorandum of Dr. Simons, seems to the Government of the United States the only sound basis on which can be built a firm and just peace, under which the various nations of Europe can achieve once more economic independence and stability. This Government believes that it recognizes in the memorandum of Dr. Simons a sincere desire on the part of the German Government to reopen negotiations with the Allies on a new basis, and hopes that such negotiations, once resumed, may lead to a prompt settlement which will at the same time satisfy the just claims of the Allies and permit Germany hopefully to renew its productive activities.

The important parts of the German memorandum which elicited this reply are herewith given:

It is the earnest desire of the Government of Germany to reach an accord with the governments of the allied and associated powers, and it is sincere in its purpose to meet their requirements as far as possible. That an agreement was not reached at the Conference of London on the question of reparations is a matter of extreme regret to the Government of Germany. In their effort to reach an agreement the delegates from Germany went far beyond the limits considered possible for Germany, in the judgment of an overwhelming majority of her economic experts.

It has been asserted that Germany is reluctant to recognize her obligation to make reparations. This is not correct. It is entirely clear, not only to the Government of Germany but to the German people also, that Germany must make reparation to the limit of her ability to pay. This realization on the part of Germany will not be altered in any way by any changes which may take place in the internal politics of the country. Every responsible group, particularly the workmen, of Germany are imbued with the determination to do all that lies in their power to help in reconstructing the regions which have been devastated. Fundamental to this determination is the sober conviction on the part of responsible circles in Germany that an early removal of all traces of the devastation caused in France is to the best interest of Germany. It is the consensus of opinion, also, that the proposals made by Ger-

many in regard to reparations must consider fully the financial necessities of the allied and associated governments, and particularly of France.

At this point arguments were introduced relative to some methods of reparation that had been proposed. Complaint was made against France for not accepting Germany's offer to reconstruct the devastated regions of Northern France with German labor and materials. Attempt was made to show that the establishment of an actual sum of cash money in foreign exchange of important proportions would only be possible for Germany by an increase in exports that would menace the economic life of other countries. That her former opponents should participate in the returns from German industry was pronounced not feasible, because the proceeds would be in paper marks, valueless to foreign creditors. Therefore, the note concluded:

An international loan, in favor of which the allied and associated governments would waive their general mortgage, constitutes the only solution of the problem. The Government of Germany is prepared to offer the necessary securities for the safety of such a loan. It is the opinion of the German Government that if the loan were properly organized and offered, and if those who have evaded taxation be granted a general amnesty, the large sums of German capital which have been secretly withdrawn from Germany could again be drawn in for the loan and thereby become available for the reparations. It has been reiterated by the allied and associated governments that the situation of Germany is better than that of many of the allied and associated countries, due to the fact that Germany has no foreign debts. Germany would not be unwilling to assume the obligation of the interest and the amortization of the foreign debts of the allied and associated powers, within the limit of her capacity, should this measure be entertained by the allied and associated Governments and their creditors.

Germany stands ready to meet any proposal which appears feasible for the solution of the economic and financial problems of Europe, and would invite the examination by unbiased experts of its own ability to make payment. It is the opinion of Germany that the heavy weight of debt now borne by all the States which were participants in the World War, and the damages which were wrought in the course of that war, cannot be laid upon the shoulders of any single people. Germany believes also that a policy of duress and coercion will not bring about the reconstruction of international economic life, and that only by way of peaceful discussion and understanding can such reconstruction be

obtained. The German Government considers it important to give, with solemn emphasis, the assurance that for its part it is honestly willing to follow the path which it has suggested.

SIMONS.

The note of Secretary Hughes was received with unqualified satisfaction by the allied Governments, by whom it was regarded as greatly strengthening the pressure that could be brought to bear upon Germany to fulfill the reparations demands. Conversely, it produced depression in Germany, which had clung to the hope that the United States would either assume a neutral attitude or aid materially in persuading the Allies to modify their requirements.

### PROTEST AGAINST THE YAP MANDATE

What may prove to be an epoch-making document, defining as it does the attitude of the United States on the whole subject of mandates, was the note addressed by the United States Secretary of State to Great Britain, France, Italy and Japan on April 2. The note to Japan contained additional paragraphs referring to previous correspondence between the two Governments. This was not made public. The note to the other powers follows:

April 2, 1921.

With respect to the mandate to Japan, purporting to have been confirmed and defined in its terms by the Council of the League of Nations, of the German possessions in the Pacific Ocean, lying north of the equator, this Government deems it appropriate to state the fundamental basis of its representations and the principles which, in its view, are determinative.

It will not be questioned that the right to dispose of the overseas possessions of Germany was acquired only through the victory of the allied and associated powers, and it is also believed that there is no disposition on the part of the British Government to deny the participation of the United States in that victory. It would seem to follow necessarily that the right accruing to the allied and associated powers through the common victory is shared by the United States and that there could be no valid or effective disposition of the overseas possessions of Germany, now under consideration, without the assent of the United States. This Government must therefore point out that, as the United States has never vested either the Supreme Council or the League of Nations with any authority to bind the United States or to act on its behalf, there has been no opportunity for any decision which could be deemed to affect the rights of the United States. It may also be observed that the

right accruing to the United States through the victory in which it has participated could not be regarded as in any way ceded or surrendered to Japan, or to other nations, except by treaty, and that no such treaty has been made.

The fact that the United States has not ratified the Treaty of Versailles cannot detract from rights which the United States had already acquired, and it is hardly necessary to suggest that a treaty to which the United States is not a party could not affect these rights. But it should be noted that the Treaty of Versailles did not purport to secure to Japan or to any other nations any right in the overseas possessions of Germany, save as an equal right therein should be secured to the United States. On the contrary, Article 119 of the Treaty of Versailles provides: "Germany renounces in favor of the principal allied and associated powers all her rights and titles over her oversea possessions." It will not be questioned that one of the "principal allied and associated powers" in whose favor Germany renounces her rights and titles is the United States. Thus, not only could the position of the Government of Japan derive no strength from the Treaty of Versailles or from any discussions preliminary thereto, but the terms of that treaty confirm the position of the Government of the United States.

Further, the draft convention relating to the mandate for the German concessions in the Pacific Ocean, north of the equator, which was subsequently proposed, proceeded in the same view, purporting on behalf of the United States as one of the grantors to confer the mandate upon Japan, thus recognizing the right and interest of the United States and the fact that the proposed action could not be effective without the agreement of the United States as one of the principal allied and associated powers.

As the United States did not enter into this convention, or into any treaty, relating to the subject, this Government is unable to understand upon what grounds it was thereafter attempted to confer the mandate without the agreement of the United States. It is manifest that the League of Nations was without any authority to bind the United States, and that the confirmation of the mandate in question, and the definition of its terms, by the Council of the League of Nations in December, 1920, cannot be regarded as having efficacy with respect to the United States.

It should be noted that this mandate not only recites Article 119 of the Treaty of Versailles, to the effect that "Germany renounced in favor of the principal allied and associated powers all her rights over her oversea possessions, including therein the groups of islands in the Pacific Ocean, lying north of the equator," but also recites that "the principal allied and associated powers agreed that in accordance with Article 22, Part I (Covenant of the League of Nations), of the said treaty, a mandate

should be conferred upon His Majesty, the Emperor of Japan, to administer the said islands and have proposed that the mandate should be formulated "as set forth. While this last quoted recital, as has already been pointed out in previous communications by this Government, is inaccurate in its terms, inasmuch as the United States as one of the

that the so-called decision of May 7, 1919, by the Council of Four assigned to Japan a mandate for the Island of Yap, was conveyed to me by Mr. Norman Davis in October last. I then informed him that I had never consented to the assignment of the Island of Yap to Japan.

"I had not previously given particular attention to the wording of the Council's minutes of May 7, 1919, which were only recently called to my attention. I had, on several occasions prior to the date mentioned, made specific reservations regarding the Island of Yap, and had taken the position that it should not be assigned under mandate to any one power but should be internationalized for cable purposes. I assumed that this position would be duly considered in connection with the settlement of the cable question and that it therefore was no longer a matter for consideration in connection with the peace negotiations. I never abandoned or modified this position in respect to the Island of Yap, and I did not agree, on May 7, 1919, or at any other time, that the Island of Yap should be included in the assignment of mandates to Japan.

"As a matter of fact, all agreements arrived at regarding the assignment of mandates were conditional upon a subsequent agreement being reached as to the specific terms of the mandates, and further, upon their acceptance by each of the principal allied and associated powers. The consent of the United States is essential both as to assignments of mandates and the terms and provisions of the mandates, after agreement as to their assignment or allocation.

"The consent of the United States, as you know, has never been given on either point, as to the Island of Yap."

Apart from the expressed purpose of President Wilson in relation to the Island of Yap, inasmuch as the proceedings of the Supreme Council on May 7, 1919, did not, and in the nature of things could not, have finality, this Government is unable to perceive any ground for the contention that it was the duty of this Government to make immediate protest with respect to the so-called decision of May 7, 1919, and certainly it cannot be said that an omission to do so operated as a cession of its rights. It may be added, however, that when the matter was brought to the attention of this Government in connection with the Conference on Communications in October last, this Government informed the Government of Great Britain and other Governments (by notes of Nov. 9, 1920) that it was the understanding of this Government that the Island of Yap was not included in the action of May 7, 1919. Its position was subsequently stated at length.

It is a cause of regret to this Government, that after and despite this protest, there should have been any attempt to pass upon drafts of mandates purporting to deal with the Pacific Islands including Yap, and that a mandate should have been approved, or attempted to be put into effect, which, while

(Wide World Photos)

RENE VIVIANI

*Special Envoy from the French Republic to the United States*

principal allied and associated powers had not so agreed and proposed, the recital again recognizes the necessity of the participation of the United States in order to make the proposed disposition effective.

As, in the absence of any treaty with the United States relating to the matter, there was no decision of May 7, 1919, binding the United States, it is deemed to be unnecessary again to examine the brief minute of the meeting of the Supreme Council on that date. It may, however, be proper to say that the minute of this meeting, although obviously without any finality, could not properly be construed without due regard to the other proceedings of the Supreme Council and without taking account of the reservations which President Wilson had already made in the previous meetings of the Supreme Council on April 21, April 30 and May 1, 1919. The attitude of President Wilson is sufficiently shown by the following statement which he made to the Department of State on March 3, 1921:

"I beg to return the note received yesterday from the Japanese Government, which I have read, in relation to the proposed mandate covering the Island of Yap.

"My first information of a contention

purporting to be made in the name of the United States, was without the assent of the United States. This Government trusts that this action, which it must assume was taken under a misapprehension, will be reconsidered.

In particular as no treaty has ever been concluded with the United States relating to the Island of Yap, and as no one has ever been authorized to cede or surrender the right or interest of the United States in the island, this Government must insist that it has not lost its right or interest as it existed prior to any action of the Supreme Council or of the League of Nations, and cannot recognize the allocation of the island or the validity of the mandate to Japan.

This Government, as has been clearly stated in previous communications, seeks no exclusive interest in the Island of Yap, and has no desire to secure any privileges without having similar privileges accorded to other Powers, including, of course, Japan, and relying upon the sense of justice of the British Government and of the Governments of the other allied and associated powers, this Government looks with confidence to a disposition of the matter whereby the just interests of all may be properly conserved.

#### JAPAN'S ATTITUDE BEFORE THE NOTE

Prior to the dispatch of the latest note of the United States State Department on the subject of the Yap mandate, a statement had been issued by the Foreign Office at Tokio on March 25 which, while avoiding the real crux of the American protest—exclusive control by Japan of cable communications—set forth the views of the Japanese Government on Yap and the other islands allotted to Japan by mandate. It was in part as follows:

In accordance with the Supreme Council's resolution in 1919 and the fixing by the League of Nations Council of the terms of the mandate in December of last year, Japan is now preparing a suitable administrative organ for promoting the moral and material happiness and the social progress of the inhabitants, and will shortly abolish the military administration. Recent rumors about fortifications and naval activity are entirely unfounded, and it is very regrettable that newspapers publish such fabrications. There is apparently a tendency to exaggerate the economic and strategic value of the islands and to attach undue importance to Japan's occupation, but the total area is less than that of Rhode Island.

Economically the islands are scarcely worth mentioning, and strategically they are unimportant, because Japan, true to the spirit of mandatory rule, has disavowed any

intention to establish military or naval bases and fortifications. The Island of Yap is one-third of Guam's area, while its harbor will barely accommodate three small steamers. Except for its cable facilities Yap is worthless and barren soil in mid-ocean.

One might as well say America controlled the Atlantic through the purchase of the Virgin Islands as to say that by means of the Mandate Islands Japan staked out a set area of 4,000,000 square miles from Kamchatka to the South Pacific. There have been certain changes in the administrative posts owing to climatic and communication considerations, but rumors of strategic preparations are groundless.

#### THE FRENCH REPLY

A reply from France to Secretary Hughes's note on Yap, made public on April 14, stated that, as the Washington communication had gone to the four allied Governments, France would not formally reply until after the next meeting of the allied Premiers. While withholding a distinct pledge to adopt the American viewpoint, the tone of the note was friendly. Significance was attached to the statement in the note that the Japanese Government had official knowledge of the American reservation on Yap. The part of the note bearing on this point read as follows:

Already, as your Excellency is aware, the Government of the republic has done all that it could do to give in this matter aid to the American Government. In the note of Feb. 18, after having stated that the decision of May 7, 1919, did not admit of any restriction so far as the mandate attributed to Japan in the islands of the North Pacific was concerned, my department submitted to your Embassy that President Wilson and Mr. Lansing had nevertheless, during a previous meeting, formulated, in the presence of the representative of Japan, categorical reservations on the subject of the Island of Yap, that Baron Makino did not refuse to allow the question raised by the United States to be brought under discussion, and that in consequence the Japanese Government had cognizance of the American reservations. The note concluded that there was therein a basis for renewal of the conversations between the United States and Japan which the Government of the Republic would be happy to see lead to a satisfactory result.

It was stated that a preliminary reply had been received by the State Department from Great Britain on April 11, but up to April 15 had not been made public.

On April 12, the day after the convening of the Sixty-seventh Congress in special session, President Harding in the House of

Representatives read his message to the assembled members of the Senate and the House. In it he enunciated his domestic and foreign policy. Regarding the latter, he advocated ending the state of war with Germany by Congressional resolution; rejected the League of Nations, but committed his Administration to a plan of co-operation with foreign Governments for the rehabilitation of Europe, and to the formation of a non-political association of nations.

The President indicated that the Versailles Treaty, minus the League covenant and modified by reservation or otherwise, so as to preserve the United States from commitments to action that might be considered embarrassing, if this could be done, would be resubmitted to the Senate. He made it clear that this Government would stand with the Allies in compelling Germany to live up to her treaty obligations, and would assist them also in carrying out economic measures covered by the Versailles Treaty, even where America was not directly concerned in those measures.

#### PRESIDENT HARDING'S MESSAGE

The essential parts of the President's address dealing with foreign relations follow:

In the existing League of Nations, world governing with its super-powers, this Republic will have no part. There can be no misinterpretation, and there will be no betrayal of the deliberate expression of the American people in the recent election; and, settled in our decision for ourselves, it is only fair to say to the world in general, and to our associates in war in particular, that the League covenant can have no sanction by us.

The aim to associate nations to prevent war, preserve peace and promote civilization our people most cordially applauded. We yearned for this new instrument of justice, but we can have no part in a committal to an agency of force in unknown contingencies; we can recognize no super-authority.

Manifestly the highest purpose of the League of Nations was defeated in linking it with the treaty of peace and making it the enforcing agency of the victors of the war. International association for permanent peace must be conceived solely as an instrumentality of justice, unassociated with the passions of yesterday, and not so constituted as to attempt the dual functions of a political instrument of the conquerors and of an agency of peace. There can be no prosperity for the fundamental purposes sought to be achieved by any such association so long as it is an organ of any particular treaty, or committed to the attainment of the special aims of any nation or group of nations.

The American aspiration, indeed, the world aspiration, was an association of nations, based upon the application of justice and right, binding us in conference and co-operation for the prevention of war and pointing the way to a higher civilization and international fraternity in which all the world might share. In rejecting the league covenant and uttering that rejection to our own people, and to the world, we make no surrender of our hope and aim for an association to promote peace in which we would most heartily join. We wish it to be conceived in peace and dedicated to peace, and will relinquish no effort to bring the nations of the world into such fellowship, not in the surrender of national sovereignty but rejoicing in a nobler exercise of it in the advancement of human activities, amid the compensations of peaceful achievement.

In the national referendum to which I have adverted we pledged our efforts toward such association, and the pledge will be faithfully kept. In the plight of policy and performance, we told the American people we meant to seek an early establishment of peace. The United States alone among the allied and associated powers continues in a technical state of war against the Central Powers of Europe. This anomalous condition ought not to be permitted to continue.

To establish the state of technical peace without further delay, I should approve a declaratory resolution by Congress to that effect, with the qualifications essential to protect all our rights. Such action would be the simplest keeping of faith with ourselves, and could in no sense be construed as a desertion of those with whom we shared our sacrifices in war, for these powers are already at peace.

Such a resolution should undertake to do no more than thus to declare the state of peace, which all America craves. It must add no difficulty in effecting, with just reparations, the restoration for which all Europe yearns, and upon which the world's recovery must be founded. Neither former enemy nor ally can mistake America's position, because our attitude as to responsibility for the war and the necessity for just reparations already has had formal and very earnest expression.

It would be unwise to undertake to make a statement of future policy with respect to European affairs in such a declaration of a state of peace. In correcting the failure of the Executive, in negotiating the most important treaty in the history of the nation, to recognize the constitutional powers of the Senate we would go to the other extreme, equally objectionable, if Congress or the Senate should assume the function of the Executive. Our highest duty is the preservation of the constituted powers of each, and the promotion of the spirit of co-operation so essential to our common welfare.

It would be idle to declare for separate treaties of peace with the Central Powers on the assumption that these alone would be

adequate, because the situation is so involved that our peace engagements can not ignore the Old World relationship and the settlements already effected, nor is it desirable to do so in preserving our own rights and contracting our future relationships.

The wiser course would seem to be the acceptance of the confirmation of our rights and interests as already provided and to engage under the existing treaty, assuming, of course, that this can be satisfactorily accomplished by such explicit reservations and modifications as will secure our absolute freedom from inadvisable commitments and safeguard all our essential interests.

With the super-governing League definitely rejected, and with the world so well informed, and with the status of peace proclaimed at home, we may proceed to negotiate the covenanted relationships so essential to the recognition of all the rights everywhere of our own nation and play our full part in joining the peoples of the world in the pursuits of peace once more. Our obligations in effecting European tranquillity, because of war's involvements, are not less impelling than our part in the war itself. This restoration must be wrought before the human procession can go onward again. We can be helpful because we are moved by no hatreds and harbor no fears. Helpfulness does not mean entanglement, and participation in economic adjustments does not mean sponsorship for treaty commitments which do not concern us and in which we will have no part.

### THE KNOX PEACE RESOLUTION

The day following the President's declaration of foreign policy, Senator Knox of Pennsylvania offered in the Senate his resolution declaring the war between the United State and the Teutonic powers at an end. It has been revised to meet the President's views, and was merely a declaratory announcement of the ending of the war, with a provision for preserving all the rights obtained by the United States under the armistice of Nov. 11, 1918, and the Versailles Treaty.

The revised resolution read as follows:

That the joint resolution of Congress, passed April 6, 1917, declaring a state of war to exist between the Imperial German Government and the Government and people of the United States, and making provisions to prosecute the same, be, and the same is hereby, repealed, and said state of war is hereby declared at an end:

Provided, however, that all property of the Imperial German Government, or its successor or successors, and all of the German nationals, which was, on April 6, 1917, or has since that date come into possession or under

the control of the Government of the United States or any of its officers, agents, or employes, from any source or by any agency whatsoever, shall be retained by the United States and no disposition thereof made, except as shall have been heretofore, or specifically hereafter be provided by Congress, until such time as the German Government has, by a treaty with the United States, ratification whereof is to be made by and with the advice and consent of the Senate, made suitable provisions for the satisfaction of all claims against the German Government of all persons, wheresoever domiciled, who owe permanent allegiance to the United States and who have suffered, through the acts of the German Government or its agents since July 31, 1914, loss, damage, or injury to their persons or property, directly or indirectly, whether through the ownership of shares of stock in German, American, or other corporations, or in consequence of hostilities or of any operations of war, or otherwise, and also provisions granting to persons owing permanent allegiance to the United States, most favored nation treatment, whether the same be national or otherwise, in all matters affecting residence, business, profession, trade, navigation, commerce and industrial property rights, and confirming to the United States all fines, forfeitures, penalties and seizures imposed or made by the United States during the war, whether in respect to the property of the German Government or German nationals, and waiving any and all pecuniary claims based on events which concurred at any time before the coming into force of such treaty, any existing treaty between the United States and Germany to the contrary notwithstanding.

Section 2. That until by treaty or act or joint resolution of Congress it shall be determined otherwise, the United States, although it has not ratified the Treaty of Versailles, reserves all of the rights, powers, claims, privileges, indemnities, reparations or advantages to which its nationals have become entitled, including the right to enforce the same under the terms of the armistice signed Nov. 11, 1918, or any extensions or modifications thereof or which under the Treaty of Versailles have been stipulated for its benefit or to which it is entitled as one of the principal allied and associated powers.

Section 3. That the joint resolution of Congress approved Dec. 7, 1917, "declaring that a state of war exists between the Imperial and Royal Austro-Hungarian Government and the Government and the people of the United States are making provisions to prosecute the same," be and the same is hereby repealed, and said state of war is hereby declared at an end.

The resolution was referred to the Committee on Foreign Relations.

# THE MONTH IN THE UNITED STATES

*Convening of Sixty-seventh Congress—Aid for veterans—Army promotions—Supreme Court decisions—Railroad problems—Emergency Tariff Bill—Decline in prices—New Ambassadors—Prohibition enforcement—President Harding's message*

[PERIOD ENDED APRIL 15, 1921]

**A** SPECIAL board was appointed by President Harding on March 29 to map out plans to aid American veterans disabled in the World War and to provide for the dependents of men killed in the conflict. It was announced at the

**AID FOR VETERANS** was announced at the White House that the committee, composed of nine men and two women, would investigate the War Risk Insurance Bureau and the Board for Vocational Training and make recommendations not only regarding the conduct of these activities but looking into the general scheme of caring for ex-service men. The plan was to have the committee make suggestions which the President could submit to Congress as the basis for future legislation.

The committee was headed by General Charles G. Dawes of Chicago and included among its members the former and present Commanders of the American Legion, Franklin D'Olier and Colonel F. W. Galbraith Jr. The women members were Mrs. Douglas Robinson and Mrs. Henry R. Rea.

\* \* \*

**T**HE appointment of twelve new Major Generals was approved by the President, April 13, on the recommendation of Secretary Weeks. The list was

**ARMY PROMOTIONS** headed by Brig. Gen. Clarence R. Edwards. Others included were Big. Gens.

James W. McAndrews, John L. Hines, Henry T. Allen, David C. Shanks, Adelbert Cronkhite, William M. Wright, George W. Read, Charles H. Muir, Charles T. Menoher, William G. Haan and George Bell Jr.

In order to promote General Edwards it was necessary to strike the name of some other officer from the list of Major Generals nominated by former President Wilson, and whose appointments were held up by the Senate so as to afford the new Administration an opportunity to deal with the question. Secretary Weeks recommended that the name of Brig. Gen. Omar

Bundy, now commanding the Seventh Corps area with headquarters at Fort Crook, Neb., be eliminated.

General Edwards commanded the Twenty-sixth (New England) Division in France, and has for several years been the ranking Brigadier General in the army. He has been a Brigadier General since 1912, a period of more than eight years, during which one officer after another had been promoted over his head to be Major General.

Major Gen. Hunter Liggett, commander of the First American Army in the World War, retired, on March 21, as an active army officer after forty-two years of service. He was popularly credited with having directed the master stroke of the Americans in the war, and had the official distinction of having commanded the largest mobile fighting unit in the history of the world.

As a Lieutenant General he was in charge of 1,200,000 men, including five French divisions, and 5,000 field pieces. With this force, in October, 1918, he launched the great drive on the armies of the Crown Prince in the Argonne. He ended his overseas duty as commander of the Third Army, which marched into Germany, following the cessation of hostilities, returning to America in July, 1919, to resume his post as commander of the Western Department. He is 64 years old.

\* \* \*

**S**ECRETARY WEEKS announced on April 1 that the War Department had ordered 200 pursuit planes and thirty-five bombing planes for use by the American

**ARMY** He explained that these were the first purchases of aircraft made for the army since the war, and that the purpose was to provide army fliers with machines for their practice work. The 200 pursuit planes will be of the Morse-Thomas type and represent a contract price of \$1,400,000. They will not be equipped

with Liberty motors because they are not suited for that type of engine. The bombing planes will be of the Marlin type, and will be equipped with Liberty motors to be furnished by the army, which has a considerable surplus stock on hand.

\* \* \*

IT was announced in Washington on March 16 that the Harding Administration had decided that the official honors to the American unknown soldier would be held

**UNKNOWN** anniversary of Armistice  
**SOLDIER** Day, at the National Cem-  
**BURIAL** etery at Arlington, Va.

On that occasion the unknown soldier will be buried with the highest official honors in the presence of President Harding, Secretary Weeks, Secretary Denby, members of the Diplomatic Corps and, in all probability, representatives from the principal foreign nations. There are about 1,600 American soldiers who gave their lives for their country and whose identity has not been established.

\* \* \*

STATISTICS made available April 10 by the railway executives showed that the roads of the United States suffered a deficit of \$7,205,000 in February, with 106 of the 200 lines reporting to the

**RAILWAY** Interstate Commerce Com-  
**DEFICIT** mission failing to earn their  
**INCREASED** expenses and taxes. In Janu-  
ary the deficit was \$1,167,-

800, and 109 of the 200 roads failed to make expenses and taxes. The 200 roads reporting in February represented a mileage of 235,362. Forty-six were in the Eastern district, sixteen in the Southern district and forty-four in the Western district. It was stated by the executives that, as a result of the deficit shown, the carriers fell short by \$63,804,000 of earning the amount it was estimated they would earn, under the rates fixed by the Interstate Commerce Commission, in accordance with the provisions of the Transportation act of 1920.

Abrogation of the national agreements, defining the working conditions on all railroads of the country formerly under Federal control, was ordered by the Railroad Labor Board, in a decision issued on April 14.

The order of abrogation was made effective July 1, 1921, and in the meantime the officers and system organization of employers were called on by the board to confer and decide so much of the dispute relating to rules and working conditions as might be possible for them to decide. Such conferences were to begin at the earliest possible date. The board was to be kept informed of final agreements or disagreements, to the end that it might know prior to July 1 what portion of the disputes had been decided. The board reserved the right to stay the termination of its direction to a date beyond July 1, if it should have reason to believe that any carrier was unduly delaying the progress of the negotiations.

The decision meant that disputes about rules and working conditions were automatically referred back to conferences between each road and its employes. This plan had been urged by the railroads, while the labor leaders favored a national conference between representatives of all roads and all unions.

The board approved the principle of the eight-hour day, but believed it should be limited to work requiring practically continuous application during eight hours. Eight hours' work for eight hours' pay was enjoined. The right of seniority was upheld, as well as the right of employes to negotiate through representatives of their own choosing. Espionage by both sides was condemned.

\* \* \*

SECRETARY OF WAR WEEKS stated on March 1 that work had just begun on the removal to this country of the soldier dead from the great American cemetery at Romagne, France, where lie the bodies of 22,000 American soldiers who fell in the Argonne. The shipment of the bodies will be expedited as far as is humanly possible, and will be delayed only by adverse weather conditions.

The latest official figures showed that in all there were 75,882 dead overseas, of whom 13,616 had been returned. Requests had been received to allow 19,681 bodies to rest permanently abroad, but this number was constantly changing. Definite instructions had been received regarding 50,040 bodies, and there were 25,842 dead whose

final resting place had not been definitely decided.

\* \* \*

**T**HE United States Supreme Court on April 11 affirmed a decree of the Texas District Court enjoining the City of San Antonio from enforcing a 5-cent fare with universal transfers over the lines of the San Antonio Public Service Company. In its appeal the city had asserted that its franchise contract with the railroad called for service at 5 cents, and that the courts were without jurisdiction to interfere.

**SUPREME COURT  
DECISION  
ON FARES**

Injunctions obtained by the City of Fairfield, Iowa, in lower courts, restraining the Iowa Electric Company from increasing its rates above those set in its franchise also were set aside by the Supreme Court. The Court held that a contract calling for a "confiscatory rate" would not stand in law.

\* \* \*

**T**HE Sixty-seventh Congress convened in extraordinary session at noon on April 11, and, after short sessions, at which no business of importance was transacted except the choice in the House of Speaker Frederick H. Gillett of Massachusetts to succeed himself—by a vote of 298 as against 122 for Claude Kitchin of North Carolina—adjourned to the following day.

**MEETING OF  
SIXTY-SEVENTH  
CONGRESS**

On April 12 President Harding in the House of Representatives delivered his message to a joint session of the Senate and the House. The portion of the message that dealt with foreign relations is treated elsewhere in this issue.

The greater part of the address was devoted to domestic affairs. The President called for retrenchment in expenditures, a prompt and thorough readjustment of internal taxes, emergency tariff legislation, the repeal of the excess profits tax, protection for agricultural interests and the mature consideration of permanent tariff legislation. He also advocated the adoption of a national budget system. Congress was urged to take up the problem of the high cost of living. Railway rates and cost of operation, the President said, must be reduced. He gave notice that the United

States meant to establish and maintain a great merchant marine. The encouragement of aviation was stressed, and the establishment of a Bureau of Aeronautics in the Navy Department recommended.

**A** TEMPORARY settlement of the differences between the big meat packing concerns and their employes was reached on March 23, after a conference of representatives of both sides with Secretaries Davis, Hoover and Wallace. The settlement was in the nature of a com-

**TRUCE IN  
PACKING HOUSE  
CONTROVERSY**

promise, each side making concessions. The basic eight-hour day and overtime rates were restored. Wage cuts of 8 cents an hour for hourly workers and 12½ per cent. for all piece workers were to remain in effect as of the dates announced by the packers, and were not to be subject to any further arbitration. The agreement of Dec. 25, 1917, and extensions thereof and all decisions thereunder (except as modified by the March 23 decisions) were to remain in effect until Sept. 15, 1921, at which time the agreement was to terminate. President Harding on March 24 received a visit from the representatives of the packers and their employes, accompanied by the Secretaries who had taken part in the conference, and expressed personally his gratification over the peaceable settlement of the dispute.

TERMS**

the Government's prosecution of the war were returned to Federal prison as a result of the refusal of the Supreme Court, April 11, to review their convictions. Haywood, a former secretary of the I. W. W., and fourteen others were sentenced to twenty years each and fined sums ranging from \$20,000 to \$35,000. They and others had been sent to the Federal Penitentiary at Leavenworth, Kan., but subsequently were released on bail bonds aggregating \$500,000, pending the outcome of their appeals.

In appealing to the Supreme Court from decisions of the Circuit Court of Appeals,

sustaining their convictions, the men had argued that the principal evidence used against them in their trials was illegally obtained in that it was seized by Federal agents during a raid without search warrants or other court orders.

**T**HE Emergency Tariff bill, combining the farmers' tariff measure, vetoed by President Wilson, with the Anti-Dumping bill, was passed by the House on April 15 by a vote of 269 to 112.

**EMERGENCY** This first legislative act  
**TARIFF BILL** of the special session was  
**PASSED** accomplished by an al-  
most united Republican vote. All efforts on the part of the Democrats under Representative Garner of Texas to force through amendments were rejected. Mr. Garner's motion to recommit the bill and strike out the section dealing with the difference of exchange rates was defeated by a vote of 265 to 118.

\* \* \*

**J**UDGE ELBERT H. GARY, Chairman of the Board of the United States Steel Corporation, on April 12 announced a reduction in steel prices ranging  
**CUT IN** from \$1.50 to as much as \$15 a  
**STEEL** ton for tin plate. The reduction  
**PRICES** was to take place immediately.

The decreases, however, were confined to certain products. It was stated that a reduction on tubular and sheets would be announced later, as the adjustment in regard to these products had not yet been definitely decided upon. No statement was made as to whether there would be a reduction in wages following the decrease in prices.

\* \* \*

**B**RADSTREET'S approximate index number of ninety-six staple commodities, as of April 1, was reported on April 7 as 113,749, which marked a decline of  
**PRICE** 4.1 per cent from March 1, of  
**DECLINES** 45 per cent. from April 1 a year ago, and of 45.4 per cent.

from the peak point of Feb. 1, 1920. Compared with the level of prices on Dec. 1, 1918, just after the armistice, the price index was 40 per cent. lower. Every group but one of the thirteen classes of commodities declined during March, the sole exception being fruits. Oils, building materials, naval stores and coal and coke showed the

largest percentages of decline in March. The changes in prices from March 1 to April 1 showed thirteen products advancing and forty unchanged, while fifty-three declined.

**P**RESIDENT HARDING on April 14 sent to the Senate the nomination of Colonel George Harvey of New Jersey to be Ambassador to Great Britain and of Myron T. Herrick of Ohio to be Ambassador to France. The nominations of AMBASSADORS were confirmed by the Senate; nineteen Democratic Senators and one Republican (Norris) voted against confirming Colonel Harvey.

\* \* \*

**A**MONG important nominations sent to the Senate by the President on April 14 were those of ex-Representative Esch of Wisconsin to be an Interstate Commerce Commissioner; George H.

**OTHER NOMINATIONS** Carter of Iowa to be Public Printer; Hubert Work of Colorado to be First Assistant Postmaster General; William D. Riter to be Assistant Attorney General; Edward F. Finney of Kansas to be Assistant Secretary of the Interior, and Thomas E. Robertson of Maryland to be Commissioner of Patents. They were confirmed.

On March 26 James C. Davis of Iowa, general counsel of the Railroad Administration, was named as Director General of Railroads to succeed John Barton Payne.

\* \* \*

**A**MAZING revelations of the graft, corruption and terrorism responsible for throttling the building industry in Chicago were made on March 27 before the Joint Investigating Legislative Committee. The

**GRAFT AND TERRORISM IN BUILDING** exposures closely paralleled those uncovered at a similar inquiry in New York. The Federal Government and the county and municipal authorities had representatives at the hearing, and it was said that all of these forces would be combined to crush the criminal rings whose machinations were revealed.

One man who had built more than a thousand houses and bungalows, building them honestly and selling them at what he considered a fair profit, testified that he was finally bankrupted and driven from the city because he would not add \$1,000 to

the price. After testifying he hurried out of the city, fearing vengeance at the hands of the hired tools of the combination.

Testimony was given that graft entered into every building transaction, from the minute the first spadeful of dirt was removed until the building was turned over

MYRON T. HERRICK  
*New American Ambassador to the French Republic*

to the owners. It was said that graft averaged 35 per cent. of the cost of the structure and ran into many thousands of dollars. The Legislative Committee was told that this plunder was collected by four men, one building contractor and three union business agents, and that disbursements were made by them to the smaller members of the ring.

\* \* \*

**G**OV. MILLER of New York on April 4 signed measures providing for enforcement by municipal authorities of the prohibition amendment and the Volstead act.

Of the three bills signed, one provided for the repeal of the 3½ per cent. beer and light wine bill, enacted last year, as well as the Raines law with all its amendments, and the city local option law, and defined as intoxicating all beverages containing one-half of 1 per cent. of alcohol, or in excess of that proportion. Another added a new section to the Criminal Code,

charging local authorities with the enforcement of the prohibition law. A third amended the civil rights law by providing for the recovery of damages suffered by reason of selling or giving away intoxicating liquor. The enforcement plan in general followed that embodied in the Volstead act.

**A** BILL providing for the use of lethal gas in executing the death penalty in Nevada was signed on March 28 by Governor Boyle. Hitherto, condemned men have

had the choice between hanging and shooting.

**GAS  
FOR DEATH  
PENALTY**

Nevada is the first State of the Union to make use of gas as a means of capital

punishment. Under the new law it was provided that the death warrant must designate the week within which the execution must take place. The week must not be less than sixty nor more than ninety days after the date of the judgment. The law provides for a suitable cell for inflicting the penalty. The warden, a competent physician and six men must witness the execution. The cell is intended to be airtight, fitted with windows of thick glass and equipped with valves to admit air when wanted. It is planned that when the condemned man is asleep, the air valves shall be closed and others admitting lethal gas be opened, life being taken without the prisoner awakening.

**JOHN BURROUGHS**

*Famous nature lover, essayist and thinker,  
who died March 29, 1921*

30, 1886. For many years he was a prominent figure in American life. His ability as an organizer and executive was remarkable, and his personal qualities won him general respect and esteem.

John Burroughs, world-renowned naturalist, died suddenly March 29 on a railroad train while returning to his home, Riverby, New York. He was one of the best-known and best-loved men in America and figured largely in the intellectual life of the nation. He loved the great outdoors and had a more intimate knowledge of the nature of birds and animals than probably any man since Audubon. Supreme as a naturalist, he also held high rank in the world of letters. In 1917 the American Academy of Arts and Letters awarded him its medal for distinguished achievements in literature. He was buried on April 3, the day on which, if he had lived, he would have reached his eighty-fourth birthday.

# SECRET PACTS OF FRANCE AND ITALY WITH TURKEY

BY GEORGE R. MONTGOMERY  
Director of the Armenia America Society

AT a time when France is protesting against a separate treaty between the United States and Germany she has not hesitated to abandon her allies, her fellow-signatories in the Treaty of Sèvres, and to make a separate treaty with the Nationalist Turks. The astonishing thing about this secret treaty is that it was agreed upon at the very time that France was uniting with the other Premiers in making certain joint proposals to the Turks with respect to modifications of the Sèvres Treaty already signed. The Turks replied to this joint proposal that they would have to consult their Government at Angora. Instead, then, of standing by her fellow-signatories to the Treaty of Sèvres, France has agreed to other changes in that treaty, and has proceeded to carry out certain parts of it without waiting for the Turks to carry out their part, or even to reply to the joint proposals.

This independent action on the part of France, aside from the aspect of treachery toward her allies, is important from an international standpoint, because it means a restoration to the Turkish domination of the Christians who, after the armistice, were encouraged to settle in Cilicia with the expectation of its becoming an Armenian home. George Picot, for instance, was appointed High Commissioner of Syria and Armenia. It was General Gouraud who changed the title to High Commissioner of Syria and Cilicia. Also, when Colonel Bremond was sent out to be Military Governor of Cilicia, he went as head of the "Commission for Armenia."

The separate treaties made by both France and Italy have international importance, also, because they restore Turkey to her old place as a factor of division among the powers, quite in the spirit of the nineteenth century diplomacy, and thus open up the way to another world war.

The separate treaty with France, printed below, surrenders to Turkey portions of Northern Syria which the Treaty of Sèvres set apart as Arab territory, and establishes

a boundary entirely different from that previously determined. The boundaries outlined by President Wilson are not involved in these changes, although his award was involved in the joint proposals made by the conference of Premiers last month. The agreement entered into by France makes practically futile the joint proposals of the conference of Premiers presented at about the same time. [See Page 347.] The agreement is signed by Briand, the French Premier, and by Bekir Samy, delegate of the Grand National Assembly at Angora, acting in the name of the National Turkish Government.

There are twelve points in the agreement, lettered from A to L, as follows:

A.—Cessation of hostilities and exchange of prisoners, according to the terms of the attached annex.

B.—Disarmament of the populations and of the armed bands in accordance with regulations to be made by the French and Turkish military authorities.

C.—Establishment of a constabulary (making use of the gendarmerie already formed) under Turkish command, assisted by French officers, who will be placed at the disposition of the Turkish Government.

D.—In accordance with measures to be agreed upon by the French and Turkish military authorities, there will be evacuation at the expiration of one month (after the cessation of hostilities) of the territories occupied by the armed troops north of the frontiers established by the Treaty of Sèvres. The Turkish troops are first to retire and then eight days after the evacuation will occupy the localities evacuated by the French troops. Provisional measures will be taken with respect to the evacuation of territories assigned to Syria by the Treaty of Sèvres and reincorporated in the Turkish State by the present agreement, on account of ethnic considerations.

Because of the condition of protracted war, and of the deep-rooted confusion which has resulted from it, the French troops will withdraw gradually, according to stipulations to be determined by the French and Turkish authorities, in a joint commission, on the following general basis: Effective pacification, guarantee of safe communication by railway between the Euphrates River and the Gulf of Alexandretta, the restoration of construction in the Amanus Mountains and at the Bridge of Djerablous, the right of military pursuit in case

of attack by bands, the punishment of those guilty of the ambush at Urfa.

E.—Complete political amnesty and maintenance in their activities of the administrative personnel in Cilicia.

F.—Pledge to protect the ethnic minorities, to guarantee to them absolute equality of rights in every respect and to have regard in an equitable way to the proportions of the populations for the purpose of establishing an equilibrium in the districts where the populations are mixed, when the establishment of the constabulary is undertaken and when the municipal administrations are formed.

G.—Economic collaboration between the French and Turks, with the right of priority in respect to concessions to be granted for the exploitation and for the economic development of Cilicia in the districts evacuated by the French troops, as well as in the vilayets of Mamurt-el-Aziz, Diarbekr and Sivas, in so far as such exploitation shall not be carried out directly by the Ottoman Government or by Ottoman subjects with the assistance of national funds.

Concession to a French group in the Argana copper mines.

Concessions which involve monopolies or privileges shall be exploited by companies that are established under the Ottoman law.

The widest possible association of Ottoman and French capital (extending to 50 per cent. of Ottoman capital).

H.—Establishment of proper customs regulations between the Turkish and Syrian territories.

I.—Maintenance of French educational institutions and hospitals and of philanthropic organizations.

J.—The French Government will establish a special administration for the District of Alexandretta where the populations are mixed, and agrees to give to the inhabitants who are of the Turkish race every facility for the development of their culture and for the employment of the Turkish language, which will have an official character on a parity with the Arabic and French languages.

K.—Transfer to a French group of the section of the Bagdad Railroad which extends from the Cilician Gates to the Syrian frontier.

Every effort will be made to facilitate in every respect the use of the railroad by both Turks and French for economic and military purposes.

L.—The frontier between Turkey and Syria will start from a point to be chosen on the Gulf of Alexandretta, immediately south of Payas, and will extend in a straight line toward Meidan Ekbes, the railroad station and the town being assigned to Syria.

Thence the boundary will turn southeast in such a way as to leave to Syria the town of Marsova, and to Turkey the town of Karnaba, as well as the City of Killis.

Thence the frontier meets the railroad at the station of Chotenbeg. From there the frontier will follow the Bagdad Railroad, whose roadbed will remain in Ottoman territory as far as Nissibin.

Thence the frontier will go to the bend of the

Euphrates north of Azekh and will follow the Euphrates as far as Djeziret-Ibin-Omar.

The Turkish line of custom houses will be established north of the railway and the French line of custom houses to the south.

#### ANNEXES

*Article I.*—While awaiting the prompt conclusion of a more general agreement between the high contracting parties, all active military operations will be entirely stopped on the Cilician front and on the confines between Turkey and Syria, as soon as orders to this effect shall have been received by the respective troops, the orders to be given by the French authorities as well as by the authorities at Angora at latest within a period of one week.

In order to hasten this suspension of hostilities the commanders of the French and Turkish military units will, as soon as they shall have been informed, impart to the hostile forces that may be opposed to them the fact of the signature of the present agreement and of the suspension of operations.

*Article II.*—As soon as the urgent instructions to be given by the two high contracting parties shall have been received, the prisoners on both sides, as well as any French or Turkish individuals imprisoned because of the hostilities, shall be set at liberty and conducted at the expense of the party who had taken the captives to the advance posts or else to the nearest city which may be designated. Exception will be made only for those infractors of the common law whose cases shall be reserved for a joint examination.

*Article III.*—The present agreement is made without limitation as to duration, and the resumption of hostilities may not take place on either side excepting after a formal declaration one month in advance. During the suspension of hostilities the parties pledge themselves to refrain from reinforcing their troops and from any dispositions that would tend to better their respective positions. The only transportations of a military sort that are authorized shall be the normal replacements as well as those necessary for the provisioning and the maintenance of troops.

*Done at London in duplicate, March 9, 1921.*

#### ITALY'S PACT WITH THE KEMALIST TURKS

Not only France, but also Italy, it was revealed early in April, had concluded a secret pact with the Turkish Nationalists while Greece was fighting in Anatolia to enforce the terms of the Sèvres Treaty signed by all the Allies in common. This agreement between Rome and Angora, it now appears, was arranged between Count Sforza and Bekir Samy Bey, representing Kemal, during the London conference in March. The pact itself was signed on March 12. Count Sforza on April 2 officially informed the Italian Chamber of the

signing of this treaty, and explained the objects sought to be attained. The following week the British Government instructed its Minister at Rome to ascertain what the provisions of this secretly concluded compact were. The salient points of the treaty, finally published in Rome on April 7, and summarized in Paris on April 12, were as follows:

1. The two Governments at Angora and Rome have in view Italian-Turkish economic collaboration with the right of priority for concessions of an economic character to be accorded in the Sandjaks of Adalia, Meugla, Bourdour and Sparta and in part of the Sandjaks of Afiun, Karahissar and Kutahia, which will be determined when the accord becomes definite, as well as in the coal basin of Heraclea, so far as the above-mentioned should not be directly given by the Ottoman Government to Ottoman subjects with Ottoman capital.

2. When the concessions contain privileges or monopoly they shall be exploited by societies formed according to Ottoman law.

3. Ottoman capital shall be assisted as largely as possible with Italian capital. Ottoman participation may reach 50 per cent. of the total.

4. The Royal Government of Italy pledges itself to support effectively in relations to its allies all demands of the Turkish delegation relative to the Peace Treaty, and especially restitution to Turkey of Smyrna and Thrace.

5. This part of the agreement involves the withdrawal of Italian troops which still remain in Ottoman territory.

6. The foregoing disposition will come into effect as a result of a convention to be concluded between the two contracting parties im-

mediately after the conclusion of peace assuring Turkey a free and independent existence.

On April 2, Count Sforza, the Italian Foreign Minister, gave in the Rome Chamber a comprehensive account of the Near East Conference and of the German Conference which followed. In regard to the former he said—and this is most important, as it has not been imparted by any other statesman of the Entente:

The first proposal for a Commission of Inquiry in Thrace and Smyrna, conditionally accepted by the Turks and rejected emphatically by the Greeks, could not be imposed with force, and therefore another solution was required. It consists of fresh proposals made on March 12 concerning which the Turks showed themselves well disposed, and the Angora delegates promised to refer the matter to their National Assembly. The Greeks will refer the matter to Athens. The proposal is for a partial revision of the Treaty of Sèvres. [Here the Count paraphrased the proposals of the Allies.]

I desired to reach an agreement with the Turkish delegates on our own economic action in Anatolia and the Heraclea mining basin, and it was understood that the policy of the Italian Government was to proceed in perfect harmony and co-operation with the Turkish authorities.

I was able, happily, to conclude an agreement, signed on the evening of March 12, by which a vast zone in Asia Minor is open specially to Italian economic penetration without any political aims, and I have secured the sincere and cordial co-operation of Turkey, which is convinced of the honest and loyal intentions of Italy.

## SCOTLAND'S HOUSING CRISIS

AT the close of 1920 Scotland, with a population far less than that of New York City, found that it had to provide 131,000 houses for its residents. State aid for housing resulted. By the end of February contracts had been let to construct 19,137 houses, to cost \$70,265,000 at the present exchange rate; 15,787 brick, 1,438 stone, 700 brick and stone, 552 concrete and 600 timber houses. J. L. Jack, Director of Housing under the Scottish Board of Health, speaking before the Government Committee of Inquiry at Edinburgh, reported these facts:

That although land was cheaper than it

was five years ago, the Government's State-aid project had inflated land values.

That contractors in many instances profited at the Government's—and thus at the house builder's—expense.

That materials had increased in cost 25 per cent. since 1919.

That under the Government's three-year housing-aid project, labor was loafing on the job, thus greatly increasing the costs of construction.

A census of the shortage was taken through local authorities. The Valuation Department of the Inland Revenue got \$738,150 subtracted from inflated land prices. Contractors were induced to lower their charges by amounts ranging from \$200 to \$585 a house.

# FORCING RELUCTANT GERMANY TO PAY

*England, France and Belgium levy a 50 per cent. duty on all German goods coming into those countries—France to seize the Ruhr Basin if Germany does not pay indemnity—Total amount of the indemnity payments*

REPARATION by Germany to the Allies was an acute question in England, France and Germany during the month. Though the Allies failed, at the London Reparations Conference, to come to any agreement with the German delegates regarding indemnity payments, they agreed among themselves in adopting a novel substitute measure. It was a scheme devised by Mr. Lloyd George and Mr. Austen Chamberlain to levy an import tax of 50 per cent. ad valorem on all German goods when they entered any of the chief allied countries, under an arrangement by which Germany was to be forced to pay this tax. Great Britain, France, Italy, Japan and Belgium all agreed to the plan, and it was understood that the sums collected should be pooled and divided as German indemnity money. Each country was to formulate and pass the necessary tariff law. Lloyd George's idea was that if Germany consented to play the game, reimbursing her exporters, it would produce some of the cash which the conference had failed to produce, whereas, if she refused, the measure would have a punitive effect.

The British Premier and his Chancellor of the Exchequer led the way by introducing in Parliament, on March 11, a full-fledged measure for this purpose, entitled "The German Reparation (Recovery) bill." It was officially described as a measure "for the application of part of the purchase price of imported German goods toward the discharge of the obligations of Germany under the Treaty of Versailles." It provided all the necessary machinery for fixing values, varying contracts, settling disputes, and empowering Parliament to suspend the operation of the act when it should see fit to do so.

The bill required all importers of German goods to pay over to the Commissioner of Customs a certain percentage (not to exceed 50 per cent.) of the total value of the goods consigned; they were to receive in ex-

change an official receipt exempting them from the payment of this amount to the German consignors, and the latter were expected to look to their Government for reimbursement. M. Briand's understanding, as he told the Chamber when introducing a similar bill in France, was that all the receipts were to be pooled and divided by the allied nations concerned; Mr. Lloyd George's idea, however, as he explained to Parliament under fire from many hostile critics, was that Great Britain should keep all its own receipts under the law until the British share of the indemnity, which was 22 per cent., had been liquidated.

The bill advanced by stormy stages until it became a law at the third reading on March 18 by a vote of 215 to 132. It went into effect on March 31. The law was opposed bitterly by the business interests, whose representatives likened it to a stick thrust into the works of a clock. Members of Parliament had pointed out that its practical result would be to saddle a new and heavy tariff tax upon the British public. Dr. Simons, the German chief delegate, had declared to the allied Ministers that such a tax meant one of two things—either that the German exporters would add this amount to their price, which would mean that the consumer would eventually pay it, or that German trade would go to the wall.

After the British bill was on its way through Parliament he told the Reichstag at Berlin: "This action on the part of the Allies we regard as the greatest and most fateful mistake which could have been made in the efforts to further the restoration of the economic position of Europe." Lord Robert Cecil, speaking in the British Parliament on March 16, said that he hoped the bill was really a penalty bill and not a bill for collecting the indemnity; he could conceive no more disastrous way of levying the indemnity than that they should keep

alive for thirty or forty-two years a special tax on German imports.

Nobody showed any enthusiasm for the idea except Lloyd George, who defended it at every turn and forced it through to a final vote. The general impression was that the British Premier's purpose was to use the new law as a cudgel to persuade Germany to come to some reasonable terms in regard to indemnity payments. The following rhymes in *The Manchester Guardian* expressed the view of one element of the population:

In matters of commerce the fault of the British  
Is being a little too headlong and skittish—  
Free Trade was their settled and wedded affection,  
But now they elope with the maddest Protection.

Protectionist Allies like Belgium and France  
Hold back and regard the proposal askance,  
Preferring indemnities paid by the raiders  
And not by their own and unfortunate traders.

So Britain, poor Britain, alone sets the pace  
In cutting her nose off to spite her own face,  
And a measure that no one imagines will last  
By Lords and by Commons is solemnly passed,  
Whereby to a kind Coalition's content  
We clap on boche exports just 50 per cent.—

Fifty per cent, 50 per cent,

Fifty per cent. from the Alleyman's shelves—  
And if any one pays it we pay it ourselves.

The other Allies showed various degrees of reluctance in adopting the scheme. When Premier Briand introduced a bill for that purpose in the Chamber, on March 21, it was viewed askance by many Deputies. The Temps expressed the fear that it would only weaken Germany's means of paying. On April 1, however, Premier Millerand delivered a yet more staggering blow of this kind by signing a decree raising the tariff on goods imported from Germany in various degrees up to 100 and even 300 per cent. On April 14 the Chamber adopted the 50 per cent. tariff bill on German imports by a vote of 383 to 79. The Belgian Parliament passed the 50 per cent. tax on March 23 by a vote of 128 to 19. The Finance Minister obtained its passage solely on the ground of its necessity to punish Germany for bad faith regarding indemnities. In Italy the subject was a sore one, for Italian importers were doing a rushing business in imports from Germany—in fact, in a single day of March 25,000 registered parcels from Germany accumulated at the Custom House at Chiasso, and forty inspectors were unable to handle the business. Count Sforza,

who had consented to the idea at London, found it a delicate matter to handle when he reached home; at last accounts Italy and Japan had taken no action.

The new allied customs collections in the Rhineland became effective April 20. A 25 per cent. German tariff in gold is collectible at the eastern frontier of the Rhineland on westbound merchandise, while on eastbound merchandise from the occupied into the unoccupied area the duty is 25 per cent., payable in paper money. The Interallied Rhineland Commission has the power to change the regulations as it sees fit. Evaders of the customs regulations will be prosecuted in courts set up by the commission, and will be subject to a fine of 500,000 marks or imprisonment for five years.

The keynote of all debates in France during the month, also of the utterances of political leaders and influential newspapers, was, "Germany must pay." Toward the end of April the fact was semi-officially announced that unless Germany showed a practical and actual disposition to make the payment of 12,000,000,000 marks on May 1, 1921, which sum the Allies contend is their due, the French Government would seize the whole Ruhr industrial and mining region and levy a heavy tax on its exports. Marshal Foch announced, on April 15, that he would require 200,000 troops for the task; this will necessitate calling to the colors the classes of 1918 and 1919, thus increasing the French Army by 450,000 men.

The sentiment in France for drastic action has been at fever heat since early in March, when the feeling became general that Germany was seeking to evade payment. The Chamber of Deputies was roused to the utmost fervor on March 16 by the brilliant and effective speech of M. Briand, the Premier, explaining the results of the London conference. That conference had ended in a deadlock, the Germans refusing to comply with the allied demands for reparation, as a consequence of which refusal a new interallied occupation of the Rhine district had ensued. Some parts of the Premier's speech brought the entire house to its feet, amid wild storms of applause and approval. M. Briand reviewed the reasons for the failure of the London discussion and for the occupation. The Allies, he said, now controlled the greater

part of the transport of coal. He explained that the application of the customs sanction would produce a common fund, which would be divided according to the percentages of the Spa agreement.

Taking up then the question of reparations, he drew an effective picture of the wealthy German profiteers who were storing up vast profits, while by the purchase of newspapers and all the arts of propaganda they were pleading Germany's poverty to the world. If this continued, declared M. Briand, the day would come when Germany would attempt in the economic sphere those imperialistic conquests which she had failed to make in the military domain. Her assertions that she could not pay what was being demanded could not be trusted. She had no foreign debt, her taxes were less heavy than those of France, and her economic situation superior. At Spa she declared she could deliver only 800,000 tons of coal. Threatened by penalties, she delivered nearly 2,000,000 tons. Dr. Simons in London, before the final break, had similarly named a low figure for the payment for the first five years, but on receiving an ultimatum had discovered new resources, and had actually come to the very figures of the Allies. Since the final German answer to the Allies' whole plan was a refusal, both parties now faced the execution of the Versailles Treaty by means which it was for the Allies to decide. The Chamber would have to make its own decisions on the steps to be taken, and would be informed by the Premier of events as they occurred.

By this speech M. Briand scored another of his many spectacular successes since he assumed the Premiership. The full extent of this success was seen on the following day (March 17), when the three days' debate ended. By a vote of 491 against 68 the Chamber gave M. Briand its confidence. A notable feature of the last day's debate was the participation of former War Minister Lefèvre, who proposed that the Allies should reserve the right of perpetual inspection and control of the manufacture of munitions by Germany. To this M. Briand replied that no provision was made for permanent control in the Versailles Treaty, and by that treaty the Allies must abide.

The comments of the press showed that all in all M. Briand was solidly backed by

the Government and the people in his determination to force Germany to pay, even at the cost of an extended occupation of German territory. One paper pointed out that the German banks and the large industrial owners were colossally rich, and that the Prussian landlords had immense reserves of real property, from all three of which sources Germany could find funds to pay for the consequences of the war. The Temps declared that M. Briand had showed the Germans that their real enemies were in Germany herself, and constituted "those persons, many of whom wished to bring about the war, and many of whom have profited by it."

Through the rest of March and during the first half of April the Allies were perfecting their plans to force matters with Germany to an issue. In the course of the debate in the French Chamber, on April 12, M. Briand declared: "The time for words has passed. We must now revert to acts." The first application of the penalties, he said, had not produced the desired result, and Germany still showed a disposition to evade payment.

On May 1 [the Premier continued] Germany will be face to face with a whole series of violations of the treaty which she signed. I repeat here, with all the strength at my command, that we creditors hold a perfectly legal deed. A process server has been dispatched to Germany, and if our debtor persists in refusal to pay, the next next time a policeman will accompany him.

This process is a legal proceeding as between individuals in everyday life, and it is the same in relations between nations. It is no use to begin over again discussions already closed. We have in hand a promissory note duly signed, and if the debtor refuses to pay we must coerce him by all means of coercion we have in our power.

In full agreement with our Allies we have a rendezvous with Germany on May 1. France shall not fail that rendezvous.

Germany must pay, declared the French financial experts. M. de Lasteyrie, official reporter of the Finance Committee of the Chamber, pointed out that Germany had paid only 3,000,000,000 francs reparations, although she claimed to have paid 21,000,000,000—a figure which she reached by including the value of the war material left behind by the German Army when it retreated—and concluded: "France must be paid. If Germany refuses France must go in herself and exact payment. It is a ques-

tion of life or death." This declaration was applauded by the entire House.

It was taken as a confirmation and supplement to a similar statement embodied in the report of M. Chéron, Chairman of the Senate Finance Committee, distributed among the Senators shortly before. In this report M. Chéron had declared, on the basis of official facts and figures, that unless Germany paid the fiscal problem of the French Government was insoluble. France, said the report, must find 58,000,000,000 francs this year, and her revenue was estimated at 22,000,000,000. She was carrying a deficit of 38,000,000,000 already spent on the prospects of German payment, and 16,000,000,000 additional was carried in this year's budget to the same account. No alternatives or palliatives could be effective. Germany must pay or French finances faced a disastrous impasse. M. Chéron pointed out that in the figures above quoted had not been included the costs of pensions for 1,500,000 mutilated soldiers and 700,000 widows, who still remained to be provided for.

Although the report of the Bank of France showed that during the year 1920 the general economic situation gave some hope for the future, in view of an improvement during that year in respect to trade balance, agricultural production and transportation, the figures given by M. Lasteyrie and M. Chéron were inexorable, showing as they did that financially France was facing a crisis.

The Commission on Reparations, meanwhile, completed its hearings in Paris of the German experts on German resources, and announced on April 12 that the final bill would be presented to Berlin on April 30, one day before the expiration of the time limit fixed by the Versailles Treaty.

It was announced April 15 that the Reparations Commission had set the German indebtedness on the reparation account at a figure between 130,000,000,000 and 150,000,000,000 gold marks, which if carried in instalments over a period of thirty years would mean, with interest, between 340,000,000,000 and 400,000,000,000 marks gold. As to Germany's ability to pay, the Reparations Commission on April 12 gave out the following figures:

The German internal debt is 1,178 marks paper a head; that of France 5,353 francs paper a head. The external debt of Germany is 40 marks paper a head, and France 2,102 francs paper a head. This means that Germany's external debt is practically nothing.

France is paying taxes at the rate of 548 francs a head; Germany 478 marks a head. On a gold basis, the Frenchman is paying five times the taxes the German does.

The Reparations Commission's information shows that the German railroads, with 40 per cent. less traffic than before the war, have 300,000 more employes, and the commission estimates that the German Government could save 2,000,000,000 marks annually in the operation of the railroads if it wished to.

The prosperity of Germany is evidenced by the fact that bank deposits in 1920 increased 50 per cent. over those of the preceding year. The commission estimates that in 1922 Germany will have available 3,800,000 tons of shipping, not counting ships flying neutral flags but owned by German firms. In the last year German companies have increased their capital 400,000,000 marks. Dividends of 20 to 100 per cent. are common, although often camouflaged in accounting.

The disarray of the German Government's affairs—a disarray which the French charge is largely intentional—causes budget expenditures of 110,000,000,000 marks, with revenues of only 40,000,000,000. The Reparations Commission estimates that the German wealth of 350,000,000,000 marks before the war has not materially decreased.

# GERMANY CRUSHES COMMUNIST REVOLT

*Labor denounces the uprising—Allies again refuse to discuss German disarmament or to grant extension of time for indemnity payments—United States refuses to grant an easement—Upper Silesian plebiscite goes against Poland*

[PERIOD ENDED APRIL 15, 1921]

**T**AKING a cue from reactionary Bavaria's defiant rejection of the disarmament law enacted by the Reichstag on March 19, in compliance with the Allies' insistence upon fulfillment of the Treaty of Versailles, the leaders of the extreme Communists, acting, as alleged, under instructions from Moscow, launched a revolutionary movement in the industrial districts of Middle Germany. From March 20, when the general strike began in the Halle section, until the final skirmish there, on April 2, between communists and security police, according to semi-official estimates, about 50 policemen and some 500 rioters were killed, 50 policemen and several hundred of their opponents seriously wounded, and about 3,700 individuals arrested, charged with complicity in the plot to overthrow the German Republic.

The outcome of the uprising was a disappointment both to the communist leaders and to the junker reactionaries. The former hoped to rally the German proletariat to their red banner with the slogan of "Let's join Soviet Russia!" The junker reactionaries were waiting for a chance to "come to the rescue" of the Government with their more or less secret military organizations, to slaughter the rebellious workers by the wholesale, and then seize the reins of government in the interest of the monarchists and big business. Both extremes were disconcerted by the action of the Central Government, which refused to use the regular army or to ask for the help of the "Orgesch," and allowed Herr Severing, the Prussian Minister of the Interior, and Herr Hörsing, President of the Province of Saxony, both Majority Socialists, to restore order with the military police. This moderation deprived the extreme commu-

nists of the sympathy and possible aid of the masses of their own party and of the Independent and Majority Socialists. The revolt, consequently, was suppressed without wholesale blood-letting. About all the reactionary press could do was to clamor for vengeance upon the rebels and point with pride to the calm that had obtained in Bavaria, due, according to the junkers, to the strength there of the "Orgesch."

Taking note of the spread of "wild strikes" and an epidemic of lawlessness in the Halle district, Herr Hörsing issued a proclamation to the workers there on March 16, pointing out that industry was being so hampered by the irresponsible acts of the "Committees of Action," elected in place of the regular Shop Councils, that he was about to send strong detachments of police to preserve order. Thereupon the communist press of all Germany, led by Die Rote Fahne of Berlin, covered him and his supporters with insults, and declared he was merely a tool of the reactionaries seeking to pave the way for the arrival of the "Orgesch." It called upon the workers to imitate Dr. von Kahr, the Bavarian Premier, i.e., to laugh the law to scorn, to arm themselves and to effect a union with Soviet Russia, even over the body of the German bourgeoisie. Belated confiscation of the issues of Die Rote Fahne containing especially violent appeals only caused that paper to increase the bitterness of its language. In this it was outdone only by the organ of the Communist Labor Party, speaking for the small group of intransigents that regards the United Communist Party as a half-hearted organization little better than the Majority Socialists.

Preceded by an attempt to blow up the Column of Victory in Berlin on March 13,

the anniversary of the reactionary Kapp revolt of 1920, and by the arrest of several communists charged with complicity in widespread plots to destroy public buildings in leading German cities, a general strike was called on March 20 in the industrial district surrounding Halle. This turned into armed rebellion the next day, following a fatal clash between security police and strikers. At first the strikers were able to seize the big Leuna chemical plants and to dominate the situation in Eisleben, Merseburg and Mansfeld. Meanwhile, by sympathetic outbreaks in Hamburg, the strikers tried to keep possession of the big shipbuilding plants of the Vulkan Company, Krupps and Blohm and Voss, as well as of the municipal buildings, over which they hoisted the red flag. But the police dislodged them after losing about a score killed and many more wounded. Elsewhere the response to the communist call for action consisted merely of scattering attacks with bombs upon public buildings in Leipzig, Freiburg, Plauen, Rodewisch, Dresden, Auerbach and some other towns. In Berlin attempts to call out the workers were foiled by the hostile attitude of the men themselves and the vigilance of the security police.

Prompt action by the Prussian authorities, aided by the proclamation of a modified state of siege by President Ebert and a declaration by the Executive Committee of the General German Trade Union League denouncing the uprising soon enabled the security police to gain the upper hand in all centres of rebellion and to oust the communists from their control of strategic places in the Halle district. In the last days of March, when order had been restored in Middle Germany, there was a flicker of revolution in the West. This resulted in strikes and scattering attacks upon the police in Dortmund, Mettmann and Essen. All these uprisings were put down with more or less bloodshed. Finally there was a futile flare-up in Gotha and Erfurt. In the occupied zone the trouble was confined to Meers and Crefeld in the Belgian section, and to a slight disturbance in the American section, quickly quelled by twenty American military policemen. The Belgians crushed the strike in the Crefeld district by arresting 281 of the communist leaders. On April 4 the Berlin police found many

mysterious packages containing high explosives scattered in public and private buildings and along the tracks of the elevated railroad. This was regarded by the authorities as the last effort of the expiring revolt.

After the actual fighting was over the non-communist papers and parties, which had been practically a unit in supporting the Government's suppression of the uprising, immediately divided along their usual lines. The organs of the junkers and the big business interests demanded that the extraordinary courts set up under an order by President Ebert mete out exemplary punishment to the strike leaders. On the other hand, the Socialist and Democratic press warned against setting up a reign of terror, and exhorted the Government to pursue a moderate course which would show the nation and the world that it was strong enough to maintain the republic without resorting to excesses. While several inflictions of the death penalty by the special courts had been reported up to April 15, there was little indication that a policy of "blood and iron" would follow the liquidation of the "putsch" (revolt). Nevertheless Die Rote Fahne attacked the courts so fiercely for what it called murder that it was suppressed and its editor charged with high treason.

In attempting to explain the origin of the outbreak, Conservatives, Majority Socialists and even Independent Socialists tended to accuse the communist extremists of having obeyed orders from Moscow, transmitted by George Zinoviev, President of the Third International, to bring about a Soviet revolution in Germany in order to bring cheer to the Russian Communist Government, then threatened by the Kronstadt rebellion. Minister Severing said that he had unimpeachable circumstantial evidence to back up this belief, but the National Government did not allow this statement to interfere with its negotiations for a commercial treaty with Russia, nor was any special effort made to arrest the numerous Soviet agents said to be operating in Germany. The communists, while not denying their intention of setting up a Soviet republic and effecting an alliance with Russia, declared that the revolt had been precipitated by the "provocative" action of the Prussian authorities. These

they accused of being in league with the reactionaries to stamp out the workers' organizations and re-establish the monarchy. Both extremes counted upon the support of the German masses in any kind of attempt to smash the Peace Treaty and escape from the penalties imposed by the Allies, but the common sense of the 8,000,000 trade unionists and the populace in general outweighed their feelings of resentment. It was estimated that not more than 100,000 persons joined in the uprisings.

No definite steps toward enforcing the disarmament law were taken by the German Government. On the other hand, in a note dated March 26, Germany asked the Council of Allied Ambassadors to arbitrate certain questions of disarmament. As President of the Council of Ambassadors, Premier Briand of France answered the German note by saying that all these questions had been settled on Jan. 29 and ordering Germany to carry out the Allies' demands or take the consequences of a refusal.

About the only progress made during the period toward breaking the deadlock between the Allies and Germany over the question of reparation, which had resulted in an extension of the zone of occupation in the Ruhr district early in March, was the exchange of notes between Paris and Berlin. Dr. Walter Simons, the German Foreign Minister, stated in this connection that Germany would make a new offer before May 1, the last day upon which the Reparation Commission may present its final bill to the German Government, according to the terms of the Peace Treaty.

In all the discussion on reparation the German Government laid stress upon its eagerness to help reconstruct the devastated regions of France. On March 21 the French Confederation of Labor announced that it favored the importation of German labor and materials for this work, as otherwise the task would not be finished for many years. Berlin declared on April 7 that an offer of such labor and material would be made before May 1. A bid for American intervention was made by Dr. Simons in a note sent to Secretary of State Hughes on March 23 through Loring Dresel, American Commissioner in Berlin. This note declared that Germany was fully aware of its obligation to "make repara-

tion to the limit of its ability to pay," complained of the alleged harshness of the Allies' methods and suggested an international loan as the only means of placing Germany in a position to get to work and fulfill its obligations. In his reply [printed elsewhere in this issue of CURRENT HISTORY] Secretary Hughes said that the United States stood with the Allies in holding Germany responsible for the World War and therefore morally bound to make reparation so far as possible.

In the meantime the Allies went ahead with preparations to impose the penalties prescribed for the German failure to accept the terms of the London Conference in March. The limits of the new zone of occupation [sketched in the April number of CURRENT HISTORY] were extended from Duisburg along the railroad to within two and a half miles of Essen, and on April 10 the Interallied High Commission for the Rhineland announced from Mayence that the new allied customs collections would become effective April 20. The tariff line is about 500 kilometers long and just inside the military occupation line. The present German tariff, payable in gold, was to be collected on eastbound and westbound goods crossing the regular Western German frontier. A 25 per cent. German tariff, in gold, was to be levied at the Eastern frontier of the occupied Rhineland on westbound merchandise, while on eastbound goods from the occupied into the unoccupied territory the same duty was to be paid in paper money. This arrangement, calculated to promote business in the occupied zone at the expense of the rest of Germany, may be adjusted by the Interallied Rhineland Commission at will.

Germany protested to the League of Nations against the extension of the zone of occupation, but, as explained by Dr. Da Cunha, President of the League Council at Geneva, the League can take no action unless the initiative is taken by a member nation.

Despite predictions of wholesale bloodshed, the plebiscite held in Upper Silesia on March 20 to show the preference of the inhabitants for Germany or Poland, under the terms of the Treaty of Versailles, passed off without any violence of importance. It resulted in a vote of 716,408 for Germany and 471,406 for Poland, as announced by

the Interallied Commission on March 22. The presence of some 30,000 British, French and Belgian troops in the district apparently had a quieting effect upon the fiery spirits of the German and Polish agitators.

Although the voting showed a majority of about a quarter of a million for Germany, the Upper Silesian problem was not finally settled by the plebiscite, as, under the Peace Treaty, the Supreme Council of the Allies is not obligated to award the district as a whole to either of the claimants, but may divide it according to the expressed wishes of the residents of the various communes. Consequently there is a possibility that the allied representatives may consider important sections of the rich coal district as entitled to become part of Poland because the majority of their inhabitants voted Polish. In a note covering 500 pages the German Government, on April 7, asked

the allied Governments and the Interallied Commission to award Upper Silesia to Germany as a whole, promising to protect the Polish minority and to give Poland part of the coal from the district. The next day General Le Rond, head of the Interallied Commission, arrived in Paris.

Carl Neuf and Fred Zimmer, the American military detectives who tried to arrest Grover Cleveland Bergdoll, an American draft evader, in Eberbach, Baden, on Jan. 22, were tried in Mosbach, found guilty of "an illegal assumption of power" and sentenced on March 22 to serve fifteen months and six months, respectively.

On April 13 the German Government sent a message to William Hohenzollern, the former Emperor, condoling with him on the death of his wife. [An account of the death of the former Empress is printed elsewhere in this issue.]

## WHAT BELGIUM IS DOING

[PERIOD ENDED APRIL 15, 1921]

**P**LANS for the reconstruction of Louvain University Library have been accepted by a committee headed by Cardinal Mercier. Whitney Warren, the architect, announced in Paris on April 7 that work would probably begin in July. Across the facade of the new building, in giant letters, is to be a Latin inscription which, translated, reads "Destroyed by German hate and restored by Americans." The library will not be on the old site, but will be erected in the centre of the city.

The Rockefeller Foundation has announced a contribution of 43,000,000 francs toward a budget of 100,000,000 for new buildings and endowments for the medical school of the University of Brussels.

King Albert has informally conveyed to President Harding the information that retention of Brand Whitlock as Ambassador at Brussels would be most pleasing to him and to the people of Belgium. Burgomaster Max of Brussels, it was reported on March 21, would be sent to the United States to congratulate Mr. Harding on his accession to the presidency.

The Belgian Government has accepted the proposal of the League of Nations that the International Bureau for the control of traffic in arms and munitions, established in 1890, shall perform a similar function now. Belgium led the way to disarmament by agreeing on April 11 that her future budgets for armaments shall not exceed the present one. Holland has also notified the League that it intends to adhere to the arms traffic convention.

**BELGIAN CONGO**—Natives of the equatorial district of the Congo Free State, in a rising in March, burned fifty trading posts. A dispatch from Brussels on April 12 reported that the revolt was fomented by a native pretending to have discovered a charm making its possessors invisible and invulnerable. He sold the charms to credulous natives, whose faith in them was confirmed when troops sent to quiet their excitement fired into the air. The natives became uncontrollable and a widespread use of troops was necessary to restore order. [See also article on Page 283.]

## DEATH OF THE GERMAN EX-EMPRESS

**I**N the little Dutch railway station of Maarn, shrouded in the gloom of an April evening, the ex-Kaiser, surrounded by his sons and their wives and several other members of the Hohenzollern family, bade an eternal farewell to the last remains of her who had been his faithful companion, sharer of his former grandeur and of the sorrows of his downfall, the former Kaiserin Auguste Victoria. The light from a few lamps on the railway embankment, as it fell on the sombre figure of the former monarch, struck out bright gleams from the helmets and swords and gold buttons of the full military uniforms in which the Kaiser and the other Hohenzollerns had garbed themselves for this tragic scene.

This dramatic leave-taking of the ex-Kaiserin's remains was necessitated by political considerations which Holland could not see her way to ignore. After the death of the ex-Kaiserin, which occurred on April 11, 1921, a painful controversy arose over the funeral, of which the German monarchists wished to make capital. The Kaiser, however, and all the Hohenzollern family soon made it clear that they wished no imperial ceremonial. The Dutch authorities, on the other hand, sent word that they could not allow either the former Kaiser or the former Crown Prince to accompany the body to the frontier, as this would have necessitated a special consultation with the allied Governments.

The body of the former Empress lay in state in Doorn Castle until April 16. The Kaiser's chaplain, Dr. Dryander, officiated at a church service in the morning, and funeral services were held at 8 o'clock in a large room decorated with evergreens and palms. The Kaiser, as well as his sons and their wives, showed great emotion during these last solemnities. The funeral procession proceeded from Doorn to Maarn Station in automobiles, one of which, draped with crape, adorned with a large silver cross, carried the body. The cortège arrived at the little station at night, in a darkness relieved only by the feeble rays of a few railway lanterns. First came a huge car filled with flowers. Then the big hearse rolled up, flashing powerful searchlights. From the next car descended Chaplain Dry-

ander in his sable robes. The ex-Kaiser and his daughter, Princess Victoria Luise, and the rest of the Hohenzollern family followed in the other cars making up the cortège. Former German officials, stanch friends of the exiled royal pair and representatives of Queen Wilhelmina of Holland, the Dowager Queen and the Prince Consort, together with representatives of the King of Spain and the King of Sweden and a

**THE FORMER GERMAN EMPRESS**  
*as she appeared when visiting the wounded during the war*

number of Dutch officials, closed the procession.

In the half light of the station, the familiar figure of the Kaiser, dressed in the full uniform and regalia of a General of the Brandenburg Infantry, with helmet and sword and the military cape of field gray, could be plainly discerned as he stood with the other members of his family, similarly garbed in military uniform. The former Crown Prince was dressed as a General in the Death's Head Hussars. The Duchess of Brunswick and the other Princesses, garbed in unrelieved black, looked like nuns.

When all had collected around the coffin, Dr. Dryander, his voice vibrating with emotion, delivered a brief oration. The ex-Crown Prince and other Princes then lifted the coffin from the big motor hearse and placed it on the train. The pale light

gleamed bizarrely on the purple velvet of the coffin and on the helmets and swords of the German Princes. The ex-Kaiser and Princess Victoria Luise then entered the car to bid farewell to the Hohenzollerns returning to Germany on the funeral train.

The German Government had sent an official message to William condoling with him over his loss. All the sisters of the ex-Kaiser, together with Generals von Hindenburg, Ludendorff and Mackensen, were expected to attend the funeral at Potsdam. Both the former monarch and the Crown Prince returned to Doorn. The latter made a strong plea with the Dutch Government to allow him to go to Potsdam. He was informed that he could not return to Holland if he crossed the frontier. To the former Emperor the prohibition forbidding him to take part in the Potsdam ceremonies was a crowning bitterness in his cup of exile.

## HUNGARY'S RESTORATION FIASCO

*Attempt of ex-Emperor Charles to remount the Hungarian throne fails for lack of support—Helped by aristocrats and clergy, but opposed by the Farmers' Party and treated with indifference by the masses—A Cabinet crisis*

[PERIOD ENDED APRIL 15, 1921]

**A**FTER a vain attempt to remount the Hungarian throne in the last week of March, ex-Emperor Charles of Hapsburg returned, a somewhat wiser man, to his place of exile in Switzerland. His sudden appearance in Hungary and his proposed coup d'état were not without dra-

matic features, but he found the Magyar nation, for the time at least, unready and unwilling to accord him all the honors due to the wearer of St. Stephen's hallowed crown.

Charles's appearance in Hungary on March 26 was a distinct surprise, at least

SKETCH MAP SHOWING THE TERRITORY TRAVERSED BY EX-EMPEROR CHARLES IN HIS TOUR FROM GENEVA TO STEINAMANGER, AT THE TIME OF HIS UNSUCCESSFUL ATTEMPT TO REGAIN THE HUNGARIAN THRONE

to the rank and file of the Hungarian people. Reports have it that Admiral Horthy, the regent, was equally surprised, and when he was first notified of the presence of the erstwhile monarch, his former commander as the head of the Austro-Hungarian Navy, he disbelieved the news and considered it a joke. Only when the former ruler appeared in person and demanded that he yield supreme power to him was Horthy aware of a grave situation demanding quick action. "I will not dispute your right to the throne," he told Charles; "but you must remember that I was elected Regent of Hungary and will abandon my place only in response to a constitutional act by the National Assembly." Charles pleaded in vain, and was told that he must leave the country immediately.

Speculation is rife as to what prompted Charles to abandon his exile and try his hand at restoration. It has become known that before his departure from Prangins he was in Strassbourg with his brother-in-law, Prince Sixtus of Bourbon. There, it is reported, he discussed his return to the throne with leading royalists and militarists of France. He asserts that Premier Briand assured him of non-intervention and that he should go ahead with his plans and the powers would bow to a *fait accompli*. Praznovsky, the Hungarian Minister at Paris, declares he knows that leading French Generals knew about the coup beforehand and encouraged Charles. General Franchet d'Esperay, who was supreme commander of the Allies' Balkan forces in the war, was frequently referred to in reports as being in sympathy with Charles's plans. Even the name of Grant Smith, American High Commissioner at Budapest, was linked with the plot. However, Premier Briand not only denied all such knowledge, but sent to the Hungarian Government a protest which ultimately caused Charles to leave the country. The suspected French General remains silent, while Grant Smith declared that his presence in the vicinity of Szombathely, the town in Western Hungary where Charles established his headquarters, was due to an invitation by Count Sigray, Governor of Western Hungary and owner of a large country estate there.

The Hungarian Government disavowed all knowledge of Charles's plans, and in an interview Regent Horthy declared that he

considered the very presence of the King dangerous to the best interests of the country. The coup stirred the National Assembly to action; in a special meeting on April 2 it adopted a resolution against the

COLONEL LEHAR

*Commander of the West Hungarian Army,  
who resigned when the coup d'état failed*

restoration of Charles, called his return a national danger, threatening the very peace of the country, and advised the Government in no uncertain terms to eliminate this danger. On the other hand, it was reported from Vienna that the Government would submit a bill to the National Assembly designating Aug. 20 as the date on which the King of Hungary should be selected.

On April 13 the Hungarian Government, through the Swiss Legation in Vienna, informed the Swiss Federal Council that Hungary considered the former Emperor Charles as its lawful sovereign, and that only "foreign influences" prevented the ex-Emperor from exercising his rights to authority. It requested the Swiss Government to permit Charles to reside permanently in Switzerland. On this request, however, Switzerland reserved its decision pending a full investigation of all the circumstances and a consideration of its own best interests.

Charles's unexpected return to Hungary precipitated a Cabinet crisis. Count Teleky, the Premier, tendered his resignation and that of the Ministers at a session of April 8. Two Ministers holding portfolios were especially charged by the Farmers' Party as being of Carlist sympathies. The same party, wielding decisive power in the Assembly, also demanded that the new Cabi-

net be selected from among such as favor free election of the future King; i. e., those who do not call themselves legitimists or sympathizers with the principle that Charles is the rightful King of Hungary, nor subscribe to the idea that only a Hapsburg can be selected. The Christian party opposed this resolution and wished that the whole affair be considered closed, but failed to obtain sufficient support.

Inspired by its success, the Farmers' Par-

daughter at Villa Prangins, Switzerland

ty had gone a step further and demanded that all who had conspired for the restoration of Charles be prosecuted on a charge of treason; it voiced strong censure of the Government, charging duplicity in the matter. Acceptance of the resignation of the Government remained temporarily in abeyance, the Regent having declared that he must consult with leaders. The National Assembly adjourned until the appointment of the new Cabinet.

Undoubtedly, there are many in Hungary who have shown sympathy with the restoration idea, but even the foremost legitimists, such as Count Albert Apponyi, are opposed to immediate restoration of the Hapsburgs.

The aged statesman, who is also a leading figure in the group that desires tranquillity restored, has declared that only ill-wishers of Charles and Hungary could have suggested so unfortunate a step at this time, provoking the anger of the Entente. Premier Briand of France, in a note sent to Entente countries, including Czechoslovakia, Rumania and Jugoslavia, has vetoed the return to power of the Hapsburgs.

As to what prompted Charles to such action at a time when even his friends in Hungary were averse to it, various rumors circulate. One is to the effect that Charles was overcome by a fit of jealousy and feared lest some other Hapsburg should forestall him; presumably Archduke Joseph, once blocked by the Entente to mount the Hungarian throne, was plotting in favor of his son, Joseph Francis, whose betrothal to an Italian Duchess was reported as imminent. Italy's support thus assured, Charles may have thought he would have to act without delay. However that may be, he suffered a setback, and agitation for his restoration in Hungary will be checked for some time to come.

Charles's stay in Hungary lasted ten days, and in Budapest but a few hours. His interview with the regent occupied about three hours, at the end of which he decided to return to Bishop Mikes's palatial home in Szombathely, near Steinamanger; there he marked time for more than a week. His final decision to leave the country came on April 5, when he was confronted with a flat refusal to permit him to stay any longer. The Government itself cautioned him not to invite danger from the Entente and especially from countries of the Little Entente, i. e., Czechoslovakia, Rumania and Jugoslavia, which threatened war and actually mobilized their military. The Jugoslavs even crossed the boundary and occupied some coal mines in the vicinity of Pecs. The attitude of the Little Entente caused considerable indignation in Hungary, as voiced by Foreign Minister Gratz when he said in the National Assembly:

It is unprecedented that foreign Governments should force by threat of war a Government, whose independence they have recognized, to choose a Constitution and a sovereign in accordance with their caprice and their pretended interests, and compel it to expel a man who as a Hungarian has a right to remain in Hungary.

Failing to obtain enough support for his restoration even in Hungary, Charles at last yielded to the demand that he leave the country. He did so on April 6, but before leaving issued the following proclamation:

His Majesty leaves the country because of his conviction that the moment has not yet come for him to take over his right of governing. He cannot permit maintenance of his right to entail disturbances in the present state of peace. He leaves the land as the crowned King of Hungary.

The resignation of Colonel Lehar, military commander in West Hungary, followed; it was interpreted by some as proof that the Government was not in accord with the plans of Charles. Colonel Lehar was an ardent supporter of the King and accompanied him in his exile. It was stated that the Colonel would have been court-martialed had he remained in the country.

In summing up the situation, all factions agree that the attempted coup proved unprofitable for the interests of both Charles and Hungary. It is predicted that hereafter his followers will find it difficult to agitate his restoration, while for the moment the anti-Hapsburg group gained a marked advantage, which it may utilize decisively in spreading opposition.

Radical elements have seized upon the miscarriage of Charles's coup to try to set the people against any lawful government. They are thought to be responsible for the Yugoslav occupation of the mines around Pecs, in which city Count Karolyi's erstwhile associates have established a radically socialistic, autonomous Government under Yugoslav protection.

**SWITZERLAND**—In the Swiss Parliament interpellators asked the Government to explain how Charles had contrived to leave Switzerland; they intimated that he had violated the privilege of asylum by political plotting, and questioned his right to be allowed to use Swiss territory again as a refuge. The Canton de Vaud, where Prangins Castle is situated, decided to exercise its cantonal prerogative of refusing to receive Charles. The Swiss Government thereupon obtained the assent of Lucerne, and Charles and his entourage moved to that place. Prangins showed no grief over the dispossessed ruler's departure. Lucerne,

on the other hand, adopted a sympathetic attitude, believing, it was said, that the presence of Charles would lend interest to the place for tourists and thus be an aid toward prosperity. The new residence of Charles was formerly the refuge of Constantine, who has since been recalled to the throne of Greece.

**AUSTRIA**—The attempted restoration of Charles of Hapsburg to the Hungarian throne aroused strong opposition in Austria from the present régime, but the Government failed to present a united front on the question. Minister of War Mueller and Minister of the Interior Glaz, who objected especially to the placing of members of the National Guard upon the train on which Charles traveled through Austria, resigned from the Cabinet.

The former Emperor's journey through Austria was somewhat delayed at the Bruck Station, where members of the Socialist Party hostile to Charles insisted upon having an interview with the former ruler; but their desire to tell the former ruler some unpleasant truths was not granted by the Entente representatives.

Socialists, who now have the upper hand in Austria, indicated that they plan strong measures to prevent a recurrence of such attempts on the part of the exiled monarch. The press, largely controlled by them, uttered unrestrained denunciation. The Christian Socialists and the Conservatives, secretly in sympathy with Charles, tried to make things easier for him when it became apparent that his coup had failed. The Socialists, however, carried a measure under which the estate of Count Erdödy, in whose home Charles first rested on his way to Hungary, was to be confiscated and the Count expelled from Austria. They also demanded in Parliament that the counties of Western Hungary adjudged to Austria by the Peace Treaty should be ceded at once, so that Austria would at least have assurance that no new plots would be staged from this vicinity. They further demanded that every Austrian subject who had any part in the plot be prosecuted. Non-Socialist parties counseled calmness, and urged that the allegiance of the counties in question should be settled by friendly agreement between Austria and Hungary.

# THE LITTLE ENTENTE AND THE HAPSBURGS

*Effect of the adventure of former Emperor Charles in Hungary on the policy of the new Balkan Confederation—Internal affairs of Rumania, Jugoslavia and Czechoslovakia*

THE adventure of Charles Hapsburg at Budapest in the last days of March brought into prominent relief what the emancipated States of the dissolved dual-monarchy and those Balkan States which profited by the dissolution have been doing in the last few months to protect themselves from a reactionary movement in Central Europe toward the restoration of thrones. The international engagements in this part of Europe have been usually connoted under the title of the "Little Entente," although the original conception created by Take Jonescu, the Foreign Minister of Rumania, and perfected by Dr. Edouard Benès, the Foreign Minister of Czechoslovakia, has been vastly expanded. The original "Little Entente" was signed on Aug. 14, 1920. Rumania did not join it because, although it sufficiently protected her, as it did the signatories, Jugoslavia and Czechoslovakia, from a reactionary Hungary, it did not protect her from a Bolshevik Russia. The compact, as revised and expanded, embraced the following new engagements:

The annex to the Treaty of Rapallo, signed Nov. 12 by Jugoslavia and Italy, consisting of a military convention later subscribed to by Czechoslovakia and Rumania.

The Franco-Polish declaration, signed at Warsaw, Feb. 2, 1921, which pledged France to aid Poland with war material and officers, in case she should be attacked by Russia.

The Rumanian-Polish pact, signed March 2, which sixteen days later was developed into a defensive alliance by the admission of Czechoslovakia.

It had been the original idea of Take Jonescu to include Greece in a chain of States which should extend from the Baltic to the Mediterranean, forming, on the one hand, a barrier against the move of Bolshevism westward, and, on the other, a protection for democracy against the re-establishment of royalty. The return of Greece to the old régime caused this plan to be modified, and on the very eve of Charles's adventure Dr. Benès, in the National Assembly at Prague, declared that Czechoslovakia was ready to negotiate with Hungary, the Magyar aris-

tocratic State, and recommended the ratification of the peace treaty with Bulgaria, so as to pave the latter's path into the "Little Entente." In regard to the doubtful adhesion of Hungary, he said:

The Magyars must cease their fanatical propaganda against Czechoslovakia, and in the differing social structure of autocratic Hungary and democratic Czechoslovakia I perceive difficulties in arriving at an agreement. The restoration of the Emperor Charles cannot be considered for a moment, and would constitute a *casus belli*. This applies not only to Charles himself, but to all members of the former royal house, particularly Joseph.

In regard to the "Little Entente" itself, he said:

This arrangement is, to a considerable extent, indispensable to the interests of international politics. No conflicting questions of prestige can arise between these States, whose relations with the Allies, especially England, France and Italy, are equally cordial.

It will be seen that while M. Jonescu exploited the anti-Bolshevist feature of the "Little Entente," Dr. Benès exploited the anti-reactionary feature. Both these policies had their separate patrons among the great powers. The former was patronized by France through her diplomacy at Warsaw and Bucharest; the latter by Italy through her diplomacy at Prague and Belgrade, based on the Treaty of Rapallo.

It is possible that the return of Constantine to the Greek throne and the subsequent marriages of two of his children with two of the children of the King of Rumania may have tended to qualify the anti-reactionary policy of M. Jonescu and cause it to be passed on to Dr. Benès. The restoration, however, also affected Jugoslavia, for it turned into a dead letter the Serbo-Grecian treaty of mutual defense, dating from March, 1913, and, as we shall see, inspired a Serbo-Bulgar rapprochement, initiated in Prague and Agram (Zagreb), the capital of Croatia.

It was Agram which took the lead in calling Hungary to account and in urging the "Little Entente" to act. Charles had

scarcely arrived in Budapest when the opposition paper, *Rijetch*, declared:

The key to the situation lies in the hands of the States bordering on Hungary. We must prove both to Hungary and to the powers that we are quite capable ourselves of hindering the realization of the aims of Hapsburgian reaction. Never before has such solidarity been shown; there is not a single newspaper which has not rallied to the support of the Government.

Jugoslavia, Czechoslovakia and Rumania on April 2 sent their ultimatum to the Hungarian Government, demanding that Charles leave the country within forty-eight hours. This ultimatum was endorsed by Italy. On the same day France announced her cordial support of it, thus bringing the two patrons of the "Little Entente" into common accord for the first time, and adding infinite prestige to the policies of M. Jonsescu and Dr. Benès.

**RUMANIA**—The Dacia of Kolozsuvár in the middle of March started a campaign against Rumanian corruption by comparing the conditions in Rumania with those in the neighboring State of Hungary. The Dacia said, among other things:

The contrast between the order of our neighbor and our own anarchy is amazing. Such a state of things as is found with us can exist nowhere else except in Soviet Russia. All over the Continent of Europe the work of reconstruction is being feverishly pushed forward; with us, however, though there is much talk of it, not even a signal box, a pointsman's hut or a bridge has yet been rebuilt. But the most humiliating thing of all is that our Hungarian neighbors speak of us—with justice, too—as a nation where boundless corruption reigns. Similar strictures are passed upon us by all our neighbors, both enemy and friendly, who give publicity to our daily chronicle scandaleuse.

A Czech Ministerial Councilor declared that he was constantly receiving incontrovertible testimony of acts disgraceful to Rumanian reputation, which rendered difficult the possibility of economic relations with us. As instances, he stated that certain Czech railway trucks lent to us more than a year ago had not yet been restored, despite repeated demands for them, and also that a locomotive, "borrowed for one day only," had been actually sold to a Rumanian timber merchant in Transylvania.

There is bitter feeling expressed in Transylvania over the means taken to enforce the attendance of Magyar children at Rumanian schools. This is particularly resented in those districts where, as in Csik, there are, according to the Government

census, 125,888 Magyars and only 18,032 Rumanians. In the district of Szepsiszentgyörgy all public servants have been notified that if they send their children to Hungarian schools the act, "if persisted in, will render them liable to prosecution before the Military Court for treason."

The appeal of the communists concerned in the November general strike and attempted revolution was dismissed by the Court of Cassation, and the leaders, including Francis Katyler, Trojan Novak and Kollman Maller, must now work for ten years in the salt mines, where a five-year sentence is usually considered equivalent to a sentence of death.

In the middle of March Parliament adopted a resolution providing for compulsory registration through local police bureaus of all persons who have been residents of the country since August, 1914. It was expected that the measure would facilitate the execution of the naturalization law of 1919, by which the candidate for citizenship was required to make personal application, the acceptance of which depended upon the will of the Ministry of the Interior, governed only by an interpretation of general qualifications.

Under the new rule persons who established their residence prior to August, 1914, and who desire to become citizens will take precedence over the later arrivals. The effect will be to keep the vast number of refugees from Russia, who have been arriving since 1918, from becoming citizens, except at the pleasure of the Ministry of the Interior.

**JUGOSLAVIA**—While Serbia proper continued to find evidence that Bulgaria was not sincerely carrying out the terms of the Treaty of Neuilly, particularly in regard to disarmament and the return of stolen property to Serbia, the Croatian element, whose headquarters are at Agram, was endeavoring to promote friendship between Agram and Sofia. Neither the Croats nor the Slovenes can be made to feel the antagonism felt at Belgrade for Bulgaria. The official press of Czechoslovakia was similarly attempting to promote a rapprochement between all Jugoslavia and Bulgaria with a view to securing a better understanding between the Balkans and the new States of Central Europe.

On March 16 nine Slovenian members of the Peasant Party joined the bloc inaugurated by Premier Pashitch, thus giving him a control over 260 votes in the National Assembly out of a total of 419. On the same day an agreement was reached between the Government and Bosnian Mussulmans, who had a grievance against the Serbian land owners on account of the forcible seizure of their farms. The direct effect of this was the appointment of two Mussulmans to Cabinet portfolios; the general effect was to lighten the burdens of the commission of the Assembly which is drafting a Constitution for the entire country.

Owing to conflicting opinions, both political and racial, it was at first thought that the Constitution should provide for a federation of States, but with the growing support that the Premier has received from the regions outside of Serbia proper the Constitution is now reflecting the organism of a highly centralized Government, with all the old boundaries wiped out and the former divisions replaced by departments, as in France, with prefects appointed by the central Government. Each department is expected to include a population of 700,000, and will have its own Legislature, while the national Legislature will consist of a single elected Chamber, drawn from the counties into which each department will be divided. These local divisions will take into consideration three elements—industrial, racial and political. Universal manhood suffrage will prevail.

**CZECHOSLOVAKIA**—The sudden appearance of Charles in Hungary caused considerable uneasiness in Czechoslovakia. The policy of the Czechs has been shaped on the general policy of the Entente, whose view would naturally be reflected in Prague. But apart from this, the Czechoslovaks have a special motive for their opposition to the restoration of Charles, or of any other member of the Hapsburg family. This motive springs from the fact that Hungarian

territories have variously been allocated among the neighboring States, including Czechoslovakia, and that all such ceded territories are still considered by the Hungarians, at least in principle, as their rightful possessions forced from them by coercion. The re-establishment of the Hungarian throne, in the Czechoslovak view, would foreshadow an attempt by the new holder of the crown of St. Stephen to regain these territories. The danger of a new union of Hungary and Austria, in case a Hapsburg were allowed to ascend the Hungarian throne, also disturbed the Czechs.

Czech and Hungarian representatives sitting in joint conference at Bruck to regulate economic relations, contingent on the reopening of the frontiers for commerce, were reported at this time to have entered into a valid pact, the immediate consequence of which was the rapid rise in the value of the Hungarian crown, which has doubled in value over the rate quoted a few weeks ago.

The Czechoslovak Government faces a difficult task in satisfying the wishes of the populace of Uhro-Rusinia—the easternmost part of the country—which is working for self-government. Councilor Frankenberg, delegated by President Masaryk, consulted leaders in Rusinia regarding a suitable basis for the establishment of a self-governing body. The plan so far formulated is to introduce a bill in Parliament which would provide for a temporary board of councilors until the time of election, when Deputies would be selected for the *Szozjm* (Diet), which, in turn, would send a number of representatives to the Parliament at Prague. The Hungarian legal party in Rusinia, however, demands complete autonomy and the holding of the plebiscite promised in the Peace Treaty.

It was understood that Czechoslovakia had agreed to join France in the application of economic penalties against Germany, and even to contribute to military pressure if necessary.

# AMERICA'S TIES WITH HUNGARY

BY DR. IMRE JOSIKA-HERCZEG

*The author of the following article was graduated from the universities of Budapest and Kolozsvár with the degrees of Doctor of Laws and Doctor of Political Science. Under the Royal Hungarian Government he was appointed by Francis Kossuth, son of the great Kossuth of history, and then a member of the Hungarian Cabinet, to an important political and commercial mission to the United States. To his efforts was due the memorable visit of Count Apponyi to America in 1911. As a Captain of Squadron in the First Royal Hussars Dr. Josika-Herczeg saw active service on the Russian front during the first part of the World War. On hearing that the United States had entered the war, he sought and obtained a diplomatic mission abroad. One of the most influential Hungarians in the United States today, he is known as an earnest advocate of closer ties between the two countries*

**T**HERE are some things which Americans should never forget about Hungary. One of these is the fact that so many Hungarians fought side by side with the North during the Civil War. In the Arlington National Cemetery, at the end of a long path, are the graves of those Hungarian heroes who offered their lives so chivalrously to Lincoln to preserve this great Union of American people. The men whose remains lie here, like Louis Kossuth, came to the United States as political refugees. They answered with joy President Lincoln's first call to the country's colors. It was at his request that the Hungarians who fell while fighting to preserve the Union were buried with their American comrades in the National Cemetery.

It is now almost forgotten that Louis Kossuth, Governor of Hungary in 1848 and 1849, and leader of the Hungarian revolution, was liberated from his internment in Asia Minor by the intervention of the United States, and was brought to this country as the guest of the United States Government on board the frigate Mississippi in 1851. There are historical records which show America's sympathy for the Hungarian cause, and the treatment of Kossuth was but another evidence of this sympathy; it is a historical fact that certain powers were pressing Turkey urgently to deliver Kossuth up to Austria.

At about the time of Kossuth's arrival there came to this country many distin-

DR. IMRE JOSIKA-HERCZEG

guished Hungarian citizens. The members of this immigration came from the upper and middle classes of the thousand-year-old Hungarian Kingdom, and, naturally, they had received the highest education and good training in democratic government. Most of them had also been officers in the ranks of the Hungarian Army and had seen active service, which, naturally, made them desirable elements for Lincoln's army. These Hungarian political refugees were received in this country hospitably and were aided financially and even socially by the American people. The intention of these Hungarians was, of course, to return to their country, because they expected a call to the colors, but this call never came, and so they soon were scattered all over the United States. Some of them became farmers, engineers, lawyers, journalists, &c. In a word, they became useful citizens of the United States.

These were the men who, ten years later, offered their blood and lives in response to Lincoln's call. The records of the gallant deeds of the Hungarians who fought for the Union are innumerable. The Secretary of State published a report in which he stated definitely that about 25,000 Hungarians were fighting in Lincoln's army. The so-called Garibaldi Guard, which was with the Thirty-ninth New York Infantry, was mainly composed of Hungarians. The official records state that 1,800 Hungarian soldiers and about 100 Hungarian officers

—fully one-half of the total—were on the roster of Lincoln's riflemen, who were later incorporated with the Twenty-fourth Illinois Infantry. A number of these Hungarian soldiers subsequently won high rank; two became Major Generals, five Brigadier Generals, fifteen Colonels, two Lieutenant Colonels, thirteen Majors and twelve Captains. Many distinguished names might be mentioned, especially that of the gallant Major Charles Zagonyi, whose Hungarian Hussars in a whirlwind attack upon the Confederates at Springfield won immortality by their "Death Ride" against the artillery of the enemy. Other well-known names are General Asboth, General Albin Schoepf and General Julius Stahl, whose record is one of honor and distinction in the annals of the country.

Two of Kossuth's great supporters in New York were William H. Seward, then United States Senator, and Horace Greeley. Senator Seward was champion of the great democratic ideals of Kossuth in the United States Senate, and Horace Greeley stanchly supported the great Hungarian patriot in the columns of *The Tribune*. When Seward became Secretary of State he sent a commission to Europe supporting Kossuth. ("The Diplomatic History of the War for the Union," by William H. Seward; Boston, 1864, pp. 6 and 7.)

The visit of Count Albert Apponyi to the United States in 1911 is still remembered.

(Times Wide World Photos)

GENERAL HARRY H. BANDHOLTZ  
*American Representative on International  
Mission to Hungary*

Count Apponyi was the real political follower of Kossuth in liberalism and democracy. His visit to this country was virtually a triumphal tour; he was given high honors, including the invitation to address Congress. He received a great ovation from the members of the House and Senate. It is interesting to note that up to 1911 only three foreigners had been invited to address Congress, two of these being Hungarians—Kossuth and Apponyi—the third, Lafayette. Apponyi's lectures did much to strengthen the ties of friendship between the United States and Hungary. For more than fifty years Count Apponyi was leader of the Independent Kossuth Party in Hungary. He is recognized today not only in Hungary but also in the whole civilized world as one of the foremost statesmen of his time. His remarkable oratorical power and diplomatic abilities were greatly admired at the Peace Conference at Neuilly and Versailles.

The American public has very little knowledge of present-day happenings in Hungary. This is mainly due to unreliable news, explained by the fact that the American press is not directly represented in

COUNT ALBERT APPONYI  
*Veteran political leader of Hungary*

Hungary, and is compelled to print news regarding that country which comes in several cases from unreliable sources. If asked why Hungary today is important I would answer: because Hungary for a thousand years has been and still is the door for Western Europe to the East. It is also the nearest to the Balkan border. Before the war the Balkan States found in Hungary all the industrial, financial and commercial connections they needed. These well-established industries, even in their present terribly damaged condition, are still furnishing a great number of locomotives, railway cars, and other equipment for Rumania, Jugoslavia and Bulgaria. Hungary is exporting electric light material to Italy, and such orders have been placed even from South America. France lately gave large orders for machinery parts to several Budapest factories.

After the World War, Hungary opened a new chapter in her history. On Aug. 20, 1921, she will elect her new ruler. According to Parliamentary decision, the Government will remain a Constitutional monarchy. It now appears that the political situation will soon crystallize. One thing is certain: as soon as the new ruler is chosen, the political horizon will be cleared of many pending questions, and the country will be in a position to continue the great work of consolidation and reconstruction.

Besides Count Apponyi, another great Hungarian statesman is Dr. Lorant Hegedus, Secretary of the Treasury for the past four or five months, and the financial brain of the country. During his short term of office Minister Hegedus has accomplished results in the economic consolidation of Hungary which have astonished Europe. He has put men to work and decreased unemployment from week to week. It is interesting to note that the number of unemployed in February, 1921, was between 45,000 and 50,000—an encouraging figure in view of the fact that during the Red Terror of communism there were over 130,000 unemployed in Hungary. Mr. Hegedus has solved the labor question and has convinced the people that the only thing for Hungary to do is to work steadily. It is due to his policy that the income of the country already covers the expense budget.

This masterwork of statesmanship speaks for itself. Secretary Hegedus is typical of the men who have helped Hungary to regain the confidence of the outside world.

Hungary's present feeling toward America is one of the greatest cordiality. On the occasion of the reopening of Parliament on March 4, Charles Huszar, the late Premier, proposed an official greeting to President Harding. The proposal met with an enthusiastic reception. New ties have come to link Hungary to America. The new Hungary will long remember gratefully the names of some representatives of America who have aided her in her day of trial. Among the first on the list stands the name of Herbert Hoover, who did much to lay the foundation for Hungary's affection and gratitude. Another name is that of Professor Coolidge of Harvard University, who headed the American Commission in Budapest.

I would mention here specially General Bandholtz of the United States Army, who until recently was head of the Military Mission to Hungary. I am confident that even the children in the Hungarian schools will be taught to revere his name. During the frightful days of the Rumanian invasion the American Military Mission was the only place where the terrorized Hungarians could go to regain their civil rights. When the Rumanians tried to loot the picture galleries of the National Museum they found the American, General Bandholtz, with his military aids before the doors of that institution, and it was he who placed the official seal of the United States upon the Museum's doors and thus prevented the Rumanians from carrying out their designs.

Another name which cannot be forgotten is that of Captain Pedlow, head of the American Red Cross in Budapest, who represents the heart of the people of the United States. The names of Hoover, Bandholtz and Pedlow, like those of Kosuth and Apponyi, will be everlasting in Hungary, just as in America the memory will live of those thousands of Hungarian heroes who died for the Union's cause. These are links between the people of Hungary and the United States which will never be broken.

# GIVING INDIA SELF-GOVERNMENT

By J. ELLIS BARKER

*Difficulties of Great Britain's task in introducing modern parliamentary methods in the rule of India's many races and religious sects—Establishing the new Chamber of Princes—How all attempts at reform are obstructed by Gandhi's "non-co-operators"*

IT is widely alleged that England rules India with barbarous severity and that she is largely responsible for the poverty and backwardness of the country and for the terrible diseases and famines which periodically destroy large numbers of the inhabitants. Many believe that before long the English will be expelled from India, that fear has caused England to grant some measure of self-government to the natives, but that the concessions lately made have come too late. The reading public likes sensation, and the news agencies obligingly provide it with accounts of Indian murders and conspiracies, with seditious speeches and with stories about poisonous snakes, tigers and children brought up by wolves. The true facts are little known, largely because the Indian Government has neglected to enlighten the world as to its achievements.

India is a gigantic country. It contains about one-fifth of the world's population. However, the Indians are by no means a single nation, as some may believe. India is a loose conglomerate of races and nations held together by the British Administration. Withdrawal of that administration would cause India to be dissolved into its component parts and would destroy the internal peace which the natives have enjoyed for so long. About 150 different languages are spoken in India. Hindi is spoken by 82,000,000 people, Bengali by 48,000,000, Telugu by 24,000,000, Marathi by 20,000,000, Tamil by 18,000,000, Punjabi by 16,000,000, &c. Religion is one of the most powerful bonds in the East. Of the 315,000,000 Indians, 218,000,000 are Hindus, 67,000,000 are Mohammedans, 11,000,000 are Buddhists, 4,000,000 are Christians, 3,000,000 are Sikhs, &c., and strife among the various religions and among the numerous sects belonging to each religion

is extraordinarily bitter and passionate. Recently, for instance, hundreds of Sikhs have been killed in collisions between orthodox and reforming sects. Yet it has been asserted that the English were responsible for these occurrences.

The Indians are poor, ignorant and backward, and they suffer severely from famine, plague, cholera and other devastating diseases, owing to the extraordinary conditions of the country. India is greatly overpopulated. In the Provinces which stand under direct British Government there were 223 people per square mile in 1911, while there were only 191.2 in France and 171 in Pennsylvania. However, large portions of India consist of waste land. If we look at some of the principal Provinces we find that the density of the population is far greater than in France and in the most closely settled American States. In 1910 Massachusetts had 419 people per square mile, while the Province of Bihar, with 24,000,000 inhabitants, had 561 people per square mile. Bengal, with 45,000,000 people, had 578 people per square mile; Oudh, with 13,000,000 people, had 520 inhabitants per square mile; Agra, with 35,000,000 inhabitants, had 417 people per square mile; while the native State of Travancore, with 3,500,000 inhabitants, had 452 people per square mile, and Cochin, with 1,000,000 inhabitants, had 675 people per square mile. The people of France, England, Pennsylvania, Massachusetts, Connecticut, &c., can easily make a living, owing to the vast natural resources possessed. The densely settled districts of India, however, are condemned to poverty and want by the insufficiency of the natural resources on the one hand and by an extraordinarily high birth rate on the other hand. The great bulk of the people of India live by agriculture, and Indian agriculture is, and will

always remain, exceedingly precarious, because the country is exposed to terrible droughts.

Besides, conservativeness and prejudice make it exceedingly difficult to increase agricultural production. Weeds, noxious insects and diseases of men and beasts are considered inevitable visitations of the Deity. The cultivators of the soil prefer methods used from time immemorial to science. Hence produce per acre is low, and the live stock has utterly degenerated. The Indian agricultural and veterinary departments have done a great deal of good; however, it is difficult to increase the fertility of the soil, as the natives insist upon using manure as fuel instead of returning it to the ground.

In 1913 the birth rate among the people of India was 39.4 per thousand, while it was 27.5 per thousand in Germany, 23.9 per thousand in England, and 18.8 per thousand in France. The Indian villages have been described as a collection of hovels erected upon dung heaps. The intense conservatism of the people and the conditions of the country combined keep them in ignorance and poverty, and largely defeat all attempts to introduce among them educa-

tion, sanitation and better methods of production.

Although India is poor, if measured by European standards, the people in general are far more prosperous than they have been for decades, and the wealth of India is rapidly increasing, largely owing to the excellence of the English administration and to vast improvements which it has brought about, notwithstanding the inertia of the inhabitants. India, far from being bled by England, is enriched by it. That may be seen by the fact that India is by far the largest importer of silver and gold in the world. Since 1873 India's imports of gold have exceeded India's exports by £251,210,000, according to the official figures, which would probably be greatly increased if we had any means to ascertain the unrecorded importations.

#### A MAZE OF RACES

India, far from being a single country inhabited by a single race, which, with the awakening of nationalism, may be expected to throw off the English yoke, is a world in itself. Thirty years ago Lord Dufferin, one of the most eminent Viceroy of India,

(Photo International)

DUKE OF CONNAUGHT, ONLY SURVIVING SON OF QUEEN VICTORIA, HOLDING A RECEPTION TO NATIVE PRINCES IN INDIA ON THE OCCASION OF THE OPENING OF THE NEW INDIAN PARLIAMENT AT DELHI

drew the following picture of the country, which is still true:

This population is composed of a large number of distinct nationalities, professing various religions, practising diverse rites, speaking different languages, while many of them are still further separated from one another by discordant prejudices, by conflicting usages, and even antagonistic material interests. But perhaps the most patent characteristic of our Indian cosmos is its division into two mighty political communities as distant from each other as the poles, asunder in their religious faith, their historical antecedents, their social organization and their natural aptitudes; on the one hand the Hindus, numbering 190,000,000, with their polytheistic beliefs, their temples adorned with images and idols, their veneration for the sacred cow, their elaborate caste distinctions and their habits of submission to successive conquerors; on the other hand, the Mohammedans, a nation of 50,000,000, with their monotheism, their iconoclastic fanaticism, their animal sacrifices, their social equality and their remembrance of the days when, enthroned at Delhi, they reigned supreme from the Himalayas to Cape Comorin. To these must be added a host of minor nationalities—most of them numbering millions—almost as widely differentiated from one another by ethnological distinctions as are the Hindus from the Mohammendans, such as the Sikhs, with their warlike habits and traditions and their enthusiastic religious beliefs; the Rohillas, the Pathans, the Assamese, the Baluchees and other wild and martial tribes on our frontiers.

At one end of the scale we have the naked savage hill man, with his stone weapons, his head hunting, his polyandrous habits and his childish superstitions; and at the other, the Europeanized native gentleman, with his English costume, his advanced democratic ideas, his Western philosophy and his literary culture, while between the two lie, layer upon layer, or in close juxtaposition, wandering communities with their flocks of goats and moving tents; collections of undisciplined warriors, with their blood feuds, their clan organization and loose tribal Government; feudal chiefs and barons, with their retainers, their seigniorial jurisdiction and their medieval notions, and modernized country gentlemen and enterprising merchants and manufacturers, with their well-managed estates and prosperous enterprises.

England's difficulty in administering India is largely due to the lack of uniformity of Indian conditions, to the fact that it has to grapple, not with a few large problems, but with in infinite number of large and small ones, and that the differences existing among the Indians themselves are almost irreconcilable.

The English have been accused of ruling

India by terror, by the display and use of overwhelming force. Nothing can be more false than this statement. India is governed by a few thousand civil servants of English nationality, who direct and are supported by vast numbers of native officials.

LORD READING

*New Viceroy of India, who faces a difficult task*

The English army of occupation consists only of 75,000 soldiers, who, as a rule, are concentrated in garrisons whence the border may be watched. How small the proportion of English people in India is may be gauged by the fact that per thousand population there are more Chinese in the United States than English people in India. It is as impossible to keep 300,000,000 dissatisfied Indians in subjugation by means of 75,000 white soldiers as it would be to keep 100,000,000 dissatisfied and unarmed Americans in subjection by means of 25,000 foreign soldiers stationed near the Canadian frontier.

England owes the strong position which she occupies in India, not to the cruelty of her rule, but to her fairness, her justice

and her respect of India's feelings, wishes and prejudices. Her position is one of the greatest difficulty because of the extraordinary sensitiveness of the natives with regard to their religions, which differ so vastly from those of Europe. In a little official handbook entitled "The Indian Empire: A Short Review and Some Hints for Soldiers Proceeding to India," which was published long before the war, we read, for instance, with regard to the Hindus:

The principal points to be observed in order to avoid wounding the religious feelings of Hindus are:

Do not go inside temples or burning ghats without permission, or meddle with shrines, sacred trees or rocks.

When cattle are killed or beef is being handled, arrange to perform the necessary operations out of the sight of Hindus.

Do not expect a Hindu to assist in killing a snake or to handle one when dead. Leave these reptiles alone when they live near temples or shrines or if you have reason to think they are regarded as sacred.

Never shoot monkeys, any game mentioned in a shooting pass, or any of the half-tame birds and beasts which hang around temples and villages.

Do not try to catch fish or to shoot crocodiles in water near temples or burning ghats or where the country folk ask you not to do so.

Never damage tulsi plants, pipal, banyan or bail trees.

Do not go near places where food is being cooked.

It is best not to offer food or drink at all, but if you do, do not be offended by a refusal. Under no circumstances offer beef in any form to any Hindu or flesh of any kind to a Brahman.

If water is offered you, do not drink out of the vessel it is brought in; use your own mug or tumbler, or make a cup of your hands in Eastern style.

If taking water from wells, do not draw with the village buckets; if you have none of your own handy, natives will almost always draw water for you, if asked civilly.

Brahmans and sadhus are best left alone altogether; if you do speak to them, be ordinarily polite.

## WHAT THE GOVERNMENT DOES

In the early days England went to India for the same reason for which France and Holland had gone there. Adventurers tried to enrich themselves in the country, and cared little about the welfare of the inhabitants. However, the spirit of colonization in the best sense of the term soon as-

serted itself. The English in India endeavored to improve the fate of the people by giving them peace and good government. The vastness, the multifariousness and the paternal solicitude of the English administration may be seen from a sketch descriptive of the functions of the Indian Government which is contained in the report of the Decentralization Commission. It states:

The Government [in India] claims a share in the produce of the land; and save where, as in Bengal, it has commuted this into a fixed land tax, it exercises the right of periodical re-assessment of the cash value of its share. In connection with its revenue assessments, it has instituted a detailed cadastral survey, and a record-of-rights in the land. Where its assessments are made upon large landholders, it intervenes to prevent their levying excessive rents from their tenants; and in the Central Provinces it even takes an active share in the original assessment of landlords' rents. In the Punjab, and some other tracts, it has restricted the alienation of land by agriculturists to non-agriculturists. It undertakes the management of landed estates when the proprietor is disqualified from attending to them by age, sex, or infirmity, or, occasionally, by pecuniary embarrassment. In times of famine it undertakes relief works and other remedial measures upon an extensive scale. It manages a vast forest property and is a large manufacturer of salt and opium. It owns the bulk of the railways of the country and directly manages a considerable portion of them, and it has constructed and maintains most of the important irrigation works. It owns and manages the postal and telegraph systems. It has the monopoly of note issue, and it alone can set the mints in motion. It acts, for the most part, as its own banker, and it occasionally makes temporary loans to Presidency banks in times of financial stringency.

With the co-operation of the Secretary of State, it regulates the discharge of the balance of trade, as between India and the outside world, through the action of the India Council's drawings. It lends money to municipalities, rural boards and agriculturists, and occasionally to the owners of historic estates. It exercises a strict control over the sale of liquor and intoxicating drugs, not merely by the prevention of unlicensed sale, but by granting licenses for short periods only and subject to special fees which are usually determined by auction. In India, moreover, the direct responsibilities of Government in respect of police, education, medical and sanitary operations, and ordinary public works, are of a much wider scope than in the United Kingdom. The Government has, further, very intimate relations with the numerous native States, which collectively cover more than one-third of the whole area of India, and comprise more than

one-fifth of its population. Apart from the special functions narrated above, the Government of a subcontinent containing nearly 1,800,000 square miles and 300,000,000 people is in itself an extremely heavy burden, and one which is constantly increasing with the economic development of the country and the growing needs of populations of diverse nationality, language and creed.

A few thousand English officials act more or less the part of Providence to more than 300,000,000 people and try to improve their lot and to reconcile their differences.

In 1746-49 the English made war on the French in India and conquered the country under Clive and Hastings in the course of decades. While many Englishmen, animated by fear, wished to keep the Indians in strict subjection, some of the most enlightened administrators desired to raise them and to teach them the arts of government, introducing among them Western standards and accomplishments. One of the most eminent Anglo-Indian soldiers and administrators, Sir Thomas Munro, wrote, for instance, 120 years ago:

We should look on India not as a tempo-

rary possession, but as one which is to be maintained permanently, until the natives shall in some future age have abandoned most of their superstitions and prejudices, and become sufficiently enlightened to frame a regular Government for themselves, and to conduct and preserve it.

Other prominent Anglo-Indian statesmen have expressed similar views. From decade to decade the English in India have tried to associate the people to an ever-increasing degree in the government of the country.

PRACTICAL IMPROVEMENTS

With infinite patience and effort England has tried to improve the conditions under which the Indian people live. Good law and a good medical service have been provided, education has been energetically developed and the prosperity of the masses has been increased by the organization of agriculture and by opening up the country. India's interests have always stood first with the administrators. By developing education on too literary lines they have created a dissatisfied proletariat of students and pro-

SKETCH MAP OF INDIA, SHOWING THE LOCATION OF THE CHIEF CITIES AND CENTRES OF DISAFFECTION

fessional men. In order to keep the Indians from being exploited by European capitalists, the Indian Government has either built its own railways or has strictly limited the profits of privately built railroads and other undertakings.

Vast stretches of India which used to be a desert have been converted into densely settled territories yielding prolific crops by the creation of huge irrigation works. The English Government has constructed 66,120 miles of irrigation canals, which in their combined length would circle the globe three times. With their help 25,000,000 acres, more than one-eighth of India's agricultural area, have been made to yield very large crops. Some of the works in connection with the irrigation service are very vast. For instance, the reservoirs of the Western Ghats possess masonry dams 270 feet high. In all its public works and in the administration in general the Anglo-Indian Government has practiced the utmost economy.

The vast majority of Indians of all classes recognize the benefit of England's rule. Hence all India supported England with the utmost enthusiasm in the war. A distinguished Indian Judge, Nawab Nizamut Jung of the High Court of Hyderabad, published in *The London Times* of Oct. 2, 1914, a poem expressive of the feelings of his countrymen at the occasion of the landing of the Indian contingent at Marseilles. It ran as follows:

Though weak our hands, which fain would clasp

The warrior's sword with warrior's grasp  
On Victory's field;  
Yet turn, O mighty Mother! turn  
Unto the million hearts that burn  
To be thy shield!

Thine equal justice, mercy, grace,  
Have made a distant alien race  
A part of thee!  
'Twas thine to bid their souls rejoice,  
When first they heard the living voice  
Of liberty!

Unmindful of their ancient name,  
And lost to Honor, Glory, Fame,  
And sunk in strife  
Thou found'st them, whom thy touch hath made  
Men, and to whom thy breath conveyed  
A nobler life!

They whom thy love hath guarded long,  
They, whom thy care hath rendered strong  
In love and faith,  
Their heart-strings round thy heart entwine;  
They are, they ever will be thine,  
In life—in death!

Pessimists and men little acquainted with India foretell that the Mutiny which began in 1857 will be followed by a more terrible rising which will destroy England's rule. They forget that the great Mutiny was limited to the old Bengal army, that the vast majority of the people either remained passive or supported the British, that conditions have completely changed since then. If a great rising should occur, it would once more be found that millions of Indians would defend the English. It is not without cause that most Indians prefer trial by an English Judge to trial by one of their own countrymen.

### UNREST AND ITS CAUSES

Although England has conscientiously done her best by India, placing Indian interests above English interests, there is a great deal of dissatisfaction with English rule. Mistakes have been made, for even the ablest and the most painstaking officials are apt to err. Natives have had reason to complain of the tactlessness of individual Englishmen here and there. Education has created a great deal of disappointment among men who have learned the rudiments of European science and art, but who have failed to succeed because they lacked other indispensable qualifications or because the number of candidates for employment was greater than the number of vacancies.

An extraordinarily high percentage of political crimes is due to the fanaticism and enthusiasm found among the young and immature. According to the report of the Sedition Committee of 1918, 186 persons were convicted between 1907 and 1917 of revolutionary crimes in Bengal or were killed in the commission of such crimes. Of these 186 individuals two were less than 16 years old, 48 were from 16 to 20 years old, and 76 were aged from 21 to 25. Two-thirds of these criminals were youths. As regards the occupation of these 186 criminals, 68 were students, 24 were persons of no occupation, largely office seekers; 20 were clerks who occupied humble positions in Government employment, 16 were youthful teachers and 5 were journalists. Foiled ambition and failure drove these youthful students to political agitation and eventually to political crime.

Unrest in India is due to a large number

of causes. There is the dissatisfaction of the struggling intelligentsia, which with youthful exuberance recklessly plunges into revolution everywhere. Besides, the Indian students, both in England and in India, have been taught to admire democracy and self-government. Japan's victory over Russia has given a mighty encouragement to all the nations of the East. The idea of democracy and of self-determination has come to the fore during the war, and the Russian revolution turned the heads of many Indians who were imperfectly informed about events in Russia. Besides, the English administration in India became very unpopular with certain classes, which had to be restrained in the interest of the community. Among the most determined opponents of English rule are the village usurers, the small-town bankers and grasping money-lenders, who are prevented by English law from seizing the land of the poor. Lastly, every trouble afflicting the people is readily attributed to the all-embracing Government, which is held responsible for the failure of the harvest and for religious and racial strife. Not unnaturally, all the enemies of England have tried to exploit the short-sightedness and credulity of the Indian masses. German, Irish and Russian agitators have done everything in their power to throw discredit upon England's government of India.

## TOWARD SELF-GOVERNMENT

Consecutive administrations had striven to give to the native Indians an ever-growing share in the management of the country. During the war the desire among cultured Indians for more liberal institutions increased, and the English Government resolved to open a large avenue to India's abilities and ambitions. The Montagu-Chelmsford report of April 22, 1918—Mr. Montagu was the Secretary of State for India and Lord Chelmsford the Indian Viceroy—laid down the following principles for the future government of India:

There should be, as far as possible, complete popular control in local bodies and the largest possible independence for them of outside control.

The provinces are the domain in which the earlier steps toward the progressive realization of responsible government should be taken. Some measure of responsibility should be given at once, and our aim is to

give complete responsibility as soon as conditions permit. This involves at once giving the provinces the largest measure of independence, legislative, administrative and financial, of the Government of India which is compatible with the due discharge by the latter of its own responsibilities.

The Government of India must remain wholly responsible to Parliament, and, saving such responsibility, its authority in essential matters must remain indisputable, pending experience of the effect of the changes now to be introduced in the provinces. In the meantime the Indian Legislative Council should be enlarged and made more representative and its opportunities of influencing Government increased.

In proportion as the foregoing changes take effect, the control of Parliament and the Secretary of State over the Government of India and provincial Governments must be relaxed.

The lengthy recommendations made by the committee were officially summarized as follows:

*The Executive*—To increase the Indian element in the Governor General's Executive Council.

*The Provinces*—The Provincial Government to be given the widest independence from superior control in legislative, administrative, and financial matters which is compatible with the due discharge of their own responsibilities by the Government of India.

*Local Self-government*—Complete popular control in local bodies to be established as far as possible.

*The Public Services*—Any racial bars that still exist in regulations for appointment to the public services to be abolished.

In addition to recruitment in England, where such exists, a system of appointment to all the public services to be established in India.

Percentages of recruitment in India, with definite rate of increase, to be fixed for all these services.

In the Indian Civil Service the percentage to be 33 per cent. of the superior posts, increasing annually by 1½ per cent. until the position is reviewed by the commission.

Steps were promptly taken to carry out these recommendations as soon as possible, but in the meantime the principal agitators continued inflaming the people by every means in their power. They incited the Mohammedans against England because of the peace conditions which were to be imposed upon Turkey and the Sultan. They exploited with the utmost recklessness every actual or fancied grievance, holding the Government responsible. The proposed concessions to the Indian people were in advance declared to be utterly insufficient and unacceptable, an insult to India. Egged on

by reckless and suborned mischief mongers, crimes of violence became more and more frequent, in Bombay and the Punjab. Telegraph lines were cut, railways wrecked, banks plundered, individual Englishmen murdered. In the Indian temperament there is a strong strain of violence. Men of many races are apt to run *amok* and to murder all and sundry in a fit of ungovernable passion.

When the agitation was at its height the Amritsar massacre occurred on April 13, 1919. In consequence of murderous attacks, destruction of property, looting, &c., political assemblies had been forbidden. Martial law had been declared. Misled by agitators, thousands of people flocked to a forbidden meeting. The General-in-Command had only a few armed soldiers at his disposal. He feared a collision and the beginning of a widespread massacre of Europeans, similar to that which occurred at the time of the great mutiny of 1857. He marched his few soldiers to the meeting place and opened fire on the demonstrators without further warning. Several hundreds were killed.

This unfortunate occurrence, which led to the punishment and dismissal of the General-in-Command, naturally created a deep impression throughout India. England was held responsible for the act of General Dyer, to the deep regret of all those Englishmen who wished to pursue a policy of conciliation and of friendship toward the native Indians. Feeling toward England had become greatly embittered, owing to this unfortunate collision.

#### GOVERNMENT OF INDIA ACT

The Government of India act, which was based upon the recommendations of the Montagu-Chelmsford report, was passed in December, 1919. India received representative government and a greatly increased share in the administration of the country. The King-Emperor signified assent to the great Reform bill in a long proclamation which was published on Dec. 23, 1919, in which King George pointed out that the reforms granted were in accordance with the liberal policy which England had pursued for decades, and in which he called upon the people of India to forget old grievances and to co-operate with England in order

to lead India toward a bright and brilliant future. That proclamation stated:

Another epoch has been reached today in the annals of India. I have given my royal assent to an act which will take its place among the great historic measures passed by the Parliament of this realm for the better government of India and for the greater contentment of her people. The acts of 1773 and 1784 were designed to establish a regular system of administration and justice under the Honourable East India Company. The act of 1833 opened the door for Indians to public office and employment. The act of 1858 transferred the administration from the company to the Crown and laid the foundations of public life which exist in India today. The act of 1861 sowed the seed of representative institutions, and the seed was quickened into life by the act of 1909. The act which has now become law intrusts the elected representatives of the people with a definite share in the Government and points the way to full responsible government hereafter. If, as I confidently hope, the policy which this act inaugurates should achieve its purpose, the results will be momentous in the story of human progress. \* \* \*

The path will not be easy, and in the march toward the goal there will be need of perseverance and of mutual forbearance between all sections and races of my people in India. I am confident that those high qualities will be forthcoming. I rely on the new popular assemblies to interpret wisely the wishes of those whom they represent and not to forget the interests of the masses who cannot yet be admitted to franchise. I rely on the leaders of the people, the Ministers of the future, to face responsibility and endure misrepresentation, to sacrifice much for the common interest of the State, remembering that true patriotism transcends party and communal boundaries, and, while retaining the confidence of the legislatures, to co-operate with my officers for the common good in sinking unessential differences and in maintaining the essential standards of a just and generous Government. Equally do I rely upon my officers to respect their new colleagues and to work with them in harmony and kindness; to assist the people and their representatives in an orderly advance toward free institutions; and to find in these new tasks a fresh opportunity to fulfill, as in the past, their highest purpose of faithful service to my people. \* \* \*

While parliamentary institutions on democratic lines were granted to the provinces governed directly by England, the rulers of the independent States were encouraged to form a Chamber of Princes. The inauguration of the new era was intrusted to the Duke of Connaught, the uncle of the King, who is well known throughout India, and who had made himself extremely

popular during his long stay in the country. The inauguration took place at Delhi in the most impressive manner. The Duke delivered the King's message to the Indian Princes and people, and, when his official address was ended, he addressed the assembly in somewhat faltering tones, asking permission to add a personal appeal to his official statement. [This eloquent appeal was given in full in last month's *CURRENT HISTORY*, Page 138.] His plea for the burial of the dead past, and for a joining of hands for realization of India's new hopes, made a deep impression.

### GANDHI'S BOYCOTT CRUSADE

England's difficulties, however, are by no means ended. Numerous agitators continue making mischief and deluding the masses. Among these Mr. Gandhi is by far the most prominent. This interesting personage is a pupil of Tolstoy. He met the great Russian philosopher, poet and moralist, and learned from him the gospel which combines lofty idealism with anarchism, the very gospel which has destroyed Russia. Mr. Gandhi, like Tolstoy, has preached for years the gospel of non-resistance, and, like his Russian prototype, tries to live a saintly life as an ascetic. However, he not only preaches the ideal policy of non-resistance, which appeals equally to devout Christians and to devout Hindus, but he teaches at the same time the duty of non-co-operation with the English in India, hoping to drive them out by isolating them completely. At a special congress held in Calcutta in September, 1920, he laid down his program of non-co-operation, which comprises the following items:

- (1) Gradual withdrawal of children from schools and colleges owned, aided or controlled by Government, and in the place of such schools and colleges the establishment of national schools and colleges in the various provinces.
- (2) The gradual boycott of the British courts by lawyers and litigants and the establishment of private arbitration courts by them for the settlement of disputes.
- (3) Refusal on the part of the military, clerical and laboring classes to offer themselves as recruits for service in Mesopotamia.
- (4) Withdrawal by the candidates of their candidature for elections to the Reformed Councils, and refusal on the part of the voters to vote for any candidate who may, despite the advice of the Congress, offer himself for election.
- (5) The boycott of foreign goods.

The carrying out of the Gandhi program would lead to complete chaos in India, as the British-established law courts, schools, &c., cannot be replaced by native institutions. In his extravagance Mr. Gandhi has demanded in addition the resignation of all titles and honorary offices by Indians and the boycott of all undertakings managed by Englishmen. As the railways, the telegraphs, the Post Office, the irrigation service, &c., are directed by Englishmen, the carrying out of Mr. Gandhi's program would involve India's reversion to barbarism.

The members of the Indian National Congress, impressed by England's obvious desire to lead India on the way to self-government by easy stages, had drafted the following resolution at the end of 1919:

The objects of the Indian National Congress are the attainment by the people of India of a system of government similar to that enjoyed by the self-governing members of the British Empire, and a participation by them in the rights and responsibilities of the empire on equal terms with those members. These objects are to be achieved by constitutional means, by bringing about a steady reform of the existing system of administration, and by promoting national unity, fostering public spirit, and developing and organizing the intellectual, moral, economic and industrial resources of the country.

Mr. Gandhi possesses to an eminent degree the fatal gift of eloquence. He succeeded in carrying the Congress with him and caused it to replace this moderate and sensible resolution by the following one, which was passed in 1920:

The object of the Indian National Congress is the attainment of Swaraj by the people of India by all legitimate and peaceful means.

The meaning of the word "Swaraj" is made clear by the policy which Mr. Gandhi preaches unceasingly. For instance, he stated in his organ, *Young India*:

The movement is essentially religious. The business of every God-fearing man is to dissociate himself from evil in total disregard of consequences. \* \* \* Therefore, whoever is convinced that this Government represents the activity of Satan has no choice left to him but to dissociate himself from it.

Swaraj—self-government as Mr. Gandhi understands it—is to be carried out by the complete boycott of England and of everything English. That policy would inevitably lead to civil war in India, and it would, before long, create in that country condi-

tions worse than those prevailing in Russia.

Happily for India, Mr. Gandhi's agitation is proving a failure. Only a few prominent Indians have resigned their titles and offices. Some lawyers have stopped practicing the law, but these are mostly men who had failed in their attempt to obtain any business and who hoped to benefit themselves by a dramatic formal withdrawal from the courts. Although many Indians, obedient to Mr. Gandhi's orders, boycotted the Duke of Connaught by closing their shops and staying indoors, reducing his reception in some localities to a more or less official function, they have come freely forward as candidates for election and as voters. In only six of the 637 constituencies the elections failed on account of the absence of any candidate. The extreme non-cooperators have stood aside from the councils, but they are only a small minority. Thus the attempt to introduce parliamentary government into India has succeeded, notwithstanding the hostility of the extremists. Owing to the limitation of the franchise, the Indian electorate consists at present of only 5,000,000, but the number will grow, and in course of time India will possess democratic and representative institutions and self-government on democratic lines.

#### NEW METHODS OF EXTREMISTS

The non-co-operators have not failed to observe the collapse of their original program. So their most recent activities have been directed toward other ends. They are striving by a passionate campaign to bring into the remote villages a belief in the "Satanic" nature of the Anglo-Indian Government, and they are resolved to avail themselves of every genuine or fancied grievance which may serve their purpose. They are endeavoring to exploit agrarian, industrial and religious troubles with a view to attacking the established Government. With this end in view, they have taken up the grievances of the tenant farmers of Oudh and of Bihar, and they are endeavoring to create trouble in every mill, factory, mine, and wherever labor is employed.

This change of policy means the beginning of the end of the policy of Swaraj.

Instead of directing a nation-wide agitation against the Anglo-Indian Government, they endeavor, like the I. W. W., to make trouble by "boring from within," wishing to create trouble for trouble's sake. They will no doubt cause a great deal of further mischief. However, the new councils have obtained the support of educated Indian opinion, which is ignoring Mr. Gandhi and his supporters. The Indian councils and the new Ministers are finding their feet. That huge country has been fairly started on the road toward self-government.

England strives to raise India not only by political and economic measures, but also by social recognition. Formerly Indians were never admitted to English clubs and families. Now there are many inter-racial clubs, and Indians are even elected to English clubs, if they are personally acceptable. Until the outburst of racial ill-feeling which followed the trouble of April, 1919, it was also indubitable that social intercourse in sports and entertainments was widely growing. In the past native Indians were discriminated against in the English Army. That discrimination tends to disappear. The report of the Montagu-Chelmsford Commission stated:

British commissions have for the first time been granted to Indian officers. The problem of commissions is one that bristles with difficulties. The announcement of his Majesty's Government that "the bar which has hitherto prevented the admission of Indians to commissioned rank in his Majesty's army should be removed" has established the principle that the Indian soldier can earn the King's commission by his military conduct. It is not enough merely to assert a principle. We must act on it. The services of the Indian Army in the war and the great increase in its numbers make it necessary that a considerable number of commissions should now be given. The appointments made have so far been few. Other methods of appointment have not yet been decided on, but we are impressed with the necessity of grappling with the problem. We also wish to establish the principle that if an Indian is enlisted as a private in a British unit of his Majesty's Army its commissioned ranks also should be open to him. The Indian soldier who fights for us and earns promotion in the field can reasonably ask that his conduct should offer him the same chances as the European beside whom he fights.

There is every prospect that India will settle down within reasonable time, notwithstanding the mischievous pertinacity of

agitators and the desire of England's enemies to create trouble. In order to open the new era worthily and to make the experiment of democratized institutions a success, the British Government has sent there Lord Reading, who has shown his

eminent ability, energy, industry and tact in all the important functions which he has undertaken. He is probably the best man available for the most important post of Viceroy under the new conditions created by the Reform bill.

## GANDHI— BRITAIN'S FOE IN INDIA

*A Hindu Mahatma, preacher of "non-co-operation," a militant Tolstoy who advocates the ejection of the British from India by passive resistance and admits that this movement may lead to the shedding of much blood—Gandhi's personality described*

**T**WO recent events have focused world interest on Great Britain's problem in India. One was the appointment of Lord Reading, who had long held the high office of Lord Chief Justice, as the new Viceroy of India; the other was the opening by the Duke of Connaught—the only surviving son of Queen Victoria—of the advisory Indian Parliament established by the new Reform act at Delhi. Both events were considered in Great Britain and India alike as of the greatest historical importance. The opening of the Delhi Parliament, amid impressive ceremonies, was an expression of Great Britain's willingness to start India on the road to democracy. The appointment of Lord Reading, one of the keenest and wisest minds of England, signified that the situation in India was dangerous in the extreme, and needed an administrator of the highest ability to cope with it.

The anti-British ferment in India began before the war, and continued while the allied nations were at grips with Germany. With the aid of the native princes, numbering some 112 Indian potentates, all rioting and disturbances were repressed. The existing discontent, however, was augmented by the use of Indian troops in France, and troubles began anew. The slogan of the war, "self-determination of the peoples," bit into the Hindu mind, and the anti-British movement became clearly crystallized. In an effort to overcome Indian hostility, measures providing a lim-

ited degree of self-government were embodied in an Indian Home Rule bill, based on the findings of the Montagu-Chelmsford report to Parliament. This bill was finally passed in 1919, nineteen months after the submission of the report.

### INCREASING HOSTILITY

During this interim the disorders in India had broken out afresh, and had led to the passing of the Rowlatt bill, a stern repressive act known in India as the "Black Cobra" bill. This repressive measure, vigorously enforced, culminated in the so-called massacre at Amritsar (in the Punjab Province), where General Dyer, the British officer in command, opened fire on a multitude of assembled natives; a number were killed and many wounded. Though the British Government censured General Dyer severely, the British press showed a disposition to commend him for his firmness in putting down what was described as revolution; commendatory speeches were made in Parliament, after General Dyer's removal from active service in India, and a large purse was raised for the censured General from public contributions. The stern repressions of the Rowlatt bill, and the whole British attitude toward the Dyer case, have contributed in large measure to intensify Indian hostility to the British régime.

Undeterred, and perhaps even stimulated by this growing hostility, the British Government proceeded with its plans to lead

India slowly, safely and sanely toward the ideal of democracy. The reform bill sponsored by Lord Montagu—the Secretary of State for India—has been described as a beginning of self-government; under it the Indian will participate in the government of his home land on an advisory basis, the British, however, retaining control of all political and legislative initiative. The impressive opening of the new Council at Delhi on Feb. 8, 1921, inaugurated the application of Indian *swaraj* (home-rule) as the British interpret it.

### GANDHI—ENGLAND'S FOE

In this new legislation, however, the British reckoned without the most dangerous opponent that they have ever been compelled to face in India. This persistent and effective anti-British agitator, Mohandas Karamchand Gandhi, is the most-talked-of man in India today. Curiously enough, he was educated in England. Professor Gilbert Murray, the Greek scholar, in an article published not long ago in the *Hibbert Journal*, gave this lucid sketch of Gandhi's early career and personality:

About the year 1889 a young Indian student, called Mohandas Karamchand Gandhi, came to England to study law. He was rich and clever, of cultivated family, gentle and modest in his manner. He dressed and behaved like other people. \* \* \* He took his degrees and became a successful lawyer in Bombay, but he cared more for religion than for law. Gradually his asceticism increased. He gave away all his money to good causes except the meagrest allowance. He took vows of poverty. He ceased to practice at the law because his religion—a mysticism which seems to be as closely related to Christianity as it is to any traditional Indian religion—forbade him to take part in a system which tried to do right by violence. When I met him in England in 1914, he ate, I believe, only rice, and drank only water, and slept on the floor; and his wife, who seemed to be his companion in everything, lived in the same way. His conversation was that of a cultivated and well-read man, with a certain indefinable suggestion of saintliness.

Mr. Gandhi acquired political significance in the eyes of the British Government in 1893, when he accepted the appeal of the 150,000 Indians in South Africa to come to Natal and to plead against the decree of expulsion by the South African Government on the ground of color, as well as against

discriminations in taxation and registration practiced against them by the Government, and against the violent actions of South African mobs. He went as a barrister, and was forbidden to plead. He went again in 1895, and was mobbed and nearly killed at Durban.

For many years following this experience he was engaged in passive resistance to the British Government. And yet in 1899, on the outbreak of the Boer war, he organized an Indian Red Cross unit; in 1904, when plague broke out in Johannesburg, he opened a private hospital; in 1906, when a native rebellion began in Natal, he organized and personally led a corps of stretcher-bearers in work which proved to be extremely dangerous and painful. For this he was thanked by the Governor of Natal. Shortly afterward he was thrown into jail at Johannesburg for his political activities. Work for humanity was one thing with Gandhi, hostility to the British another.

### HIS RISE TO LEADERSHIP

The upward line of his meteoric career in India began with his organization of the All-India *Swaraj Sabha* (Self-Government Society), the existence of which, under Gandhi's Presidency, made him a force to be reckoned with. The power of his personality became evident in December, 1920, at the Nagpur Indian National Congress, when he succeeded in changing the constitution of the Congress, and in making it adopt his so-called "non-co-operative" movement, said to be inspired by the teachings of Leo Tolstoy; the method of warfare adopted by this movement is that of passive resistance, chiefly by boycotting all British titles, British employments, British schools and colleges, and British merchandise.

With the launching of this movement the issue became clearly defined. Great Britain had drafted a scheme of gradual evolution toward the ideal of Home Rule. That plan was now imperiled by popular demands for complete separation from the empire—under the leadership of this Hindu ascetic, whose monk-like, Messianic personality, combined with a dangerously eloquent power of oratory, soon gained a strong hold on the imagination of the Indian populace,

to whom his appeal was especially addressed.

For months Gandhi's activities have been reported in the British press, and his name has become almost as familiar to the British public as that of Lloyd George. In India the Nationalist leader's life has been

MOHANDAS KARAMCHAND GANDHI  
Leader of the movement against British rule  
in India

a continual pilgrimage from place to place, from village to village, and the fiery breath of his eloquence has left behind it an arid waste of non-co-operation. The name of Gandhi today is an open threat against British rule. This threat has been reinforced by his alliance with the Indian Moslems, represented by such leaders as Shaukat Ali, whose belief lies wholly in the sword. Politics make strange bedfellows. This alliance has overcome the former Moslem opposition to nationalism. The power of Gandhi's personality has also succeeded in overcoming the resistance of the low-caste Hindus, who at first showed no desire to return to the harsh and arbitrary rule of the high-caste Hindus from which the British domination liberated them.

This extreme religionist with a beguiling tongue, this ascetic who walks about like

a mendicant with bare feet and the humblest clothing, this man of mystery in dreaming India, whose whole impulse is religious, stands essentially for two things: the driving out of the British from India by passive resistance, and the complete independence of India, under a reversion to her ancient ways. A Hindu Jean Jacques Rousseau, he preaches the overthrow of all the benefits of civilization; an Indian Tolstoy, he urges the overthrow of all force. Right must triumph. If it fail, it is not Right.

Sir Valentine Chirol in an article published by The London Telegraph of Feb. 7, 1921, after describing the mesmeric influence of Mr. Gandhi's speeches on the Indian multitudes, and its effect in the spread of non-co-operation, describes an interview which he had with the Nationalist leader in the presence of Shaukat Ali, Gandhi's Mohammedan ally. The writer brings out vividly the contrast between Shaukat Ali's "great burly figure and heavy jowl, his loud voice and truculent manner, and even his more opulent robes, embroidered with the Turkish crescent," and "the slight, ascetic frame and mobile features of the Hindu dreamer, draped in the simple folds of his white homespun." Mr. Gandhi's views were described as follows:

With a perfect command of accurate and lucid English, and in a voice as persuasive as his whole manner is gentleness itself, he explains, more in pity than in anger, that India has at last recovered her own soul. \* \* \* Not, however, by violence, but by her unique "soul-force" would she attain to *Swaraj* (home rule), and, purged of the degrading influences of British rule and Western civilization, return to the ancient ways of Vedic wisdom, and to the peace which was hers before alien domination divided and exploited her people.

Sir Valentine asked him whether his doctrine of non-co-operation would not prove a destructive rather than a constructive force.

"No," he rejoined, and I think I can convey only his words accurately, but not his curious smile, as of one who feels compassion for the incurable skepticism of one in the outer darkness. "No, I destroy nothing that I do not at once replace. Let your law courts, with their cumbersome and ruinous machinery and their ancient jurisprudence, disappear, and India will set up her old *panchayats*, in which justice will be dispensed in accordance with her inner conscience. For your schools and colleges, upon which lakhs of rupees have been wasted in

bricks and mortar, and ponderous buildings which weigh as heavily upon our boys as the educational processes by which you reduce their souls to slavery, we will give them, as of old, the shaded groves open to God's air and light, where they will gather round their *gurus* to listen to the learning of our forefathers, that will make free men of them once more."

Asked if the fundamental antagonism between Hindu and Mohammedan would not store up trouble for the future, Mr. Gandhi pointed to Shaukat Ali, and said:

Has any cloud ever arisen between my brother Shaukat Ali and myself during the months we have now lived and worked together? Yet he is a staunch Mohammedan and I a devout Hindu. He is a meat-eater and I a vegetarian. He believes in the sword; I condemn all violence. What do such differences matter between two men in both of whom the heart of India beats in unison?

### EXTREME TOLSTOYISM

A more intimate portrait was drawn by Perceval Landon in *The London Daily Telegraph* of Feb. 5:

Seated on the floor in a small, barely furnished room, I found the mahatma, clad in rough white homespun. He turned up to me, with a smile of welcome, the typical head of the idealist—the skull well-formed and finely modeled; the face narrowed to, the pointed chin. His eyes are deep, kindly and entirely sane; his hair is graying a little over the forehead. [He is 51 years old.] He speaks gently and well, and in his voice is a note of detachment which lends uncanny force to the strange doctrines that he has given up his life to teach. \* \* \* Courteous, implacable and refined, Mr. Gandhi explained to me the faith that was in him, and as he did so, my hopes of an understanding between him and the English grew less and less. The hated civilization and rule of England must go. I suggested the "unprotected state of India should our work come to an end; to this he answered: "If India has sufficient unity to expel the British, she can also protect herself against foreign aggression; universal love and soul force will keep our shores inviolable. It is by making armaments that war is made. \* \* \* If even all India were submerged in the struggle, it would only be a proof that India was evil, and it would be for the best."

D. N. Bannersja, a Hindu author,

writing in *The Adventurer* (London), lays emphasis on Mr. Gandhi's "austere, puritanic life, his abstention from the merest suggestion of violent methods, his ingrained fighting spirit, which in South Africa brought Generals Botha and Smuts to their knees; his identification, in interest and outlook, with the toiling millions in factories and cotton mills, and his iron will and capacity for suffering."

Though personally opposed to the use of violence, Mr. Gandhi at the Bagpur Congress admitted that the success of his movement might involve "wading through oceans of blood." Of his fighting spirit there can be no doubt. An Indian member of the newly constituted Legislature at Delhi, writing to an English newspaper shortly after the departure of the Duke of Connaught, stated that wherever the Duke went he was followed by Mr. Gandhi—to Calcutta, to Delhi, to Bombay—and wherever the Duke's ringing words of cheer and optimism were heard, Mr. Gandhi's impassioned speeches against the hated English rule followed like a blighting and maleficent echo. In lieu of independence, said Gandhi, the Duke brought childish baubles for the Indian people to play with. Beautiful promises, flimsy insubstantiality, that was all India would ever get from Britain. Self-government, the goal of Indian desire, was already in sight if the people held firm to the formidable weapon of non-co-operation. Such was the import of the speeches made by Gandhi and his fellow-agitators to counteract the possible effect of the Duke of Connaught's mission.

Your visit [he wrote to the Duke] upholds Dyerism. Three hundred million innocent people are living in fear of their lives from 100,000 Englishmen. I oppose British rule to the bitter end.

Such is the enemy and such the situation that Lord Reading faces as the new Viceroy. The enormous difficulties of his task are evident. That the British Government does not underrate them is seen in the calibre of the man it has chosen to cope with the problem.

## JAPANESE AGGRESSION IN SIBERIA

By SIDNEY C. GRAVES\*

Former Staff Major and Assistant to Chief of Staff of the  
American Expeditionary Force in Siberia

*Mr. Graves, whose father commanded the American forces in Siberia, has written this article out of his own experiences as a member of that expedition, supplemented by official records. He presents a rather startling view of the whole Japanese scheme of Asiatic control, of which the Siberian episode is an important part, with his personal convictions regarding the danger of war with the United States*

International relations are quite unlike relations subsisting between individuals. Morality and sincerity do not govern a country's diplomacy, which is guided by selfishness pure and simple. It is considered the secret of diplomacy to forestall rivals by every crafty means available.—*Marquis Okuma in the Kokumin, a Tokio newspaper.*

**I**S JAPAN preparing for a war with America, and was her Siberian expedition the first important step toward the realization of a pan-Oriental plan calculated to make such a struggle possible and profitable? I am not a jingoist, but twenty months' intimate contact with the problem, as a staff officer of the American expedition, convinces me that such is the case. Japanese diplomatic chicanery and falsehood were successful during the period of joint occupation. The question is, Will they continue to succeed until the United States is forced to abandon the Orient or to fight at the time of Japan's choosing?

In the joint expedition to Siberia in 1918 Japanese statesmen saw an opportunity to gain control of Manchuria and the Chinese Eastern Railway, and also, if not prevented by America, to shut off Russia territorially as a potential enemy. The Lansing-Ishii agreement convinced Tokio that the United States would go to no great lengths to prevent Japan's annexation of Manchuria, and perhaps of Eastern Siberia, and the Japa-

---

\*The author of this article is a West Point graduate who served on the Mexican border and in Mexico, and who fought in France for a year as Captain of an infantry regiment, where he won various honors and the temporary rank of Major. Later he joined the American Expeditionary Force in Siberia, which was commanded by his father, General W. S. Graves, and became assistant to the Chief of Staff and liaison officer to the various allied headquarters at Vladivostok. In July, 1920, he resigned with the rank of Captain, thus regaining the private citizen's privilege of publishing such facts as were in his possession.—*Editor.*

nese Government's plans, drawn up in common with independent Cossack leaders already in Japanese pay, were well laid.

### THE OPENING WEDGE

It is not my purpose to give a history of the Siberian expedition except in so far as it relates to the anti-American activities of the Japanese forces, and the manner in which American diplomats were outwitted or forced to play into Japan's hands. It is well to understand, however, the purposes of the joint expedition as stated officially by the American Department of State, in July, 1918, and as reaffirmed by Tokio at that time, namely: "To assist the evacuation of the Czechoslovaks, and to render moral and material aid toward the rehabilitation of the Russian people without interference in their internal affairs." Both Governments pledged themselves to take no part in the factional strife, guaranteed the territorial integrity of Russia, and agreed to withdraw when, in the opinion of either country, the aforesaid objects had been achieved. The maximum force of each was fixed at 13,000 men; within six months Japan had 72,500 soldiers in Manchuria and Siberia, and was steadily increasing her complement.

Severe Winters and lack of development make communication difficult or impossible in Siberia except on two branches of the Trans-Siberian Railway: one running north from Vladivostok to the Amur River, and then west to Lake Baikal; and the other, or Chinese Eastern line, branching west through Manchuria to join with the first near Chita. The latter, although it passes through Chinese territory, is properly a Russian road, which, under treaty agreement, was to be guarded by Russian troops; in 1917, however, owing to Bolshevik disturbances, a large part of the guard was replaced by Chinese.

Seeing clearly that control of the railways assured military and economic domination of Eastern Siberia, Japan directed her efforts toward turning the inter-allied railway agreement of February, 1919, to her own advantage. This pact provided that a division of sectors was to be guarded by American, Japanese and Chinese troops for the benefit of the people; but any announced purpose mattered little to the Japa-

nese, who made evident their purpose to occupy permanently a strategic barrier, the nature of which will be described later in this article.

Even before the joint expedition landed, the Czechs had achieved their own security, and by 1919 the Kolchak Government was well launched in its futile effort against the Soviet, leaving the problem of Eastern Siberia to the Americans and Japanese.

### OCCUPATION OF MANCHURIA

By virtue of the Military Agreement between Japan and China, Japan demanded that Chinese troops guarding the Chinese Eastern Railway be commanded by Japanese officers, but this was refused by the Peking Government. The Japanese then moved troops into Manchuria, to occupy important points along the line; this led to several armed clashes, but the Chinese were too weak to offer any effective resistance. As a result, Manchuria is today a Japanese province, which Japan will go to war to retain.

The former anti-Bolshevist leaders—General Semenov, at Chita, and General Kalmikov, 400 miles north of Vladivostok on the Amur branch of the railway—were armed, paid and directed by the Japanese. History presents few worse examples than these Cossack "Generals," who murdered, burned and robbed at will, and whose atrocities kept all Eastern Siberia in a state of fear and revolt. The Japanese encouraged these marauding expeditions, and even sent columns of their own, under the guise of fighting Bolshevism, to shell defenseless villages and to execute many of the inhabitants.

### ANTI-AMERICAN PROPAGANDA

Japanese Headquarters soon realized that the American Commander-in-Chief, General Graves, would not deviate from his instructions of neutrality, and consequently they initiated an anti-American campaign in an endeavor to force the United States to recall its troops. Representatives of the State Department seemed only too willing to credit Japanese assurances of non-interference, but General Graves, by preventing Japanese activities in his sectors and by reason of his knowledge of the anti-American campaign, was an obstacle to

MAP OF JAPAN AND OF THE PORTIONS OF THE ASIATIC CONTINENT NOW UNDER VARIOUS DEGREES OF JAPANESE CONTROL. THE MINE FIELDS AT THE NORTH AND SOUTH ENDS OF THE JAPAN SEA SHOW HOW EASILY JAPAN COULD GUARD HER LINES OF COMMUNICATION IN CASE OF WAR

Japan's designs which she could not tolerate. Newspapers were subsidized to create feeling against the United States among the Russian people, and Semenov and Kalmikov were paid to provoke hostilities with our troops. A typical example follows:

On Sept. 1, 1919, Kalmikov was paid 30,000 yen by the Japanese. On Sept. 5 he arrested an American officer and an enlisted man on the pretext that they were not in possession of Russian passports. As this had never been required, the arrest was illegal. The soldier was beaten almost to death with Cossack whips, and a battalion sent to effect his rescue was stopped by a Japanese force, which threatened to open fire if the Americans continued to advance. An apology tendered by the

Japanese, and later the release of the soldier by the Russians, ended the incident; but at this time General Horvat, President during the Czar's régime of the Chinese Eastern Railway, and Mr. Medviedev, President of the local assemblies or Zemstvos, both warned General Graves that Kalmikov had been instructed by the Japanese to attack our small detachments as an indication of ill-feeling of the Russians toward Americans, and as a measure calculated to provoke a sentiment for recall in the United States. In consequence of this warning, American troops were concentrated, and both the Russians and the Japanese were warned that the molestation of any American soldier would lead to an attack on Kalmikov. This effectively deterred that Cossack leader from any further overt acts.

JAPANESE INFANTRY MARCHING UP ONE OF THE WIDE AVENUES OF VLADIVOSTOK, MAY 1, 1919

Under cover of the discord created in the maritime provinces of Siberia, Japan seized the Russian half of the island of Saghalien, including the fishery rights along the coast, and forced the Chinese gunboats to leave the Amur River, which, jointly with the Russians, they had patrolled for years. All opposition on the part of the local population was ruthlessly suppressed, and only the presence of the Americans prevented a virtual annexation of Southeastern Siberia. General Rozanov, the nominal Kolchak commander at Vladivostok, sold allied cotton to the Japanese for half its value and appropriated the proceeds. The revolution in November, 1920, which was led by General Gaidar as a protest against the reactionary character of the Kolchak Government and its representatives in the Far East, was suppressed by Rozanov with Japanese support, notwithstanding proclamations of neutrality made by all the Allies.

Semenov's men, armed with rifles supplied by Japan, on some of which appeared in Spanish "Republic of Mexico," operated at will near Chita and the Manchurian border; robbed the Chinese customs, seized furs belonging to an American concern, and attempted, but without success, to appropriate a carload of rifles under American guard. These anti-American activities continued throughout the entire sojourn of our expedition, and culminated shortly before evacuation in an armed clash. An armored train with a field piece, machine guns and about fifty men was captured by thirty-

eight American soldiers after the Russians had attacked them without cause or warning. Japan has repeatedly denied her connection with these independent Cossacks, but the records of the American expedition are conclusive proof to the contrary. Recently, when the Liberal Government at Irkutsk forced the elimination of Semenov, he was taken to Japan in triumph, the lodged in a palace in Tokio.

#### CONTROL OF SUPPLIES

The interallied railway agreement was conceived by Roland S. Morris, American Ambassador to Japan, as a sincere effort to relieve the suffering of the population of Siberia, and with a belief in the bona fide intentions of the Japanese. The latter, however, acquiesced simply because they saw in such a plan an opportunity to further their general scheme. Only such supplies were shipped as they desired, owing to the control of the terminals by their Cossack hirelings and their own control of Manchuria by the replacement of Chinese by Japanese guards along the Chinese Eastern Railway. Protests on the part of the American command were unavailing, and even the most flagrant Japanese actions were excused with the oft-repeated and absurd claim that individual acts of military representatives did not reflect the sentiment of Japan, where the military party was on the wane, or with the declaration that their

operations were necessary to prevent the spread of Bolshevism.

Our diplomatic representatives, in spite of repeated evidence of a well-thought-out plan of annexation, continued to credit such protestations and to hope that the Japanese command would change its tactics. Perhaps the irrelevant California land question, which is Japan's greatest card to meet any objections to her Oriental policy, may have again deceived Washington, but the fact remains that the Siberian expedition has given Japan all and more than she fought for in 1904; her grip on the throat of China is assured, and her imperialistic methods will make peaceful association or competition with her in the Far East by America impossible.

#### DEPARTURE OF AMERICANS

The inevitable collapse of the Kolchak Government inaugurated a wave of revolutionary sentiment which, for a time, threatened to overthrow the supremacy both of the Japanese and of the Russians under their control. Kalmikov was eliminated in

the revolt of January, 1920, and Rozanov, at Vladivostok, escaped to Japanese Headquarters in Japanese uniform when the troops of the new Provisional Government entered the city on the 31st of the same month. Officers of the American command forced allied neutrality at Vladivostok, and the Japanese were powerless to attack elsewhere, owing to the fact that Czech and American troops were not yet evacuated from the interior, and that hostilities invited destruction of the railway which had been seized by the revolutionists at important points. Both the Czechoslovak and American Governments had ordered their forces recalled, and any attempt to destroy the Transsiberian Railway would have met with energetic action and led to an inquiry on the part of these Governments, which Japan wished to avoid. Outwardly she acquiesced in the changed conditions, but hastily increased her forces in Manchuria and Siberia to about 200,000. Five days after the departure of the Americans the Japanese attacked and decisively defeated the forces of the new Government at all points.

#### ABSOLUTE CONTROL TODAY

Japan has at the present time ceased to disguise her actions and intentions in Siberia, and her control of occupied territory is absolute. Vladivostok has become a Japanese city; the "Rising Sun" flies from all public buildings, and municipal administration is enforced by Japanese officials with the aid of martial law. Japan's zone of occupation embraces only the old line of Russian fortifications; that is to say, it runs along the littoral west to about 250 miles north of Vladivostok; in Manchuria, however, she has seized the whole of the railway and, in spite of Chinese objections, has garrisoned strategic points, such as Urga in Northern Mongolia. If Russia were today a united and powerful empire it is doubtful whether she could dislodge the Japanese from her territory, as a relatively small force, holding the strategic key as does Japan, would be almost invincible.

Colonization as a field for her surplus population is not an object of Japan's policy. Her own northern islands, owing to rigorous Winters, are quite sparsely settled, and Siberia and Manchuria, with their much more severe climate, are not attrac-

TYPICAL JAPANESE OFFICER IN UNIFORM AT A RAILWAY STATION IN SIBERIA

JAPANESE SOLDIERS AT BAYONET DRILL IN BORZA, SIBERIA

tive to the Japanese settler. The Japanese, furthermore, cannot compete with Korean and Chinese labor, and, as pointed out by Mr. Bland in the February issue of *Asia*, no efforts of Japan in Manchuria and Mongolia can keep the Chinese from inheriting the land. Korea, the Japanese population of which in the ten years since annexation has increased less than 200,000, is an example of this fact.

#### OBJECTS OF JAPAN'S POLICY

What, then, are the objects of Japan's policy, which has been a heavy burden on her taxpayers and is likely to remain so? It is ridiculous to assume that her only purpose is to aid the Russian people, and equally absurd to accept her pretext of checking Bolshevism in Siberia, where this movement has never existed, as in European Russia. The following interpretation, which is the opinion of many Russian military critics, and which has, in part at least, been substantiated by Japanese occupation, offers a plausible and disconcerting explanation.

Japan has long realized that the United States and Russia were the two great ob-

stacles to her abrogation of the "open door" policy, to the establishment of an Asiatic "Monroe Doctrine," and to the continuance of her Prussian methods of occupation, which make commercial competition with her impossible. England could be controlled by fear of Oriental intrigue and propaganda in India, while civil war in China, with the subsidizing of officials, could be continued to render the latter country impotent. The European war eliminated Germany and gave Japan, by virtue of the "Twenty-one Demands" and other treaties, an opportunity to assume control of Chinese affairs. Racial equality and emigration questions were used to cloud the real issues at the Peace Conference and to enable Japan to retain the territory which she had seized when the Allies were powerless to interfere. Realizing that she could never wage war on the United States with Manchuria and Korea open to Russian attack, Japan took strategic advantage of the Siberian expedition to eliminate Russia as a possible ally of the United States. A glance at the accompanying map of the Japanese Islands and the adjacent Asiatic Coast will show the powerful position Japan

will occupy in the event of war with America. Mine fields between Saghalien and the Siberian Coast, between the Japanese Islands themselves, and between Korea and Nagasaki—all narrow straits—close the Japan Sea and the railway terminals in the Gulf of Pechili to naval attack, and leave the Japanese fleet free for offensive operations.

### MANCHURIA AS A JAPANESE RESERVOIR

Manchuria has been likened to the stomach of Japan, but it is more than that; it is the source from which she intends to draw her economic strength. Perhaps Vladivostok will enable her to control a large part of Siberian produce and mineral wealth in the event of changed conditions in Russia, but in Manchuria, at any rate, Japan has effectively obviated the lack of natural resources which she has long felt so keenly.

If we are to retain our interests in the Orient, many observers believe, war is

inevitable. Japanese statesmen, apparently facing that fact, have already begun to prepare. At the present time Japan is powerless to pit her strength against that of the United States, but if she is allowed to continue her oppressive methods, and to turn the wealth of other nations to her advantage, America, in a relatively short period, will face an empire almost as great as that of Germany in 1914, which will insist to the point of war that we abandon the Far East and the Western Pacific Ocean. Are we to meet this threat with continued belief in the assertions of Oriental diplomats and with complaisant acceptance of proposals for American disarmament?

AUTHOR'S NOTE—Since writing the above, information has been received that the Japanese have effected the destruction of the railway tunnels on the Trans-Siberian line near Lake Baikal, in order to prevent attack by the Chita Government, or directly by the Soviet. The American Government spent over four and a half million dollars and maintained a corps of experts in addition to the A. E. F. for the purpose of assuring the efficient functioning of the Trans-Siberian Railway.

### LENIN'S LABOR SLAVES

THE discontent of the Russian trade unions and the factory workmen under the Soviet régime has become a serious problem for the Moscow dictators, and reports received in March indicated that Trotzky and Lenin had agreed to disagree on the methods to be followed in solving it. The Soviet Government's treatment of Russian labor unions has done much to alienate the sympathy of labor all over the world. A report drawn up by a foreign engineer who returned from Russia to Central Europe in December, 1920, brings out in strong relief the foundation of the Russian workers' dissatisfaction. The following passages speak for themselves:

Factory hands are exploited to an extent undreamed of in Czarist times. This is done on the principles of "labor discipline," under pretext of suppressing the prevalent laziness and carelessness. The workmen are attached to the factories, and can be sent from one to another only by orders from the Executive. They are very badly fed, sometimes receiving no more than twenty-four pounds of

bread a month, with nothing besides, so that they are always hungry. A great deal is demanded from them, and they get nothing in return. They are continually terrorized, as, owing to the militarization of labor, every man is punished very severely for desertion. The lightest punishment is confinement in a concentration barracks; the heaviest, death.

In every factory there is a Communist committee of five or six, who are nominated, and who carry on a system of espionage, control and terrorization of the other workmen. From these committees are elected the workmen's representatives at all meetings, so that the majority at meetings is always Communist. \* \* \* Even this hard rule does not keep the ill-fed, ill-clad workmen in the factories; they make every endeavor to run away to the country and work for the peasants.

Such revelations go far toward explaining the disillusionment of European and American labor leaders who were at first inclined to favor Bolshevism. The British Independent Labor Party on March 28 decided, by 521 votes to 97, against having anything to do with Lenin's Third International.

# BIRTH OF A REPUBLIC IN SIBERIA

*Rise of the Far Eastern Republic at Chita confirmed by Siberian elections—Formal organization by the Constituent Assembly followed by overtures to the United States—Bitter Protest against the Japanese Occupation*

A NEW State, the Far Eastern Republic, duly organized at Chita by constitutional methods, and undertaking to maintain a representative Government over the vast region of Siberia east of Lake Baikal, all the way to Vladivostok and the Pacific Ocean, formally announced its existence on March 29, 1921, through a note to the American Legation at Peking. The note asked for friendly relations with the United States, and for an exchange of trade commissioners between Chita and Washington; it affirmed the inviolability of private property, declared for free trade and the "open door," and stated that the Far Eastern Republic was specially desirous of grant mining, railway and other concessions to Americans.

Whether this new Siberian State is to be any more lasting than others that have sprung up in the last two years remains to be seen; but certain essential differences from the others compel attention. It has been established by a freely elected Constituent Assembly, not by a factional group of Soviet leaders; it has Moscow's promise of noninterference, and it has one point of absolute unanimity among its own people, namely, hostility to the Japanese military occupation. In other words, it is a buffer State between Japan and Soviet Russia, which may prove to be a very important factor in the whole Asiatic situation.

In the beginning the Chita Government was only a small local affair set up by anti-Japanese Russian Nationalists, headed by M. Krasnochekov—a former Chicago lawyer, whose real name is Tobelson, and who is now Premier of the new republic—and its lease of larger life depended upon its power to unify the people and obtain a majority of votes in a general election.

It succeeded in both of these objects. Vladivostok and the Maritime Province voluntarily subjected themselves to Chita. The general election, held on Jan. 9, 1921, created a National Constituent Assembly,

which met at Chita on Feb. 12, and proceeded at once to create a Government by democratic methods. The delegates to the Assembly were divided on party lines approximately as follows: Peasants, 160; Communists, 98; Peasants' Union, 42; Social Revolutionaries, 6; Social Democrats, 16; Buriats, 10; Siberian Social Revolutionaries, 6; People's Social Revolutionaries, 4; Koreans, 5. Effort was bent on completing a Constitution. Meanwhile serious problems confronted the Assembly, such as the critical economic and financial situation. Action to dismiss the Vladivostok Parliament was deferred, owing to the serious political situation in the Maritime Province.

The whole political complexion of the new State will depend largely on the exact amount of influence which the Bolshevist elements will be able to exercise. How that influence bulks at present is the subject of dispute. Captain Robert Rosenbluth, who returned from Siberia on March 23, cited the view of Antonov, editor of *The Red Flag*, leader of the Communist Party, and formerly head of the Provisional Government, to show that the new republic never would become communist; first, because there is no industrial population; second, because the great natural resources of Siberia offer unlimited possibilities for the acquisition of wealth, and, third, because in view of these vast resources the whole world would be justified in stepping in and supporting the aggression of the Japanese if any move were made toward nationalization or confiscation.

The Japanese press, which is following events at Chita with the closest attention, gives plain evidence that it is uncertain as to just how deeply the Bolshevist influence goes. The *Yomiuri*, in commenting on the Constituent Assembly, admitted a sincere desire among Siberian Russians to establish a truly democratic Government, and blamed the strong trend toward the left upon the activities of Semenov and the

intervention of foreign powers. The Asahi, a moderate independent organ, declared, on the other hand, that the communists were in an "irresistible majority." There were some 120 acknowledged communists, it declared, and over 100 more masking as members of the Peasant Party. Owing to this predominance, the Speaker and the ruling body of the Assembly had been elected from among the communists, and demands had already been made to found the new republic, not on the principle of democracy, but of internationalism.

Dispatches from Chita showed that both the communists and the peasants were inclined to look to Moscow for protection, so far as the intervention of the Japanese, or any other foreign power, was concerned. The leader of the Peasants' Party even went so far as to declare: "We will defend our Soviet motherland at all costs, as we are here as an outpost of the Soviet Government, and we demand the withdrawal of all foreign troops on Russian soil." The editor of The Japan Chronicle, a close observer of events in Siberia, confirms the view that the communists and the peasants are at present united in one policy. "The truth is," he says, "that they have one common aim which unites them as they would otherwise never have been united. They hate the Japanese, and want to get them out of the country. Mr. Krasnochekov, the Premier and Foreign Minister, says: 'Our mission lies in eliminating all possible causes of foreign intervention.' That is the one desire that unites all classes."

It became clear at the end of March that the Chita Government, whatever its final decision might be, was working in harmony with the Soviet Government, by whom its independence had been recognized. At this time it was announced that the authorities of the new republic had ceded Kamchatka to the Bolshevik rulers, and that Japan had formally protested. The concessions granted by Moscow to the American financier, W. B. Vanderlip, were said to underlie the cession, the main obstacle to which had been the rights of possession of the Far Eastern Government. The Chita Government, on its own part, was preparing to grant concessions on a large scale to foreign enterprise, and Mr. Krasnochekov at the fourth meeting of the Constituent

Assembly on Feb. 25 declared that this policy was indispensable for restoring industry. Steps were also being considered to repair the Far Eastern Railway, which, owing to the destruction wrought by the troops of Semenov, was in a deplorable condition. Soviet Russia was sending her best engineers to direct the tremendous labors involved. Mr. Shatov, the Minister of Transport, complained bitterly of the arbitrary actions of the Japanese Military Command in forbidding the sending of the railroad materials stored in Vladivostok for repairing the Siberian system, which had virtually come to a standstill.

The situation in Siberia was further complicated by a new attempt of General Semenov—the anti-Bolshevik General formerly attached to Kolchak—to begin another offensive toward the west, with the object of uniting with anti-Bolshevik elements in Siberia. This new movement was launched by his lieutenant, General Ungern-Sternberg, and was said to be formidable. In its note to Japan on Jan. 19 the Chita Government had bitterly assailed Semenov, calling him the enemy of the Russian people in Siberia, and had charged Japan with giving him support. New charges were made on the advance of Ungern-Sternberg, and the Chinese Government confirmed these by declaring that it had concrete evidence that the Semenov-Ungern combination was receiving both financial and material support from the Japanese. This the Japanese Government officially denied.

#### CHITA'S INDICTMENT OF THE JAPANESE

One fact stood out clearly: that the Far Eastern Republic was solidly united in opposition to the Japanese occupation. This hostility, indeed, had inspired its creation. It was dramatically expressed on Dec. 5, 1920, after the Japanese by an autocratic proclamation, dated Dec. 3, had forbidden the Maritime Province and Vladivostok to unite with the Government at Chita. At the ratification meeting, held two days later, despite the Japanese prohibition, the leader of the Cadet Party took occasion to defy Japan categorically, and to shake his fist in the Japanese representative's face.

The full story of Japan's occupation of Eastern Siberia still remains to be told.

Certain aspects of the subject, however, are brought into sharp relief in a long telegram sent on Jan. 19, 1921, by Mr. Krasnochekov to the Japanese Foreign Minister at Tokio. Relations had long been strained, and fighting between the Chita Russians and the Japanese soldiers had been continued over a considerable period. The Japanese declared that they had no intention to interfere with Russia's internal affairs, but Mr. Krasnochekov, in his telegram, declared that this pledge had not been kept, and recited, item by item, the various aggressions of which Japan had been guilty. The full text of this enlightening document, as published in *The Japan Chronicle* at the beginning of February, is as follows:

While ordering its army to occupy Russian Far Eastern territory, the Imperial Japanese Government, by its proclamation of Aug. 21, 1918, clearly stated to the Russian people and to the world that this extraordinary measure was taking place "solely for the sake of rendering assistance to the Czechoslovak army," and that, "maintaining its established policy of unqualified friendship toward Russia and the Russian people and the territorial integrity of Russia, and forbearing any interference in the internal affairs of the Government, upon the completion of the evacuation of the Czechoslovak army, the Japanese army will unconditionally leave Russian territory." The evacuation of the Czechoslovak army was successfully completed in August, 1920. Moreover, long before the completion of this evacuation, by its declaration of March 31, 1920, the Imperial Government of Japan declared that "as no other country is geographically so closely connected with Siberia as our empire, and whereas the political condition of the Far East is such as to threaten not only the life and property of our citizens living in Siberia, but also to make a breach of the peace of Korea and Manchuria, we regret to state that it will be impossible to evacuate our troops from the Far Eastern territory." Yet the Government of Japan reiterates that the presence of its army upon the territory of the Far East does not mean any political aggression against Russia. And again in this act the Government of Japan "sincerely stated that as soon as peace is established within the territory the Japanese army will immediately leave."

The same statement has been reiterated by the commander of the expeditionary army, General Oi, in his notes to the Minister for Foreign Affairs of the Far Eastern Republic of May 11 and Sept. 18, always expressing his sincerest desire for the speediest reunion of the separate territories of the Far East, not only as beneficial for the Russian

population; but as a condition precedent to the establishment of economic relations between the two nations. In his declaration of May 11 General Oi states literally as follows: "The Japanese command will with pleasure lead its troops out of Russian territory as soon as stable conditions are established in the Russian domains in the Far East." And again: "The Japanese command, considering the will of the Russian population, does not wish to complicate the political situation of the region by rendering assistance to individual Russians which might tend to disregard the will of the whole Russian population. The Japanese Command, together with the Russian population, is heartily welcoming establishment within the territories of the Far Eastern region of such a form of government as will conform to the people's desires." It was also plainly declared "that the above is not only the wish of the Japanese Military Command, but also that of our Government and people."

The Russian people, having lost faith in different self-styled saviors, decided upon their own volition and not at all due to demands of foreigners, to establish such order as shall make it possible once and for all for the will of the people to express itself freely in the whole area of the Russian Far East. The authorized representatives of the whole people gathered in Chita on Oct. 29, 1920, and most solemnly proclaimed the union of all the territories of the Far East into one independent self-governing Far Eastern Republic, beginning with the day of declaration of independence, namely, April 6, 1920. The same declaration laid down the first basic principle upon which the Government must be built in order to bring about law and order and peaceful development of all social forces. At the same conference a law was passed for the convening of the Constituent Assembly, and a Government was formed to bring into life the [will of] the people. All these solemn declarations were published in due time and made known to the whole world.

Two months have passed since the establishment of the Far Eastern Republic. The Government of the Far Eastern Republic is steadfastly following the road that is pointed out by the declaration of Oct. 29, 1920. The elections to the Constituent Assembly have already taken place. Within ten days the representatives of the people will be gathering in the capital of the Far Eastern Republic in order to work out a Constitution for the country and decide upon the important life problems of the Government.

The internal war which has been flickering in some parts of the country prior to the unification has died by itself. All classes of the population are earnestly striving for a peaceful life, and labor with a view to rebuilding all that was destroyed. The Vladivostok People's Assembly, laboring under extraordinarily hard circumstances,

due to intervention, and in spite of various memoranda and veiled threats by the Japanese High Command and Chief of Staff and the head of the Diplomatic Mission, has by an overwhelming majority recognized the Government of the Far Eastern Republic. These are the heroic results of the aspiration of our people for unity, their burning desire to outlive intervention. On the territory of the Far Eastern Republic that is free from intervention law and order reign supreme. The life, freedom, labor, and property of all citizens are absolutely safe. Numerous foreigners residing in the Republic enjoy the same rights as the native citizens, and their lives and property are as safe as in any other civilized country.

Concluding on the basis of the above-mentioned facts that the further coming and staying of Japanese troops on Russian territory is not only unjustifiable but absolutely harmful, the Vice Minister for Foreign Affairs, Mr. Kojevnikov, by order of the Government of the Far Eastern Republic, most explicitly brought to the attention of the Imperial Japanese Government, through the chief of the Japanese Diplomatic Mission in Vladivostok, the urgent necessity of most speedily evacuating the Japanese forces from the Far East; and he further informed it of the readiness of the Far Eastern Republic to commence negotiations with the Imperial Government of Japan with a view to concluding a treaty of everlasting friendship and of the establishment of economic relations for mutual benefit, firmly believing that there is no such problem between the Government of the Far Eastern Republic and the Imperial Government of Japan which cannot be solved by way of negotiation.

However, the Japanese army continues by force to occupy part of the territory of our Republic, thereby making life unbearable for the population of that part of the territory of the Republic on which these forces are situated.

Taking advantage of the presence of Japanese troops and their actual suppression of any and all attempts to establish order on the part of the population and their governmental organs, which suppression is contrary to all declarations, the criminal elements are doing their contemptible deeds. Russian cities and villages within the zone of intervention are enveloped in a poisonous gas, as it were, of robbery, murder, and all kinds of unspeakable crimes. Criminal persons at Grodekovo, on the Ussuri Railway, are stopping trains, searching and robbing passengers, and taking many of them off, beating them, and very often leading them away nobody knows where. These same criminals are riding in the trains without paying their fares, are forcing railway agents to give them special locomotives, and, not receiving them, are detaching engines from trains. There was one such case at Grodekovo Station on Nov.

28. They are also taking away from Russian as well as from foreign passengers silver and other belongings, which is much like open highway robbery.

The local authorities find it impossible to establish order, thanks to the opposition of the Japanese military command to the lawful authorities, and to its sympathy with the enemies of law and order. The Japanese Command by force of arms is holding back the authorities of the law from fighting with the criminals and establishing order, which means an absolute violation of the right of self-determination of the people. The sympathies of the Japanese Military Command toward the enemies of the people were most vividly expressed when it carried under its protection Semenov—this criminal and enemy of the people—through Russian territory, defying the whole Russian and foreign population, and, officially informing the former Maritime Government, as if challenging its impotence, took him to Port Arthur with a guard of honor of the army of the Imperial Government of Japan, thereby openly scorning the feelings of the free people.

This criminal is now issuing orders in which he is promising to start a new adventure in the Spring, and while he is openly proclaiming that Japan will be rendering him assistance, he is thereby arousing the population against Japan, and, by awakening an old hatred, is hindering the establishment of good neighborly relations.

The Japanese Command does not allow paymasters on their way to pay the salaries of railway servants to travel on the trains; it obstructs the movement of nearly all freight, by these means grossly and without warrant interfering with the inner life of the Far Eastern Republic.

The Japanese Command has also held up the car of the Secretary of the Military Diplomatic Mission of the former Verkhneudinsk Government, which has since become part of the Far Eastern Republic, attempting to search him and his car, thus violating the most elementary laws with regard to diplomatic representatives, as established by practice and international right. The Japanese Command also demonstrated thereby before the population, that all official Japanese declarations are mere words. Needless to say all these actions on the part of the Japanese are awakening within the minds of the Russian people doubts as to the genuineness of the solemn declarations of the Japanese Government, and force them to be on the alert.

True to the mandates of our people and being directed by the same desire, the Government of the Far Eastern Republic thinks it necessary, with a view to establish peaceful mutual relations between both countries and peoples: first, that the High Command of the Japanese expeditionary force in Vladivostok, with regard to the actions of its subordinates, should adhere to the

principle of absolute non-interference in the internal affairs of the Far Eastern Republic, and desist from rendering assistance to separate groups of the population in their internecine struggles—in this case with regard to the assistance given to the Grodekovo band; secondly, in view of the fact that the region is quiet and that a strong Government has been established, it is an appropriate time for the fixing by the Japanese Imperial Government of a definite date for the evacuation of the Japanese troops from the Far Eastern Republic.

Considering the fact that upon the territory of the Far Eastern Republic there is at present a Japanese Diplomatic Mission, the Government is kindly asking to be informed whether the Japanese Imperial Government will agree to receive our mission in Tokio upon the just principle of reciprocity, with the aim of speedily establishing political and economic relations based on such treaties as will be for the mutual benefit and friendship of both the Japanese and Russian peoples. We trust that this will speed the long-hoped-for day of mutual understanding and peaceful relations between the two peoples.

KRASNOCHIEKOV,

*Minister of Foreign Affairs of the  
Far Eastern Republic.*

Chita, Jan. 19, 1920.

To this communication, so far as can be learned, the Japanese Government has made no reply. A bitter and outspoken article in the Tribuna (described as an organ of the Chita Government), called attention, at the end of February, to Japan's ignoring of the communication from Chita, and declared that in consequence the Siberian authorities were prevented from taking such measures as they deemed fit for the restoration of peace and order in the Maritime Province. The situation in the Japanese zone of occupation was described as deplorable. Russians were being slain daily by the Japanese troops; many of the inhabitants had abandoned their homes, schools had been closed, public offices abolished, criminals could not be arrested owing to Japanese interference, and the general result was anarchy.

In addition to its other troubles, the Maritime Province was threatened with the complete breakdown of all civil administration, as the Vladivostok authorities had reached the end of their gold reserve, and had no

means of paying the 2,000 or more officials, who were facing starvation with their families. The tense situation between Japan and the Chita Government was becoming more strained because of Japan's demand on the Chita Government through Vladivostok on behalf of the rights of Japanese fishermen along the coast. The Chita authorities were playing for time, while protesting against the severity of Japan's demands. Meanwhile the Japanese were at loggerheads with the Interallied Railway Committee over the question of whether Russian rolling stock should be removed, Japan's attitude being that she had the right to prohibit this in order to secure the safety of her military; the commission, however, overruled this by a decision taken shortly before Feb. 24.

An attempt of the anti-Bolshevist elements to gain control of Vladivostok on March 31 proved abortive. The fighting of the insurgents, united with the remnants of the forces of General Kappel, another Kolchak commander, had not proceeded very long before officials of the Japanese garrison ordered the belligerents to cease firing and disarm. This intervention proved effective, and the beginning of April saw quiet restored.

Study of the whole Siberian situation shows that the Japanese are hated by all Russians, whether of the Bolshevist or non-Bolshevist factions; that the Russians are determined to drive them out of the country, and that the Japanese are making every effort to maintain their domination. The Chita army in the Maritime Province is said to number 150,000 bayonets. The Chita Government and the Japanese alike disclaim aggressive intentions, but the play of hostile forces is such that the danger of a sudden explosion cannot be denied. The recent seizure by the Japanese of new Russian territory, and their action in taking possession of the Kamchatka fishing waters, have increased this danger. Only time can tell what the outcome of this complex situation will be.

# THE FATE OF PROHIBITION IN RUSSIA

*An interesting account, by a Vladivostok correspondent, of what has happened to the "dry" laws in Russia and Siberia since the Bolshevik revolution of 1917—Drastic supervision that proved unavailing\**

THE Czar's order of prohibition, coinciding with the feverish preparations for the World War, was greeted throughout Russia with sincere enthusiasm. Never had any similar measure had better chances of success. Even those to whom it meant in some cases a mortal economic blow accepted it with quiet resignation. But hardly was the first flush of excitement over when this unanimity disappeared. People began to discover in every possible difference of class, position, profession, &c., a valid reason to change their attitude. This tendency, for example, ran through the whole army, from the higher military authorities down through the officers to the men, every class inventing its own reasons why it should enjoy exemption from the law. Everybody found a sufficient and just ground for regarding himself as an exception.

The war between the popular will and the law began. Secret trade in all kinds of liquor soon flourished all over the country. In fact, it was so easy to obtain alcoholic drinks that one wondered whether the disregard of the law was not officially encouraged.

Nevertheless one distinctly salutary remarkable effect of prohibition remained. Nobody dared to appear intoxicated in public. Persons already under the influence of alcohol could obtain no more of it in any public place. Even private smugglers refrained from selling drink to such. For in case of offenders being detained by the police, they could buy immunity by indicating those who supplied them with alcohol, and the otherwise voluntarily blind authorities would act sternly in such a case. It seemed as if the public, with the tacit consent of the authorities, changed the imposed absolute prohibition to a voluntary obligation not to abuse the right to drink, not in public at least.

After the Revolution, however, it was

more the habit of four years than the vigilance of the police that maintained—as far as it maintained—prohibition. Scenes of the old times recurred, and drunken men and women in the streets became more and more numerous. The militia, as the police were now called, made hardly any effort to stop it. They had neither the will nor the means.

But at this point a new force came to the rescue of the success of prohibition. Whatever smuggling and secret trade there was in alcoholic drinks during the first four years of prohibition, it was, speaking the language of economics, only a liquidation of the large stocks that remained on hand. The uncertainty of the future of the trade, its risks, the impossibility to continue it on a large scale, forced capital of any considerable proportion to withdraw from it. The consequence was that after the old stocks had been exhausted new material could be obtained only at very high prices, and generally of very low quality. At the same time the buying capacity of the market sank rapidly. Soon it became impossible for the large majority to acquire any decent alcoholic drinks regularly. From time to time, at special festive occasions, alcohol figured on the table as a luxury, but later it disappeared even as such. The cheapest and most dangerous kinds were so bad that only very desperate alcoholics could find any taste for them. And so prohibition was now enforced not by the law, which was impotent, but by the iron severity of economic necessity.

The Bolshevik régime was officially decidedly prohibitionist. But as, in the beginning especially, money was abundantly supplied to the army, and the army was in most part stationed somewhere near

---

\*Condensed from a somewhat longer article in the Japan Weekly Chronicle of Feb. 24, 1921, written by its Vladivostok correspondent.

the frontiers, smuggling was greatly encouraged. Later drastic measures were adopted, and the money became almost valueless. Prohibition again triumphed.

### SMUGGLING IN SIBERIA

In Siberia the Kolchak Government restored the old order. Officially prohibition was upheld, but all kinds of drinks could be obtained anywhere and for reasonable prices. This was mainly due to the fact that the Siberian Railway runs near the Chinese and Manchurian border, through which it was very easy to import any quantity of liquor.

It should be remembered that Russians are perfectly satisfied in their desire for alcohol if they get vodka, i. e., a 40 per cent. alcoholic dilution. Smuggling is thereby greatly simplified, as the vodka is easily "condensed" to pure alcohol, which in turn is readily changed back into vodka by mixing it with a corresponding quantity of water.

There were, of course, numerous ways and means by which alcohol was carried across the frontier, but the bulk of the secretly imported liquor came in on the Siberian border through two principal channels and chiefly in two ways. One of these channels was the Manchurian Railway, on which hardly one male passenger traveled without being consciously or unconsciously guilty of smuggling. A most simple and sure method was adopted. The spirit was packed in very flat large or small tins, rounded so as to fit a man's breast or legs. The larger tins gave eight to ten bottles of vodka, the smaller ones two to four. Just before the train reached the border-stations Manchuria or Pogranchnaya, the bottles, provided with convenient leather belts, were attached to the waist, breast, back or legs, under the waistcoat or trousers, or were placed under the seat-cushion, often of a fellow passenger. For those third-class passengers who went in the Winter with the typically Siberian felt-boots, special tins were prepared filling almost completely the interior of the boots.

It must have been an unusually malevolent customs official who discovered any of the tins. There would have been no end to the inspection if they did. And so round-tin fabrication became a flourishing industry which brought handsome prof-

its to the Chinese merchants of Fudyadyan (the Chinese town of Harbin).

The other chief gate of entrance for clandestine alcohol was Vladivostok and the near Korean frontier. The small Chinese boats, a large number of which were engaged in carrying fire-wood to Vladivostok, had but a few hours' sail from the point where they took the wood to and from Korea, where they could load their more precious cargo of spirit. To evade the vigilance of the Vladivostok police was an easy matter. Big wooden barrels, made to look exactly like logs of wood, could quite openly pass at any time from the vessel to the carts waiting for them. Sometimes goat-skin bags were used, which, flat and spread over the seat as if to serve as a cover, proved more handy and less expensive, but they could not carry any considerable quantity.

### END OF PROHIBITION

The force of prohibition in Siberia was further weakened by the following fact: The different allied military missions and army units did not regard prohibition as binding for themselves, and were regularly supplied with their wonted drinks. As a result the sale of these to the entire population who could pay for them became uncontrollable by the Russian authorities, the missions and armies being naturally outside their jurisdiction.

After the fall of Kolchak a similar economic situation brought about the same effects on prohibition in Siberia as it did in Russia. Very few were able to afford real alcoholic drinks. The alcohol that was smuggled in from China and Manchuria was often a most dangerous mixture of ethyl with alcohol—methyl-alcohol, called *handsha*—and was palatable to the worst drunkards only.

In September last, however, desirous to obtain the revenues it was expected to yield, the Vladivostok National Assembly voted unanimously the abolition of prohibition. The shops were the next day filled with all kinds of drinks. Many feared a wild outbreak of drunkenness, but nothing of the sort happened. The depression, amounting to a crisis, which drove the Government to the step, has thus far made it impossible for the public to abuse the restored liberty.

# SUCCESSSES OF SOVIET RUSSIA

*Soviet prestige increased by signing of trade treaty with Great Britain—Moscow's attempt to obtain a similar pact with the United States is rebuffed—Suppression of the Kronstadt rebellion—Other events favorable to the Soviet leaders*

[PERIOD ENDED APRIL 12, 1921]

THE outstanding event of the month, from the viewpoint of the Soviet dictators, was the signing of the long-deferred trade treaty with Great Britain. Many times had the negotiations been broken off, many times had the hopes of the Moscow rulers been dashed to the ground. This was a victory for Red Russia. Nor was it an isolated triumph; the peace negotiations with the Poles at Riga, which had dragged on for months and often threatened disruption, were finally brought to a successful end. This new peace, important for Poland's future, was equally important for the Soviet Republic. The Red rulers, lastly, succeeded in entering the rebellious Neva fortress of Kronstadt, drove out the counter-revolutionary sailors who had sworn to overthrow the Bolshevik régime, and re-established completely their menaced power. Revolts in other parts of Russia still remained to be liquidated, but the general trend of events was favorable to the Soviet rulers.

The Kronstadt rebellion, which alarmed the Bolshevik rulers in its early stages, was an outgrowth of workmen's revolts in Petrograd. The whole movement started in a strike at the cartridge works in the former capital on Feb. 21, which spread on Feb. 23 to the Baltic works and then to the Laferme cigarette factory on the Vassili Ostrov (Island). Other strikers joined the men, who were besieged on the island and who were further reinforced by sailors who came up from Kronstadt on an icebreaker. Serious fighting continued until the end of February. On March 2 the sailors of Kronstadt, headed by Petresenko, a sailor of one of the Bolshevik warships, informed Petrograd of their refusal to acknowledge the Soviet rule further, and simultaneously arrested the Kronstadt commissar and chief of the fleet. Bombardments from both sides began and continued for a number of days. The Soviet forces regained possession of the

fortress of Krasnaya Gorka, across the strait, and made attacks which the besieged sailors found it ever more difficult to repel.

The size of the garrison, it appeared, had been exaggerated, as it did not exceed 16,000 men. Worn out by the strain of days of bombardment, sleepless nights, and hard fighting, the Kronstadters at last faced actual invasion by a Red Army of 60,000 men under Trotzky, which entered the city in a fog, and though driven out by machine gun fire, returned to the assault, and was finally victorious. Severe fighting occurred in the streets; the Kronstadters declared that Communist sympathizers lodged in houses harassed them with a cross-fire. Eventually the sailors were completely routed. Fully 12,000 fled across the ice to Terioki, Finland, where they became a problem for the Finnish Government. Petresenko—the sailor who headed the revolt—was the last to leave Kronstadt for Terioki. The whole uprising was subsequently explained by the Moscow officials as having been due to the attempts of Trotzky to introduce discipline among the Kronstadt sailors, who had been demoralized by the free and easy life which they had long led in their semi-isolation in Kronstadt, and whose anger was intensified by Trotzky's action in reducing their food supplies in order to compel them to accept his dictates. The Bolshevik authorities were said to have executed more than 2,000 of the insurgents who fell into their hands.

Kronstadt was announced officially to have been taken on March 17. The next day the peace treaty with Poland and Ukrainia was signed at Riga. [See Poland]. After the signing, M. Dombisky, head of the Polish delegation, declared that it was Poland's desire to be the bridge between Russia and Europe. He added, however, that future relations between the two countries would depend on the way the treaty was executed. The comment of Adolph Joffe, head of the

Russian delegation, was mainly as follows: "Soviet Russia's enemies have endeavored to represent her as an aggressive State, but the signing of this treaty shows her peacefulness."

The Russo-Ukrainian-Polish frontier was defined by the treaty in such a way as to give Poland new territory; propaganda and political interference were abjured, political amnesty was granted on both sides, property taken from Poland and the Ukraine was to be returned by Russia, the Soviet power and Ukraine were to pay to Poland 30,000,000 gold rubles during the year following ratification of the treaty; Poland was released from the payment of debts of the former Russian Empire; matters regarding railway material and machinery, accounts, deposits and funds were settled, negotiations for commercial treaties and postal and telegraph conventions were to start within six weeks.

Lenin heard simultaneously of the Kronstadt liquidation and of the signing of the Riga and London Treaties on March 18. It was just after he had come from the Tenth Communist Congress in Moscow, where he had made a speech subsequently interpreted as an abjuration of Bolshevism. News of the occurrences above mentioned was greeted by a screwing up of one eye, and by the dryly humorous remark: "I fear I have become respectable." According to Captain Francis M'Cullagh, the Russian correspondent of *The New York Herald*, he then sent to the British Government the following telegram:

Agreement useless unless the British Government ceases the mistrust shown us for three years. Our best and only propaganda will be the example given the world by our economic reconstruction of Russia.

Stafford Ransome, the English author, who was Lenin's guest at Moscow, paid tribute at this time to Lenin's attitude during the trying days of the Kronstadt rebellion. His cool and humorous demeanor had prevented the panic-stricken Zinoviev, President of the Central Executive Committee, from causing a massacre in Petrograd. More important, he had spoken daily before the Communist Congress, where his position was most difficult. His numerous speeches had been remarkable in that he frankly admitted his mistakes. At the opening of the Congress on March 8, he had said:

Our internal difficulties are bound up with questions of demobilization, food and fuel. We made a mistake in the distribution of stocks of foodstuffs, although these stocks were considerably larger than in former years. The fuel crisis is due to the fact that we attempted to restore our industrial life on too large a scale. We overestimated thereby the transition from war to peace economics.

The most important question of the present moment is the relation between the working classes and the predominating section of the Russian population—the peasants. Moreover, the international situation is defined by the exceedingly slow development of the world revolutionary movement, and we in no case can consider its speedy victory a premise of our policy.

In speaking of the internal situation in Soviet Russia, it is necessary to dwell upon the events at Kronstadt. The rising organized by France in conjunction with the Social-Revolutionaries will be crushed in the next few days. Nevertheless, it forces us to consider most seriously the internal situation of Soviet Russia.

The peasants consider that they have nothing more to fear from the Czarist Generals, and that they receive too small an amount of industrial products. The peasants, therefore, consider that the sacrifices demanded from them by the State are too great. We must meet the desires of the peasants. We are introducing a food tax in kind, which will be imposed according to the means of the peasant, and will afford him a free field of action in his interests as a landowner. This tax will consume only part of the peasant's harvest. The surplus that remains in his hands he will have the possibility of selling locally. \* \* \* The question of the "kind" tax is now the most important of Soviet policy.

During the Congress and just before it opened Lenin made five different speeches, in which he announced allegedly important changes in the policy of the Moscow Government. He recognized or feigned to recognize the impossibility of bringing about the world revolution by organized propaganda, and declared that Russia must grant concessions to foreign capitalists for the sake of fostering economic development. His proposals for internal changes were as follows:

1. More freedom must be effected in the exchange of goods among the people.

2. The peasants must be permitted to sell their farm products, and only a portion of them shall be delivered to the Soviet régime as a tax.

3. The operation and organization of smaller industries must be left to some extent to private initiative.

4. Greater freedom must be allowed to the co-operative societies.

These proposals were all adopted, though not without a conflict. The second of the measures means in effect that the Moscow Government is to abandon compulsory requisitioning of food, grain, fodder and other agricultural products; inasmuch, however, as the State still retains the grain monopoly, the peasants can dispose of their grain on a price basis only to the Government. Even so, the passing of this decision will tend to diminish the hostility of the peasants to the régime, which before they regarded purely as a predatory power.

The first item mentioned concerns one of the most fertile sources of discontent among the Russian people, namely the abolition of the free market. The whole anti-Bolshevist movement among the peasants has been in large part based on the demand for the freedom of trade. This demand the Bolsheviki have fiercely denounced as in substance a demand for freedom of speculation in food. To prevent this, the dictators established a chain of military cordons to watch all roads, and their agents searched all railway cars, carts and other vehicles, and confiscated all food which they believed intended for free sale. This control which failed to prevent much of the traffic, has now been officially removed—whether only temporarily or permanently remains to be seen. By some it is considered as a desperate but provisional expedient to save the main cities from absolute famine.

The trade agreement with Great Britain was signed in London on March 16 by Sir Robert Horne, President of the London Board of Trade, on behalf of the British Government, and by Leonid Krassin, head of the Bolshevist trade delegation, on behalf of the Moscow régime. (The full text of the pact follows this article.) Its terms forbade propaganda on either side, provided for repatriation of all war prisoners still remaining in either country, raised the blockade of Russia, sanctioned freedom of shipping, stipulated that all mines in the Baltic be cleared away, called for the admission of trade representatives and official agents, pledged the British Government not to seize Russian gold sent to cover future trade, and empowered the Soviet Government to terminate the contract if any British court decided in favor of attachment of gold or other property for debts of any preceding

Russian Government. This provision was devised to cover certain litigation to be brought as a test case in the British courts. Unless the British courts confirm the Soviet ownership of Russian gold, M. Krassin himself declared after the signing, the treaty will be useless and practically void.

At the time this trade agreement was signed a special letter was handed by Sir Robert Horne to M. Krassin, in which Great Britain categorically charged, with full details, that the Moscow Government was still continuing its subversive propaganda against Great Britain, notably in Afghanistan and other territory contiguous to India. It told who the Russian agents were and what instruments they had made use of—Hindus and Afghans, some of whom had been convicted of crime, while others had been in the pay of Germany during the war. All these activities, said the note, must cease immediately. The whole letter virtually amounted to an ultimatum.

Apart from backing the Kemalite Turks in their protest against the Sèvres Treaty, the Bolsheviki, according to Moscow advices received in London toward the end of March, hurried through negotiations with one Eastern people after another before the Trade Treaty with Great Britain was signed, in order to obtain a strong position in the East before all further activity was prohibited. Treaties were concluded with the Afghans, Bokharans, Persians and Turks. The treaty with Afghanistan, though ostensibly recognizing Afghan independence, practically turned the Afghan Government into an institution subsidized by Russia to the extent of 1,000,000 rubles yearly. The treaty with Turkey, signed March 16, confirmed the territorial frontiers claimed by Turkey under the act passed by the Turkish Parliament on Jan. 28, 1920, ruled regarding disputed territory, acknowledged Turkey's sovereignty, and released her from payment of the old debt to Imperial Russia.

It is scarcely necessary to say that France looked upon the Russo-British trade treaty with a cold and fishy eye. France's insistence that no trade with Russia was possible until Moscow recognized Imperial Russia's debts has never been modified; she has not believed that such a trade agreement would be workable. French feeling, as reflected in the press, was that the present compact would not prove practicable. Brit-

ish reaction was one of considerable hostility. Several of the leading London papers assailed the treaty, declaring that recognition of the Soviet régime was implied by it. Vigorous onslaughts were also delivered orally in Parliament. At the session of March 22 Lloyd George defended his policy. The agreement, he said, was a purely trading agreement, not a peace compact, and recognized the Soviet merely as the Government de facto, which undoubtedly it was. It was an attempt to settle up some of the most important problems of the East by a mutual arrangement, in which the rights and claims of all British nationals were protected.

The letter sent by Tchitcherin to the Washington Government proposing a similar pact with the United States, and the uncompromising refusal dispatched by Secretary Hughes in reply, will be found elsewhere in this issue, under head of the Harding Administration's foreign policy.

The Russian trade delegation to Italy was less fortunate than the mission to England. The Italian authorities insisted in Rome on having the delegation's luggage examined, and the Soviet emissaries protested in the strongest terms against what they called an outrage. The baggage was found to contain many jewels and ornaments of gold and silver worth a small fortune. Italian feeling ran high against the Red envoys, as no doubt was entertained that these jewels were to be disposed of, as in England, for the purposes of subversive propaganda. A Rome dispatch of March 21 stated that the Russian delegation had broken off relations with the Italian Government—which had prepared expulsion decrees—and was intending to return to Moscow.

The draft of a German-Russian trade agreement was ready for signature on March 23.

Sporadic revolts in Kazan, West Russia, White Russia and the South continued; the Soviet Government was repressing them with a strong hand as they occurred. The Soviet's greatest difficulty, as before, was

the food question. Petrograd was in a pitiable plight. The whole situation was reviewed by the Central Committee elected by the Tenth Congress in a letter sent to all members of the party, appealing for party unity, and urging them to aid in the task of establishing closer connection with the peasants, making them understand the seriousness of the economic crisis, and the spirit of conciliation in which the measures passed by the Congress had been conceived. From the Bolshevist point of view, the most serious development in Siberia was the reported launching of new offensives by General Semenov and his anti-Bolshevist Generals. [See Siberia.]

An echo of the liquidation of General Wrangel's venture was heard on April 5, when it was reported that the situation of some 35,000 soldiers of the former Wrangel army, interned on the island of Lemnos, was becoming desperate. The soldiers complained bitterly of insufficient food and shelter. The French authorities had offered to remove most of the men to the mainland, but this offer had been accepted only by some 3,000. Other offers were likewise refused. General Wrangel, supported by all his followers, had asked the French Government to transport them to Siberia, which seemed an unlikely solution. The situation, according to the anti-Bolshevist publicist, Vladimir Bourtsev, was critical, and only lack of arms and transportation was preventing this pent-up and resentful fragment of the former army from attempting an attack on Constantinople, or engaging in some other venture equally perilous.

According to the Bolsheviks' own statement, 114 revolts had occurred; 249 anti-Bolshevist plots had been discovered, 4,300 people had been executed, and 20,000 people had been imprisoned during the last six months in the twelve districts of Central Russia. Authorities on Russia believe that these figures are far below the actual facts. As they stand, they do not encourage the belief that the Bolshevik régime is solidly established or accepted in Russia.

# TEXT OF THE RUSSO-BRITISH TRADE AGREEMENT

*Official version of the document under which England is attempting to reopen trade with Bolshevist Russia—Nature of the concessions which Lloyd George's Government has made, and which the United States has refused to imitate*

AFTER ten months' negotiations the agreement for the opening of trade relations between Great Britain and Soviet Russia was finally signed in London on March 16, 1921, by Sir Robert Horne and Leonid Krassin for their respective Governments. At almost the same time the Moscow dictators succeeded in suppressing the anti-Soviet rebellion at Kronstadt and concluded several desired treaties with Asiatic Governments. Events, for the time at least, were favoring the Lenin-Trotsky régime. The trade agreement with Great Britain was especially pleasing to the Bolshevist leaders because it amounted practically to a recognition of them as the de facto Government of Russia. In England there was general distrust of the policy thus embarked upon, and Sir Robert Horne and Mr. Lloyd George succeeded in pushing the compact through only against considerable opposition both in and outside of Parliament. Their real aim was apparent in a long communication to Krassin, which accompanied the agreement, and which served notice upon the Soviet authorities that, if they did not stop their clandestine work for the overthrow of British rule in India, the new arrangement could not last. The text of the agreement is as follows:

WHEREAS, it is desirable in the interests both of Russia and of the United Kingdom that peaceful trade and commerce should be resumed forthwith between those countries, and whereas for this purpose it is necessary, pending the conclusion of a formal general peace treaty between the Governments of those countries by which their economic and political relations shall be regulated in the future, that a preliminary agreement should be arrived at between the Government of the United Kingdom and the Government of the Russian Socialist Federal Soviet Republic, hereinafter referred to as the Russian Soviet Government;

The aforesaid parties have accordingly entered into the present agreement for the resumption of trade and commerce between the countries.

## PROPAGANDA FORBIDDEN.

The present agreement is subject to the fulfillment of the following conditions, namely:

(a) That each party refrain from hostile actions or undertakings against the other and from conducting outside of its own borders any official propaganda, direct or indirect, against the institutions of the British Empire or the Russian Soviet Republic respectively, and more particularly that the Russian Soviet Government refrain from any attempt, by military or diplomatic or any other form of action or propaganda, to encourage any of the peoples of Asia in any form of hostile action against British interests or the British Empire, especially in India and in the independent State of Afghanistan. The British Government give a similar particular undertaking to the Russian Soviet Government in respect of the countries which formed part of the former Russian Empire and which have now become independent.

(b) That all British subjects in Russia are immediately permitted to return home, and that all Russian citizens in Great Britain or other parts of the British Empire who desire to return to Russia are similarly released.

It is understood that the term "conducting any official propaganda" includes the giving by either party of assistance or encouragement to any propaganda conducted outside its own borders.

The parties undertake to give forthwith all necessary instructions to their agents and to all persons under their authority to conform to the stipulations undertaken above.

## BLOCKADE RAISED.

I.—Both parties agree not to impose or maintain any form of blockade against each other and to remove forthwith all obstacles hitherto placed in the way of the resumption of trade between the United Kingdom and Russia in any commodities which may be legally exported from or imported into their respective territories to or from any other foreign country, and not to exercise any discrimination against such trade as compared with that carried on with any other foreign country, or to place any impediments in the way of banking, credit and financial operations for the purpose of such trade, but subject always to legislation generally applicable in the respective countries. It is understood that nothing in this article shall prevent either party from regulating the trade in arms and ammunition under general provisions of law which are applicable

to the import of arms and ammunition from, or their export to, foreign countries.

Nothing in this article shall be construed as overruling the provisions of any general international convention which is binding on either party by which the trade in any particular article is or may be regulated (as, for example, the opium convention).

#### FREEDOM OF SHIPPING.

II.—British and Russian ships, their masters, crews and cargoes, shall, in ports of Russia and the United Kingdom respectively, receive in all respects the treatment, privileges, facilities, immunities and protections which are usually accorded by the established practice of commercial nations to foreign merchant ships, their masters, crews and cargoes, visiting their ports, including the facilities usually accorded in respect of coal and water, pilotage, berthing, dry docks, cranes, repairs, warehouses, and, generally, all services, appliances and premises connected with merchant shipping.

Moreover, the British Government undertakes not to take part in or to support any measures restricting or hindering, or tending to restrict or hinder, Russian ships from exercising the rights of free navigation of the high seas, straits and navigable waterways which are enjoyed by ships of other nationalities.

Provided that nothing in this article shall impair the right of either party to take such precautions as are authorized by their respective laws with regard to the admission of aliens into their territories.

#### MINE CLEARING.

III.—The British and other Governments having already undertaken the clearance of the seas adjacent to their own coasts and also certain parts of the Baltic for mines for the benefit of all nations, the Russian Soviet Government on their part undertake to clear the sea passages to their own ports.

The British Government will give the Russian Soviet Government any information in their power as to the position of mines which will assist them in clearing passages to the ports and shores of Russia.

The Russian Government, like other nations, will give all information to the International Mine Clearance Committee about the areas they have swept and also what areas still remain dangerous. They will also give all information in their possession about the mine fields laid down by the late Russian Governments since the outbreak of war in 1914 outside Russian territorial waters, in order to assist in their clearance.

Provided that nothing in this section shall be understood to prevent the Russian Government from taking or require them to disclose any measures they may consider necessary for the protection of their ports.

#### TRADE REPRESENTATIVES.

IV.—Each party may nominate such number of its nationals as may be agreed from time to time as being reasonably necessary to en-

able proper effect to be given to this Agreement, having regard to the conditions under which trade is carried on in its territories, and the other party shall permit such persons to enter its territories, and to sojourn and carry on trade there, provided that either party may restrict the admittance of any such persons into any specified areas, and may refuse admittance to or sojourn in its territories to any individual who is *persona non grata* to itself, or who does not comply with this Agreement or with the conditions precedent thereto.

Persons admitted in pursuance of this article into the territories of either party shall, while sojourning therein for purposes of trade, be exempted from all compulsory services whatsoever, whether civil, naval, military, or other, and from any contributions, whether pecuniary or in kind, imposed as an equivalent for personal service, and shall have right of egress.

They shall be at liberty to communicate freely by post, telegraph and wireless telegraphy, and to use telegraph codes under the conditions and subject to the regulations laid down in the International Telegraph Convention of St. Petersburg, 1875 (Lisbon Revision of 1908).

Each party undertakes to account for and to pay all balances due to the other in respect of terminal and transit telegrams, and in respect of transit letter mails in accordance with the provisions of the International Telegraph Convention and Regulations, and of the Convention and Regulations of the Universal Postal Union, respectively. The above balances when due shall be paid in the currency of either party at the option of the receiving party.

Persons admitted into Russia under this Agreement shall be permitted freely to import commodities (except commodities, such as alcoholic liquors, of which both the importation and the manufacture are or may be prohibited in Russia) destined solely for their household use or consumption to an amount reasonably required for such purposes.

#### OFFICIAL AGENT

V.—Either party may appoint one or more official agents to a number to be mutually agreed upon, to reside and exercise their functions in the territories of the other, who shall personally enjoy all the rights and immunities set forth in the preceding article and also immunity from arrest and search, provided that either party may refuse to admit any individual as an official agent who is *persona non grata* to itself or may require the other party to withdraw him should it find it necessary to do so on grounds of public interest or security. Such agents shall have access to the authorities of the country in which they reside for the purpose of facilitating the carrying out of this Agreement and of protecting the interests of their nationals.

Official agents shall be at liberty to communicate freely with their own Government and with other official representatives of their Government in other countries by post, by

telegraph, and wireless telegraphy in cipher, and to receive and dispatch couriers with sealed bags subject to a limitation of three kilograms per week which can be exempt from examination.

Telegrams and radiotelegrams of official agents shall enjoy any right of priority over private messages that may be generally accorded to messages of the official representatives of foreign Governments in the United Kingdom and Russia, respectively.

Russian official agents in the United Kingdom shall enjoy the same privileges in respect of exemption from taxation, central or local, as are accorded to the official representatives of other foreign Governments. British official agents in Russia shall enjoy equivalent privileges, which, moreover, shall in no case be less than those accorded to the official agents of any other country.

The official agents shall be the competent authorities to *visa* the passports of persons seeking admission in pursuance of the preceding article into the territories of the parties.

VI.—Each party undertakes generally to ensure that persons admitted into its territories under the two preceding articles shall enjoy all protection, rights, and facilities which are necessary to enable them to carry on trade, but subject always to any legislation generally applicable in the respective countries.

VII.—Both contracting parties agree simultaneously with the conclusion of the present Trade Agreement to renew exchange of private postal and telegraphic correspondence between both countries, as well as the dispatch and acceptance of wireless messages and parcels by post in accordance with the rules and regulations which were in existence up to 1914.

VIII.—Passports, documents of identity, powers of attorney, and similar documents issued or certified by the competent authorities in either country for the purpose of enabling trade to be carried on in pursuance of this Agreement, shall be treated in the other country as if they were issued or certified by the authorities of a recognized foreign Government.

#### NO GOLD LEGISLATION.

IX.—The British Government declares that it will not initiate any steps with a view to attach or to take possession of any gold, funds, securities, or commodities, not being articles identifiable as the property of the British Government, which may be exported from Russia in payment for imports or as securities for such payment, or of any movable or immovable property which may be acquired by the Russian Soviet Government within the United Kingdom.

It will not take steps to obtain any special legislation not applicable to other countries against the importation into the United Kingdom of precious metals from Russia, whether specie (other than British or Allied), or bullion, or manufactures, or the storing, analyzing, refining, melting, mortgaging, or disposing thereof in the United Kingdom, and will not requisition such metals.

X.—The Russian Soviet Government undertakes to make no claim to dispose in any way of the funds or other property of the late Imperial and Provisional Russian Government in the United Kingdom. The British Government gives a corresponding undertaking as regards British Government funds and property in Russia. This article is not to prejudice the inclusion in the general Treaty, referred to in the preamble, of any provision dealing with the subject-matter of this article.

Both parties agree to protect and not to transfer to any claimants pending the conclusion of the aforesaid Treaty any of the above funds or property which may be subject to their control.

XI.—Merchandise, the produce or manufacture of one country imported into the other in pursuance of this Agreement, shall not be subjected therein to compulsory requisition on the part of the Government or of any local authority.

XII.—It is agreed that all questions relating to the rights and claims of nationals of either party in respect of patents, trade marks, designs, and copyrights, in the territory of the other party, shall be equitably dealt with in the Treaty referred to in the preamble.

#### "ARREST OF GOLD."

XIII.—The present Agreement shall come into force immediately, and both parties shall at once take all necessary measures to give effect to it. It shall continue in force unless and until replaced by the Treaty contemplated in the preamble so long as the conditions laid down in the articles of the Agreement and in the preamble are observed by both sides. Provided that at any time after the expiration of twelve months from the date on which the Agreement comes into force either party may give notice to terminate the provisions of the preceding articles, and on the expiration of six months from the date of such notice those articles shall terminate accordingly.

Provided also that if as the result of any action in the Courts of the United Kingdom dealing with the attachment or arrest of any gold, funds, securities, property, or commodities not being identifiable as the exclusive property of a British subject, consigned to the United Kingdom by the Russian Soviet Government or its representatives, judgment is delivered by the Court under which such gold, funds, securities, property, or commodities is held to be validly attached on account of obligations incurred by the Russian Soviet Government or by any previous Russian Government before the date of the signature of this Agreement, the Russian Soviet Government shall have the right to terminate the Agreement forthwith.

Provided also that in the event of the infringement by either party at any time of any of the provisions of this Agreement or of the conditions referred to in the preamble, the other party shall immediately be free from the obligations of the Agreement. Nevertheless, it is agreed that before taking any action in-

consistent with the Agreement the aggrieved party shall give the other party a reasonable opportunity of furnishing an explanation or remedying the default.

It is mutually agreed that in any of the events contemplated in the above provisos, the parties will afford all necessary facilities for the winding up in accordance with the principles of the Agreement of any transactions already entered into thereunder, and for the withdrawal and egress from their territories of the nationals of the other party and for the withdrawal of their movable property.

As from the date when six months' notice of termination shall have been given under this article the only new transactions which shall be entered into under the Agreement shall be those which can be completed within the six months. In all other respects the provisions of the Agreement will remain fully in force up to the date of termination.

XIV.—This Agreement is drawn up and signed in the English language. But it is agreed that as soon as may be a translation shall be made into the Russian language and agreed between the parties. Both texts shall then be considered authentic for all purposes.

Signed at London, this sixteenth day of March, nineteen hundred and twenty-one.

R. S. HORNE.  
L. KRASSIN.

#### RECOGNITION OF CLAIMS.

At the moment of signature of the preceding Trade Agreement both parties declare that all claims of either party or of its nationals against the other party in respect of property or rights or in respect of obligations incurred by the existing or former Governments of either country shall be equitably dealt with in the formal general Peace Treaty referred to in the preamble.

In the meantime, and without prejudice to the generality of the above stipulation, the Russian Soviet Government declares that it recognizes in principle that it is liable to pay compensation to private persons who have supplied goods or services to Russia for which they have not been paid. The detailed mode of discharging this liability shall be regulated by the Treaty referred to in the preamble.

The British Government hereby makes a corresponding declaration.

It is clearly understood that the above declarations in no way imply that the claims referred to therein will have preferential treatment in the aforesaid Treaty as compared with any other classes of claims which are to be dealt with in that Treaty.

Signed at London, this sixteenth day of March, nineteen hundred and twenty-one.

R. S. HORNE.  
L. KRASSIN.

## ORGANIZED LABOR AND THE "YELLOW PERIL"

DEAN INGE, "the gloomy," in a paper read at Epsom, England, recently drew a dark picture of the results to be anticipated from the coming industrialization of Asia. Incidentally he seized the occasion to denounce both the spirit and the efficiency of the workmen of Great Britain and other white countries, declaring that the labor union policy of reducing output while trying to force up wages was creating a new "yellow peril" which would bring about the economic downfall of the West in competition with the East.

The Japanese, in their haste to make money, had tolerated a system of labor in their factories no better than that of England 100 years ago, said Dean Inge, but the ratio of wages to output all over the East gave native manufacturers an enormous advantage over the European and American producers—an advantage which showed no signs of growing less. It had been proved, he said, that under a régime of peace, free trade and unrestricted emigration, the yellow races would outwork,

underlive and eventually exterminate the whites. The result of the European, Australian and American labor movement, he declared, had been to produce a type of workingman who had no survival value, and who, but for the prohibition of immigration, would soon be swept out of existence. That kind of protection, however, rested entirely on armed force—whose last resort is war. The deterioration of labor efficiency due to present conditions would inevitably lead to the transfer of capital and business ability to countries where this efficiency was unimpaired—notably to China, Japan and India—and those countries would be industrialized on the most modern basis. This would mean eventually that Asia would capture Western markets.

The remedy suggested by Dean Inge was a great increase of production, a cessation of strikes, with a Government pledged to peace, free trade and drastic retrenchment; these measures, he believed, would restore confidence and make labor stand on its own merits.

# THE RED ARMY

By COLONEL A. M. NIKOLAIIEFF

Former Russian Military Attache at Washington

FROM the rapid and decisive success gained by the Red Army over the army of General Wrangel, who led the last ill-fated venture to free Russia by armed force from the Bolshevik yoke, an impression might be created on those who watched the struggle from afar that the morale of the Bolshevik fighting machine and its aggressive qualities were of a high quality. Such an impression might further be strengthened by the recent crushing of the Kronstadt rebellion by the Red forces under Trotzky. Involuntarily the foreign observer will find himself wondering whether it is possible that the Bolshevik tyranny, which has turned Russia into a land of chaos, anarchy and terror, has really been able to manifest a creative power by organizing a formidable fighting unit—the Red Army. On the surface it looks as if this were the case, but the appearances will not stand the test of facts.

It is now well known that Wrangel's defeat in the Crimea was due to his having to face an army nearly six times as large as his own. In the case of the Kronstadt rebellion the garrison which revolted at this naval base, and which held the fortress for more than two weeks, consisted at the beginning of only a few hundred sailors and soldiers; later the number was increased to approximately 15,000 by voluntary enlistment. Against this garrison the Bolshevik leaders led an armed force of about 50,000 strong. Part of the Red force, sent out across the ice to make the first assault, was composed of cadets belonging to the various Bolshevik cadet schools, the policy of which is to train youthful apprentices to become staunch supporters of the Bolshevik régime.

That the Bolsheviks have been unable to accomplish any large constructive work in the military sphere (or in any other) is fully confirmed by the available data regarding the Red Army. These data show that the Soviet Army owes its successes not to the military talents of the Bolshevik leaders, nor to the loyalty of the army's

personnel, but to the fact that the officers who once formed the backbone of the former imperial army are being kept by coercion, and, furthermore, that the Bolsheviks have adopted the methods and regulations on which depended the fighting capacity of the former imperial army. The victories won by the Red forces when they are numerically superior are undoubtedly due to the restoration of the old discipline, which the Bolsheviks at first set themselves with such zeal to destroy, and to the compelling of the old monarchist officers to apply their military training and abilities to the communist service.

There is no longer any doubt that the High Command of the Red Army consists chiefly of officers of the old régime. There are about 400 officers of the Imperial General Staff in Soviet Russia, many of whom hold high positions. Disciplinary power has been given to them, with the same right to impose punishment for infractions of regulations which they possessed in the imperial army. These officers, however, are unwilling leaders. They are serving the Soviet régime against their convictions—to avoid starvation and political persecution and to protect their families, every member of which is registered by the Bolsheviks and virtually held as a hostage.

There exists a distinct division between these old Czarist officers and the Bolshevik-trained officers. The former have even gone so far as to have separate messrooms. The Bolsheviks have been forced to yield this point, as they cannot afford to alienate the imperialist commanders, knowing full well that the Red officers are incapable, as a general rule, of holding positions above the rank of company commander. The attitude of the Red officers toward the former Czarists is somewhat similar to that of the former non-commissioned officers of the imperial army toward their superiors. As for the rank and file, their attitude toward their Red officers, especially toward those promoted from the ranks, is not friendly, owing to these officers' cruel and

oppressive treatment; their attitude toward the officers of the old régime, on the contrary, is uniformly excellent.

For war purposes the Bolsheviki use conscription to reinforce their army cadres. In the Wrangel campaign a large number of those conscripted were hostile and unwilling, and many of those who enlisted voluntarily became deserters. Voluntary recruits were negligible in number. As a matter of fact, every one in Soviet Russia is against war, and no one really wants to fight; many, however, prefer to serve in the Red Army because the living conditions of the soldiers are so much better than those of the population. A private in the Red Army receives 1,200 rubles a month plus his ration, his clothes, and an additional half of his salary for his family. The Red soldiers' reluctance to fight is evident from their avoidance of the mobilization decrees and from the number of desertions. An order issued last Fall by the officer commanding the Baltic fleet may be cited as an instance: One hundred sailors were sentenced to be shot for disobeying the mobilization order.

As for the soldiers' attitude toward the Bolshevist Commissaries, it is one of downright hostility. This was proved by the assassination of the commissary of the 30th Division in Irkutsk, by the assassination of the commissaries of the Revolutionary Council in Tsaritsin, and of members of the Extraordinary Commission in Slatousk and Kazan. It is noteworthy that although the murders took place in the presence of a great number of soldiers, the murderers could not be found.

The police system of political spying, search and persecution introduced by the Bolsheviki into the Red Army and highly developed by them, serves as the main means of subjecting the army personnel to the interests of the Bolshevist leaders. This system of "political safety," which serves also for direct propaganda, has been introduced by four parallel organs: (1) The commissaries, (2) the Extraordinary Commission, (3) the Revolutionary Tribunals, (4) the registration institutions. Of these four organs only the Extraordinary Commission is considered secret. The functions of each are as follows:

All the commissaries are under the Revolutionary Military Council in Moscow. They

are appointed to every headquarters, military bureau and unit. Every regimental commissary forms a commission around him, and from it sends out political instructors among the battalions and companies. The personnel of the commissaries usually consists of former soldiers, tradesmen and workmen; there are among them former chauffeurs, variety actors and college students (not graduated before the revolution); many are non-Russians.

The sections and sub sections of the Extraordinary Commission, which has its central bureau in Moscow, are established at the main headquarters of the staff, and at every army and division headquarters. A net of secret agents, spread all through the army, issues from these sections and subsections.

There are Revolutionary Tribunals in every headquarters, down to the headquarters of a division; they are composed of a President, a Secretary, and of the members, who are appointed from the same class of population as the commissaries. To every tribunal is attached a platoon, whose duty it is to execute the sentences. Those who receive an order to appear before a Revolutionary Tribunal seldom escape death.

The central registration organization is in Moscow, and has its offices at Army Group Headquarters, its sections at Army Headquarters, and its subsections at Divisional Headquarters. These institutions work with the intelligence branches, and their chiefs are at the same time the commissaries of those branches.

The same apparatus, as stated above, is used for propaganda purposes. For this object the communist agitators receive very definite instructions. Simultaneously an enormous quantity of literature, proclamations and appeals is issued. A pamphlet entitled "Memorandum for the Red soldier on the southern front," which was signed by Trotzky and distributed before the Bolshevist offensive in the Crimea, is a good example of such propaganda literature, with its fierce denunciations of Wrangel himself and of all other "monarchists," and its alluring picture of the prophesied benefits of reconstruction following the liquidation of the Wrangel war.

How important a part the propaganda weapon plays in Bolshevist warfare is illustrated by the instructions given to the Red agitators before the conclusion of the armistice with Poland last year. Some of these instructions were as follows:

The tactics of the comrade-agitators shall consist in compromising the Russian (anti-Bolshevist) and Polish troops, but this object must be kept secret. The task of the agitators will be as follows:

To provoke pogroms of the Jews, which are

to be followed by pogroms of the intelligentsia and of the peasants (in enemy territory).

To keep up the Polish terror by every means in the area occupied by the Poles.

To create the belief that the army of General Wrangel is composed of bandits.

To spread the opinion in the intellectual classes that not a Bolshevik, but a Brussiloff army is advancing—that it is not a communist but a republican and national army.

To make the peasants believe that all Governments except the Soviet Government collect taxes and arrears.

To enlist in the anti-Bolshevik armies and incite the soldiers there to start pogroms, to pillage and to spread terror.

To spread the assurance that the Bolshevik Government has changed, and that the Red terror no longer exists.

To sum up briefly, the Red Army resembles a regular armed force only on account of the presence in it of elements of the former imperial army—which elements are held by compulsion and made to serve the régime which they hate—and of the restoration of the disciplinary methods which prevailed under the Czar, and which, at first, the Bolsheviki sought to

destroy. Furthermore, the Red Army is kept in subjection by the Bolshevik leaders, not because it has any high degree of morale, but because of the employment of such means as secret policing, political persecution, terror, fear of death through starvation, the creation of an atmosphere of distrust and all-pervading propaganda. Such means can be effective and bear desirable fruits only for a certain time. Eventually the Russian people, finding it intolerable to continue living in such conditions of oppression, misrule and terror, will rise in a common upheaval and overthrow the Bolshevik tyranny.

When that time comes, the Red Army will be replaced by another army, one worthy of the great people from whom it will draw its vital strength, one that will be subjected to no intimidation, that will be a prey to no propaganda, that will be officered by no coerced and unwilling commanders, but by military experts loyal to a democratic and representative Government—the Russian National Army.

## “BIG BERTHAS” ONLY NAVAL GUNS

THE mystery of the “Big Berthas,” as the supposed super-guns were called that shelled Paris from a distance of fifty or sixty miles, has at last been solved. The answer is simple: there were no “Big Berthas.” Paris was shelled by ordinary naval guns, the range of which had been doubled or trebled by certain scientific devices. Scores of these guns have been handed over to the Allies, and scores of others have been broken up by Germany herself. Meantime the Allies have spent much time and money trying to discover where Germany was hiding her monster guns, and the French press has been filled with fulminations demanding that she be forced to give them up.

At the end of March the allied investigators were in possession of designs showing exactly how the apparent miracle had been accomplished. The long barrel of the naval gun of 12-inch or 14-inch calibre had been made doubly strong by the introduction of a sheath which reduced the calibre to about nine inches. The breech was also reinforced by a massive steel jacket. This

made it possible to use a double charge, which, combined with modifications in the shape of the shell—made longer and more pointed, with grooves to increase the effect of the rifling—produced a phenomenal increase of range. Accuracy was sacrificed, and it is now stated that these guns often missed even such an obvious mark as Paris. There were, it appears, never more than four guns in action at one time, and more were not constructed because the Parisians refused to be terrorized by this bombardment. Despite this fortitude, however, the fact remains that 306 “Big Bertha” shells killed 250 and wounded 670 inhabitants of the French capital.

Many scars of the “Bertha” visitations are still visible on the homes and public buildings of Paris, as are also those caused by aircraft bombs. The Municipal Council of Paris does not mean to let all these scars disappear; it is planning to erect a memorial stone at each spot where a bomb or shell exploded. Such a stone has already been placed at the corner of the Rue Quatre Septembre and the Rue Choiseul.

# SPEEDY END OF THE ARMENIAN AND GEORGIAN REPUBLICS

*Invasion of Georgia by Russians and Turks, with a conflict between the invaders over Batum—The painful situation of Armenia*

[PERIOD ENDED APRIL 10, 1921]

EVENTS move swiftly in the Caucasus. At the reparations conference in Paris on Jan. 29 the four principal powers—England, France, Italy and Japan—granted what the little Caucasus Republic of Georgia, struggling to stem the Bolshevik tide, most ardently longed for, viz.: de jure recognition as an independent and sovereign State. The efforts of M. Guegetchkori, Georgian Minister of Foreign Affairs, to induce the powers to take this long-deferred step thus were crowned with success. M. Guegetchkori, on his way home after his long sojourn abroad, was extremely optimistic about Georgia's future. His lack of suspicion of what was to occur came out strongly in the following statement:

We have hopes that our neighbors will succeed in putting their houses in order, and will establish proper relations with the whole world. I would especially point out that a correct understanding of their interests should dictate both to the Russian and Turkish Governments a policy of peace.

At this very time, as a matter of fact, the Russians and Turks were preparing to put into execution a policy of "peace," but one interpreted as a fruit of violence. The Bolshevik invasion planned at the end of January did not occur, and for several reasons: the Georgian Government discovered the plot in time and nipped it in the bud by wholesale arrests of the communist agitators who were working to make the Russian armed invasion a triumphal march. The Bolshevik soldiers, averse to heavy fighting and hearing that their comrades at Baku, in neighboring Azerbaijan, had been given the right of pillage, refused to carry out the invasion of Georgia, and many of them swung aboard trains at Baku and departed to get their share of the booty. The Moscow plotters, however, continued their plans to add Georgia to their list of subjugated Caucasian territories.

These plans were worked out with almost

automatic accuracy. Georgia, in spite of the treaty of May 3, 1920, was invaded by the military forces of the Soviet republic, and Tiflis fell on Feb. 25. First news that the jaws of the wolf were closing came on Feb. 18. Three divisions of the Bolshevik Eleventh Army, including the whole of the available Russo-Armenian Army and a considerable number of Azerbaijan Tartars, had fallen upon Georgia simultaneously from the north and the southeast, one army advancing from Sochi and Gagri, on the Black Sea; the other, advancing in Azerbaijan, had captured Salaklu, south of Tiflis, on Feb. 16. The Georgian troops soon gave evidence of being outnumbered. Tiflis was occupied by the Red cavalry of General Budenny, after severe street fighting, on Feb. 25. Thousands of refugees fled to Kutais, where the Georgian Government set up provisionally its shattered rule.

The "explanation" officially given by the Bolsheviks was based mainly on the fact that Georgia had refused to evacuate the Bortchalu district north of Erivan, which, according to an agreement concluded in November, 1920, with the then Government of Erivan in Armenia, was to be occupied only for three months. Great stress was also laid on the fact that the Georgian Government had arrested communist agitators on its territory and confiscated property belonging to the Russian Government.

The Georgian Government vainly tried to rally its demoralized forces, to mobilize new troops and to requisition supplies. The Bolsheviks were temporarily driven out of Tiflis, but re-entered the city and there established themselves firmly. Soviet troops were pouring in on all railroads and highways leading to Tiflis. Meanwhile, the French destroyers cruising along the eastern coast of the Black Sea opened fire on the Bolsheviks at Gagri, inflicting severe losses.

The Russo-Armenians remained in possession of Bortchalu.

The next effort of the Bolsheviki was to gain possession of the important Black Sea port of Batum. Despite the fire of the French fleet, they captured Sukhum Kale, on the coast, and marched swiftly down toward Batum. At this juncture, however, the Nationalist Turks, fearful that the capture of this port by the Reds would make the Turkish occupation of Armenia impossible, ordered the Turkish Army under Kazio Kaarbekir, commander of the Fifteenth Army, already on the outskirts of Batum, to take the city, the capture of which was reported on March 10. Caught between eastern and western millstones, the Georgian Government had no alternative but to withdraw, and took temporary refuge on board a Black Sea vessel.

A curious situation then arose between the Turk and the Bolsheviki over the possession of Batum. Relations already strained by various causes were in no respect improved by the Turks' haste to capture Batum before the Red forces could reach the port. The Nationalist Turks had long turned a covetous eye on Batum; they already possessed commercial transit rights through the city under an act passed by the Turkish Parliament in Constantinople on Jan. 28, 1920. For reasons of diplomacy, however, they had deferred formulating a definite policy toward Georgia and had sent a note to Moscow stating that a conflict between the Georgians and the Reds was imminent and asking point-blank to be informed of Moscow's intentions. The request for information was ignored and the double invasion followed. The Turks declared martial law in Batum and began a general disarmament of the Georgian troops and of the population. The news of the Russian and Turkish occupations caused great despondency throughout Georgia.

Bolshevist anger, however, grew and reached the point of explosion, and despite the fact that a Turko-Russian treaty had been concluded on March 16, under which Turkey engaged to cede Batum back to Georgia, the Russians on March 19 sent a virtual ultimatum to the Turks in Batum ordering them to evacuate within forty-eight hours. In the fighting which promptly followed the Georgian troops made common cause with the Red soldiers, and after an

artillery battle and street fighting the Turks were ousted, except from a small part of the town. A Soviet Government was promptly established in Batum, which, it was said, would probably coalesce with that already set up at Tiflis. It was described as "Georgian communist, without Russian Bolshevik interference." It was composed of Makharadze, President; Mdivani, the organizer of the Armenian "revolution"; Eliava, formerly Chief Commissary of Turkestan and later nominated Ambassador to Angora, which post he had not taken; Orzhanikidze, former commander of the Reds in Azerbaijan, and Gubashvilli, said to be identical with the Commissary Stalin. The Kemalists continued to occupy part of Batum as late as March 23, despite the Georgians' efforts to dislodge them; the town was suffering from disorder and lack of food. Finally, on March 25, it was announced that the Kemalist troops had withdrawn altogether, in accordance with an agreement arranged between them and the Georgians by the Russian Bolshevist command.

ARMENIA—One strongly impelling motive of the Bolsheviki in seizing Georgia was, on their own admission, the alleged fact that the Tiflis Republic on various pretexts was blocking food supplies for Erivan, capital of Bolshevized Armenia. Karl Radek, one of the Bolshevist leaders, said on Feb. 20:

There are 7,000,000 poods of corn in the Kuban district which it is very difficult to bring into Russia; but, except for the obstacles raised by the Georgians, it would be very easy to pour corn into Armenia, which needs less than 800,000 poods monthly.

The Turks of Mustapha Kemal, though they had accepted the Armenian revolutionary government, maintained an attitude of hostility; their viewpoint being that Armenians, Sovietized or not, remained Armenians, and hence their traditional enemies. They looked by no means with a favorable eye on the victory of the Russo-Armenian Army in the Bortchalu region, and, as narrated above, moved swiftly to forestall the seizure of Batum by the Reds in order not to be hindered in their occupation of Turkish Armenia. In the Armenian towns of Alexandropol and Kars, which the Turks had occupied simultaneously with the Erivan Red "revolution," increasing demands were being made by the Kemalists upon the sup-

plies of foodstuffs and clothing sent by the American Near East Relief Organization for the Armenian population.

Taking advantage of the withdrawal of Russian troops from Armenia for the attack upon Georgia, and acting on the impression, it was said, that this withdrawal would be permanent, the Dashnaks (Armenian Nationalist Party) overthrew the Soviet Government at Erivan on Feb. 19. The movement, however, ill-timed and based on a misapprehension, was speedily counteracted, and after a short interval the Red régime was restored.

In London, meanwhile, Nubar Pasha, the representative of non-Sovietized Armenia, pleaded with the allied Premiers for the execution of allied promises made to Armenia before the Red invasion. After a special hearing Feb. 28, devoted to Armenia

and Kurdistan, the Armenian delegates were very much depressed. They had been closely questioned regarding the Armenian claims to part of Cilicia and to Turkish Armenia, and the allied representatives had shown a disposition to leave the question open for several months to come, until the situation in the Caucasus had cleared. Nubar Pasha's contention had been that the establishment of a Soviet Government at Erivan should not count against the establishment of an Armenian Republic on Turkish territory, inasmuch as it was more than probable that the Russian Armenians would naturally tend to form an entente with a State inhabited by their own race. The allied representatives, however, showed an attitude of considerable doubt, and the Armenian delegates left, declaring that now only America could help Armenia.

## MAIN POINTS OF FINLAND'S CONSTITUTION

**T**HE Finnish Constitution, formulated and adopted in accordance with resolutions of Parliament, was ratified at Helsingfors on June 21, 1919. This important document is shaped on the progressive lines of the present democratic era. Its announced object is to give stability to the new Finnish Republic, to expand the power of Parliament, and to safeguard the rights and liberties of all citizens. "The governmental power," says the Constitution, "belongs to the people, represented by the assembled Parliament."

The legislative power is exercised by Parliament, together with the President of the republic, who is elected for a term of six years. The President has the right of initiative in formulating new legislation. He has also the right of veto, unless Parliament, after a new election, reconfirm by a majority vote the vetoed legislation.

The general government of the nation is intrusted to a Council of State, composed of the Prime Minister and a fixed number of other Ministers. The judicial power is exercised by independent courts of justice, chief of which are the Supreme Court and the Highest Administrative Court; both of these tribunals are charged with the formulation of necessary changes in existing laws for submission to the President.

The right of suffrage is to be governed by the provisions of a law concerning presidential elections. The election of the President is to be "conducted by electors who shall be 300 in number." The electors are to be chosen by popular vote on Jan. 15 and 16, and are to assemble on Feb. 15 for the election of the new President by secret ballot. Election is conditioned on the obtaining of more than one-half of all votes cast. The President-elect assumes office on the 1st day of March and remains in power for six years.

The power of the President is limited by that of the Council of State. He must announce all contemplated resolutions in that Council, which has power to act over his head in case any Minister refuses to countersign a project as being contrary to the Constitution. A number of other checks to insure a truly democratic government are embodied in the Organic law, affecting also the Council of State. In all matters vital to the nation, including charges of treason against the President, Parliament has the final voice.

The official languages of the republic are Finnish and Swedish, corresponding to the two main elements of Finland's population. Citizens of either origin, whatever the ethnical complexion of a given com-

munity, are granted the right to use their original language in any of the national courts. The linguistic, religious, and minority rights of all citizens are assured; free speech and free assembly are granted under all normal conditions. Every citizen

injured in these or any other rights is given full power to make formal complaint against the Government officials by whom the injury is inflicted. The Constitution contains measures for the encouragement and advancement of national education.

## LATVIA, LITHUANIA, ESTHONIA

*Why the Vilna plebiscite was abandoned by the League of Nations in favor of a settlement by direct negotiation—Latvia's elaborate plan for giving land to all citizens*

THE long awaited plebiscite to be held in the district of Vilna, Lithuania, which for months has been illegally occupied by the Polish irregular forces of General Zeligowski, has been abandoned by the Council of the League of Nations as impracticable. This decision, made early in March, was based on the hostility to the scheme shown by both disputants. Both the Poles and the Lithuanians accepted the Council's alternative proposal to settle the dispute by direct negotiation. The meetings for these discussions are to be held at Brussels under the Presidency of Paul Hymans, the Belgian representative on the League Council. The new decision was welcomed in the Vilna district, which had suffered great economic distress under the Zeligowski occupation, and which had been greatly demoralized and excited by the impending referendum.

The Court of Arbitration sitting at Riga under the Presidency of Professor J. Y. Simpson, announced its decision March 25, on the boundary dispute between Lithuania and Latvia. In accordance with the Court's ruling, the frontier, commencing at the sea, will run approximately four versts north of the Sveta along the river of that name and the administrative boundary between the Courland and Kovno Governments, with minor deflections in either direction. The readjustment of territory between the two States was to take place on March 31.

LATVIA—Regardless of outside opinion, Latvia has been making progress in its nationalization and land programs. Its whole policy has been one of centralization. The telephones, telegraphs, and railroads are now owned outright by the Government, and

even the shipping business has been nationalized. In many lines of trade and industry, the Government has either secured a monopoly or a substantial interest. A March dispatch from Riga to the Latvian Consulate in New York gave official information that the Latvian Ministry for Trade and Industry had submitted to the Constituent Assembly a bill, the passing of which was regarded as certain, permitting the Government to acquire shares in enterprises which exploit State property, provide for the defense of the State, facilitate communication, or produce goods indispensable to the population.

Latvia's land program, the main principle of which is that everybody must be enabled to own land, and nobody be allowed to own too much, has called forth formal notes of protest from most of Latvia's neighbors—from Sweden, Denmark, Norway, Belgium, the Netherlands, Finland and Poland. Not only has the Latvian Government adopted it, however, but it has already worked out many of its practical details. The fundamental object of the plan is to buy back from the German owners and redistribute among the Lettish people the land which, from the Latvian viewpoint, was stolen in the middle of the thirteenth century by the invading German Barons.

The whole course of Latvian history was determined by this German conquest, for the Federal republic established by the Teutonic Order lasted until the latter half of the sixteenth century, and though Latvia's three provinces of Courland, Livonia and Letgalia after belonging to several Governments, finally passed to Russia (in the sixteenth century), the nobility and land-own-

ing class has been exclusively German, with the Lettish peasantry in complete subjection. Only at the beginning of the nineteenth century were the peasantry freed from serfdom, and not until fifty years later were they accorded the right to buy land from the nobility, who owned it all. Naturally, their landless condition inspired many revolts, which were always rigorously suppressed by the Germans and Russians.

The Russian revolution gave the Letts the opportunity they had been awaiting for centuries. On Nov. 18, 1918, they established a sovereign republic. The last attempt of the German landowners to regain possession through the notorious Avalov-Bermondts and his German-Russian army was balked by the hard-hitting Letts. Soon afterward, the Latvian Government took the bold step of expropriating all the big estates of the Baltic Barons. Faced by the alternative of nationalizing this property in Bolshevist wise, or of apportioning it among the people—at least among all who desired to own and to cultivate it—the Government decided for private ownership, and worked out the system now being put into execution.

The land law, passed recently by the Latvian Constituent Assembly, lays the foundation for a State land fund, to cover extended credit to prospective new owners without any initial payment. The law provides for the allotment of a little more than sixty acres to each landless family, decrees the sequestration of all private estates, and grants to each of the former owners land amounting to a medium-sized peasant farm. Compensation for the forfeited land is to be provided later by special legislation. This step was decided on only to save Latvia's banks from embarrassment, not because the Letts recognized any validity in the German owners' title. Most of these estates were heavily mortgaged, and the Latvian banks had in many instances used the mortgages to obtain loans from foreign banks. The Letts now hope and believe that at no distant date their rugged Baltic land will be peopled by families of farm owners, content in the knowledge that the fruits of their labors are their own, and that they are doing even more than their full share toward feeding and clothing the rest of the world.

In respect to her relations with Soviet Russia, Latvia is following the general trend now prevalent among the Baltic States:

First, peace, then trade. It was reported on March 24 from Riga that a Bolshevist Trade Commission had arrived at that city, and that its President, M. Lomov, a member of the Supreme Economic Council in Russia, had full instructions to negotiate an economic agreement. M. Osols, an engineer,

SKETCH MAP OF NEW BALTIC STATES

Chairman of the Latvian Evacuation Committee in Soviet Russia, had just returned to Latvia. He reported that the Soviet Government was endeavoring to fulfil the peace treaty signed with Latvia, and to return all Latvian possessions, including factories in Russia formerly owned by Letts. Russian opinion was extremely favorable to the return of these factories, which, it was believed, would be beneficial to Russia, inasmuch as Latvia possesses many skilled workmen, and also has all facilities for obtaining raw material from abroad.

**FINLAND**—Finland, under her treaty with Moscow, has entered upon possession of Petchenga in the north, and has evacuated the districts of Repola and Porajarvi. Difficulties with the Soviet Government, owing to the Finnish efforts to subject the Bolshevist commercial delegates to quarantine and other control, were slowly being adjusted, but the Finns gave every evidence that they did not intend the new treaty to be made a bridge for the dissemination of Bolshevist propaganda on Finnish soil. The Govern-

ment, following its plans for general reconciliation, continued the task of freeing the majority of political prisoners concerned in the insurrection of 1918 by special amnesty—a policy which brought about a Cabinet crisis in the latter half of February.

ESTHONIA—Esthonia, elated by the decision of the Supreme Council to recognize her independence de jure, has now begun the work of opening trade relations with the outside world. M. Piip, ex-Premier and now Minister for Foreign Affairs, declared early in February that this recognition was a por-

tent of the greatest hope, which would do much to help the country's economic condition, inasmuch as outside nations, now that Esthonia was recognized as a legal member of the comity of nations, would be much more ready to enter into commercial relations. The unsatisfactory state of Esthonian exchange had been largely due to this lack of confidence abroad. The decision was also important in its effect on Bolshevik propaganda based on the refusal of the League of Nations to admit Esthonia to membership.

## THE NEEDS OF EGYPT

*Statement by* PRINCE IBRAHIM HILMY

Brother of the Sultan of Egypt, and son of Ismail Pasha,  
a former Khedive

*In a remarkable study that appeared in the London Times of March 14, 1921, Prince Hilmy sketched the whole history of the Egyptian movement for independence, weighing the Nationalist scheme of Zaglul Pasha and the reforms urged by Lord Milner, and concluding with this lucid statement of what Egypt really needs*

LET us consider what every Egyptian, with whom his country's interests stand above his own and who is at the same time conscious of the realities of life, could claim for the benefit and further development of Egypt. First of all, outward security, then honest administration, good finances, speedy administration of justice, widespread public instruction in order to raise the intellectual standard of the people and create specialists, and, finally, the right of every Egyptian to the benefits of all the country's opportunities in preference to foreigners.

Does Lord Milner's report suggest any reliable guarantees of the fulfillment of these desiderata? It starts by giving the country complete independence, a formula monopolized by the Nationalists as a means of getting into power, without asking themselves whether or not the country is apt to bear its consequences. It is indeed understood that England is to guarantee Egypt her immunity against foreign aggression, which is a point of the highest importance; but this seems to be one of the very few advantages offered us by the report. It

extols the formation of a Constitutional Government by Ministers responsible to a Chamber elected by the people, which means giving Egypt such prerogatives as are enjoyed only by the most advanced countries of the world, and leaves entirely out of consideration the fact that among the 14,000,000 of its population 92 per cent. are illiterate. (I quote the actual terms of the report.)

I would ask the British public to reflect for a moment on the kind of Parliament this immense number of illiterates would be prone to elect and on the probable results of the uncontrolled rule of such a Parliament over a country of Egypt's geographical and commercial importance. Whether or not complete independence should be given to Egypt, which is the key to the communication with the remotest possessions of the British Empire, is a question which I, as an Egyptian, am not qualified to inquire into.

It rests with the British public to weigh the consequences of so decisive a step, where the vital interests of the empire are concerned. It is indeed stated by Lord

Milner that all necessary guarantees will be provided for in the treaty to be concluded with an independent Egyptian Government. But in Egypt's present condition, could these vital interests be adequately guaranteed by a treaty? And would it not be wiser to wait until Egypt were in a position effectively to guarantee the fulfillment of a treaty signed by her? Once more I leave these questions to the sound appreciation of the British public.

Lord Milner would show that, properly speaking, Egypt never belonged to England; that she was a privileged autonomous province under the suzerainty of the Sublime Porte occupied by British troops, and that it was solely through Turkey's declaring war on England that the latter was compelled by circumstances to proclaim her protectorate over the country. In my opinion by this act the position of Egypt was only changed in that England took over Turkey's rights over this country. This substitution, recognized at the outset by France and America, was eventually confirmed by all the powers who signed the Treaty of Versailles.

How else could Britain have deposed a monarch nominated by Turkey and recognized by international treaties and nominate one of her own choice in his place? On the other hand, how could she have prevented Egypt from taking part in the Conference of Paris on a par with newly formed countries such as the Hedjaz unless she felt that, Egypt belonging to England, it was for England to represent Egypt at the conference? But it must be recognized that England was generous to Egypt; in lieu of considering her merely in the light of a province under her suzerainty, she raised her to a Sultanate under her protectorate.

She can, of course, abandon her rights over Egypt and give her complete independence. Nobody would contest that point. But is this the time for doing so? I do not believe my country has as yet attained the point when she could stand alone by herself. What as sensible people we could reasonably ask of England is a wide internal autonomy, such as, from all we are taught by her colonies' history, she never will refuse to give. An autonomy similar to that of the Dominions, with certain restrictions gradually to be eliminated along with the progress of the country would, in my opin-

ion, be best suited to the mutual advantage of both England and Egypt.

I hold that in dealing with a great and mighty power, such as England, we should not ask too much. What would we do if she refused? As Egyptians, is it, indeed, the country's weal we are seeking, or are we content to delude ourselves with idle fancies? If we think of nothing but her welfare, let us ask England to be our guide, as she has been for forty years, assuring thereby our progress and our present prosperity. Let it be so until the time comes when, no longer in need of a guide, we shall be in a position to ask her to leave us to stand alone, and offer her of our own accord and as a token of our gratitude the alliance which Lord Milner advocates today.

As to the protection of the Suez Canal, this is a question of so overwhelming and so vital an importance that I could not think of discussing it. It is for English experts to study it, to weigh it carefully and to find out from what points and how it could be defended. All I could say is that, in my opinion, this could not be done either by way of El-Kantara or by way of Jerusalem.

What we should request from England is, first of all, the abrogation of the Capitulations, unjust, unfair—a veritable obstacle to liberty and progress. I cannot but agree with Lord Milner, who advocates the suppression of all Consular Tribunals and the constitution of a Mixed Tribunal, England alone being entrusted with the safeguard of the interests of foreigners. When foreigners are made subject to the same taxes and duties as the natives, commerce and industry, now centralized in the former's hands as a consequence of their exclusive position, will cease to be their privilege, and will be exercised by the Egyptians with equal success.

The old mistake of increasing the number of British officials should be discontinued; the Egyptian should be treated on the same footing as the foreigner, and when a post is open which he is capable for, he should by right have the preference for obtaining it. Public instruction should be completely reorganized, and the department's budget raised so as to enable it to create: (1) Primary schools in order to reduce the number of illiterates; (2) high schools in order to raise the standard of

education and create specialists qualified for gradually taking the posts now occupied by foreigners.

Measures should be adopted without delay to avoid the necessity of keeping, pending the time of Egypt's complete emancipation, foreign officials other than inspectors and controllers. The military school should be reorganized so as to allow the officers educated therein to attain all ranks in the army instead of limiting them to inferior grades as is now the case. Finally, democracy being the order of the day, let Egypt have her Constitutional Government, but let good care be taken to constitute an Upper Chamber of men of ability and experience, such as would constitute a wise counterpoise to the Lower Chamber.

To recapitulate, I hold, as an Egyptian, that Lord Milner's scheme, if applied in its integrity, would be disastrous to Egypt. Left to herself in her present position, not only would she make no progress, but would, I fear, run the risk of retrogression. For some short time yet she requires the direction of Great Britain in her progress to the future. The adoption of this scheme would also be detrimental to England herself: (1) On account of Egypt's important geographical position; (2) in view of

Britain's imperialistic policy with regard to her other possessions.

I will not say whether it will be worthy of a great nation such as Britain to abandon to its destiny a people on which she for forty years has been spending her noblest efforts, and which, if left to itself in its independent progress in the world, may stumble on the way.

I would not finish without addressing a few words to my countrymen, now seething with the excitement created by the propaganda of the Nationalist leaders. What are we aspiring to with regard to Egypt if we are true patriots? Is it her welfare, her salvation, or is it nothing but a fond delusion? Let us be reasonable, and let us not be lured by treacherous shadows. That which we all desire must come, and will come; but, for the present moment, are we strong enough to carry the burden? Would it not crush us? Think it over with care before launching on an adventure which might bring us great harm, not to say more. I have meditated a good deal on this matter, weighing both sides, and I feel convinced that at so momentous, so decisive a turning, it was my duty to my country to place these considerations before you.

## BRITISH AID IN FRENCH REBUILDING

THE people of Great Britain, though burdened with war debts and heavy taxes, are yet finding means to help their French neighbors. Under the stimulus of a campaign led by the Central Committee of the British League of Help they are contributing large sums to rebuild houses, villages and towns in the devastated areas. More than fifty ruined communities have been "adopted" by various English cities. London has adopted the immortal Verdun, whose slogan was, "They shall not pass!" Kensington has adopted Souches; Wadsworth the town of Villers-Plouich; Manchester is raising £50,000 to resurrect Mézières; Newcastle has paid its second instalment on £20,000 subscribed for Arras; Oxford, Sheffield, Exeter, Evesham, Eastbourne, Cirencester and Birmingham are giving to the limit of their capacity to restore other French fostertowns.

Sheffield has adopted Bapaume, Puisieux and Serre, all made famous in the battle of the Somme, and in the great German drive of 1918. The sum of £5,000 has been already collected. Exeter has forwarded £2,000 to the Mayor of Montdidier to restore the water supply. Fruit trees, food supplies and goods are constantly being sent.

Apart from the organized assistance of the league mentioned, the British are also raising a special fund to restore the Rheims Cathedral. Another special fund is being raised by the Royal Agricultural Society to supply cattle for raided farms; £7,000 has already been subscribed. That the French people appreciate the generous efforts of their British neighbors is seen in the many grateful expressions in the French press.

# STAMBOLISKY'S REFORMS IN BULGARIA

BY ELEANOR MARKELL

THREE small States of Europe now lead the larger States about them in reconstruction after the upheaval of the war—Belgium on the northwest, Czechoslovakia on the crest of the continent, and Bulgaria in the Balkans. Of these three, only one suffers the handicap of being a defeated State. Belgium fought with the victorious Allies and has received preferential treatment in the treaty. Czechoslovakia came into being through the action of the Entente, and has its sympathy and active help. Bulgaria, however, was forced into the war on the side of the Teutonic allies by King Ferdinand. Though suffering from defeat, from loss of her young manhood, loss of material resources in the territories taken from her, loss of direct communication on the Aegean with the outside world, loss of what she feels perhaps most keenly of all—sympathetic understanding in the West—she has accepted the situation, reorganized her Government under her new King, and gone to work, with results which are a surprise to every Westerner visiting the country.

Bulgaria lost by the war much of her richest territory. To Greece she was forced to yield Thrace, where her finest tobacco was grown, and where her two Aegean ports, Kavala and Dede-Agatch, were located; to Serbia she gave up the Strumnitza region; to Rumania, by the confirmation of the powers of the Bucharest Treaty of 1913, she surrendered the fertile lands of the Dobrudja, whence formerly one-fourth of her revenue from agriculture was derived; to Serbia and Greece—and this perhaps touches the Bulgars most keenly—Macedonia, where hundreds of thousands of her people live. Small wonder if, contrasting the Bulgaria of 1912, after the first Balkan war, with that of today, these people should feel discouraged. They have lost everything for which they have fought for six years.

And yet they are not discouraged. Facing the inevitable with all its tragedy, they have started to rebuild their new State on the ruins of the old. They have rid them-

selves of Ferdinand, and his oldest son, Boris, only twenty-four years old but keenly alive to his responsibilities, has taken his place. He told me, when I was in Sofia in September last, something of his hopes for his people, and others spoke of his active interest and participation in all affairs of State, including a protecting care for his people. No repatriated war prisoners return, they told me, who do not find their King at the frontier to meet them. He has a charm of manner which attracts all with whom he comes in contact; this, coupled with his earnest work for his people, earns for him the unanimous regard and good wishes of all Westerners, as well as of his own people.

Bulgaria has, even with her old frontiers, to which she is now confined, great natural resources and is perhaps the only State of Europe today which can be self-supporting. Her mines produce a sufficiency of coal for her needs, her fertile lands more than enough grain, cereals, sugar beets and tobacco, which in normal times she exports. Her greatest asset, however, lies in her hard-working population, 80 per cent. of whom are peasants, and nearly that number peasant-proprietors. They are hard at work today, and have already succeeded so well in bringing the production back to normal that some \$10,000,000 worth of tobacco was exported last year, part of which represented crops raised since the war. This year it is confidently expected that after supplying the needs of the country there will still be wheat and cereals for export.

The greatest menace to the State lies in the character of the present Government. It is the agrarian party, representing the large peasant population, which is in the saddle, the old experienced leaders like Malinoff, Majaroff and Guechkoff, who with Venizelos founded the Balkan League in 1912, being driven to the opposition. At the head of the Government stands Stambolisky, the peasant party's strongest man, fearless, forceful, pugnacious, filled with plans for the welfare of the State on the most advanced lines, but, like the peasantry

from which he sprang, unable to visualize the extreme difficulty of carrying them out.

An example of this is the conscription of labor law, which has been in effect since

(Times Wide World Photos)

**KING BORIS OF BULGARIA**  
*Europe's Youngest Reigning Monarch*

Sept. 18, 1920. Stambolisky explained its workings to me for half an hour, and my most vivid impression when he concluded was of the almost unsurmountable difficulties to be experienced in putting the law into execution. By the provisions of this law every man and woman between the ages of 20 and 50 is obliged to work a certain length of time for the State; thus the time formerly given to military service, now forbidden by the Peace Treaty, will be turned to useful work for the country.

But Stambolisky's ideas go far beyond that. Schools are to be founded all over the State for boys and girls, who will be entered at the age of twenty, the boys for a year and the girls for six months. They will receive instruction to prepare them for the State service they will render. This instruction will be adapted to the needs of the pupil to broaden his horizon and ulti-

mately to raise the level of the entire nation. A high ideal, certainly, but the cost of putting it into force is a staggering matter for a nation already in desperate condition financially; a nation which last year found its expenditures twice the amount of its revenue quite aside from the indemnity it is expected to pay according to the Peace Treaty.

Bulgaria has passed the most drastic law regarding individual holding of land which I found in traveling through Europe. For, though Czechoslovakia has limited the

(© Underwood & Underwood)

**PREMIER STAMBOLISKY**  
*Leader of the Agrarian Party, who has made sweeping reforms*

amount which can be held by one person to 150 hectares of arable land and 250 of general land (as contrasted with Hungary, which was on the eve of passing a law in August, 1920, providing for 500 hectares to each person), Bulgaria will allow to each person only what he can work with his own hands, or about thirty hectares. Bulgaria was, before the war, and is at present, a nation of small proprietors, and for that reason the majority will be unaffected by the law; but, although they are hard work-

ing, they are not thrifty, like the French, and I was told that if a man held five hectares and found the product of four would support his family, he would often let the fifth lie idle. This means that from his labor little can be expected for export, whereas the large land-owners not only raise crops for export, but also continually improve the methods of agriculture and the quality of the product.

Bulgaria's railroads have been nationalized for thirty years and very successfully run under State management; her coal mines are nationalized with less fortunate results, it being universally conceded that the operation is far more costly than necessary; certain of her banks are managed by the State, and recently the present Government has created a State-owned bank at the head of the great co-operative system, which numbers some 1,200 societies.

Perhaps one of the most unfortunate of Bulgaria's essays in legislation lies in the income tax, with its drastic impost on large incomes and practical exemption from the

operation of the law for the great agrarian element, which forms so large a percentage of the nation. The law cuts in two directions. First, it deprives the State of a much-needed income from the peasants, and, second, by its drastic tax on profitable large-scale business, it is driving foreign capital, so badly needed, from the country.

The reason the law is not amended is plain. The Stambolisky Government would not survive the placing of a tax on the agrarians, the party by whose mandate it holds office. And yet, given the financial condition which exists today, many are prophesying that the law must be amended or the State will go bankrupt.

This is Bulgaria's problem. A land of great national resources and a nation of hard-working peasants—the combination is one which, it seems, must succeed. Bulgaria has already started well toward success, but inexperienced leaders may nullify her best efforts and bring about a ruinous economic condition, similar to that already prevailing in the rest of Europe.

## TEXT OF BULGARIA'S COMPULSORY LABOR LAW

THE Bulgarian Government's famous law introducing compulsory labor was passed about the middle of the year 1920, after six months' propaganda and campaigning. The most interesting thing about the law is that it is in no sense the product of a Bolshevik or Communist Government. The experiment is due almost entirely to the initiative of the Prime Minister, M. Stambolisky, the leader of the Agrarian Party. As will be seen in the portions of the text given below, the act is modeled closely upon the military service laws common in most countries of Europe. Every Bulgarian boy must give the State twelve months' labor at the age of 20, and every girl six months' service at the age of 16. The exemption clauses, which are not reproduced below, follow closely the analogy of military service laws, exemption being granted for illness, incapacity, and the need to support close relatives. The enforcement of the act is entrusted to the Ministry of Public Works. Penalties for evasion are provided for in Chapter III,

and may extend to two years' imprisonment. That M. Stambolisky's Government has already encountered serious difficulties in its attempts to put the act into force is indicated by recent reports from Bulgaria. The more important articles of Chapter I. are as follows:

*Act respecting compulsory labor service, dated June 5, 1920.*

### CHAPTER I.—General Provisions.

**ARTICLE 1**—All Bulgarian citizens of both sexes, viz., men who have attained the age of 20 years and girls who have attained the age of 16 years, shall be liable to compulsory labor service, that is, to compulsory community labor.

Note 1—Compulsory labor service shall not be required from Mohammedan girls.

Note 2—Even those who have not attained the prescribed age may be admitted to service as volunteers, viz., boys who have attained the age of 17 years and girls who have attained the age of 12 years.

**ARTICLE 2**—Compulsory labor service shall have the object of:

- (a) organizing and utilizing the labor power of the country for the public welfare in the interests of production and the welfare of the country;

- (b) awakening in all citizens, irrespective of their social status or means, a love of community and manual labor;
- (c) improving the moral and economic condition of the people, fostering in the citizens a consciousness of their duties to themselves and to society and instructing them in rational methods of work in all branches of economic activity.

**ARTICLE 3**—Compulsory labor service shall be utilized in all branches of economic activity and public welfare work: the construction of roads, railways, canals, waterworks, dams and embankments, the erection of buildings, the laying out of villages and towns, the strengthening of the banks of watercourses, the rectification of rivers, the draining of marshes, the laying of telegraph and telephone cables, the preparation of various materials for building, afforestation and the care and management of forests, the cultivation of lands belonging to the State, a district, a commune or any other public body, fruit and vegetable growing, the raising of silkworms, bees and cattle, fishing, work in mines and factories, the preserving of foodstuffs, the manufacture of cloth, linen and clothing in hospitals, &c.

These tasks shall be carried out by the competent authorities, under their direction and on their responsibility.

**ARTICLE 4**—Compulsory labor service shall be an individual duty. Substitution shall not be permitted. Only those persons shall be exempted from compulsory labor service who are unfit for any physical or mental work on account of the diseases, &c., specified in a schedule approved by the Council of Ministers. In addition, married women and men called up for military service shall be exempt. If any person is granted exemption from compulsory labor service under the schedule of diseases, &c., he shall pay a tax proportionate to his income and property, imposed under a special act.

**ARTICLE 5**—A Bulgarian citizen shall not

change his nationality or settle in a foreign country until he has completed his compulsory labor service.

**ARTICLE 6**—Compulsory labor service shall last for twelve months in the case of men and six months in the case of girls.

\* \* \* \* \*

**ARTICLE 10**—In the event of extensive damage caused by the elements, national calamity, or immediate necessity, all male Bulgarian citizens between the ages of 20 and 50 years may, by a resolution of the Council of Ministers, be called up for temporary compulsory labor service, that is, to perform compulsory community labor for not more than four weeks.

This calling up shall take place in accordance with the needs of the case, by ages and by groups from communes, districts, or provinces.

Note—In this case the Council of Ministers may also call up young persons under the age of 20 years.

**ARTICLE 12**—At the beginning of each year the following persons subject to compulsory labor service shall receive a calling-up notice for purposes of classification:

- (a) boys who on Jan. 1 of the year in which they are called up have attained the age of 19 years, and girls who at the same date have attained the age of 15 years;
- (b) persons who have been granted postponement on any grounds whatever, and those who have not reported themselves.

**ARTICLE 14**—Compulsory labor service shall be rendered by men and women separately—by men, in or as near as possible to the district in which their homes are situated, unless the requirements of work necessitate their removal to a more distant place, and by women in the places where their homes are situated.

These provisions shall not apply to women teachers under the compulsory labor scheme.

[From "Studies and Reports" of the International Labor Office.]

## INCREASING THE BIRTH RATE IN FRANCE

**E**VEN before the war France had undertaken to do something to remedy the alarming decrease in the ratio of births as compared with deaths. The act of July 14, 1913, made the relief of large families obligatory on each department (corresponding to our county), and provided for a bonus of 60 francs minimum, or 90 francs maximum, for each child. This was soon seen to be insufficient, however. Then came the war, with its enormous human losses, and the problem took on a more formidable aspect. The act of June 28, 1918, added 10 francs to the allowance granted to parents for each child, but the Depart-

mental Council of the Seine has long been striving to have the bonus increased to a maximum of 300 francs. The Budget bill for 1921 increases the allowance to 180 francs. In Paris the combined bonuses of the original act, of the State and of the municipal grants, bring the sum up to 240 francs (\$48, normal exchange). The Administration estimates that in 1921 in Paris and its suburbs there will be 18,000 beneficiaries in receipt of 24,000 allowances. The Departmental Council also is endeavoring to increase the special allowance to mothers. Special bounties are now being offered for each child in excess of two.

# A BULGARIAN'S PLEA FOR BULGARIA

*Mr. Mattheeff, the writer of this passionate protest, was formerly Bulgarian Minister to Greece, and was the Bulgarian Commissioner to the Louisiana Purchase Exposition at St. Louis in 1905*

To the Editor of *Current History*:

Bulgaria, conquered, reduced, impoverished, at the feet of her neighbors, her former allies, whom she led in the first Balkan war against the common enemy, is surely not deprived of the right to lay before the public the grievous wrongs she is suffering, even beyond those sanctioned by the treaty; wrongs which even the inhumane Paris treaty should forbid.

This treaty, even before its full ratification, is about to undergo a change, and in favor of a country whose past has been most condemned. Why? Because it has successfully met force by force! For Bulgaria, however, for softening the ruinous clauses of the treaty concerning her, not a word! The Bulgarian nation is the only one of the conquered nations denied the right of self-determination. This privilege is granted to Germany in Schleswig, Posnania and upper Silesia; to Austria in Carinthia, and to Turkey in the Smyrna Province.

Bulgarian territory has been arbitrarily cut up into many parts, and not a few of them have been tossed right and left, as bones to dogs, but to no part of it has the right of self-determination been granted!

Between Serbia and Bulgaria there should be peace, but peace there is none. Serbia cannot leave Bulgaria in peace. The Serbians cannot live a day without discovering or inventing something to the detriment of the Bulgarians. There are treaty clauses for strict execution by Bulgaria, but none for Serbia.

The conditions of the armistice with Bulgaria, one and all, have been violated to the injury of Bulgaria; Bulgarian territory, ceded by treaty to Serbia, was occupied and taken possession of before the term fixed by the treaty; Serbia demanded and obtained from Bulgaria railroad and machinery material long before the legal commission had met; Serbia recently stopped for more than a fortnight all traffic between the two countries because Bulgaria asked that the continuation of the delivery of such materials be postponed, in accordance with the treaty clause, until the proper commission had sanctioned it; the treaty condemned Bulgaria to deliver to Serbia 50,000 tons of coal a year during five years. The commission to sanction this delivery has not yet met; the Bulgarian Government, however, has been obliged to deliver this coal, and has been delivering it for the past six months, and now Serbia demands the immediate delivery of 30,000-odd cattle, which the treaty has laid upon Bulgaria to deliver over to Serbia. This right of Serbia's is the right of conquest. This number of cattle was adjudged to Serbia simply on her arbitrary demand, without the least consideration as to its honesty. This demand is made before the Commission of Reparations, the authority on the subject, has met.

A law was passed which substituted for the road tax the obligatory personal labor of all from 18 to 40 years of age, upon roads and public works. The application of this law required a certain degree of organization. The Serbians have seen, in the operation of this law, a phase of military strength, and have made representations to their powerful allies on the subject, and these have demanded, by note, its repeal!

Serbia has violated all the international laws in her treatment of our prisoners of war. She will give no account of the thousands missing, and is knowingly detaining some under criminal treatment. This last question regarding the prisoners of war is, happily, in the hands of two delegates, specially sent out on Bulgaria's demand, of the Geneva Red Cross. The Bulgarians do not fear, have never feared, inquiries into their conduct. They have demanded such inquiries, and still demand them with open mind and honest heart.

In none of these cases has Serbia been called to order. The weak representations made to her regarding these flagrant and willful violations of treaty clauses have been of no avail.

Serbia is the spoiled child of her powerful allies. Consider, for instance, Serbia's conduct in Montenegro, the model country of Serbia's freedom, where life, property and honor are not safe unless one has taken the oath of loyalty to the Serbian King, son-in-law of King Nicholas of Montenegro!

The Bulgarian Government has made every possible advance to Serbia for better relations with Jugoslavia; all such steps have only provoked further animosities on her part. If I speak of Serbia rather than of Jugoslavia, I do so advisedly, because it is Serbia, and Serbia alone, who is responsible for this state of things between the two countries. Recently the Czechoslovak press attempted a friendly intervention for an understanding between Bulgaria and Serbia; the Serbian press turned round savagely upon the would-be interveners and told them to mind their own business, and even threatened them.

The attitude of the Serbian press is that of a superior people toward a fallen, degraded, immoral inferior. "Yes," the Serbians say and write, "now that Bulgaria is humbled, now that the Bulgarians are sorry for their past treacherous conduct, now that they beg to be forgiven, we might take into consideration their misery and pity them; but it is too soon; they must wait." Yet all fair-minded men know that the situation is quite the opposite of the pretension in the above-cited quotation. Bulgaria's joining the Central Powers was an unavoidable consequence of the Treaty of Bucharest, and it came about because the allied powers failed to give to Bulgaria what the Bucharest treaty took

away from her—a feature of that treaty which they have undoubtedly condemned.

The Serbian mind is outrageously poisoned against everything Bulgarian. Serbia is suffering from a swollen head. Bulgaria, reduced, impoverished, disarmed, appears to have become an uninterrupted nightmare of revanche for the Serbians. Such should not be the case; Bulgaria has been rendered harmless, even to those she led to victory against the Turk, and is at Serbia's mercy; and this Serbia misses no opportunity to demonstrate.

Serbia's new ideal is undoubtedly the complete effacement of Bulgaria, the absorption of the nation into its neighbors, Serbia to take the lion's share. This chauvinistic ideal is developing inordinately, thanks to the support and protection Serbia receives from her powerful allies.

Bulgaria joined in the last war to right a wrong done her in Bucharest, to reunite the Bulgarian lands and race, unjustifiably rent asunder. Bulgaria failed because she blundered in choosing sides. The conquerors, however, have declared that in so doing Bulgaria transgressed. So be it! But is there no limit to the punishment for such transgression? Certainly the Treaty of Neuilly refuses to allow any limit to the punishment of Bulgaria!

The greatness crammed into puny Greece is

bearing its fruit. The Turks, condemned all around for generations as utterly unfit to rule, are to be benefited, the crushing terms imposed upon them by the Sèvres treaty are to be made bearable; but not a word as to the lightening of similar clauses for Bulgaria! The Greeks have proved themselves equally unfit wherever alien populations have been entrusted to their rule. The same can be said of the Serbians and Rumanians. An impartial inquiry into the conditions of rule in the alien countries allotted to them—Thrace, Macedonia, Dobrudja, Montenegro—will amply confirm this statement. Greece's unfitness to rule is as complete in Thrace as in Asia, and yet not a word of her disgorging! It is about time to deny Galileo's assertion that the world moves—or to despair of human justice.

Bulgaria asks for an unbiased inquiry, and prays that her voice be heard. She asks for an inquiry into her condition, which is doubly wretched, (1) because of the arbitrary and passion-imposed Treaty of Neuilly, and (2) because of the unjustifiable manner in which the terms of this treaty are being put into force for the sole benefit of those already excessively favored, all to the injury of Bulgaria. The claims of the Turks are being heard. Will there be no hearing for Bulgaria?

P. M. MATTHEEFF.

Sofia, Bulgaria, Feb. 16, 1921.

## REVIVING THE RABBINICAL COURT AT JERUSALEM

THE opening of the Rabbinical Congress at Jerusalem for the re-establishment of the old Sanhedrim, or Rabbinical High Court, known as the Beth Din, was a great event for all Jews connected with the Zionist movement. A correspondent of a London paper, writing early in March, described it as "the greatest event since the destruction of the Sanhedrim," and the speech made by Sir Herbert Samuel, the High Commissioner, at the opening session, was held to "equal in importance the first appeal of Nehemiah after the return from the Babylonian captivity." Other speeches were made in English and Hebrew. The Congress decided to elect the members of the new court, which is to be composed of eight members, four chosen from among the Sephardim (the Ladino-speaking Jews of Spain, Tunis and Saloniki) and four from

among the Ashkenazim (the Yiddish-speaking Jews of Poland and Germany). There will be two Presidents as of old, and the High Court will deal with all Jewish religious matters.

The Sanhedrim is one of the most ancient institutions of the Jewish race. It began at the time of Ezra and Nehemiah, after the return from the Babylonian captivity. It was later removed from Jerusalem to Jamnia and finally to Tiberias. It enjoyed great authority under the so-called "Patriarchs of the West," until it finally came to an end under the persecution by the Romans in the fourth century. Its duties were to decide questions of religious law. Napoleon I. summoned a Sanhedrim composed of 54 rabbis and 27 laymen, under the Presidency of the Rabbi of Strasbourg; but this council was short lived.

# RUMANIA IN THE NEW EUROPE

BY PRINCE ANTOINE BIBESCO

Rumanian Minister to the United States

FEW European countries—probably none of the late Allies—have been victimized by such protracted and malicious, if not always deliberate, misrepresentations before the American public as Rumania. Her very martyrdom in the World War, suffered for the allied cause and in consequence of the failure of Russian aid, has been counted up against her. But especially in the two years that have passed since ultimate victory turned the darkest period of Rumanian history into a prelude to national dreams triumphantly realized there have appeared, every now and then, allegations in the American press concerning things Rumanian that were as remote from truth as they were indefensibly unfair to a people which has proved so conclusively its loyalty to the cause championed by the American nation. It would lead too far afield to analyze the question why hostile propaganda should have had a line of less resistance to follow than in the case of other associated powers. Yet that seems to be the fact. It is all the more essential that the great American public should be awakened to the truth about Rumania.

To sum up: Rumania stands out today as the strongest State in Eastern Europe, uniting within her borders practically the whole ethnic mass of the Rumanian nation; with democracy and economic progress for her slogans, she has a reconstruction program comparing favorably with that of any other power; her possibilities of future development, cultural, moral and commercial, are unexcelled by any other country of the same size and population.

This seems a large assertion, but it can be substantiated. First, however, one must tackle the indispensable task of demolishing certain untruths and misconceptions assiduously spread by the enemies of Rumania in this country and in the west of Europe. After all, one way of stating the truth is to refute a lie. The main points raised by anti-Rumanian propagandists are as fol-

lows: That Rumania is politically and culturally a backward country ruled by a corrupt oligarchy; that Rumania oppresses racial minorities, such as the Jews and Magyars, and that she persecutes religious dissenters. It is perfectly characteristic and rather amusing that most of this slander is being circulated by Hungarian propagandists, who, themselves inmates of a most fragile glass house, are in their chauvinistic zeal utterly oblivious of the dangers of stone-throwing.

Take the first charge—that Rumania is an oligarchic country, ruled by a small group of boyars who own the land to the exclusion of the peasantry. It is true that before the war Rumania was a country of large landed estates; about four million hectares, or half the arable area, was owned by a thousand proprietors, while the other half belonged to six and one-half million peasants. Today that situation has undergone a radical change. The land reform law, one of the most thoroughgoing pieces of legislation in this particular field, assigns over 2,000,000 hectares, carved out of estates exceeding 500 hectares, to be distributed among the peasantry. In Bukovina and Transylvania the maximum size of estates is reduced even to 100 hectares. The land is, naturally, compensated for, the peasant beneficiary paying, in instalments stretched over forty-five years, 65 per cent. of the expropriation price, and the State assuming the balance of 35 per cent. The budget of 1920-21 carries an appropriation of 90,000,000 lei for the purposes of land distribution, and the work is in full swing. The peasants benefit from the reform, regardless of their race, language or religion.

The expropriation clauses apply, first of all, to land held in mortmain, under which heading ecclesiastic property is included. The Orthodox Church, being the greatest and wealthiest, suffers most heavily under the reform, but she endures the hardship, in view of the benefit to the commonwealth.

On the other hand, the Unitarian Church of Transylvania, whose membership is purely Magyar, has raised a complaint against what her spokesmen describe as a discrim-

PRINCE ANTOINE BIBESCO  
*Rumanian Minister to the United States*

inatory measure. Echoes of this have reached the American press. The truth is, of course, that the expropriation hits all churches, and that the rich Orthodox Church suffers more than the comparatively poor Unitarian congregation. Moreover, the Magyar and Szekler peasant of Transylvania is better off today under Rumanian rule than he was under the old Hungarian régime, and certainly much better off than his brother in Hungary under the Horthy Government.

Under the old order the peasant had to take his choice between emigrating to America or drudging for an absentee landlord on terms that meant slow starvation. Today he gets land from the Rumanian State, which also redeems, at a liberal rate, his

almost worthless old Austro-Hungarian currency. He enjoys, under the Rumanian suffrage laws, more political liberty than he did in the Hungary of Tisza. No wonder the "irredentist" movement, of which Magyar sympathizers make so much, is limited to the small bureaucratic class which, incited by the ideology of a bygone age and lured by the fantastic promises of the Nationalist die-hard organizations of Budapest, emigrates to the Magyar capital and lives half-starving in box cars on the hope of the millennium.

Rumanian law insures equal rights and equal legal treatment to all citizens, regardless of race or religion. The Magyars of Transylvania may use their own language without hindrance. Whereas under the old Hungarian rule the State-controlled school was the most potent instrument for denationalizing the Rumanian population, the present Rumanian Government actually encourages the maintenance of Magyar culture in Transylvania by paying higher wages to the Magyar teacher than he received in Hungary. The schools conducted by the Magyar churches, Catholic, Calvinist and Unitarian, have been taken over by the Rumanian Government on a similar basis. There are over twice as many Magyar gymnasiums (secondary schools with Latin as principal subject) in Rumanian-ruled Transylvania as there were Rumanian gymnasiums in Transylvania under the Magyars. The University of Bucharest has a chair in Magyar language and literature. A Magyar theatrical company gave performances at the Rumanian capital in the last season; a Rumanian theatre at Budapest under the old order would have been unthinkable. Magyar newspapers imported from across the border circulate freely in Rumania, whereas Bucharest newspapers were barred from Hungary.

I am dwelling on this refutation of Magyar charges of intolerance because lately a tremendous wave of Magyar propaganda has flooded the United States. A similar wave occurred in the Fall of 1919, after the overthrow of Bela Kun, when the Rumanian troops occupying Hungary were accused of all kinds of atrocities, although in reality the Rumanians prevented and in some cases punished excesses of the Magyar White Guards. At this moment the propa-

ganda aims at fostering "irredentist" sentiment among Americans of Hungarian extraction, and at arousing distrust of Rumania among the American public at large. The propaganda among Hungarian-Americans should be a matter of grave concern, for by keeping alive old world hatreds the agitators render Hungarian-American colonies unsafe for true Americanism. Magyar propaganda in the form of pamphlets, books, maps, news letters and bulletins is flooding the editorial offices of American newspapers. Even the cables are being utilized—as when the pious wish of certain political dreamers at Budapest resulted in a dispatch from that city announcing the conclusion of a Rumanian-Polish-Hungarian alliance against Russian Bolshevism. The truth was revealed in a cable report following close upon the first, to the effect that the agreement was concluded by the Rumanian, Polish and Czechoslovak Governments as a defensive measure against Bolshevism and also by way of insuring the Treaty of Trianon. In passing I may remark here that this agreement represented a signal victory of the endeavors of Mr. Take Jonsco, the Rumanian Foreign Minister, to bring together Czechoslovakia and Poland.

To return to domestic policy: Another proof of the democratic spirit actuating the rulers of Rumania is the solution of the Jewish question. Mistakes may have been committed in the past in handling the Jewish problem, but the all-important fact is that today the emancipation, political and social, of the Rumanian Jews is complete; they enjoy full citizenship and are destined to play an important part in economic reconstruction.

In judging present-day Rumania the dominant fact to be considered is that Rumania—a country which never since its foundation has cherished plans of aggression, and whose only diplomatic conflicts up to 1913 were with Austria-Hungary because of ill treatment of Rumanians for political reasons—has today achieved her

great dream: national unity within frontiers 2,000 years old. She can afford to be magnanimous and to forget past injuries. The Rumanian people are willing to live in friendly co-operation with their neighbors, if these furnish proof of good-will and sincerity.

Speaking of economic conditions, Rumania is destined, by her natural resources, to become one of the wealthiest countries of Europe. The paramount needs of the Old World today are breadstuffs and fuel, and of both Rumania possesses a superfluity. Rumania today is actually the one wheat-exporting country in Europe, and even in normal times she would rank as the second, next to Russia. Her oil fields are the richest in Europe; her salt deposits sufficient to supply half the European demand. Recently mica mines—the only ones in Europe—have been discovered. There are coal and iron ore and gold in Transylvania. More important than the minerals—except oil—is lumber; Rumania can produce over 100,000 carloads a year. Production is rapidly being restored to normal footing, in spite of the German spoliation of machinery and rolling stock. Much of the oil machinery was destroyed by the Rumanians themselves to prevent German exploitation of the wells, and must be replaced. Rumania is the guardian of the most important inland waterway of the old world, the Danube; she is the gatekeeper of Europe at the door of the Near East, her port, Constantza, being the logical terminus of the Bordeaux - Marseilles - Milan - Venice-Belgrade-Bucharest line, succeeding to the pre-war route, Paris-Berlin-Vienna-Budapest-Sofia-Constantinople, as the channel of land traffic to the Orient.

Metternich said Asia begins at the gates of Vienna. That may be true; but, then, Rumania stands out as a European outpost of Westernism, amid surroundings sunk back to a barbarian level. The Rumanian Government and people are prepared to assume the responsibility of their victorious destiny.

# SPLIT AMONG SOCIALISTS WIDENED

**W**ITH three international political organizations striving for the support of the Socialist and Communist Parties, the prospects for the reconstruction of the world-wide Socialist International which broke down under the stress of the World War do not become any brighter.

The principal development since the split in the Italian Socialist Party over the unconditional acceptance of the Twenty-one Articles of Faith of the Third International in January was the rejection of the Moscow program by the Independent Labor Party of Great Britain by a vote of 521 to 97 at its Southport convention the last week in March. The defeated Communist delegates bolted and announced their intention of joining the British Communist Party, a group of extremists numbering only a few thousands. The Independent Labor Party is regarded as the advance guard of the British Labor Party, which is still affiliated with the Second International.

Delegates from Socialist organizations from about a dozen European countries met in Vienna the last week of February and laid the foundations for a new international Socialist organization, intended to embrace the best points of the old Second International and of the Third (Communist) International. The new body did not call itself the Fourth International, but "The International Working Group of Socialist Parties," with membership open to all Socialist and labor parties not belonging to the existing Internationals. Its aim was announced as the conquest of political and economic power by means of the revolutionary class struggle, but the form of such struggle was to be dependent upon the special conditions in each country, and not upon any cut-and-dried program laid down from Moscow or any other capital.

Both the dictatorial tactics of the Third International and the overcautious attitude of the old Second International were denounced by the delegates, who included Richard Wallhead of the Independent Labor Party of Great Britain, Jean Longuet of the French Socialist Party, Friedrich Adler

of the Austrian Social Democracy and Robert Grimm of the Swiss Socialist Party.

Among the resolutions adopted was one calling for the immediate adoption by the various nations of plans for general disarmament. Despite the convention's opposition to Bolshevik tactics in the International labor movement, it went on record as calling upon all Socialist Parties to do all in their power to prevent intervention in Russia and to force the conclusion of peace with the Soviet Government. Just before the convention opened the Executive Committee of the Third International sent out a message from Moscow deriding the proposed new organization, labeling it the "Two-and-a-half International," and calling its organizers leaders out of jobs.

At a meeting of the Executive Committee of the new International, held Feb. 27, a bureau of five members, with Friedrich Adler as secretary, was elected. The other members are Grimm, Longuet, Wallhead and George Ledebour of the Independent Socialist Party of Germany. The committee resolved to call upon the international proletariat to demonstrate on May Day for universal disarmament, for revision of the peace treaties and for self-determination in general.

The organizations represented at the Vienna convention were the Independent Socialist Party of Germany, the Independent Labor Party of Great Britain, the Socialist Party of France, the Social Democratic Party of Slovenia, the Socialist Labor Party of Croatia and Slovenia, the Socialist Party of Serbia, the Social Democratic Party of Latvia, the Social Democratic Party of Austria, Poale Zion (the Jewish political labor group), the Social Democratic Labor Party of Russia (Mensheviks), the Left Social Revolutionary Party of Russia, the Social Democratic Party of Switzerland, the German Social Democratic Labor Party of Czechoslovakia, the Socialist Party of old Rumania, the Federation of Socialist Parties of Bukovina, Transylvania and the Banat, the Social Revolutionaries of Lithu-

ania and the Kunfi faction of the Socialist Party of Hungary. The delegates from Poland and Bulgaria were not admitted.

The first party to hold a convention and formally affiliate with the Vienna International was the Socialist organization of Lithuania.

The third convention of the Communist International is to open in Moscow on June 3.

Division on the economic field was increased by the formal withdrawal of the American Federation of Labor on March 8 from the International Federation of Trade Unions because the A. F. of L. officials, headed by Samuel Gompers, thought the Amsterdam body was too radical, and a de-

cision at about the same time by the Leghorn convention of the Italian Federation of Labor to do the same thing for just the opposite reason. The Italians voted, 1,355,000 to 418,000, to join the Communist International Council of Trade Unions, with certain reservations. The Finnish Federation of Trade Unions also voted to leave the Amsterdam organization. The Executive Committee of the International Metal Workers' Union, at a meeting held in Berne on March 18, declared itself in opposition to the Communist International. The first regular congress of the Communist International Council of Trade Unions was scheduled to open in Moscow on May Day.

### MR. LANSING ON MR. WILSON

THE volume by Robert Lansing, former Secretary of State and delegate to the Paris Peace Conference, entitled "The Peace Negotiations: A Personal Narrative," was published in the last week of March, 1921, and at once became a storm centre of favorable and unfavorable criticism. It was devoted almost wholly to a detailed recital of what the author regarded as President Wilson's mistakes at Paris, with the story of the strained relations which ultimately led to Mr. Lansing's forced resignation from the Cabinet.

Mr. Lansing's chief charge against the President is that he would not take advice from the Secretary of State or anybody else. When informed by Colonel House that the President was preparing to attend the Peace Conference in person, Mr. Lansing advised Mr. Wilson against that course, but his counsel was ignored. None of the members of the American delegation, says the author, were consulted during the voyage or even at Paris. They knew practically nothing of what was going on, as Mr. Wilson resorted to private meetings and secret diplomacy. According to Mr. Lansing, the President was outwitted and made the "cat's paw" of shrewd European diplomats; obsessed by his lofty project of the League of Nations, he traded some of America's greatest principles for the

League. Mr. Lansing says he warned him that the American Senate would never ratify the treaty if it contained the League covenant, with Article X., guaranteeing the territorial integrity of nations attacked; but this advice, like that on every other point, was ignored, and the adviser considered himself humiliated. Mr. Lansing is especially bitter over the President's public statement that "he would not have a covenant drawn up by lawyers."

Carried away by his League project, Mr. Wilson, the ex-Secretary says, accepted the unjust mandate system entire, including the Shantung award to Japan; the latter country, he says, succeeding in "bluffing" the President with a threat to withdraw, though it had absolutely no intention of so doing. In accepting the plan of an alliance with France, adds the author, Mr. Wilson's only thought was to buy another vote for the League. The whole book was an indictment of the President, revealing a degree of incompatibility between the two men which not only explained why they had ultimately parted company, but caused many to wonder why they had not done so sooner. Newspapers throughout the country immediately devoted whole pages to the book, and it has become a centre of debate mildly reminiscent of that over the League of Nations itself.

# UNIVERSITY EXCHANGE WITH BELGIUM

By NELLIE E. GARDNER

*How the permanent fund was raised which now enables the young men and women of Belgium and the United States to build an educational bridge between two Nations*

A PERMANENT fund has been established for the exchange of graduate scholarships and professorships between the United States and Belgium, and for the making of loans to young men and women in Belgium who could not otherwise get a university education. This fund represents the profits from the sale of foodstuffs both outside and inside of Belgium—largely accrued during the period of the armistice—under the Commission for Relief in Belgium, which continued in service until April, 1919, and of the Comité National, which was the associate organization of the American Commission, and was made up of a great number of Belgian people under the direction of distinguished Belgian business men.

After the armistice it was desirable that the system of providing mass food supplies be continued until Belgium got back on a pre-war basis. In November, 1918, approximately 900,000 people were receiving free food; the remaining 7,000,000 people in Belgium were still able to find local money with which to pay for their rations.

Under the arrangements of the Comité National the Belgians who had money had always charged themselves a small profit, which was expended in support of the totally destitute. When the armistice came the amazing industry, vitality and ingenuity of the Belgian population soon resulted in a rapid reduction of the totally destitute, so that not only was there an accumulation of profit formerly expended for the needy, but also a new profit from those whose pride prompted them to begin paying as fast as they secured employment or who were able to come again into possession of property over which they had lost control during the occupation. There was further profit made in liquidation of surplus foodstuffs and equipment.

There was never any doubt that these profits were the property of the people of

Belgium. The only question to be determined was how they were to be returned to the public. The Belgian Government expressed the desire that they be applied in some manner that would be beneficial to the people and commemorate the relief organizations of the war. A meeting was arranged by the Belgian authorities at Brussels at which the Premier, speaking on behalf of the Ministers, requested Mr. Hoover to determine the character of this operation. After study and reflection Mr. Hoover suggested that the money be used for education in Belgium. His idea was accepted and representatives of the Belgian universities were called into conference.

The sum of 95,000,000 francs was made available to enable the Belgian universities and technical schools to resume activities immediately. Further amounts as they became available after final liquidation were allocated to the permanent foundation, from which the income only would be expended. The declared object was to build a permanent bridge of fine and high relationship between the two countries. The total fund now amounts to about 100,000,000 francs, whose eventual value cannot be determined in the present condition of exchange.

Each year forty-eight exchange graduate fellowships will be granted between Belgian and American universities—twenty-four from America and twenty-four from Belgium; exchange professorships will be arranged, and approximately 2,000 young men and women of Belgium will receive aid to permit them to continue their studies.

To promote this international undertaking, the C. R. B. (Commission for the Relief of Belgium) Educational Foundation was incorporated in America, and the Fondation Universitaire was incorporated in Belgium. The American organization was incorporated in Delaware, Jan. 9, 1920, and the Belgian organization received its charter under the Belgian Government on

July 6, 1920. Both organizations are now functioning actively, and the student loans and exchange graduate fellowships are in process of allotment. The membership of the *Fondation Universitaire* is as follows:

Honorary President, Herbert Hoover; President, Emile Francqui; Vice Presidents, Paul Heger and Millard K. Shaler; Treasurer, Félicien Cartier; Secretary General, René Sand. Other members of the Council of Administration are: University of Ghent, Henri Pirenne, O. Vander Stricht, A. Dumoulin; University of Liège, G. Galopin, E. Malvoz, C. de Paige; University of Brussels, L. Leclère, Jules Bordet, Hippolyte Vanderryt; University of Louvain, A. Merinx, M. the Canon L. Genechten; V. Grégoire, P. Bruylants; School of Mines and Metallurgy at Mons, A. Halleux; Higher Colonial School at Antwerp, Denyn and Paul Pasteur, Père Rutten and William Hallam Tuck.

In its work for the advancement of higher education in Belgium, the *Fondation Universitaire* touches nearly every field. Its principal benefits include student loans—to be repaid in ten years—to worthy young men and women who could not otherwise complete their undergraduate work at institutions of higher education; graduate fellowships abroad (not to be repaid) to students whose university work was completed with distinction and who wish to devote themselves to teaching or the advancement of science in Belgium; aid to research students who wish full time to carry on experiments deemed of value to the nation's life; aid to student clubs in the university cities of Belgium; aid to institutions of higher learning in Belgium, so that they may be in better condition to carry on their educational work.

Conditions requisite to obtaining a student loan are: Belgium nationality, good character, good health, the satisfactory passing of examinations, recognized intellectual ability and lack of funds by the student or his family to provide this opportunity for higher education. The Council and the Bureau of the *Fondation Universitaire* supervise the granting of these loans and subsidies very carefully, and every precaution is taken to make the grant fit the case.

The minutes of the meetings of the *Fondation Universitaire* read like excerpts from human life. As you read the grant of 2,000 francs to Jean or Jules or Marie, you catch something of what it means to this young son or daughter of Belgium to

be able to get the education of which he or she had dreamed. And as you note the careful instructions that are printed in the circular concerning the exchange fellowships that are to be granted in American universities in the academic year 1921-22, you can visualize the zeal with which these pages are read as they are posted on the bulletin boards of the Belgian universities.

To be eligible for one of these exchange fellowships in an American university, the Belgian candidate must be able to converse fluently and write correctly in English. A Belgian circular recently received at the headquarters of the C. R. B. Educational Foundation in New York lays down these further limitations:

In general, only young men and women who are preparing for research work or teaching are eligible.

Each exchange student will indicate his preference as to the American university which he wishes to attend; the final choice will be made by the C. R. B. Educational Foundation in New York, by agreement with the Secretary's office of the Belgian Foundation; a member of the Faculty of the university which he will attend will be assigned to him as his adviser; arrangements will be made as far as possible in advance for the student's room at the university.

Students going to California will leave Belgium on July 15, 1921, and others will leave about Sept. 1.

Exchange students will plan to remain in the United States during the entire school year, to continue friendships made in America after they return to Belgium, and to use every means to aid their country and to foster friendly relations between Belgium and the United States.

The C. R. B. at Brussels has authorized the following allotments to the exchange students:

(a) 200 francs for equipment and for the journey to Antwerp.

(b) \$50 for initial expenses.

First-class passage is provided on a steamship of the Red Star Line; if the students prefer to travel second class, they may deduct the difference in price between first-class passage, and profit by this balance.

In addition, the C. R. B. Educational Foundation will remit to the exchange students at New York, the following:

(a) \$50 for general expenses.

(b) \$50 for the purchase of books and equipment.

(c) \$1,000 in four quarterly advance instalments.

(d) Adjustment for the high cost of living. Exchange students shall render account of all money spent.

The C. R. B. Educational Foundation will meet the exchange students upon their ar-

rival at New York, will entertain them three days in the city, and will provide them with a ticket to their destination. It will pay all expenses of registration and examination, will take care of their traveling expenses back to New York, and will provide them with first-class passage from New York to Antwerp. In returning, as in going over, the students may travel second class if they prefer, and may deduct the difference.

Belgian students are urged to take with them whatever equipment they possess for working in the classroom or laboratory, and the original or a duplicate of their university diploma.

At the end of his foreign residence, each exchange student shall make a report:

(a) On his studies and work in America.

(b) On the state of science and its practice in America, in the field that he has chosen to investigate; on the reforms that he would suggest for this field of science in Belgium, and suggestions for teaching and the formation of scientific ideas.

Each American university will furnish a report upon the work of the Belgian students.

The exchange scholarship fund is renewable for a second year in case that his research investigations and prolonged studies justify a student in making this request.

Would not this report of the returned Belgian students furnish interesting reading to many self-satisfied Americans? It might give us many fertile ideas for the improvement of our own educational practices. For, make no mistake about it, these young men and women from over the sea

will take this scientific investigation very seriously, and they will enter their school year in this country in the spirit of an intellectual exploration or spiritual crusade.

American graduates already have entered the Belgian Universities of Brussels, Ghent, Liège and Louvain, and Belgian graduates have matriculated for advance courses in Harvard, Yale, Princeton, Pennsylvania, Columbia, Cornell, Massachusetts Institute of Technology, California, Johns Hopkins, Chicago and Stanford.

The first group of twenty-four American graduate students are now enjoying exchange fellowships in Belgian universities. An examination of this list of American students and of the fields of study they have chosen reveals the surprising fact that, whereas the young men have chosen Romance languages and literature, three of the young women have selected international law, political economy and chemistry, while the remaining two women "fellows" have specialized in the literature of the Middle Ages.

Information regarding the work of the Foundation and its possibilities offered to American university students may be obtained by writing to Perrin C. Galpin, Secretary of the Fellowship Committee of the C. R. B. Educational Foundation, Room 1700, 42 Broadway, New York City.

## VENIZELOS AT A PARIS TRIAL

THE attempt by two Greek officers named Tserepis and Kyriakis to assassinate ex-Premier Venizelos at the Gare de Lyons, Paris, Aug. 12, 1920, was punished, after a fair trial ending on Feb. 26, 1921, by a sentence of five years' hard labor. The outstanding feature of the trial was the testimony of M. Venizelos, who appeared in person. It was shown that Tserepis was one of several Greek officers who had planned a filibustering raid on Albania and Epirus before the war, and whose animosity was aroused by the Premier's threat to sink their vessel if they attempted the raid. M. Venizelos added, however, that this personal motive had been complicated by new factors.

Two days before [he said] I had signed the Treaty of Sèvres. My enemies, no doubt, considered that after such a victory the

elections that were to follow would be a triumph for me. \* \* \* They wished to get rid of a political leader who had enabled his country to avoid the danger it had run owing to the policy of a felonious King, and they hoped to prevent me from conducting the elections which, I had promised, should take place as soon as the treaty was signed.

A violent attack launched on M. Venizelos by a retired Greek Lieutenant drew fire from the former Premier. In a vehement speech he denounced Constantine, whose dynasty the Greek people have restored.

"You have been told," he said, "that there were no pro-Germans in Greece, and this was true so far as the people as a whole and the majority of politicians were concerned, but it was not true either of the King or of his entourage, who were not merely pro-Germans, but *boche* from head to foot."

# MODIFIED PROHIBITION IN CANADA

BY THOMAS A. KYDD

*What Canada has done in the way of prohibiting the sale of alcoholic beverages, and what Quebec Province is doing in the way of reaction toward "wetness," while still trying to avoid restoring the old-time saloon*

THE great war, among other things, brought prohibition to the whole of Canada. The saloon and hotel bars were abolished, and in every province a system of dispensing ardent beverages by physician's prescription was established. Even ordinary beer was on the prohibited list of beverages, and only a mild drink containing a minimum of alcohol for preserving purposes was permitted to be sold.

In Quebec alone of the nine provinces was there a partial wetness. The Liberal Government, under the Premiership of Sir Lomer Gouin, a steady and conservative statesman, had for some ten years or so been reducing the saloon licenses in the cities and towns of the province, with the intention of bringing their number down to the minimum. Rural communities also had beer gradually "going teetotal" until, when the war began, about 75 per cent. of them by popular vote had gone absolutely dry alcoholically. When the wartime movement of retrenchment and denial spread to Canada, therefore, Quebec was already among the most temperate provinces, and, for that matter, was one of the most temperate places in the world. The per capita quantity of strong drink consumed in Canada, be it said, was always much lighter than in European lands.

Though the Quebec Government decided to abolish the bar, it was not convinced that the inhabitants of the province were ready for absolute prohibition. Therefore, with the approval of the Legislature, a question was submitted to the electors in February, 1919, asking them if they were in favor of the sale of beer and wine of limited alcoholic strength. The vote in town and countryside was overwhelmingly in the affirmative. Accordingly, on May 1, 1919, the bars were all closed, and mild

beers and wines, of about 2 per cent. alcoholic content, in place of the former 5 and 6 per cent., were the only beverages of a spirituous or malt nature freely on sale. All spirituous liquors, such as whisky, gin, brandy and rum, were legally purchasable only by doctor's prescription, and then only in wine and imperial quart bottles, one for each prescription. Special Government licensed liquor stores were established for the purpose. The beer and wine of moderate strength were on sale by bottle in grocery stores and by the glass in restaurants.

While Quebec has been slaking its thirst in beer generally, the rest of the Dominion of Canada has by statute been under absolute prohibition. Actually, however, in every one of the provinces there has been more or less violation of the provincial prohibition laws. Some physicians, comparatively few in number, have furnished prescriptions to all and sundry by hundreds, and even thousands, monthly. There have been court prosecutions of medical practitioners for gross violation of the system, and the accused have been convicted in some instances of issuing hundreds of prescriptions for beverage purposes. In Manitoba, for instance, on Feb. 24, 1921, the College of Physicians and Surgeons in the province announced the suspension from practice of sixteen physicians, for periods ranging from a week to six months, for the wholesale issuing of whisky prescriptions. One of the medical men had to his credit, or discredit, the issuance of 10,000 whisky prescriptions in the course of a single month!

There has been a vast amount of forgery of physicians' names, and bogus forms have been printed and sold in pads by the thousand. There has also been much illicit sale

of whisky by licensed and unlicensed vendors in every part of the country, and the smuggling of hard drink across the international boundary has been enormous. It goes on day after day, despite the efforts of the authorities to uphold the law. Automobiles loaded with whisky have been seized and confiscated with their contents, and the drivers fined heavily or imprisoned; yet the game continues. In Ontario the punishments have been particularly severe; fines of \$1,000 or \$2,000 are of daily occurrence. There have been skirmishes between bootleggers and the preventive officers, with shooting, in which men have been wounded and sometimes killed.

The most sensational case of the kind was in Sandwich, Ontario, near the border city of Windsor, opposite Detroit, Mich., in the early hours of the morning of Nov. 2, 1920, when Beverly Trumble, proprietor of a roadhouse patronized by both Canadians and Americans, was shot dead by the Rev. J. O. L. Spracklin, "the fighting parson." Mr. Spracklin was conducting a whisky raid in his capacity as special preventive officer. He was arrested, charged with "slaying and killing" Trumble, and was duly tried and found "not guilty" of the charge of manslaughter laid against him by the Grand Jury at the Windsor Assizes, over which Chief Justice Sir William Meredith presided. The defense was that the hotel-keeper was armed, and had threatened to shoot Spracklin for breaking into his premises with his armed assistants. The jury accepted the evidence as the true statement of the facts. The Rev. Mr. Spracklin was deprived of his inspectorship, but retains his congregation.

Liquor in Canada requires defending as never before, and there have been instances where thieves have broken into houses, stolen whisky, and ignored money and other valuables. At the Port of St. John, New Brunswick, the thefts of whisky from the ocean steamships and the warehouses on the wharves became so extensive that the Canadian Pacific officials, one day in January last, met Mayor Schofield as a deputation, requesting police protection for the "wet" goods, brought principally from Scotland. It was complained that the situation was becoming intolerable, and that there must be a change. For example, the complainants charged that on one occasion seventeen men had descended upon a pile

of freight and carried off dozens of cases of Scotch. The Mayor agreed that such things must cease, but he did not see why the city police should spend their time guarding whisky shipments. He promised relief, however, and by a system of watching every case of liquor from the time of its hoisting out of the steamship's hold until it reached its local destination, the thieving was practically stopped.

In Nova Scotia and Prince Edward Island also there is violation of prohibition; in Quebec, in Ontario, in Manitoba, Saskatchewan, Alberta, British Columbia—in other words, from ocean to ocean.

The Province of Quebec, as already stated, differed from the others in that the sale of mild beer and wine was permitted by bottle and glass, but otherwise it resembled the rest of Canada in that whisky could be secured only on doctor's prescription. The banishment of the bar undoubtedly did away with much drunkenness, and improvement was noted, for instance, in the streets of Montreal. This city is by far the largest and most mixed in all Canada; the population of the island is about 800,000. It is also an ocean port, which adds to the difficulties of the police authorities.

The workmen generally were content with the beer sold in the legitimate restaurants and shops. In Montreal, nevertheless, as elsewhere, there was considerable illicit sale of strong drink by the bottle, and by the glass in the all-night clubs, which sprang up with prohibition, and which were licensed to retail beer and wine of the Government standard of mildness. These clubs secretly sold whisky by the glass, generally at a price of 40 or 50 cents a drink. They were responsible for most of the drunkenness that prevailed, and so notorious, indeed, did they become that the License Commission of Montreal denounced them. They are expected to vanish when the act of 1921 comes into force.

The Quebec prohibition law could not be strictly enforced in the cities, and the violations were daily becoming more common, despite the best efforts of the authorities. The sale by bottle from the licensed vendors' establishments, without the legal prescription, became also more and more open. The Quebec Government at last realized that the law as regards its administration was a failure, although an improvement on

the old order of licensed hotel and saloon bars. After months of study and consultation with municipal leaders and the best legal talent, the Government drafted a new liquor bill, much less drastic. This was duly presented as a Government measure to the legislative Assembly at Quebec in the session that opened in January, 1921, by the Hon. Walter Mitchell, Provincial Treasurer. Mr. Mitchell declared that the prohibition law had failed in Quebec as elsewhere, and he quoted American, British and Canadian opinion on the working of prohibition laws in general. The Hon. L. A. Taschereau, the new Premier of the province, addressed the House along similar lines, and after a few days of consideration the bill was accepted and passed by both the Assembly and the Legislative Council, or upper house. The new law becomes effective May 1, 1921.

By this act the whole traffic in ardent beverages, as well as in wines, is placed in the hands of a commission of five, comprising the Hon. G. A. Simard, who resigns from the upper house to become Chairman; the Hon. Justice Carroll, who leaves the Court of Appeal to be Vice Chairman; Napoleon Drouin, ex-Mayor of Quebec City, a prominent manufacturer; A. L. Caron, Montreal, manufacturer, and Sir William E. Stavert, a Montreal financier with Dominion-wide reputation. These men are all reputable, hard-working and successful citizens, and will have absolute control of the liquor business in their hands.

The Quebec Liquor Commission is to establish depots in cities and towns as it sees fit, choosing the locations and employing and controlling all agents and clerks. From these depots are to be retailed alcoholic beverages, other than beer, and including wines, by bottle not containing more than forty-three fluid ounces. This is the "imperial quart," but most of the bottles will be the familiar wine quart size. A customer may purchase only one bottle of whisky, brandy, gin or other ardent drink at a time, and he needs for this no permit. There is to be no limit to the sale of wines, as the Government's intention is to encourage wine drinking, in the conviction that this may tend to minimize the consumption of whisky. Premier Taschereau announced this policy in the Legislature and declared that the commission would retail wine at cost.

Hard drink and wines are to be obtainable only in the depots of the Liquor Commission, and whisky, gin, brandy and other strong beverages are to be consumed only in the residence of the purchaser. There are severe penalties for infractions of the law. Liquor depots are not to be established in rural communities, nor in any urban centre which does not wish to have one. A man may be placed on a blacklist for drunkenness, at the instance of his wife, daughter, sister, father or other relative, or employer or clergyman, and to that individual no liquor may be sold at any depot throughout the province.

Beer of 5 per cent. strength is to be brewed and freely sold in licensed beer taverns. Beer may also be sold with meals in legitimate hotels and restaurants. These institutions may also serve wine with meals. In this connection it should be noted that the commission is to decide what constitutes a meal in the event of a dispute. The commission may also at will close any depot in any section of the province, and may cancel licenses for lawbreaking at its pleasure. Its control is complete. The breweries are to sell to dealers and may locate depots anywhere but in dry territory. The whiskies, wines, &c., are to be purchased by the Liquor Commission direct from the distillers and wine growers, and every bottle is to be stamped with the Government stamp and the price to the purchaser.

British Columbia also is about to institute a system of retailing alcoholic beverages by the bottle from licensed shops, in accordance with a referendum taken last Autumn. The question on the ballot was: "Are you in favor of the sale of alcoholic beverages in sealed packets?" The vote was overwhelmingly in the affirmative.

The other seven provinces of the Confederation remain dry, but it is predicted by many observers, including Hon. Walter Mitchell, Provincial Secretary of Quebec, that prohibition in Canada is doomed eventually to disappear, and that the French-Canadian province's example will soon be followed. In any event, Quebec is venturing upon an interesting experiment in dealing with an ancient problem.

[For recent election returns regarding the prohibition issue, see news article on Canada, which can be located by looking up "Canada" in index at end of Table of Contents.]

# THE NEW CANADIAN TARIFF

By W. L. EDMONDS

**A**LTHOUGH the Canadian Parliament has been in session since Feb. 14, 1921, no definite announcement has yet been made as to when the new customs tariff will be submitted for the consideration of the House. A Cabinet committee in 1920 conducted an extensive inquiry in each of the nine provinces for the purpose of securing the viewpoint of the various interests concerned. This committee completed its labors some time ago, and it is the general opinion throughout the Dominion that the Government is deferring submission of the bill until something definite is known as to the nature of the proposed tariff legislation of the United States.

The statement made by a member of the Laurier Cabinet twenty years ago that the tariff was no longer an issue in Dominion politics does not hold good at present. The tariff is again a live issue. And that which has thrown it into the arena is the propaganda which the Farmers' Party, and particularly that section of it within the boundaries of the three Prairie Provinces, has been conducting for some time.

Although in the early stage of their agitation the farmers' organizations appeared to be demanding absolute free trade, they now deny that this is their object. According to official statements submitted to the investigating committee of the Cabinet last year, the platform of the Farmers' Party is, in brief, as follows:

An immediate all-round reduction of the customs tariff; the establishment of a 50 per cent. preference, in place of the 33 1-3 per cent. now obtaining, on imports from Great Britain, and within five years, free trade; unrestricted reciprocity with the United States along the lines of the agreement of 1911; the placing on the free list of all foodstuffs and agricultural implements.

That this platform has stronger adherents in the Prairie Provinces than in other parts of the Dominion there can be no doubt. Leaders of the Farmers' Party in Ontario subscribe to it, but there is by no means unanimity on the part of the farmers of that province as a class.

Among the farmers in the Province of Quebec the propaganda has made less impression than on those in any other part of Canada. Farmers in the Maritime Provinces, while stating a desire for tariff modifications, have expressed themselves in favor of allowing manufacturing industries some measure of protection. Fruit growers in British Columbia have unreservedly expressed themselves in favor of the maintenance of the protective tariff.

The agitation initiated by the Farmers' Party, which at present has about a dozen members in the House of Commons, has not been without its influence on the Liberal Party, which up to about a quarter of a century ago was advocating "free trade as they have it in England." The Liberal platform in respect to the tariff, as drafted at a convention in August last, has recently been described by The Toronto Globe, the chief organ of the Liberal Party, as being "based on the principle of obtaining the maximum revenue possible from those who live luxuriously, and taxing as lightly as revenue requirements will permit the necessities of life." There is, however, quite a division of opinion among Liberals in respect to the tariff.

The Independent Labor Party, which has developed some strength in the provincial Legislatures of the Dominion, favors the "gradual elimination of import duties on all necessities of life, such as food, clothing, boots and shoes, and the tools and machinery used in production." Certain individual labor unions have, on the other hand, protested against any general lowering of the duties.

Though any material increase in the customs tariff of the United States would undoubtedly strengthen the position of the protectionists in Canada, it is scarcely likely, in view of the combined strength of the advocates of low tariff and of free trade, that the new tariff will create a higher average scale of duties than those at present obtaining. That it is the intention of the Dominion Government, however, to maintain in the new tariff the

principle of protection is evident from the tone of the speech pronounced from the throne at the opening of Parliament on Feb. 14.

It is the opinion of my advisers [said the Governor General in that part of his speech referring to the proposed new tariff], that in such revision regard must be had to the necessities of revenue, and as well that the principle of protection to Canadian labor and legitimate Canadian industries, including agriculture, which has prevailed for over forty years in this country, must be consistently maintained; but that the customs duties imposed to that end should be no higher than is essential to insure good standards of living among our working population and to retain and make possible the normal expansion of the industries in which they find employment.

Although in the meantime several amendments have been made, there has been no complete revision of the Canadian customs tariff since 1907. The latter was the seventh since Confederation in 1867. The first revision was in 1868, and the second came in the following year, both creating an average rate of duty on total imports of 13.1 per cent. Under the Mackenzie free trade Government the third revision took place, the object being to provide a tariff for revenue only. The idea of protection was scouted entirely. Under this instrument the average rate of duty on total imports fell to 11.7 per cent. The first avowed protectionist tariff of the Dominion came into operation in 1879 under the Government of Sir John Macdonald, as a result of which the average rate of duty on total imports rose in the following year to 20.2 per cent., and on dutiable imports alone to 26.1 per cent. By amendments which were made in 1887 and 1888, with a view to affording greater protection to the iron and steel industry in particular, the average rate on dutiable goods rose to 31.9 per cent. and on total imports to 21.8 per cent. In response to a general cry throughout the country for removing what were termed "the moldering branches of protection," there was in 1894 a fifth revision of the tariff. By this, although a protectionist Government was still in power, the average rate of duty on dutiable goods fell to 30.5, and on total imports to 17.8 per cent.

The sixth revision, that of 1897, was even more remarkable for its outstanding features than that of 1879, when the principle of protection was adopted. That which in

particular gave it its outstanding features was the inauguration of the principle of preferential treatment to imports from countries within the British Empire, beginning at 12½ per cent., rising to 25 per cent. the following year, and later to 33 1-3 per cent., at which it still remains. This revision of 1897 took place in the year following the advent of the Laurier Administration to power, and resulted in a slight lowering of the average duties, due rather to the influence of the preferential provisions than to any departure from the principle of protection.

The seventh and last revision of the tariff was made in 1907. The outstanding features of that tariff were the introduction of the threefold classifications of preferential, intermediate and general duties, and the establishment of the drawback principle in respect to raw materials imported and subsequently exported in the form of finished products. With rates of duty there was very little interference, the average rate remaining about as before.

Owing to temporary expedients introduced into the tariff, there was a perceptible increase in the average duties during the war period, those on total imports reaching 20.5, and those on dutiable imports 35.9 per cent. They are now back again to the pre-war normal. The average rate for 1920 on total imports was 17.61, and on dutiable imports 27.03 per cent.

The latest available figures showing the amount of duty collected on the imports from different countries are those for 1919, and they show that the average on the total imports from the United States was 11.6 per cent., and on dutiable goods 20.9 per cent. Under the first tariff created after Confederation they were 7.3 per cent. and 20.1 per cent. respectively. The average in 1919 on total imports from Great Britain was 15.3 per cent., and on dutiable imports 22.3 per cent., compared with 13.5 per cent. in 1869.

One regard in which the new Canadian tariffs differ from those of the United States is that they become effective the moment they are submitted to the House of Commons. They have, of course, to run the gamut of both the House and the Senate, but, as the failure of endorsement would mean the resignation of the Government, they never fail to become statutes.

# THE EVACUATION OF SANTO DOMINGO

BY FABIO FIALLO

Formerly Provincial Governor and Assistant Secretary of the Interior in Santo Domingo

*The Editor of CURRENT HISTORY furnished proofs of the appended article to the State Department and Navy Department of the United States, and invited an official reply to the serious statements of Mr. Fiallo, or an unofficial reply with the sanction of the Government. After considering the matter, the authorities decided that for the present they would prefer not to make any declarations in reply to Mr. Fiallo, for the reason that the Government's future policy in Santo Domingo had not been, up to this time, fully determined.*

THE Admiral of the North American Fleet who has assumed the title of "Military Governor of Santo Domingo" published a proclamation on Dec. 23, 1920, addressed to the Dominican people, in which he announced the decision taken by the Government of the United States to "withdraw from the responsibilities undertaken in connection with Dominican affairs." This withdrawal was to take place in accordance with a previously published plan.

The plan referred to provides for the creation of a "Consultative Commission of Representative Dominicans," to which is assigned, by the "will of the Military Governor," an American technical adviser. The commission is charged to draw up reforms in the laws of the republic, in accordance with the "minutes" presented to it by the technical adviser. In case any one of these reform projects for the change of the national laws should itself necessitate the adoption of a constitutional amendment, by reason of any divergency from the Constitution already in force, it will be the adviser's duty to draw up the constitutional amendment in question.

The plan does not clearly determine whether the Consultative Commission is to have any voice in these projects of constitutional amendment or even to examine them. Reforms in the laws now in force, or any new legislation drawn up by the Consultative Commission, together with the constitutional amendments proposed or drawn up by the technical adviser,

are to be submitted to the Military Governor. The latter is empowered to approve them as they stand or to modify them, as seems to him best, and to "promulgate" immediately such part of this legislation *sui generis* as, in his judgment and discretion, he considers to be in conformity with the Constitution now in force.

The Military Governor's next duty will be to issue a call for the election of a Congress and of a Constituent Assembly. These bodies, to be convened by the Governor for this specific object, are to be informed of the constitutional amendments above described. When these amendments have been approved, the Governor is to call a popular election to choose a President of the republic, and when the latter has been elected the Military Governor "will renounce the powers with which he is invested" in favor of "the elected Executive of the Dominican Republic."

The plan, as will immediately be obvious to all, is only a specious and illegal stratagem, the only object of which is to give an appearance of legitimacy to the forcible seizure of the Dominican Republic effected by the past Administration.

It should first be noted that the functions and duties of the "Military Governor of Santo Domingo" are sanctioned by no statute either of Dominican or American source. They are in effect a fiction devised to serve the ends of an illegal occupation of territory belonging to a friendly nation and to enforce the overthrow of its legitimate rulers by the Wilson Administration.

They could be summed up briefly as a mendacious application of American military law, inasmuch as the said "Government" is exercised neither on American territory nor on the territory of a public enemy of the United States. This interpretation is confirmed by the fact that the naval commander who exercises this usurped authority has been allowed to retain a more or less fictitious rank in the American Navy, viz., Commander of the Atlantic Fleet, the reason for this being undoubtedly that the perpetrators of the intervention realized the inability of the North American Executive to create such an office without a violation of American constitutional law and jurisprudence. The ruse of allowing naval officers detached for such illegal functions to retain active ranking in the navy undoubtedly seemed the most effective means of obviating the obstacle described.

On what authority, then, does the ill-named "Military Governor of Santo Domingo" intervene in reforms in the laws and Constitution of the Dominican Republic, call elections there, and convene a Congress and a Constitutional Assembly? At this point it should be noted that even should the military occupation of the Dominican Republic be considered a legitimate act of war, the statutes that govern such acts from the various viewpoints of international law, constitutional law and military law as they prevail among civilized nations, in no way authorize the Governor of an occupied territory to call elections or to carry out by illegal means a permanent reform in the existing national laws, unless a specific transfer of sovereignty in favor of the occupying nation shall have previously occurred, and this for the simple reason that all such acts are an expression of sovereignty. In other words, only in case of a formal annexation of the Dominican Republic by the United States, bringing with it the virtual dissolution of Dominican sovereignty, would a military official of the United States be empowered within the jurisdiction of existing American laws to assume the powers granted to the Military Governor of Santo Domingo by the proposed plan.

To this plan the Dominican people are opposed, not only because of its illegality, but also because they fear the practical results of this legal outrage. To take part in

its execution would be equivalent to giving direct sanction to the intervention and to the illegitimate powers assumed by the Military Governor—by an act of public sovereignty, viz., the elections—and this sanction would create a dangerous precedent for the liberty of the republic. If the existing intervention were thus sanctioned and accepted by the Dominican people, and if the authority of the naval officer who now exercises dictatorial powers in Santo Domingo, with the right of effecting reforms in the Constitution, were thus recognized, this would obviously provide a sufficient basis for whatever future aggression the President of the United States might perpetrate in Santo Domingo. Whenever he might see fit to modify either the Constitution or the laws of the country, the President of the United States, under cover of this precedent, would merely have to send an Admiral to take over the Government of the republic.

And even though the Dominican people today have implicit confidence in the sense of justice of the American people, and in the judgment which they pronounced on such questions in the recent Presidential elections, the bitter experience of the wrong suffered at the hands of the last Administration and President Wilson's attempt to justify this act of imperialism by an arbitrary and captious interpretation of the Treaty of 1907 and of the rights which it conferred, have led the Dominicans to view with the greatest alarm any possibility of the setting up of a legal equivocation that would be a continual menace to their sovereignty and independence.

This American plan, then, has every appearance of a political stratagem of the kind exemplified by the famous Constitution—"made in Washington"—of Franklin D. Roosevelt, Assistant Secretary of the Navy under the Wilson Administration, a Constitution conceived with the intention of imposing the rule of the United States marines under the guise of a puppet Government for the Dominican people and with a certain appearance of consent upon their part.

To understand this, one need only consider that the determining power under the plan remains, as before, the Military Governor, and that the Consultative Commission is destined to play merely a figurative

rôle. It has no power to veto or to obstruct the will of the Governor, or to oppose the promulgation of the new legislation created by itself, but "amended" subsequently by the Governor according to his own whim without consultation with the commission.

FABIO FIALLO

*Poet and former Provincial Governor in Santo Domingo*

As for Constitutional reform, it is obvious that any Congress and Constituent Assembly would have to vote on the changes or additions of the Admiral exercising governmental functions; but no rational being who knows the irresponsible and despotic power wielded by the military authorities in Santo Domingo—with the support of American forces and of the National Guard which they control—can imagine that the elections which will be called to create these legislative bodies, or those which will take place later to elect a President of the republic, will represent a free expression of the popular will.

The true object of the whole plan seems to be to awaken political ambition and rivalries, in the expectation that the various political factions, impelled by degrading enticement, will abandon every consideration

of respect, of decency, and of the safety of the republic's sovereignty, in order to vie with one another for the favor of the omnipotent authorities of the occupation, even though the price of such favor will be in very fact an injury to that sovereignty. The final stage of the process, already reached in Haiti, and denounced in the electoral speeches of the new American President, would be represented by the formation of a Government classifiable as *opera bouffe*, the institutions of which would be manipulated by a few irresponsible American officials of the "carpet-bagger" type of the Reconstruction period.

The plan does not even give assurance that the military occupation will cease, for the vague promise to "withdraw from the responsibilities assumed in connection with Dominican affairs" certainly contains no specific promise in this regard, and leaves this vital question enshrouded in ominous obscurity.

The great majority of the Dominican people resolutely repudiate the plan, realizing that its acceptance and execution would mean a virtual abandonment of sovereignty, and would be in effect a sad and most unworthy sequel to the sufferings which they have bravely and patriotically endured since 1916, precisely because they did not then consent to the proposal which it is now sought surreptitiously to foist upon them—by the plan that has been confronting them since December, 1920. The Dominicans see clearly the deception, and firmly refuse to allow dust to be thrown into their eyes. The only honorable and legitimate solution of the Dominican situation, that which the Dominican people accept as the only solution which would protect their sovereignty from a grave impairment, consists in the re-establishment of the constitutional authorities deposed by the military coup d'état of President Wilson in 1916.

This desire of the Dominican people springs from no personal sympathies or political tendencies centring about the members of the national Government that was overthrown; nor does it spring from any hostility to constitutional reforms, which all Dominicans consider indispensable for the social and political reorganization of the country and for the maintenance of public order. Its source lies in a clear comprehension of the crisis through which

the republic is passing, in a sense of our own dignity and in a realization of the dangers now threatening our freedom and sovereignty. The Dominican people, and their blood brothers by language and religion in twenty South American republics, hope for this act of justice, which is in accord with the true spirit of American traditions, from President Harding. His decision will have a decisive influence upon the immediate future of Pan-American relations, alike political and commercial.

EDITORIAL NOTE.

Señor Fabio Fiallo, who is regarded as Santo Domingo's most representative poet, has figured prominently in both the literary and the political

life of his native land. Born in 1867, he devoted his youth to letters and journalism. Later he filled the posts of Dominican Consul General in New York and in Hamburg; became chargé d'Affaires in Havana, and later filled the offices of Provincial Governor and Assistant Secretary of the Interior in Santo Domingo. On July 15, 1920, Señor Fiallo was arrested by the American military authorities in Santo Domingo, on the charge that he had violated censorship regulations, and was brought to trial before a Military Commission empowered by the Military Governor to inflict the death sentence. As soon as the news of his predicament reached South America by way of Cuba, however, reading newspapers and public corporations of practically all the Latin American countries cabled appeals to President Wilson to spare the poet's life. Señor Fiallo was then sentenced to confinement with hard labor, but this sentence was changed to one year's imprisonment, and finally commuted on Oct. 15, 1920, when he received his liberty. He is now living in the United States, where he is engaged in journalistic work on behalf of Dominican independence.

## THE CENTRAL AMERICAN UNION AND THE UNITED STATES

BY BERYL GRAY

Editorial Staff, Bulletin of the Pan American Union

THE latest political movement in Latin America to promise constructive development is the confederation of four of the republics of Central America—Costa Rica, Guatemala, Honduras and Salvador—in the Central American Union. This is the resurgence of the old political division known in Spanish Colonial days as the Realm of Guatemala, a Captain Generalcy under the Spanish Empire. Central America declared its freedom from Spain as one country. It again becomes a political whole in response to its natural geographical entity and the kindred strain of its peoples. For, though Nicaragua has not joined the Union, it is likely that it will eventually do so.

In Central America there are rich natural resources which have been barely touched, because the ways of communication have never been properly opened, and political dissensions and revolutionary movements have tempted no country—and not many rich private corporations—to invest heavily in the building of roads, railroads, power plants and other such necessities for the opening of extensive mines, plantations or industries in an undeveloped

country. So mines which hide much gold, ferrochromium and lead; forests teeming with hard wood and material for paper pulp; land for planting hectares of coffee, sugar, cotton and fiber plants, and for developing new oil fields, lie awaiting the coming of men and money, which the rise of a strong government in these states will bring. Central America contains a goodly share of the raw materials which we need to keep our factories running for home consumption and for export, and her needs are exactly those things which are turned out by our steel industries, mines and textile plants. Her chief imports are machinery, railroad materials, coal and cotton textiles. Few industries outside of the raising of bananas, coffee, sugar and cacao have been developed to an appreciable extent beyond the needs of local consumption in Central America. And the chief hindrance has been the lack of shipping lines and of adequate assurance of stability of government; the would-be investor hesitated to sink his capital, even though he knew of the wealth that awaited development.

The Central American Union has been of slow growth from the earliest days of in-

dependence. When Central America drew the first breath of liberty she spoke for herself as a union, then called the State of Guatemala, under the plan of Iguala. But immediately thereafter personal enmity among the rulers of the provinces caused Honduras and Nicaragua to choose rather to join the empire of Iturbide in Mexico, and Costa Rica remained neutral, preferring her own sovereignty. So, in 1821, upon the arrival of Iturbide's Mexican troops, all these five provinces became attached to the Mexican Empire and so remained until 1823, when, at the failing of the empire, the regent of these States permitted them to call a supreme council to decide their national matters. Thus they were again given their sovereignty, holding a federal and representative congress in 1824. Once more dissensions broke out, and the countries divided. Up to 1838 various attempts by Zamorra and others broke up the union in spite of the efforts of Morazan and various patriots who worked for it. But in 1855 all the countries united against the attempt of William Walker to take Nicaragua. Yet the countries remained separate. Still the patriots and the people of these republics dreamed of a union and hoped one day for the restitution of their ancient jointure, and provision was made for it in the constitution of every one of the five States.

Now what many Central Americans believed to be but a dream is coming to pass. Whether it will be permanent, or have the ephemeral qualities of a dream, remains to be seen, and depends upon the quality of the souls of those who have brought it about and the steadfastness of the people as a whole. There has naturally been much propaganda for and against the union. Those against it have said that the United States did not want it—that it would be too strong a State—which is ridiculous, as the total population of the five countries is some 5,614,000, or less than that of New York City. Others against the union have said that the United States was secretly backing it solely for the purpose of exploiting the natural resources, to come and rob the country of its God-given wealth, converting it into American dollars to send back to the United States. This is equally ridiculous. No country that continues to hide its mineral and agricultural wealth under untouched mountains and plains can

hope to prosper, any more than did the unfaithful servant of the parable, who hid his talent in a napkin.

It is interesting to note briefly what each of the four republics of the Central American Union produces at present, and what its undeveloped possibilities are:

**COSTA RICA**—The chief exports of Costa Rica are coffee, bananas, gold and silver. Her export trade to the leading commercial countries for 1919 amounted to \$17,748,835. Her imports for the same year were \$7,517,989, chiefly in tools, sugar mill machinery and machinery for the preparation of coffee and cacao; flour, cotton fabrics, electrical material, railway material, lard, coal. In addition to bananas, of which the annual export is some 11,000,000 bunches, Costa Rica produces hides, skins and rubber, as well as such hard woods as mahogany, ironwood, cedar, logwood and other wood suitable for dyeing and tanning purposes. These latter products have never been developed to any great extent, due to lack of roads and other means of transportation. The Government lately granted a concession for turtle fishing off the coast, and so added another item to Costa Rica's list of natural resources.

**GUATEMALA**—Guatemala's chief exports are coffee, bananas, sugar, chicle, hides, rubber, skins, &c., which in 1919 amounted to \$22,419,134, bought by the chief commercial countries. Her imports for the same year amounted to \$11,230,819 worth of cotton textiles, iron and steel manufactures, food products, wood, textiles, railway material, agricultural and industrial machinery, &c. None of the exports have been developed to anything like their possible production, for lack of large investments and transportation. The message of the President of Guatemala read on March 1, 1920, states that the ferrochromium mines of Jalapa and the mines of Estrada Cabrera produced 2,241,341 kilos and 11,352 kilos, respectively, of which 1,801 long tons were shipped to New Orleans and New York. The mines of Santa Rosa produced 680,770 kilos of first grade ore and 533,400 kilos second grade. The lead mines of the Department of Huehuetenango produced 1,249 quintals of pure metal.

**HONDURAS**.—This state exports chiefly bananas, gold and silver cyanides, coconuts, cattle, hides, coffee, rubber and mahogany.

In 1919 the export trade of Honduras amounted to \$5,733,622, while her imports for the same year were \$6,931,376 worth of cotton textiles, foodstuffs, pharmaceutical products, boots and shoes, machinery, iron and steel manufactures. Some of her almost untouched resources are now coming to light in a concession recently granted to exploit vegetable pulp for paper and a twenty-five-year concession for petroleum. New oil fields and new fields for paper pulp are certainly going to be interesting, in view of our lessening supplies of these necessities. Then, too, there is a concession given not long ago for the exploitation of oleaginous fruits. The castor-bean plant grows wild in these countries, and the castor oil which it produces is not only a medicine but extensively used as a lubricant in aircraft engines. Many comestible oils are produced from plants native to Central America.

**SALVADOR.**—Salvador's exports are coffee, gold, silver, sugar, indigo, balsam, hides, rubber, tobacco, rice, etc., amounting, in 1919, to \$16,745,290. In the same year she imported \$14,958,196 worth of cotton cloth and manufactures, hardware, pharmaceutical supplies, flour, boots and shoes, cotton yarn, machinery. Not long ago petroleum was discovered in Salvador at a depth of 800 feet, and amber was reported to have been discovered in San Alejo, Department of Union.

**NICARAGUA.**—In Nicaragua, which has not joined the Union, but will probably do so, the exports are coffee, rubber, gold, silver, hides, bananas, woods, cacao and sugar, amounting in 1919 to \$12,409,472; her imports for the same year were \$7,912,653 worth of textiles, flour, machinery, kerosene, leather, boots and shoes, mining materials, rice, etc. Within the last year a contract was granted for the introduction of Spanish immigrants for the cultivation of *abaca* (Manila hemp), cotton and grapes, and another concession for an \$800,000 plant for the concession of textile fibres from several varieties of fibrous plants. An oil concession of 500,000 hectares was also granted.

Costa Rica and Salvador have passed laws granting free postage to periodicals of Central American countries, provided these countries extend reciprocal privileges.

Costa Rica, with the exception of tobacco and other State monopolies, has declared all raw materials from the Central American republics free of import tax. In case of reciprocal action by the aforementioned countries the exemption from taxation will be extended to articles manufactured from raw materials, with the exception of the State monopolies.

Costa Rica and Nicaragua signed a treaty on June 20, 1920, permitting the reciprocal use, in the timber commerce of the two countries, of the waters and streams near the frontier. Under this convention Costa Rica permits vessels loaded with timber from the forests of Nicaragua to use the Colorado River and its exit to the sea without payment of fees, taxes or contributions for fiscal services rendered. And Nicaragua grants to Costa Rica the same rights in the use of the rivers and lakes of its territory for vessels loaded with timber from the Costa Rican forests. Then Nicaragua, which is not a member of the union, has declared exempt from port, anchorage and lighthouse taxes vessels flying the flag of any of the Central American countries engaged in coastwise trade between the ports of Nicaragua, other Central American countries and Panama. This seems a good augury for the union.

It was planned to create the union, if possible, on the centenary of the independence of Central America, and to this end a central office was formed. Salvador invited the other four countries to each send five delegates to consider the matter, and the result was that a covenant was signed in San José, Costa Rica, on Jan. 19, 1921, whereby Guatemala, Salvador, Honduras and Costa Rica constituted themselves a sovereign and independent nation, to be known as the Federation of Central America. This union will allow the component States autonomy in handling their domestic affairs, and permits them to observe their diplomatic treaties severally made, if the union has not, through diplomatic means, effected changes in them.

The bases of the Constitution are that the Government of the union be republican, popular, representative and responsible. Sovereignty will reside in the nation, and federal power will be exercised by a Federal Council composed of delegates elected

by the people, each State to elect a delegate and an alternate, who shall live in the federal capital during their five-year term of office. There shall be a President of the Council elected from among the delegates. The Federal Council shall have control of the military forces of the several States. As soon as the congress of each State has ratified the covenant of San José a congress will meet which will be in session one month to draw up the Constitution. This congress must be organized by not less than three States, and not later than Sept. 15, 1921. The covenant expresses regret that Nicaragua has not entered the union, but provides that she shall be treated as a member of the Central American family, and may enter when she so desires. This provision is also extended to any other State which does not at once join the union. At the time of preparation of this article the congresses of three States had ratified the Union covenant, thus putting it into force.

After the war with Spain the United States began to realize that it could not live to itself alone, and Central America is now realizing that the time is ripe for intercourse with the world. Once, in prehistoric days, man gave chase to his food, fell upon it and devoured it. He covered his nakedness with the skins of animals thus captured, and used their splintered bones for rude tools. Next he learned that by barter and trade he could obtain things from beyond the limits of a day's journey. As civilization progressed man's needs increased. His field of activity is no longer bounded by the circle to which the endurance of his heart and the swiftness of his feet once confined him. Nations have come to realize that the laws of supply and demand reach out beyond the national confines in a network all over the world, and

that the members of the human family must help each other if they would live. Long continued personal or national selfishness is a destructive policy which operate against the one who lives by it, for it is contrary to the great scheme of things. Sooner or later individuals and nations realize that the earth was not created with their birth and will not cease its perennial miracle of Spring when they perish. They realize sooner or later that they are but part in a great, incomprehensible whole. The Rockefeller Foundation has done much to clear Central America of yellow fever, and is waging a campaign against hookworm, which is a great service not only to the countries themselves, but to the rest of the world.

Transportation in the countries of the Central American Union is in many parts by pack horse, or natives carrying loads by means of a headstrap; in more thickly settled regions it is by slow, deliberate bull carts over rutted tracks or roads. Perhaps before long this will all be changed; it will be, if it is possible to establish a strong Government, which can give assurances of the peace that must reign if capital is to be invested. If the Union of Central America becomes a strong Government, and political factions can be overcome by patriotism, it will mean the economic development of this natural geographical entity, whose various peoples are of the same racial strains. For, if the greatest good of the greatest number is earnestly striven for, Central America, previously known to the world chiefly as the place where five small republics carried on revolutions, may become a centralized State with unmeasured possibilities in the way of raw materials for the rest of the world, for which it will receive in return the products of an older national growth.

# HOW PANAMA PAID OFF ITS DEBTS

By CREDE HASKINS CALHOUN

**T**HE Republic of Panama is now in the best financial condition of any country in the world; and yet only a little over two years ago it was deeply in debt and five months behind in payment of current running expenses. To be ranked so high financially is no small matter, and it is particularly unusual for this distinction to be held by a Latin-American country. Today Panama, if it wished, could pay every cent of its national debt in cash, but such action, of course, is neither necessary nor advisable.

In November, 1918, the Government had on deposit in a local bank \$18,170.95, and in the National Bank \$9,573.75; it also held various notes, papers and credits for payments made and money advanced, amounting to \$142,381.40. A great part of the paper just mentioned was of very doubtful value. The local bank deposits were already pledged for the amortization of the contracted debt, and the National Bank credit was set aside for payment of interest on bonds covering indebtedness. Funds were not available for the payment of the Government employes, all of whom had their salaries discounted 15 per cent. by the Government because of lack of funds, and many of whom were forced to assign their salaries to usurers, sometimes at a discount of as much as 60 per cent. All bills against the Government were at a discount because they could not be collected in less than eight or nine months after maturity, and then only with great difficulty.

In his report to the Assembly the Secretary of Finance said, referring to conditions in 1918:

The credit of the Treasury was so impaired that the principal commercial houses of the Republic had notified the Government purchasing agents that they did not want any connection with the Government, against which they already had bills which had not been paid. The banks, the electric light company, and the Panama Canal had greatly harassed the Treasury in their repeated attempts to make collections.

The floating debt at this time, to merchants and individuals, amounted to \$1,000,-

000, and a similar amount was owed to the Panama Canal.

The real reformation began when Mr. Addison T. Ryan, an American with previous experience in Haiti, was appointed Fiscal Agent. It was considered necessary at first to float a loan in order to eliminate the floating debts and to make a fresh start, but the condition of the money market, as a result of the war, made the prospects of success discouraging. There occurred, furthermore, such a surprising increase in revenues and a corresponding reduction of expenses that the loan was not floated, and the Government has recovered financially without borrowing one cent.

One of the first steps taken was to reduce the force of Government employes by 15 per cent. and to pay the remainder the full amount of their salaries, instead of discounting all salaries 15 per cent., as had been the previous practice. The introduction of more efficient methods resulted in an increase in the amount of revenues collected; and the employes, who now received full pay, gave better and more loyal services.

Panama, like many other Latin-American countries, had granted to individuals for specified sums the right to collect certain taxes, such as the internal revenue on intoxicating liquors. The system applied in collecting a great part of the revenues was faulty and expensive. In some cases collecting agents had for long periods neglected to turn in to the Government the amounts collected. The accounting system was poor and accounts were not kept up to date. The Government had a number of purchasing agents and as many storehouses; this led to great confusion and entailed a great loss of materials and supplies. These and many other irregularities were discovered and have since been largely corrected.

The Government took over the collection of the internal revenue from liquors and in one month collected more than had been produced in an entire year by the old sys-

tem of selling the concession. A new system of accounting was installed which made it possible to tell day by day the exact financial condition of the country by a daily balance of all accounts. All purchasing for the Government was placed under a single head, and all materials were stored in one place and properly accounted for, with great resulting economy.

Instead of the faulty, unreliable and expensive system of handling revenues collected, a contract was made with a local bank to act as collecting agent and depository for the Government, and also to disburse moneys upon proper authority from the Department of Finance. The bank receives a small commission on the funds collected and disbursed, but pays interest on deposits. Formerly the Government paid \$45,000 a year for the collection of revenues. Under the new arrangement the interest on deposits exceeds the commissions paid the bank, making a saving of over \$47,000 a year and at the same time increasing the amounts of collections received; the Government, furthermore, is now provided with an efficient and reliable collecting and disbursing agency.

In the meantime debts to the amount of \$1,248,247.74 have been paid, leaving in the treasury on Dec. 31, 1920, a balance of \$2,918,466.31. During the ensuing period public improvements were made and over a quarter of a million dollars spent in the work of constructing a new hospital and in measures to improve the public health; interest was paid on loans and amortization of loans to the extent of \$280,452, while current running expenses were kept paid up to date. Government employes, instead of accepting paper which they could not

collect for months and which they were forced to discount at heavy loss for cash, received checks for their salaries in full on the last day of each month, and these checks were cashed at sight for face value. A statement for the eighteen-months period ended Dec. 31, 1920, showed that the collections, averaged over the period, exceeded the running expenses by \$208,908 monthly.

The national debt of Panama consists principally of loans, the largest of which pays interest at 5 per cent. and is due in 1944; the second largest loan, bearing interest at the same rate, is due in 1925. Panama can pay the interest on her loans and provide for their amortization without using one cent of current revenue collected. This is made possible by the annuity of \$250,000 paid on account of the Panama Canal, and by the interest on \$6,000,000 deposited in the United States to guarantee the parity of the national currency, which is no longer in use. [The money of Panama has practically all been exported as a result of the rise in the value of silver during the war, and at present, though not legal tender, United States money—silver, gold and paper—is employed as a medium of exchange.]

If the present methods are continued, and the budget system that has been established is maintained, the financial future of Panama is assured. As regards stability, the Government is guaranteed revolution-proof by the United States.

The surplus in the treasury is to be devoted to the construction of good roads to develop the rich resources of the interior of the Republic, and to make of Panama a producing country, which it is not at present.

## A SERVICE RENDERED

*To the Editor of Current History:*

I acknowledge receipt of a copy of the CURRENT HISTORY MAGAZINE for April, and have read with special interest the article written by Dr. John S. Cummings [on "Retraining War-Disabled Men."] I believe you have rendered a distinct service by the clear statements which you have thus presented. The task of rehabili-

tation is a responsibility of the American people. The Federal board is striving to act as the agency of the American people, and needs the intelligent and sane support of all persons who think and work.

R. T. FISHER,

*Assistant Director for Vocational Rehabilitation.*

Washington, D. C., April 2, 1921.

# “AMERICAN POWERS IN PANAMA”

*A reply to Elbridge Colby's recent article on the foregoing subject, with some pungent comments on the North American air of superiority regarding Latin Americans*

*To the Editor of Current History:*

If the American people were to judge of the importance of the Republic of Panama as an independent nation by the article contributed to CURRENT HISTORY by Elbridge Colby, published in the March number of this magazine, under the title of “American Powers in Panama,” they would be apt to consider this strip of land as nothing short of an American colony, in which the natives are but a group of school children who depend entirely on the United States to learn the rudimentary lessons on how to conduct their own affairs.

And nothing would be more unjustified or untruthful than this opinion, as it is a well-known fact—at least to those who have impartially followed the march of events in Panama since its separation from Colombia in 1903—that this small republic has been solving the problem of its existence as an independent and free nation without the aid of outside influence and with the determination and energy which arise precisely from the consciousness every Panamanian has that all the progress, both moral and sociological, which the nation may achieve is wronfully traced back to the effect which her supposed constant tutelage has on her national life.

It would be unjust not to admit that American influence has done a great deal to hasten our material progress; but if the people of the United States were acquainted with the indiosyncrasy of our race, if they would only realize how we resent that superiority which a great majority of their countrymen boast of—perhaps not maliciously, but unconsciously—when in the presence of Latin Americans; if they were aware of the fact that our pride is beyond all human conception when racial differences are concerned, they would be the last to give themselves credit for any *direct* progress evidenced in the regions of Latin America where they exercise a certain influence.

Thus, it is safe to assume that Americans

have done little or nothing to achieve the least progress in the governmental system of Panama. Their presence in the very heart of the republic has not left and will not leave any traces in the sociological evolution of our national life, for the simple reason that what they consider good and what is good for their country is absolutely useless to us down here. If the American press and officials who are sent down here to serve in the Canal Zone do not end that systematic propaganda which they carry on, with the childish egotistical intention of giving the American powers in Latin America generally, and in Panama specifically, an importance and scope of action absolutely chimerical, they will only help to breed a resentment which will spread like a forest fire throughout the Latin American continent and ruin the hope for closer relations between the two continents entertained by the few Americans who have taken pains to study our idiosyncrasies.

Now, we will endeavor to show just where Mr. Colby has misrepresented the truth in his appreciation of the work being done down here by the Americans. But before we proceed, we would like to impress upon the mind of every American the fact that Mr. Colby's act was inspired in that excess of patriotism which is apparent in the majority of the less informed Americans: their love for their country is such that they do not realize how any nation or people can prosper without the moral aid or material help of Uncle Sam. And this is doing more wrong to the American nation than is generally imagined!

We have just witnessed a fortunately bloodless war between Panama and Costa Rica. During the first few days of the threatened conflict Panama turned her eyes toward the Americans for arms and ammunition with which to carry on the defense of her invaded territory. According to an existing treaty, Uncle Sam must protect Panama in case of war. The arms and ammunition so urgently needed by Panama at

the time were, however, long in forthcoming, and the protection which Panama had a right to expect from the United States had to be looked for elsewhere.

There was some fighting done in the Coto region, invaded by the Costa Ricans. The Panamans compelled the enemy hordes to abandon the invaded territory; many prisoners were taken, and all this was achieved by precisely the same police force which Mr. Colby seems to have such a poor opinion of, to judge by the depreciatory way in which he alludes to it in his article under refutation.

All the protection given Panama by the Americans was the suggestion made by William Jennings Price, United States Minister to Panama, to Narciso Garay, Secretary of Foreign Relations of the republic, that Panama withdraw her troops from the invaded territory and that the United States would see that Costa Rica did the same. This suggestion was rejected by the Panama Government, as it was tantamount to proposing that the owners of a house infested with robbers abandon their premises while the police diplomatically convince the intruders to go on their way unmolested.

Americans have never assumed police duties in Panama. It is true, however, that detachments of marines have been landed in the cities of Panama and Colon and that some troops have been sent to the interior towns during election days, but the jurisdiction of these troops began and ended at the voting polls. They had nothing to do with the maintenance of order outside of these places and their duties were supposed to be confined to supervising the elections. This was done at the express request of the Panaman authorities as a means of guaranteeing fairness in the elections and never with the intention of preventing violence, as Mr. Colby wrongfully asserts in his article. The Panaman police force is quite capable of doing this without American interference.

The presence of American troops in Chiriqui was generally considered as an injustice to Panama. The reasons alleged for their continued stay in that region were as futile as can be possibly imagined. Mr. Colby speaks in his article of "American ranch owners" who requested that the troops stay there to protect their interests, and as a matter of fact there is only one ranch

owner of American nationality established in the Chiriqui Province. His property was generally respected, and the activities of the cattle thieves were confined to the ranchers of Latin extraction. Those ranchers were the first to impress upon the National Government the necessity of having the American troops withdrawn from the province.

The arrival of the American troops in Chiriqui concurred with the adoption of stringent measures on the part of the Panama Government to put an end to the cattle robberies in that region. The action was spontaneous and came as the natural consequence of the redoubled activities of the thieves. It was not an imposition of the Americans, but the local authorities' earnest intention of re-establishing order in that important section of the country.

Convictions were secured in court without the least trouble, once the guilt of the accused was definitely established. As a newspaper man in this country for the last ten years, the writer can assure that in the columns of the local papers there has never appeared an item attacking any native Judge for laxity in judicial affairs in this connection, as Mr. Colby asserts. It is true that the press attacked the police authorities or, to be more exact, one police authority for his apparent ineptitude to cope with the situation in Chiriqui. That authority is no other than A. R. Lamb, an American, whose services were hired by Panama to act as Inspector General of the police force.

Lamb had promised to work wonders in our police system; he had agreed to introduce wide-reaching reforms; he was bound under contract to make of our police an institution comparable in efficiency to any of the best American and European forces. The Chiriqui question was the first problem that he was called upon to solve. His appearance in Panama had been given such wide publicity, his aptitude had been so greatly exaggerated that it was only too natural that the people should be disappointed when they saw that the Chiriqui thieves continued to commit their robberies right under Inspector Lamb's very nose. The press protested, unjustly so, perhaps, but not against our Judges. Inspector Lamb was the bullseye of all the attacks. Time, however, has shown us that Lamb's presence in our police force has produced some

benefits and that he deserves much credit for the present efficiency of the force.

The American soldiers who were detailed for service in Chiriqui acted in a way which tended to increase rather than to decrease the ill-feelings entertained by the population against their presence there. They acted as conquerors and not as friends who were supposed to be on the best of terms with the native population. The most insignificant private had about him the airs and actions of a powerful tyrant when in the presence of the natives. They would boast of their power and speak with contempt of all our institutions, and would not pass by an opportunity of showing that, in all respects, they were the better and only men.

And this was not all. They carried their idea of power and conquest so far as to violate the sanctity of our mails, and it was with the greatest alarm and indignation that the people of Panama read about the raid that a group of American soldiers—at the command of precisely the same Sergeant to whom Colby refers in his article, saying that he had been recommended for the distinguished service medal—entered the Post Office at David, the capital of the Chiriqui Province, and by sheer force and regardless of the protests of the Postal Agent and his subordinates, opened every bag of mail and kept the letters addressed to the men of the post. The reason they gave for this action was that the employes of the David Post Office were very slow in sorting out and distributing the mail!

Does it not seem strange that an American who so acts should be recommended for such a high honor as the distinguished service medal? Is it nothing to wonder at that every native should ask that the American troops be removed from the Province? Does it seem possible that any Panaman would favor the continued stay of a group of soldiers who acted so tactlessly—to say

the least—with such a sacred thing as the postal institution of a foreign nation? The answers to these questions will suffice to convince every sound-minded American of the falsity of Mr. Colby's assertions in his contribution to CURRENT HISTORY.

But there is still another point that we should like to clear before ending this article, with which we hope to expose beyond a doubt the spirit in which Mr. Colby wrote his misstatements about Panama.

Fred Grant was a private in one of the American Army posts stationed in the Canal Zone. He carried on a love affair with a Nicaraguan girl, with whom, it is said, he lived a marital life. Grant felt a wild passion for the girl, and one day he conceived the crazy idea of taking her out for a ride in an automobile of his own. To that end he hired an auto and ordered the chauffeur to drive out with him toward the Sabanas Road, in the suburbs of Panama. There a bullet perforated Chauffeur Moreira's skull, ending his life, and Grant thus realized his dream of being the proud owner of an automobile. He took the machine to the Corozal post, repainted it, and returned to Panama later to take the girl out for a ride. The car was in Grant's possession for two or three days, until Inspector Lamb, his own countryman, arrested him as the murderer of Moreira, placing enough evidence before the jury to secure his conviction. He was sentenced to twenty years in jail.

Grant is the American soldier to whom Mr. Colby refers as having been sentenced to life imprisonment for a quarrel with a few natives. As to the woman who was sentenced to forty-nine days in jail, and who was released five days later, that case is a sheer invention; the annals of the Panama police show nothing of the kind.

## PHILIPPINE INDEPENDENCE

*A Filipino student's reply to the contention that the Moros and the Christian Filipinos could not unite in the creation of an independent Government for the islands*

*To the Editor of Current History:*

In the March number of *CURRENT HISTORY* there appears an article entitled "Filipino Independence and Moro Domination," written by Mr. Donald S. Root. Among those unfamiliar with actual conditions in the islands, that article is bound to create the same impression that earlier writings on the backward people of the country had created. Like all other articles written by opponents of Philippine independence, the one by Mr. Root draws a gruesome picture of the chaos that is supposed to be forthcoming should the Filipino people be turned loose to carve their own destiny.

It is not the object of the present writer to blur the facts set forth by Mr. Root as a basis for his stand on the Philippine independence issue. The episodes he describes are not questioned. It is his sweeping generalization that leads one to suspect that Mr. Root had already a preconceived opinion on the subject, which he wanted to crystallize by appropriate illustrations. Assuming, however, that he is one of those who have the best interests of the Filipino people at heart—a safe assumption, otherwise he would not have served the Philippine Government for six long years—his views may be considered as not distorted by prejudice.

But, granting that in some localities such conditions as were found by Mr. Root existed up to 1918, it does not necessarily follow that similar conditions exist everywhere else. To judge America by the impressions gained in its big cities, where a vast number of unassimilated foreign immigrants are found, is to misjudge America; likewise, to judge the Filipino people by impressions obtained from the backward peoples and from the backward places is to misjudge and to misrepresent the whole Filipino race.

Mr. Foster of Reed College sets forth four fundamental principles for testing the validity of any generalization: (1) Is the relative size of the unobserved part of the class so small as to warrant the generaliza-

tion? (2) Are the observed members fair samples of the class? (3) Are we reasonably sure that there are no exceptions? (4) Is it highly probable that such a general rule or statement is true?

Mr. Root, in the first place, as he himself intimates, was stationed in Mindanao and Sulu all the time that he was in the Philippines. But Mindanao and Sulu are only a small portion of the Philippines from the standpoint of population. If a part can be considered equal to the whole, then Mr. Root's contention is irrefutable. But statistics show that less than one-tenth of the entire population live in Mindanao and Sulu. To say that the Filipino people are not yet ready for self-government simply because a small fraction of them are ignorant of law and order—assuming that all the Moros are still so—is evidently fallacious and cannot stand our first test. Taking this with the fact that the Moros had no chance to develop themselves during the Spanish régime, it at once follows that they cannot be taken as fair samples of the class. If the Moros constitute but a small portion of the population of the country, and if they are not fair samples of the class, no general statement such as Mr. Root has made can reasonably be probable.

It is not fair to judge a people wholly by their past. It is true that the Moros were at one time feared by not a few people in the northern islands. But the piracy and outlawry so vividly brought out in Mr. Root's article are a thing of the past. This fact is borne out by the following memorandum of Colonel Ole Waloe, commanding officer of the constabulary in the Department of Sulu and Mindanao, issued on Nov. 23, 1918:

1. As late as 1885 the Spanish Government pardoned Datu Pedro Cuevas and his gang of escaped convicts on condition that they protect the town of Isavela, Basilan, from further attacks of the Joloano and Yakan Moros, notwithstanding the place was at that time protected by an excellent fort.

2. In 1904 this same Datu Cuevas wrote the Governor that he had captured three

pirates, and, after investigating them, had had them shot.

3. During 1908 no less than six different outlaw bands operated at various times during the year on Basilan in such alarming force that it was necessary to send four companies of United States infantry and two companies of constabulary to that island.

4. For the years 1908-1909 37 outlaws were reported killed, captured and wounded; for 1910-1911, 28; for 1912-1913, 40; for 1914, 23; for 1915, 1, and for 1916-1917, none. This great change from the spirit of outlawry and piracy, coming down from the Spanish régime, to peace and industry, was brought about almost entirely by the sympathetic attitude and friendly interest of the department Government toward the Moros and pagan tribes of the province. Force without limit had been used for 300 years, but apparently with little, if any, permanent result.

5. For the last four years the number of grave crimes in the Province of Zamboanga has been less than that in the department's most-advanced Christian province for the same period.

Contrary to the prediction of the calamity howlers, the Christian Filipino officers of the constabulary have succeeded completely in winning the confidence of the Moros

The foregoing testimony, furnished by an American officer, is the best indication of the ability of the Philippine Government to deal with the lawless elements among the Moros. Unfortunately, Mr. Root, in his connection with the Philippine constabulary, an insular police organization, had to deal more with the lawless than with the peaceful people, and is therefore prone, like any one else under similar conditions, to be rather uncompromising in his interpretation of facts and too drastic in his conclusions.

The Philippine Government, like all others, has its problems. The Moro problem, acknowledged to be the most difficult, is not nearly as intricate as the race and immigration problems in America. As the following facts disclose, the Government is succeeding wonderfully in solving the Moro problem in the way it ought to be solved:

1. During the school year 1918-19 the average daily attendance of the schools was 23,953. The number of teachers employed was 1,061, a majority of whom hail from the Christian provinces.

2. There are seventeen dispensaries, which for the most part are located in remote communities. Approximately 30,000 children are treated each year in these dispensaries.

3. The Philippine Legislature has appropriated \$500,000 to aid such Christian Filipinos from Luzon and the Visayan Islands as may desire to migrate to Mindanao and Sulu, and

establish agricultural colonies. The object of these colonies is not only the development of the vast fields that have not yet been touched by the hands of man, but "also the amalgamation of Christian and Mohammedan Filipinos." The plan has proved a success, as admitted even by its opponents.

The restlessness among the Moros in the past was due to the fact that they were not given fair play and a square deal. They were hunted like criminals, instead of being given a chance to develop. The migration to Mindanao and Sulu of the Christian Filipinos, the opening of agricultural schools and the improvement of sanitary conditions are some of the forces that have been operating to bring about the existing friendly relations between the Christian Filipinos and the Mohammedans. That such a friendly relation now exists is confirmed by the annual report, Dec. 31, 1919, of Mr. Luther B. Bewley, Director of Education in the Philippines, in which he made the following statement:

Today the Philippine Government has the united support of the more intelligent of the Mohammedan Filipinos. Six of the highest ranking Mohammedan princesses of the Sultanate of Sulu are now teaching in the public schools. There are today in the provinces of Sulu, Lanao and Cotabato forty-two young men and young women of the Mohammedan faith teaching in the public schools.

Mr. H. G. Rasul, son of former Senator Hadji Butu of Jolo and adopted son of the Sultan of Sulu, who is in Washington taking courses in diplomacy and law, says:

Christian and Mohammedan Filipinos are one in spirit and one in blood. Education and personal contact are solving everything. I can speak for ourselves and am for the Filipino independence.

The statement of a Moslem Third Member of the subprovince of Zamboanga also is significant:

He who thinks that it is impossible for the Moslem and the Filipino to live together in peace and participate together in government is foolish and lacks wisdom.

Even Hadji Butu, who was cited by Mr. Root as not in accord with the Philippine independence movement, expressed himself on the relations between the Christian and Mohammedan Filipinos: "We are one in spirit and one in blood."

The transformation of the Mindanao and Sulu region is best described in the following words by ex-Director of Education Dr.

W. W. Marquardt, who has been in the Philippines for eighteen years:

The Spanish outpost at Jolo is a clubhouse for the Jolo Golf Association, and where the Spaniards once shot at Sulu chiefs the American golf ball now endangers the life of the Sulu caddy. Datu Piang rejoices in the prowess of his sons in the manly art. Baseball has become a distinct moral force, and the younger is no longer found at the cockpits.

The above facts are an eloquent testimonial that the Moros of generations ago are no longer the Moros of today.

Multiplicity of languages is an old contention against Philippine independence. Switzerland has been able to survive, despite the presence of a number of languages. It is true that many dialects are spoken in the Philippines, but there are three main languages, any one of which can be spoken by the great majority. In view, besides, of a fairly general knowledge of Spanish and English, particularly the latter, with its unifying influence, only a pessimist can question the strong solidarity of the country.

Does the fact that three teachers in the back country cannot speak intelligible English prove Mr. Root's assertion that the progress in English is slow? To know what a people really is capable of doing, it is not fair to base judgment on impressions in the back country, where conditions are most unfavorable. Dr. W. W. Marquardt, one of the greatest living authorities on this sub-

ject, in view of his eighteen years of experience in the islands, says: "If you go from Zamboanga to Aparri, you always find the native able to converse with you in English." Statistics show that in 1919 474 took civil service examinations in Spanish and 11,600 took them in English, whereas fifteen years ago 3,555 took them in Spanish and only 2,917 in English.

Professor Monroe substantiates the above facts in the following significant statement, made after personally investigating the educational conditions in the country:

It seems probable to an observer that greater educational progress has been made in the Philippine Islands in ten or twelve years than in any similar period or in any place in the history of education.

The fact is that today 25 per cent. of the people write and speak English fluently, with 866,000 pupils studying the language.

No one can judge the ability of the Filipino people to manage their own affairs and solve their own problems unless they are given the chance to do it themselves. The question of Philippine independence will forever remain an academic question enshrouded with speculative opinions unless it be actually put to a practical test. Such a policy is consonant with the spirit of "square deal" and "fair play," the dominant note of American idealism.

VENANCIO TRINIDAD,

*Filipino Student at Iowa State Teachers' College.*

## MESOPOTAMIA AND THE BRITISH MANDATE

ON Feb. 16, Bonar Law, Government leader in the British House of Commons, in reply to a demand made by W. Joynson-Hicks on the Prime Minister that a copy of the Mesopotamia mandate be laid on the table, set forth the unusual proposition that not only must it be submitted to the League of Nations first, but that there was no power afterward to revoke it, even in regard to its financial responsibility. He added that otherwise "it would really mean that the League of Nations could not carry on its functions."

The foregoing statement throws a flood of light on the British note, conciliatory but firm in rejection, sent the Washington

Government on March 5, in answer to Secretary Colby's demand for equal opportunity for United States nationals in the economic employment of Mesopotamia.

Meanwhile, the news to the Arabs that the Allies were contemplating a change of heart, not only toward the Constantinople Government, but also toward that of Angora, caused them to co-operate with the British in the restoration of peace with more enthusiasm. The vernacular press of Bagdad regards the return of King Constantine to the throne as very bad for Greece, but a real benefactor to Irak—provided the Allies "punish him by taking from him what rightfully belongs to Turkey."

# PROSPEROUS TIMES IN NEW ZEALAND

By TOM L. MILLS

Editor of The Star, Feilding, New Zealand

IT has been reported by observant New Zealanders who have recently returned from tours abroad, including sojourns in the United States and Canada, that New Zealand still remains the land of the happiest conditions and of the most reasonable rates of living. At the time of writing (the opening of the new year) there is not a single strike or lock-out in any part of the dominion. New Zealand, industrially, works under a system of conciliation and arbitration in the compulsory settlement of disputes. Nor have we any problem of unemployment as yet to solve.

Wages have shown a general increase in all branches of activity. The industrial awards of the Arbitration Board at the beginning of January recognized the minimum wage for the lowest class of male adult unskilled workers as \$23 for a week of 48 hours, which is \$1.50 higher than the basic wage recently recognized by the Board of Trade of New South Wales, the mother State of Australia.

As to the skilled trades, wages have increased very much over the pre-war rates. The pay of linotype operators and others in the printing and kindred trades has gone up 80 per cent., taking into the calculation the increased-cost-of-living bonuses awarded periodically, on the call of the labor unions, by the Arbitration Court. Linotype operators in our cities are earning \$40 a week. Compositors who were paid \$17 a week in 1914 are today paid \$28.50. Drivers of horse vehicles and stable hands who before the war received \$10.50 a week now get \$20.50. The carpenter and builder who six years ago was in receipt of \$3 for an eight-hour day now gets \$5 or \$6 a day for a 45-hour week—and there is just as great a demand for homes and as great a housing problem in New Zealand today as in America or any other part of the world.

As regards prices, official records compiled by Government departments show that for the general group of grocery supplies the increase in 1920, compared with 1914, is 47.50 per cent.; for dairy produce, 58 per cent., and for meat, 40 per cent. Here are some individual quotations concerning

the essentials of our everyday life: Sugar in 1914 was 7 cents over the counter, and today it is 15 cents. A 100-pound bag of flour was \$3.50, and is now \$6. Coffee was 50 cents a pound, and is now 66 cents. Candles were 20 cents a pound, and are now 36 cents. Bacon was 30 cents a pound, and is now 46 cents. Kerosene was \$5.50 a case, and today \$7.50 is charged. A suit of clothes, made of either New Zealand or imported English tweed or worsted, in 1914 sold for \$32, but today the charge is \$64. A ready-to-wear suit six years ago sold for \$21, but the same kind of suit today costs \$37.50.

The greatest post-war problem that our dominion had to face was that of the settlement of returned soldiers on the land. A tremendous proportion of these men desired to become settlers, so that the Land and Survey Department could not get new lands opened up fast enough to meet the demand. Consequently, numerous large private estates were acquired by the Government and cut up into suitable farm lots for the boys who came back from the war. The result has been a boom in settlement, and already the increase in production is making itself felt. Very many of the soldier settlers have taken up dairying, and there are soldier settlements dotted all over the land, especially in the North Island. Up to this writing, the Government has expended over \$100,000,000 under the Settlement of Discharged Soldiers act, and another loan of \$25,000,000 has just been subscribed within the dominion for the same purpose. Approximately 14,000 returned soldiers have been provided with land within the five years of the scheme's operation, and the total area of rural land now under settlement is 2,156,555 acres.

The equable climate of the dominion, as it becomes better known overseas, is inducing farmers to come from Canada and the frozen places of America to farm in a country where—for the most part—milch cows are out in the open all the year round, and where there is no interruption from January to December in outdoor operations on the land.

**T**HE railroad situation in the United States is one of the most disquieting with which the business men and governmental authorities have to deal. When the railroads were turned back by the Government to private ownership and operation, it was thought that the guarantee of earnings for a limited period and the higher freight and passenger rates permitted would put the roads on a solid footing. But the higher rates proved a boomerang, for passenger traffic fell off to a greater degree than was compensated for by the higher rates, and the loss in shipments has resulted in a great shrinkage of income.

[American Cartoon]

The Tug of War

—Newspaper Enterprise Association.

**T**HE shrinkage in freight and passenger traffic prompted the railroads to seek a revocation of the wage rate granted by the Government to railroad employes. Practically all the roads announced a forthcoming wage cut, ranging from 20 to 30 per cent. The employes resisted this and appealed to the Railway Labor Board, which suspended the cuts until it had found time to grant a full hearing to both sides.

THE attempt of ex-Emperor Charles to gain possession of the throne of Hungary ended in ignominious failure. There were two or three days when it seemed possible that the strong monarchical sentiment in Hungary might justify the Hapsburg hope. But the prompt action of the Allies in warning Hungary that the restoration of the former Emperor would have disastrous consequences for the country, coupled with the threat of war by the "Little Entente," doomed the attempt, and Charles returned disheartened to Switzerland.

# THE ENGLISH LABOR REVOLT

*Strike of the coal miners, and the series of dramatic events that averted a sympathetic strike of the railway and transport workers—Resignation of Mr. Bonar Law and election of Mr. Chamberlain as Unionist leader in the House of Commons*

[PERIOD ENDED APRIL 15, 1921]

THE signing of a trade agreement between Great Britain and Soviet Russia, the continued warfare in Ireland, the increase of unemployment—these and all other current political problems in England dwindled into comparative insignificance before the very real danger brought to the home threshold by the labor crisis.

The crisis was precipitated by the decision of the Government, as approved by a vote in the House of Commons on March 9, to discontinue Government control of the coal industry at the end of March instead of at the end of August, as proposed in the Coal Mines (Emergency) act of last year. By so doing the Government contended that, instead of being guilty of the breach of faith charged, it had satisfied the desires of both owners and miners, besides saving the taxpayers £5,000,000 a month in subsidies to the miners.

Premier Lloyd George, at a luncheon in the House of Commons on March 23, said of British labor: "Although the peril of war has passed away, a new danger threatens our country. That danger is the phenomenal rise to power of a new party with new purposes of the most subversive character. It calls itself Labor; it is really Socialist, and even now the real danger is not fully realized." Lloyd George went on to declare that socialism was fighting to destroy everything that the great prophets and leaders of both parties had labored for generations to build up; parliamentary institutions, he said, were just as much menaced as private enterprise, and he warned those who belittled the danger to remember that a change of 4 per cent. in the voting would put the Socialists in the majority. The Premier pointed out that in the new army of labor the real leaders were not Messrs. Clynes, Thomas or Henderson, but the corporals with whom you never came into contact. They had no responsibility. Once they were in Parliament it was

these juntas behind who would say: "This is what you have to do, and if you do not do it some one will be put in your place."

Meanwhile negotiations between the mine owners and miners proceeded, but came to a deadlock on March 24. The miners stood out for the principle of a standard rate of wages throughout the country, while the owners wanted each district to adopt a rate suited to its own circumstances. The miners, however, made it plain that their quarrel was not with the owners, who, they admitted, were unable to meet their demands, but with the Government. They insisted that the State should come to the help of industry and provide the money for higher wages and help unprofitable collieries to keep at work, a condition absolutely rejected by the Government. This situation continued until March 30, when the Miners' Federation executives sent instructions to every district to withdraw all colliery workers at the expiration of the time limit given to employers, viz.: midnight of the 31st. It was also decided to withdraw the pump men and engine winders, so that for the first time "safety workers" were ordered to come out in support of a national strike. These instructions meant the flooding of the mines, a threatened industrial disaster of the first magnitude, since it might have become impossible to work many of the pits again. In view of this most serious situation a royal proclamation was simultaneously issued declaring Great Britain in "a state of emergency." This was the first time that an industrial crisis had been so designated. It empowered the Government to apply certain special measures provided for under an act passed by Parliament last October, at the period of another mining difficulty, but not put into force owing to the reaching of a settlement.

Promptly at midnight on the 31st work came to a standstill in practically all the coal mines. At the outset there was no

disorder, but an immediate effect was the closing down of steel works in South Wales and the throwing out of work of 11,000 dockers. On April 3 the Board of Trade issued orders rationing coal for the British Isles, and reports from the coal fields indicated that disastrous consequences had already followed withdrawing labor from the pumps. Water in great volume was pouring into the mines.

By April 3, interest became centred on the action of the railway men and transport workers, who were debating in mass meetings the question of supporting the coal miners' strike. In order to cope with this double emergency the Government took upon itself far-reaching powers, by which the various Ministries and departments were authorized not only to take over the coal mines and coal stocks, but to assume practically complete control of everything connected with food supply and road transport, water, gas and electricity, tramways and light railways, harbors, shipping and export trades. Military movements began on a considerable scale on the night of April 4.

While the general public maintained an appearance of outward calm, realization of the seriousness of the situation was manifested in steadily increasing gloom. April 8 proved to be a day of sensational incidents. Early in the morning the railway men and transport workers threw in their lot with the miners, and a sympathetic strike of 2,500,000 seemed certain. The time set for it was April 12.

By April 10 signs multiplied everywhere that public opinion, as a whole, was back of the Government in a determination to prevent a wholesale and irreparable disaster to British industry. The Government was credited with having saved the mines by insisting upon the resumption of pumping while the truce lasted. In Scotland, however, twenty pits, employing 21,000 men, had been flooded, and in England and Wales eighteen pits, employing 6,000 men. There were five mines which, it was feared, could never be restored. The strike was estimated as costing Great Britain £15,300,000 weekly.

The conference of April 11 was in session for a total period of six hours without tangible results. When the Premier and the union delegates met again the next day,

the conference ended in failure. The Triple alliance agreed to postpone the sympathetic strike for at least twenty-four hours, but on the 13th it announced that all its members would be ordered to walk out at 10 P. M., Friday, April 15. It was a declaration of war, threatening ultimately to throw millions out of employment.

Late in the evening of the 14th the miners' Secretary, Frank Hodges, gave hope of a further truce by offering to discuss wages with the owners and the Government if the larger issues—a national wages board and a national profits pool—were separated from wages and considered later.

This offer revolutionized the whole situation. Mr. Hodges had made the proposition at a meeting with a number of Members of Parliament, and it was these M. P.'s, not the Premier, who carried on the negotiations on the 15th which finally averted the Triple Alliance strike. When the railway men and transport workers heard of Mr. Hodges's offer, they jumped at the idea, supporting it in the conference. To their astonishment, however, the striking miners repudiated their own secretary, refusing to

AUSTEN CHAMBERLAIN

*Former Chancellor of the Exchequer, who has been chosen to succeed Bonar Law as leader in the House of Commons*

go into further conferences with the mine owners and insisting that the general strike be called.

At this point the disagreements that had been latent throughout the crisis came to a head, and a stormy meeting of the three branches of the Triple Alliance ensued. The upshot of it was that the railway men and

(Underwood & Underwood)

LEONID KRASSIN

Head of the Russian mission that negotiated the trade treaty with Britain

transport workers refused to go on with their sympathetic strike, and the larger catastrophe that had been threatening the United Kingdom was averted. The miners' strike continued, but it had lost a further share of public opinion. A definite split had taken place in the ranks of labor, dividing the older school—which was fighting for the wage issue alone—from the newer and radical wing, which was fighting for political control of the Government itself. There was general rejoicing, after the momentous developments of that 15th day of April, over the partial clearing of the skies, though

the coal miners' strike continued to cripple industries.

The basic wage of the British miner in 1920 was \$4.38 for a seven-hour day. The last two months of Government control of the mining industry had cost Great Britain approximately \$35,000,000. The "Triple Alliance" that had threatened a general strike included 1,200,000 miners, 400,000 railway men, and 300,000 transport workers, but a general strike would have thrown nearly 8,000,000 persons into idleness.

\* \* \*

A sensation ran through political circles on March 17, when Andrew Bonar Law unexpectedly resigned from his leadership in the House of Commons and from his office of Lord Privy Seal in the Cabinet. His health, he explained, had been gradually failing under the stress of the last few years. In speaking of the event at the first dinner of the 1920 Club, Mr. Lloyd George paid a high tribute to the capability of his late colleague, adding:

When I see one chieftain after another with whom I have been in action during great events falling under the weight of his armor, I do not mind telling you I am becoming very lonely. Public life in these days

is an almost intolerable strain, and there is nothing I would like better than to retire from that strain and be a spectator and witness of events.

Mr. Bonar Law had been the Unionist Party leader in the Commons, while Lord Curzon occupied a similar position in the upper house. Thus the Coalition Government was threatened with a crisis by Bonar Law's retirement, since Mr. Lloyd George, theoretically a Liberal, could not lead the Unionists. This danger, however, was removed by the unanimous election of J. Austen Chamberlain to the Unionist leadership at a meeting of the party on March 21. In accepting the position, Mr. Chamberlain made use of an expression which was said to be entirely indicative of his

character. "If I have not seemed specially to court your good-will," he said, "believe me, I have profoundly desired to deserve it." So far from his ever having courted favor, it was remarked that he had hidden from all but a few intimates his many claims to favor and popularity. On subsequently entering the House of Commons the new leader was greeted with a great cheer by the Coalitionists of both camps, and on March 23 the announcement was made of Mr. Chamberlain's appointment as Lord Privy Seal in succession to Mr. Bonar Law. Sir Robert Horne, former President of the London Board of Trade, who had negotiated the famous Anglo-Russian trade agreement with Leonid Krassin, succeeded Mr. Chamberlain as Chancellor of the Exchequer.

## WAITING FOR HOME RULE IN IRELAND

*Appointment of Lord Edmund Talbot as Lord Lieutenant not accepted as an olive branch by the Sinn Feiners—New developments in the warfare of assassinations and reprisals*

[PERIOD ENDED APRIL 15, 1921]

FOR the first time since Tyrconnell in 1687 a Roman Catholic was appointed Lord Lieutenant and Governor General of Ireland when Lord Edmund Talbot was named on April 2 to succeed Field Marshal Viscount French. A special clause in the new Home Rule act made this possible. Also Lord Edmund Talbot became the first Viceroy in Ireland under the new Home Rule act, his great function being to summon the two Parliaments of Southern and Northern Ireland, respectively. Much was hoped from this appointment, since, as a member of one of the most ancient English Catholic families, it was supposed Lord Edmund would be well received by the Catholics of Ireland, while, on the other hand, a man of his gentleness of nature could hardly be objectionable to the Protestants of the North. But though the Irish press conceded that it was a notable event—another of the religious barriers against the Irish people removed—Lord Edmund was attacked personally as a "rabid Tory partisan," who fought the shadow of coercion in the Protestant North, just as he fought bitterly to impose coercion on the Catholic South.

Otherwise Irish political circles were occupied chiefly with plans for the forthcoming elections. The necessary preliminaries to bring the Home Rule act into operation were fixed to take place on April 19, and the date for the proclamation of the elections was set for May 3. While the Sinn Fein decided to contest every seat in Southern Ireland, it was announced on April 7 that Joseph Devlin, Nationalist M. P. for Belfast, and Eamon de Valera, Irish Republican leader, had ratified an agreement by which the Sinn Fein Constitutional and Nationalist Parties would present a united front to the Unionist forces in the North of Ireland. Further, all candidates had agreed to accept the principle of self-determination for Ireland, and had pledged themselves to abstain from sitting in the Irish Parliament if elected.

Meanwhile the list of battles, ambushes and reprisals continued to lengthen. Moving scenes were witnessed in Dublin on the morning of March 14, during the execution of six young men convicted of murder in connection with the shooting of British officers on Nov. 2. While the executions were being carried out huge crowds assembled

outside Mountjoy Prison and the rosary was recited at each hour. No sound issued from the prison precincts, no bell was tolled, not even a black flag was flown. Thousands upon thousands, men, women, children, youths and maidens, knelt on the wet ground around the prison walls and on the neighboring streets and roadways, praying earnestly and singing hymns which formed a customary part of Catholic devotions. These were the only sounds that broke the stillness. For three hours after the executions had taken place there was an entire stoppage of labor in the city, consequent upon a declaration of the Labor Party that the hours until 11 o'clock were to be spent in mourning as a solemn protest against the executions.

At a meeting of the Dublin Corporation a resolution of sympathy with the relatives of the deceased was passed in silence. A curious penalty was subsequently visited upon a man charged with working during the hours of mourning. He was found chained to the railing of the Pro-Cathedral in Marlborough Street, and though crowds passed him by no one attempted to liberate him until the police came.

Among the Irish reprisals which promptly followed the executions Constable O'Kane was shot dead in Clifden, County Galway, on March 16, and another constable was wounded. Later, the Archbishop of Tuam, in a letter condemning these reprisals and the failure to obey his call for a cessation of executions by the Republican forces, said: "I must give my people moral guidance, even if corrupt politicians turn gospel teachings to bad ends." The Archbishop again urged the Government, as the stronger side, to call a truce and initiate peace negotiations.

In the five days preceding and including March 23 the casualties reported in Ireland, comprising Crown forces, Sinn Feiners and civilians, totaled sixty-three killed and sixty-seven wounded. The Crown forces had lost five killed and five wounded in the ambush of a party of the Ninth Lancers at Scramoge, County Roscommon, while the Sinn Feiners lost but one killed. The First Royal Fusiliers also lost heavily when their train was attacked near Headford Junction, County Kerry, March 21. As the train neared a cutting it was fired upon from both sides. The soldiers promptly detained

and engaged the enemy. The fight lasted until another train with troop reinforcements arrived. The casualties numbered for the Crown forces one officer and eight men killed and ten wounded, one civilian killed and two wounded and four Sinn Feiners killed.

Pandemonium was reported as prevailing in Westport, County Mayo, on March 20 when Crown forces, in turn, engaged in reprisals for an ambush near that place. While continuous gunfire went on in various parts of the town, houses and shops were wrecked with bombs, and furniture and other effects burned.

In a big raid carried out on March 26 in Molesworth Street, Dublin, the Government authorities found what they believed to be the headquarters of the Sinn Fein propaganda department, and made the largest capture of literature yet found in Ireland. The office equipment was elaborate, but as the raid was conducted after curfew no one was found on the premises.

Heavy weekly casualties were again reported among the Crown forces on April 1. The military had thirteen killed and fourteen wounded. There were twenty-six attacks on the Crown forces, of which twenty-two were ambushes. Sinn Fein assassinations of civilians, the motive for which was presumed to be friendly relations of the victims with the police and military, numbered six.

What was described by residents of Harcourt Street, Dublin, as "the fiercest outbreak since the Easter rebellion" occurred on April 6, when a lorry containing members of the Worcestershire Regiment was bombed and fired upon from behind the protection of stone pillars at the entrance to Harcourt Street Station. A heavy fire was also opened from the station roof, and at least one bomb was thrown from that point. When the attackers were driven off three civilians were found dead and one wounded. One officer was wounded.

Sinn Fein plotting in England was credited with a series of incendiary fires on the night of March 18 in the Surrey outskirts of London; also on farms near Newcastle on March 26. A raid on a Sinn Fein club in Manchester led to some casualties.

In response to an appeal for the women and children made homeless by the fighting in Ireland, President Harding on March 26

sent a letter to Morgan J. O'Brien, Chairman of the Executive Committee of the American Committee for Relief of Ireland, saying:

I wish you the fullest measure of success. The people of America will never be deaf to the call for relief in behalf of suffering humanity, and the knowledge of distress in Ireland makes quick and deep appeal to the more fortunate of our own land, where so many of our citizens trace kinship to the Emerald Isle.

On March 30 the British Embassy in Washington issued a communication relative to the raising of funds in America for Irish relief. The communication read:

Widespread misapprehension appears to exist in regard to the necessity of raising funds from American sources for relief work in Ireland.

Banking and trade statistics and tax returns show that Ireland as a whole has never been more prosperous than at the present time. Cases of unemployment exist as a result of the world-wide depression in trade, but this depression has been less

severely felt in Ireland than in England owing to the fact that Ireland is largely an agricultural country.

Apart from these cases of genuine unemployment, common to all countries at the present moment, and apart from the unhappy but normal poverty of the slums of towns, every case of distress and destitution is directly due to the effects of the Sinn Fein rebellion. Steps have been taken to meet even these cases. Millions of pounds have been made available from money raised by taxation in the United Kingdom to build houses, to encourage land settlements and to promote employment schemes and the general work of reconstruction, but the counties and cities of Ireland which are Sinn Fein in sympathy refuse to accept this money and prefer to appeal to America for charity. Were it not for this attitude, there is no case of distress affecting any individual or his property which could not be adequately met from British sources.

Public criticism of this communication was made by Frank P. Walsh, counsel for the Irish Republicans, who held that the increase in Irish bank deposits was due to withdrawal of funds from British banks.

## CANADA AND OTHER DOMINIONS

*Canadian Government to take over the Grand Trunk Railway, whose failure to meet bonded obligations creates anxiety—Tea and olives cultivated with success on Vancouver Island—Difficulties of the Hughes Government in Australia—African adjustments*

[PERIOD ENDED APRIL 18, 1921]

INTEREST in the last few weeks has centred upon the prohibition referendum in Ontario, where provincial prohibition was upheld by very large majorities in 1919. At that time a provincial political general election was also decided, and the vote was heavy. In the present instance the vote was to decide whether provincial prohibition should be extended by Federal enactment to prevent the importation of intoxicating liquors for beverage purposes. The ballot paper carried the questions:

Shall the importation and the bringing of intoxicating liquors into the province be forbidden? NO.

Shall the importation and the bringing of intoxicating liquors into the province be forbidden? YES.

The campaign, which ended on April 18, assumed great bitterness in its closing

phases. "Pussyfoot" Johnson, who made a tour under the auspices of the Dominion Alliance, a strong prohibition organization, was denied a hearing in Kingston, where the crowds howled him down. In Toronto he had many interruptions, but made his speech. Outside the hall the police had finally to engage in a pitched battle with boisterous antis, and several arrests were made. The "Wets" brought Hon. C. A. Windle from Chicago to address a number of gatherings. He was accorded a good hearing everywhere.

The Province voted for "bone dry prohibition" April 18 by a majority exceeding 125,000, in a total vote exceeding 1,000,000.

An acute stage has been reached in the railway situation, precipitated by the failure of the Grand Trunk Railway to meet interest due April 1 on part of its bonded

indebtedness. As the Government is to take over the Grand Trunk, there is now a keen desire to bring the negotiations to a head by closing up the arbitration proceedings, and reaching a definite settlement on terms. There is growing anxiety as to the situation. There have been several discussions in the Commons on the matter, and on April 5 Premier Meighen announced that a committee of the House would be appointed with somewhat wide powers of investigation and inquiry into the national railways and shipping.

On April 7 it was announced that Sir Thomas White, member of Parliament for Leeds County and former Minister of Finance, had resigned his seat. He has desired to do so for some time. He is a member of the Arbitration Board on the Grand Trunk Railway acquisition, and there has been some criticism of his so acting with remuneration while remaining a member of the House. It was decided that he had the legal right to do so if he wished.

Official reports show that Canada's Government-owned mercantile fleet had a surplus of \$781,460 on operations last year after due allowance for depreciation. The amount of net earnings is equivalent to 2.35 per cent. interest on the investment, according to Hon. C. C. Ballantyne, Minister of Marine and Fisheries.

Canada's revenue for the fiscal year ending March 31 was \$451,366,029, and the ordinary expenditures totaled \$357,515,278. The net debt now stands at \$2,311,294,443.

Dr. Tolmie, Canadian Minister of Agriculture, speaking on April 7 in Ottawa, stated that for the first time tea and olives were being grown in Canada. Vancouver Island is the scene of the experiments, which have now been crowned with success, and the prospects are for great development. On the same island there will be a good fig crop this year; the bamboo crop is large enough to harvest for baskets and fishing poles, and filbert and almond trees are thriving.

**AUSTRALIA**—The Australian Commonwealth Parliament, in which Premier Hughes had a majority of only three votes when it met early last year, now threatens his downfall. The Nationalist Party, under Mr. Hughes, had 39 seats in the House, while the opposition had 36, consisting of 26 Labor votes and 10 of the Country Party,

which was anti-Labor. Now Mr. Fleming, a Nationalist, has left them and joined the Country Party, and there is one vacancy, leaving the vote 35 to 35; so that the Hughes government is dependent on the Speaker's vote for its majority. As a matter of fact, the Premier has the support of some of the Country Party members who are in sympathy with the Nationalists, but not enough in sympathy to join them to save the Government in a critical division.

Premier Hughes gave his views of the League of Nations at Sydney on March 23, saying:

It consists of forty-two nations recruited from all countries and of all colors, and there is not one of them outside the British Empire with any conception of the ideals of Australia. I have not found one of them our friend.

On April 7, at Melbourne, he declared, with respect to the Anglo-Japanese Treaty that Australia could not make an enemy of America to obtain the friendship of Japan, and that the treaty must be renewed in a modified form satisfactory to America. He declared the real hope for the peace of the world lay in some understanding between America, Great Britain and France.

The New South Wales Political and Labor Conference, held in March, adopted a resolution in sympathy with Ireland, and cabled to Premier Storey, then in London, to urge the withdrawal of the troops from Ireland. The Victoria Conference also adopted a resolution of sympathy.

The shipping policy of the Government is seriously criticised in Australia. The hull of the cruiser Adelaide on March 15 was towed from Cockatoo to Garden Island, drawing all Sydney's attention to the fact that it is still unfinished, although it has already cost over a million pounds. There is a real crisis in the merchant shipping industry. During the first three years' operations the commonwealth made a net profit of £900,000. The 1918-19 profit was over a million; that of 1919-20 fell off very considerably and this year a heavy loss is expected. Despite the fact that the world is oversupplied with shipping, the Government yards are still building.

It was announced on March 21 that the board controlling wheat export prices had reduced the rate from 9 shillings to 7 shillings 11 pence to meet North American com-

petition. Tasmania has decided to forbid for a year the killing of kangaroos, wallabies and opossums, owing to excessive slaughter last season for fur.

Lieutenant McIntosh, who last year flew from England to Australia, was killed in an air accident at Pilbara on March 28.

**EGYPT**—In preparation for negotiations to carry out a scheme of independence for Egypt, a new coalition Cabinet was formed at Cairo on March 15, with Adly Yeghen Pasha as Premier, to conclude an agreement with Great Britain. He will seek the collaboration of the Nationalist Egyptian delegation headed by Zaglul Pasha. Born in 1865, Adly Yeghen, who is a relative of the Sultan of Egypt, entered the Foreign Office at the age of 20, and in 1902 became Governor of Cairo. In 1913 he was appointed Vice President of the Legislative Assembly, and the next year took office as Minister of Foreign Affairs under Rushdy Pasha. After the resignation of his chief in 1919 he did much to direct the Nationalist movement toward a friendly settlement with Great Britain. On taking the office of Premier he at once received the support of the lawyers, the ulema and the students of El Azhar University. The armed police cyclists, who have attended the Ministers since September, 1919, were dispensed with, and there was every sign of popular approval.

Zaglul Pasha arrived from France on April 4, and had an enthusiastic reception at Alexandria. He made a triumphal entry into Cairo the next day. All the streets were draped in red, the Egyptian color. Then conferences were begun, at which differences were apparent between Zaglul and Adby. The former intimated that the Presidency of the official delegation, which is to go to London to conduct the negotiations, should be reserved for him, and that acceptance of all his reservations by Great Britain should precede negotiations. It became apparent that the Zaglulists were preparing to compel Adly to allow Zaglul to formulate the delegation's policy.

The question of abolishing the consular courts was another matter of difference, Zaglul wishing them retained. Italy inquired what were the Cabinet's views on the abolition of the capitulations, and was informed that no decision would be made until negotiations for the abolition of the

protectorate proceeded. The Americans referred the suggested amendments to Washington. The mixed courts will stop functioning in May, but are likely to be prolonged. [See "The Needs of Egypt," Page 269.]

**SOUTH AFRICA**—General Smuts's new Cabinet was announced at Cape Town on March 9 as follows: General Smuts, Prime Minister in charge of native affairs; Sir Thomas Smartt, Agriculture; Mr. Jagger, Railways; Patrick Duncan, Interior, Public Health and Education; Colonel Denys Reitz, Minister of Lands; Sir Thomas Watt, Public Works, Telegraphs and Post; F. S. Malan, Mines and Industries; Colonel H. Mentz, Defense; Henry Burton, Finance, and N. J. De Wet, Justice. Thus the Dutch and English-speaking elements each have five representatives. It was reported that Sir Thomas Smartt would accompany General Smuts to the Dominion conference in London.

Parliament was opened on March 11 by Prince Arthur of Connaught, who referred first of all to the League of Nations at Geneva, the usefulness of which was growing, he said, owing to the disordered conditions throughout the world. The Government, he declared, would concentrate its attention on the financial and economic situation and proposals dealing with unemployment.

Uneasiness regarding the labor situation in South Africa was not diminished when the Cape Federation of Labor Unions at Cape Town voted to affiliate with the Moscow Third International. Depressed state of trade and the prospect of a big deficit in the Government revenue were given as the cause of labor discontent. Wages, it was felt, would have to come down, and it was thought unlikely that labor would submit without a struggle.

**MANDATES**—The League of Nations on March 22 issued the text of the mandates for the administration of German Samoa by New Zealand, of Nauru or Pleasant Island by Great Britain, of the other former German possessions in the Pacific south of the equator by Australia, and of German Southwest Africa by the Union of South Africa. On the same day the British Government assumed administration of certain districts of German East Africa, between Lake Tanganyika and Victoria Nyanza, captured by

the Belgians in the war and administered by them, while the Belgians retained certain districts northeast of Tanganyika. The British districts are incorporated in Tanganyika Territory.

The French have adopted a scheme of administration for the Cameroons and Togoland. The former will have full financial and administrative autonomy distinct from French Equatorial Africa, and its resources

will be devoted to its own development. Commercial equality is assured.

Captain Aneiras, a Frenchman, is the first white man to cross the 2,000 miles of the western Sahara desert, between Algiers and Dakar, according to reports received on April 12 from the French Ministry of War.

An exposition of agricultural, mineral and industrial products was planned to be held in Algiers from April 16 to May 8.

## MEXICO'S PROGRESS TOWARD STABILITY

*Recognition still withheld by Washington—Obregon nips revolutions in the bud—Annulling vast Diaz concessions to release land for the people—Tour of Mexican "Goodwill Commission"*

[PERIOD ENDED APRIL 15, 1921]

THE deadlock between the United States and Mexico continues so far as recognition is concerned. Major Gen. Hugh L. Scott, retired, has been suggested to President Harding for appointment as Ambassador to Mexico should the Government decide to recognize President Obregon. Correspondence has been passing between the two Presidents, Obregon admitted on March 18, but it is considered private.

General Obregon also wrote a letter to President Millerand of France, which the latter acknowledged, causing a report that France had recognized the Mexican Administration. This was denied in Paris, where it was said that no step toward formal recognition was in progress.

Another statement, evidently intended to cause trouble, was published in the Universal of Mexico City on April 6, to the effect that Mexico had appointed Salvador Escudero Minister to Soviet Russia. This was officially denied the next day "despite claims of newspapers sympathetic to the Russian cause."

President Obregon returned to Mexico City on March 28, after an eight-day trip through the States of Mexico, Michoacan, Morelos and Guerrero. At the Balsaras River he inspected the site of a proposed dam in

a gorge where it is intended to establish power stations. He stopped at Cuernavaca, where he conferred with military leaders. During a visit to the Borda Gardens the leaders discussed the agrarian problem, which is principally one of absentee landlordism. Twenty-seven men own practically the entire State of Morelos, with an area of 2,773 square miles, against 160,000 natives without a foot of land.

A big revolutionary plot was revealed in Mexico City on April 7, in documents received from Spain where they came into possession of the Mexican Legation in Madrid. They call for the sale of Mexican properties by former Carranza generals in order to provide funds for the intended rebellion. President Obregon meanwhile is meting out stern punishment to all persons found guilty of conspiracy. Five followers of the Cardenas brothers' "ten-man revolution" were captured by Rurales on April 2 and executed the next morning. General Rafael Cardenas escaped, but his brother, Augustino, had been captured and executed a week earlier. Julio Fernandez Perez, a general of brigade in the State of Chiapas, met the same fate at Tuxla Gutierrez on April 6. Undeterred by these examples, General Pablo Gonzales, in Laredo, Texas,

on April 9, told The Associated Press that he expected to head another movement against Obregon.

There was a gathering of extreme Socialists in Pachuca, in March, which adopted the principles of the Third International, or Moscow Bolshevik Congress, and set May 1 as the date for beginning a social revolution in Mexico, at the same time voting sympathy with the railway strikers. The Mexican Bolsheviki have their headquarters in Mexico City on the Calle Colon, back of the Regis Hotel, where radicals from Russia, Germany, France, Italy, England, Spain and the United States meet their Mexican comrades.

The railway strike was settled on March 16, after a conference between General Calles and the workers who still remained out. The Government won by its firmness, the men returning to work unconditionally on March 19. The railroads, which had been taken over by the Government on Dec. 4, 1914, are about to be restored to the company, according to the report of J. Pedrero Cordova, Chairman of the Board of Directors of the National Railways of Mexico.

There has been an increase of idle labor in Mexico and at the same time an influx of laborers from the United States, especially to the oil regions, which led President Obregon on March 15 to issue a decree barring all foreign laborers from the country. Exception was provided in the decree for those who could show that they had "sufficient sustenance and implements" for colonization or agriculture.

President Obregon has released 3,700,000 acres of land to the people by annulling the enormous concession in the State of Chihuahua granted to Luis Terrazas by the Diaz régime. The reason given was Terrazas's failure to fulfill the terms of the contract, which stipulated the establishment within ten years of numerous villages with improvements and the division of the land into small tracts for the benefits of the peons. German immigration to Mexico is no longer feared, only about 600 having entered since the war. The first attempt at colonization was a conspicuous failure. A company was formed of several hundred members, who bought German goods estimated to bring \$800,000 in Mexico and sent them there in charge of two men, who sold

the goods, pocketed the money and disappeared. Meanwhile, very many of the colonists had embarked and are now dependent upon the charity of the permanent German residents.

A conference of oil company executives was held in Galveston on March 16, at which it was stated that, so long as Article 27 of the Mexican Constitution held out a threat of confiscation, American oil interests would oppose recognition. Regarding the opposition in the United States, President Obregon said on March 30:

I am sure that the campaign is backed by certain interests who think they have found in the present Government an obstacle to their ambition for enrichment without outlay. They have charged that members of the Government are immoral and willing to accept bribes. If this were true, the oil companies would not spend so much money attacking these members, but would through bribery both save money and attain their ends.

Regarding the report that Mexican oil wells were on the point of exhaustion and being invaded by salt water, E. L. Doheny, President of the Mexican Petroleum Company, in his annual report explains this, declaring the so-called salt water invasion no menace to the property in general. He says:

Each separate and individual pool of oil is cut off from all other pools of similar character by the uplifted walls of basaltic rock. Each has a separate basin. Therefore one of these pools may be exhausted and its neighbor be in no way affected. When these pools give up all their oil content they leave behind the body of water upon which the oil was superimposed.

Arrangements are being made by the Mexican Government to establish a new national banking system with a capital of 17,500,000 pesos gold. Secretary de la Huerta says the Treasury has 15,000,000 pesos on hand toward this amount and the rest will be supplied soon. The National Bank of Mexico, which had been suspended for several years, resumed business in March, together with fourteen other banks in different parts of the country. A commission is about to be sent abroad to cancel certain contracts for arms and munitions which have not been filled and make arrangements for the return of deposits made during former administrations.

A "good-will commission," which left Mexico City on Feb. 28, has been touring

the United States for the purpose of interesting business men in the development of Mexico, and has been extending invitations to attend the Trade Conference. On arrival of the visitors in New York on March 28, the Merchants' Association, who had made arrangements to entertain them, were surprised by the receipt of letters from the National Association for the Protection of American Rights in Mexico and the American Association of Mexico, describing the good-will commission as an instrument for political propaganda and warning against acceptance of the invitation to the Trade Conference. The American Association, in its note, declared that nothing could be further from its wishes than to dissuade the Merchant's Association from cordial treatment of its guests, but trade with any foreign Government was best promoted by Americans resident there; under the Carranza Constitution the rights of Americans were restricted; trade excursions served as a form of propaganda; spreading favorable reports about Mexico served to embarrass the Washington Government in its designs, and the Mexican Government was interested in the work of the visitors. When this peculiar method of refraining from dissuasion was shown to Fernando Leal Novelo, head of the Mexican guests, he said: "We have simply come to the United States as business men to try to interest your commercial leaders in the development of commerce with our country."

A committee of the Merchants' Association met the good-will commission and took its members to West Point, where they inspected the Military Academy. General Douglas McArthur, the Commandant, received the visitors cordially, and through them extended an invitation to the Commandant of the Chapultepec Military Academy and his staff to visit West Point. If such a visit could be officially arranged, he said, it would be a great step toward cementing the proper friendly relations between the two republics. After saying that most South and Central American countries had students at West Point, General McArthur added: "I think from my acquaintance with General Obregon, which covered a considerable period at the time both of us were in El Paso, that he will appreciate the opportunity this offers to the youth of

Mexico, and I trust he will send some of his nationals here."

After being entertained at luncheon by the Merchants' Association the next day, the good-will commission continued its tour and finally reached Washington on April 9, to pay its respects to President Harding, who received the members cordially and expressed the hope that trade relations might continue to develop.

The two associations who issued the warning notes also sent representatives to Washington who presented to Secretary Hughes a memorandum personally attacking several members of President Obregon's Cabinet and protesting against recognition unless a written guarantee were given that Article 27 of the Constitution were not made confiscatory. The Petroleum Committee of the Mexican chamber on April 11 agreed upon a bill regulating the application of Article 27 so that it shall not be retroactive and agreeing that all oil rights acquired prior to Feb. 5, 1917, will be respected. On April 12, Washington learned from Mr. Summerlin, American Chargé d'Affaires, that Obregon had given assurances that no foreign property would be disturbed in the proposed expropriation of Mexican land for the benefit of peasants.

Several notes were sent by the State Department in March, asking guarantees for the lives and property of foreigners in Mexico, on account of recent murders and deaths of Americans at the hands of Mexicans. An absconding clerk in the Texas Treasury Department was arrested at Nuevo Laredo on March 20 and returned to the United States, being the first fugitive delivered to American officers in five years.

Linn Gale, an American draft evader, was deported from Mexico on April 5. He had escaped from draft officials at Albany, N. Y., and made his way across the border in 1918. There he established a Bolshevik and pro-German periodical called Gale's Magazine, which soon became the organ of the radical elements in Mexico. It was first stated that he would be delivered to United States authorities, and he was sent to Vera Cruz; but on begging the Mexicans not to send him to the United States he was sent by train to Guatemala, which state was said later to be about to deport him to Salvador or Honduras.

## PANAMA REJECTS THE WHITE AWARD

*Refuses to accept Secretary Hughes's suggestion of a basis for settlement of the Costa Rican dispute — The month's events in Central America*

[PERIOD ENDED APRIL 15, 1921]

PANAMA and Costa Rica having agreed to accept the mediation of the United States to settle their differences, as related in CURRENT HISTORY for April, and both sides having withdrawn their military forces from the disputed districts, the incident was thought to be closed. But on April 7 the Panama National Assembly reopened the whole question by unanimously approving a reply to a note of Secretary Hughes in which Panama was urged to accept the award of President Loubet of France, rendered on Sept. 11, 1900. This award granted to Costa Rica the territory between the Burica Point Ridge, the Golfits River and the Pacific Coast, forming a triangle extending inland about fifty miles, with a base of thirty miles on the ocean. It had been occupied by Panama and previously by Colombia, and occupation was continued on the ground that Chief Justice White, who further defined President Loubet's decision in 1914, had gone beyond the territory in dispute.

Secretary Hughes's note, sent to Panama on March 15, declared that the United States "considers it an unavoidable duty to request the Government of Panama at once to take steps to confirm the boundary line from Punta Burica to a point in the Central Cordillera, north of Cerro Pando, by relinquishing its jurisdiction over the territory on the Costa Rican side of that line and transferring it to Costa Rica."

With respect to the Atlantic side of the boundary Chief Justice White's award gave to Costa Rica a portion of the territory claimed by Panama, and to Panama a portion of the territory claimed by Costa Rica. The line begins at the mouth of the Sixaola River, goes west to Mount Chirripo and Mount Pando, and thence southwest to nine degrees north latitude, where it turns south to meet the Burica Point line. This award has never been accepted by Panama, although by an agreement of March 17, 1910, known as the Porras-Anderson treaty, both republics pledged themselves in advance to

abide by the award "whatever it be." Secretary Hughes urged that Panama and Costa Rica name a commission of engineers to mark out the boundary.

President Porras, on March 18, made a personal appeal to President Harding against Secretary Hughes's urgent request; President Harding replied the next day, fully sustaining the Secretary of State. President Porras, on March 25, called a special session of Congress, which met on March 28, to consider a reply to the demand of the United States. In his message to the National Assembly the President gave warning that a refusal to comply would result in the withdrawal of the friendly offices of the United States, and that warfare with Costa Rica would be resumed. He declared that Costa Rica would receive aid from other Central American republics, while Panama would be without means of defense.

The reply unanimously approved by the Panama Assembly was an absolute defiance of the United States Government's demand, reiterating the refusal to accept the White award as a basis for the settlement of the boundary question, and declaring that it was prepared to accept whatever consequences might follow the national determination to preserve territorial integrity. The President was authorized to spend \$50,000 to retain the services of three Panamanians and three foreign experts to support the Government in contesting the White award. A new internal loan of \$1,000,000 was proposed, to be guaranteed by the proceeds of the national lottery, to repel a possible invasion by Costa Rica, and arms and ammunition purchased abroad began to arrive.

Costa Rica was naturally delighted with Secretary Hughes's note, and a resolution expressing gratitude to the United States "for its just, prompt and efficacious mediation" was sent to Vice President Coolidge for transmission to the State Department. Meanwhile, Costa Rican interests in Pan-

ama were placed in the hands of the Spanish Minister. All Latin America is reported to be pleased with the Hughes note, as it removed the fear that the United States would be partial to Panama, owing to her close relations with the Washington Government.

**PANAMA CANAL ZONE**—Colonel J. J. Morrow, on March 26, was appointed Governor General of the Panama Canal Zone, in which capacity he had been acting for some time. It was announced on April 1 that a bill to restore free toll privileges through the Panama Canal to American vessels would be introduced in the Senate at the present session of Congress. The New York Board of Trade and Transportation has been urging Congress to grant free tolls for those American vessels engaged in the coast-to-coast trade. Traffic through the canal during 1920 reached the high record of 2,814 commercial ships, as compared with 2,134 in 1919, an increase of 31 per cent. Net tonnage aggregated 10,378,265, compared with 6,919,149, a gain of nearly 50 per cent. Tolls levied were \$10,295,392, against \$6,992,218. Distribution of traffic was in the following order: (1) From the west coast of South America to the east coast of the United States; (2) from the Atlantic Coast of the United States to the Far East; (3) from South America to Europe; (4) from the east coast of the United States to the west coast of South America; (5) from the west coast of the United States to Europe, and (6) from the Gulf coast of Mexico to South America, the latter principally fuel oil.

**COSTA RICA**—Appearance of the British cruiser Cambrian in Costa Rican waters in support of the validity of the Amory oil concession has caused speculation as to whether Great Britain would attempt to use coercion. A note was presented to Costa Rica on Dec. 30 declaring that the British Government was interested in the concession granted by the Tinoco Government to the Lord Cowdray oil interests, which includes some 700 square miles of land. The United States refused to recognize the Tinoco Government, as it had been instituted by force. Washington has always taken the position that concessions granted by an unrecognized Government in Latin-American countries are illegal. On March 17 it was announced that the Costa Rican

Congress, by a vote of 24 to 14, had sustained the action of the Costa Rican President in refusing to recognize the validity of the Amory concession. For many years Great Britain has never attempted to use force to compel Latin-American countries to carry out obligations to British subjects without first informing the United States; but there was no advance notice given of the visit of the British cruiser to Costa Rica, and as a result reports have been current in Washington that British interests have considered the possibility of negotiating for rights to construct an Isthmian canal to compete with that at Panama on account of Britain's large interests in the Far East.

**CENTRAL AMERICAN UNION**—Dr. Julio Bianchi, Guatemalan Minister to the United States, on April 8, announced the birth of a new American nation on receipt of advices that Guatemala had ratified the treaty of San Jose, which creates the "Federation of Central America." Costa Rica had signed the treaty but had not then ratified it. [For text of treaty see *CURRENT HISTORY* for April, pages 153-157.] The three necessary ratifications had been voted by Guatemala, Honduras and Salvador. These three States have a population of 4,100,000, an area of 101,164 square miles and a foreign trade of \$45,800,000 annually with the United States. [See article on page 294.]

An agreement relative to currency reform in Central America is under discussion between the United States, Costa Rica and Nicaragua, and a treaty is before the United States Senate providing for the establishment of gold clearance funds with Guatemala, Panama, Paraguay and Haiti.

**GUATEMALA**—For the purpose of encouraging Guatemalan trade a decree has been promulgated removing the export duty on sugar, the country's second most important article of exportation, about \$3,000,000 worth having been shipped to the United States last year. The duty, formerly 2 cents a pound, was reduced to 1 cent about six months previously, and internal taxes in the twenty-two departments have been greatly reduced and made uniform. Guatemala is preparing to abolish or decrease duties to a large extent on all articles of export, the loss in revenue to be recovered by an income tax.

Guatemala is also inviting proposals for a concession to establish a bank with a capital of 10,000,000 gold pesos and the privilege of issuing three times that amount in currency, the notes to be redeemable at sight in national money or American gold dollars. The institution would be required to lend the Government 3,000,000 pesos.

**HONDURAS**—There were rumors in March of a revolution impending in Atlantida province and the city of Ceiba, Honduras, as an outcome of a strike of laborers on the banana plantations for a wage increase from \$1.25 a day to \$2.50. An increase to \$1.75 was granted, but the workers in the banana and sugar plantations say that this is not enough. All food supplies are imported by the United Fruit Company and other big business concerns, and are sold at a good profit; only 50 cents a hundred pounds is paid at the ship for bananas, which are sold for \$5.50 in New Orleans. The Honduran Government restored order after the arrival of the United States warship *Sacramento* to look after American interests, but Colonel Ramon Lagos, Governor of Atlantida, was dismissed and Colonel Manuel Matute appointed in his place.

The foreign trade of Honduras for the fiscal year ended July 31, 1920, broke all records, imports amounting to \$12,860,762, nearly double those of any previous year, and exports reaching \$6,944,000 against, a previous high mark of \$5,997,741 in 1919. Over 95 per cent. of the exports from Honduras are shipped to the United States.

Honduras has signed a contract with W. G. Stott, a United States army officer, to organize a national police force.

**NICARAGUA**—A dispatch from Managua, dated April 8, said that a commission

of American engineers was expected from the United States to study plans for an interoceanic canal through Nicaragua. This route formerly was considered more practicable than that of Panama, as there was no elevation as high as Culebra to be cut, and Lake Nicaragua afforded a water transit for about one-third of the distance. Though the project was dropped in President Roosevelt's time, it is now being revived because the traffic by way of Panama is increasing so rapidly that the canal in a few years will be unable to handle it. The Bryan-Chamorro treaty of 1916 gives the United States the exclusive right to construct a canal through Nicaragua, and to establish a naval base on the Gulf of Fonseca, on the Pacific Coast. For these privileges the United States paid \$3,000,000. Salvador and Honduras protested against this treaty as ignoring their rights in the Gulf of Fonseca, and this is the chief reason why Nicaragua refuses to join the Central American Union, fearing the merger would invalidate the treaty.

United States marines arrived at Managua on April 3, to replace those who were punished for wrecking the plant of the Tribuna.

Nicaragua has asked the Knights of Columbus to establish councils within its borders "for the benefit of the youth of Nicaragua and the general welfare," but the Supreme Secretary said it was improbable that the organization would be extended beyond the United States, its possessions, Canada and Newfoundland.

Corinto has been made a regular port of call for Pacific mail steamers, making a direct service of fifteen days to Baltimore and New York, avoiding transshipment at Cristobal, which formerly resulted in loss of time often amounting to a month.

## SOUTH AMERICAN PROSPERITY

*Industrial expansion under improving business conditions—Growing navies of four republics—A large Krupp concession in Chile—Brazil's diamond mines—A Pan-American research laboratory as a memorial to General Gorgas*

[PERIOD ENDED APRIL 15, 1921]

**B**USINESS conditions in South America have been gradually improving during the first quarter of the year; collections are easier, and plans are afoot for the improvement of railroad, river and road transportation. Brazil and Chile are about to issue new loans for the extension of railways, and an Argentine company with a capital of 50,000,000 pesos is about to establish a shipbuilding yard. The arrival at Valparaiso of Chile's first dreadnought—the 28,000-ton La Torre, formerly the Canada of the British Navy—and three destroyers, has revived comparisons of South American sea power. That of Argentina is 140,000 tons, of Brazil 120,000, of Chile 85,000 and of Peru 10,000.

**ARGENTINA**—The Socialist Party of Argentina split in March over the adoption of a resolution rejecting adherence to the Third International of Moscow. A large number of the extremists were expelled. A band of university students at Rosario captured the City Hall and attempted to take over the local government, but was suppressed by the police, and the disturbers were imprisoned.

The steamer Martha Washington having been tied up by a boycott of the union port workers of Buenos Aires, the American Ambassador, on April 13, made a demand on the Argentine Government to lift the boycott and provide means for unloading the vessel. Ambassador Stimson took this step, considering the Government responsible, because port labor in Buenos Aires had been fiscalized; that is, taken over by the Government to prevent strikes. The matter was referred to President Irigoyen. If the Government refused to interfere, it was said, Buenos Aires might be dropped as a port of call for American vessels.

Four hundred German immigrants arrived in Argentina at the end of March on board the first passenger vessel flying the German flag which had reached Buenos Aires since the beginning of the war. Most of

them were middle-class people, including eighty army officers, but few had any capital; they were expecting to obtain employment at once.

American goods to the value of \$40,000,000 were said to be piled up in the Buenos Aires Custom House, having been rejected by Argentine buyers through inability to accept delivery. Credit, however, is now improving, owing to record crops. President Irigoyen on March 18 issued a decree that no export duties, additional to those assessed monthly, should be imposed on exported cereals. As stated in a dispatch from Brussels on April 7, the Argentine National Bank has been authorized to finance large shipments of wool to Antwerp, allowing two years' credit. The cotton industry in Northern Argentina has quadrupled in three years. It was announced on April 12 that the first big gusher among oil wells in the Government field at Comodoro Rivadavia had just been brought in, with an estimated production of 25,000 barrels a day.

President Irigoyen is leading advocate of a plan for the nations of North and South America to erect a memorial in the Panama Canal Zone to the late General William C. Gorgas for his success in conquering tropical diseases. The memorial will be in the shape of a laboratory open to physicians of the world who wish to undertake research work in connection with tropical pestilences. Dr. Franklin H. Martin of Chicago is a member of the preliminary committee appointed by President Porras of Panama to gain aid for the memorial.

**BRAZIL**—The contract for the use of twenty-seven former German steamships borrowed by France from Brazil during the war expired on March 31, and the French Government is preparing to return them. Whether Brazil will retain or sell them has not been decided. It was stated in Rio Janeiro that interests in the United States had offered to purchase them.

Stern measures have been taken to curb

the activities of foreign anarchists in Brazil, owing to several bomb explosions in Rio Janeiro. President Pessoa has signed a decree providing heavy penalties for the propagation of subversive doctrines.

Brazil is endeavoring to improve foreign exchange by raising the price of coffee, having purchased more than 300,000 sacks in the first half of April.

C. A. Legesen, a South African diamond expert, who arrived in New York recently from Brazil, declares that the diamond mines of Minas Geraes are larger than all those of South Africa together, and believes there are in sight at least \$120,000,000 worth of the precious stones. The output is now about 15,000 karats a year. The diamonds are pure white, not yellow, as popularly supposed.

**CHILE**—The Chilean Cabinet resigned on April 12 as a result of rejection by the Senate of the Government's proposal to appoint Luis Aldunate, former Minister of Foreign Affairs, as Chilean Minister to France. President Alessandri refused to accept the resignations. Antonio Huneus and Manuel Rivas also resigned as delegates to the League of Nations, because Augustin Edwards, Minister to Great Britain, had been named Chairman of the Chilean delegation to the Assembly. The Government cabled a refusal to accept their resignations. At the same time the President has called by cable for the resignation of all diplomats who belonged to the opposition party, which includes Chilean representatives to Austria, Spain, the Vatican, Holland, Portugal, Brazil, Mexico and Cuba.

German farmers have been negotiating for the purchase of 50,000 tons of Chilean nitrate. The Krupps, on April 8, obtained a thirty-year concession from Chile for the construction of the largest steel and munitions plant in South America, and are to receive nearly 100,000 acres of rich timber lands.

Mlle. Adrienne Bolland, who held the French woman's aviation altitude record, flew across the Andes on April 1 from Mendoza to Santiago, Chile, in six hours and a half.

**COLOMBIA**—Senator Lodge, on April 12, began the debate in the United States Senate on the Colombian treaty, which provides for the payment of \$25,000,000 compensation for President Roosevelt's action

when he "took" Panama. Senator Lodge declared that if he thought anything in the treaty reflected on Colonel Roosevelt in regard to the Panama Canal nothing would induce him to support it. Besides that, very large oil fields were on the point of development in Colombia, which it would be advantageous to have in American hands. Expression of the American Government's regret for having separated Panama from Colombia, in order to build the Panama Canal, had been eliminated, so there was nothing now to prevent ratification of the treaty as compensation for the loss of Panama. President Harding has expressed himself in favor of the treaty, entirely putting aside old and unhappy controversies.

**PARAGUAY**—A decree of Jan. 13 gave temporary permission to vessels under foreign flags to engage in trade on the Upper Parana River, and the Argentine Navigation Company, in consequence of a strike, placed their steamers under the Paraguayan flag, the Asuncion Government agreeing to operate them with "officialized" crews. In March the company reached a settlement with the river boatmen's union, promising to restore union crews to the vessels. The "officialized" crews protested, as this meant loss of their jobs. The nonunion men running the steamer Huttaita, on April 6, stole off with the vessel and headed north toward the Brazilian frontier. A Paraguayan gunboat was sent in pursuit and the Huttaita was sunk near Concepcion. This, it is believed, forestalled a plot of the crews to resist the Paraguayan Government's intention to restore the steamboats to the Argentine Company.

**PERU**—The Marconi Wireless Telegraph Company has obtained a contract to operate the postal, telegraph and wireless systems for twenty-five years, beginning May 1, receiving 5 per cent. of the gross receipts and 50 per cent. of the annual profits. The Marconi Company will have exclusive use of all international wireless stations in Peru and practically all telephone services.

**URUGUAY**—Laws enacted by the Uruguayan Congress, President Brum declares, have made labor contented. One pending in March provides a minimum wage of \$20 a month, with board and lodging, and of \$45 in the city. Another law gives an obligatory day of rest each week and includes domestic servants.

The first fatal duel since the adoption of the law legalizing dueling occurred in Montevideo on March 21, when Captains Melo and Gomez of the Uruguayan Army fought with pistols and the former was shot through the heart.

**VENEZUELA**—Dr. Esteban Gil-Borges, Venezuelan Minister of Foreign Affairs, arrived in New York with a number of other distinguished Venezuelans to represent their country at the unveiling of the bronze eque-

trian statue of General Simon Bolivar, the Liberator, in Central Park, New York, on April 19. It was understood that President Harding and Secretary Hughes would speak on the occasion. On the same day official ceremonies were to be conducted in Caracas, where two parks were to be christened Washington and Clay. The statue was presented to the City of New York by the Venezuelan Government and was the work of S. J. Farnham of New York.

## POLITICAL TENSION IN CUBA

*A Congressional strike of the Liberals prevents the proclamation of Dr. Zayas as President—New York and Havana can now talk by telephone—Affairs elsewhere in the West Indies*

[PERIOD ENDED APRIL 15, 1921]

**CUBA'S** Presidential troubles have taken a new and curious turn. Though the supplementary elections of March 15 confirmed Dr. Zayas as the republic's choice for President, the Liberal members of Congress undertook to render the proclamation of his election impossible by going on strike and absenting themselves from Congress. At this writing the Cuban public is puzzled over the problem of whether Dr. Zayas can constitutionally take office on the legal date, May 20, in the face of this new complication.

The Liberals generally stayed away from the polls, and Dr. Zayas received about 33 per cent. of the vote. There were no clashes, as General Crowder had taken every possible step to assure order. The Liberals and Democrats, however, had determined, if possible, to prevent Zayas from acceding to the Presidency. The House of Representatives passed out of existence at noon on April 4, and when the new Congress was called to order at 3 o'clock on that day, no quorum was present. Every member of the National League, which includes the old Conservative Party, was there, but there were present only three Liberals, who evidently came as observers for the Parliamentary Council of the Liberal Party, then in session.

Jose Miguel Gomez, the defeated Liberal

candidate for the Cuban Presidency, arrived in Washington on March 30, to appeal to the State Department for the establishment of a Provisional Government in the island, under an American chief executive if necessary, to supervise new elections. General Gomez has been the stormy petrel of Cuban politics. He protested against the second election of Estrada Palma and supported a revolutionary movement begun by Pino Guerra in 1906. He took the field in 1917, proclaiming that Menocal had been re-elected by fraud. He was captured in battle, but was soon released. As a result of the second American occupation, he was elected President and served four years, from 1909 to 1913. On April 5, Gomez called on President Harding and, on the same day, Dr. Rafael Angulo, Chairman of the committee of Liberals who had been sent to Washington, presented a formal appeal to the State Department to set up a Provisional Government.

The United States, through Minister Long, on April 17, formally recognized Dr. Zayas, candidate of the Coalition Party, as the duly elected President of the Cuban Republic. This decision determined General Gomez to give up the contest, and he so formally announced as soon as he learned of Minister Long's statement.

Fernando Quinones, National League

candidate for Governor of Havana Province, was shot dead on the famous Prado in the heart of Havana by Ernesto Collado, a Liberal member of Congress and party candidate for Governor of the same Province. Collado was indicted for homicide and held without bail pending action by Congress on a plea of immunity as member of the House of Representatives. Assassination talk has been rife in Cuba lately. In March Dr. Zayas's private secretary was found murdered, and a prominent political leader is said to have made a vow that Dr. Zayas will never serve as President of Cuba.

Direct telephone communication was opened between this country and Havana on April 11. President Harding and President Menocal exchanged oral expressions of good-will, as did also several of the Cabinet Ministers in the two capitals. Still more wonderful was the fact that Washington and Havana, as well as other cities across the United States, listened to a wireless telephone operator on Catalina Island, off the Pacific Coast, the distance to Havana, 5,700 miles, being a new record for transmission of the human voice by a circuit of radio, wire and cable. The Postal Telegraph Company on the same day completed the laying of a new submarine cable between Miami and Havana, giving it an alternative route to that from New York.

Great Britain is now levying a 50 per cent. ad valorem duty on cigars imported from Cuba, and cigars that cost 8 cents before the war now sell in London for 25 cents—a shilling. As a result only the well-to-do can afford to smoke them, and the British Government loses a revenue amounting to \$2,400,000 a year. Cubans in reprisal are demanding a duty of 40 per cent. ad valorem on all British goods, and R. T. Nugent, director of the Federation of British Industries, is urging strongly a reciprocal agreement with Cuba. He points out that in the first quarter of 1920 British exports to Cuba were 150 per cent. heavier than in 1919, and that British cotton goods were getting a big hold in the island; all this will be lost if a tariff war ensues. Spain is following Britain's example, raising duties on Cuban cigars by the expedient of valuing them in gold instead of silver as heretofore. This amounts to an increase of more than 60 per cent. Cuban manu-

facturers have cabled a protest to Madrid. The Banco Nacional de Cuba suspended business on April 9, owing partly to failure to raise \$12,000,000 in the United States to tide the bank over April 15, when, under the moratorium law, it would have been compelled to pay another instalment of 20 per cent. to its depositors. The bank had vast amounts loaned to sugar planters who could not pay promptly, but is solvent, having over \$30,000,000 of mortgages, bonds and assets available as collateral.

**SANTO DOMINGO**—Ex-President Henriquez y Carvajal of Santo Domingo on April 12 presented a petition at the White House, begging that the United States restore to Dominicans the "rightful sovereignty of which they have been deprived since 1916, through the employment of the military forces of the United States without warrant of law.

An appreciable diminution in the volume of freight between New York and Santo Domingo has caused the three principal lines, which were operating at less than 60 per cent. of capacity, to reduce freight rates on a number of important articles. A reduction of postage to United States domestic rates also went into effect on April 1.

**JAMAICA**—The Legislative Council of Jamaica has remitted the export tax on cocoanuts and cocoa, fully \$1,000,000 worth of which are exported to the United States annually. Fruit companies trading with America are engaged in fierce competition. The banana price has risen and many cultivators are said to be selling immature fruit. Alastrim, a contagious disease similar to a mild form of smallpox, is raging. Marcus Garvey, a leader of American negroes, has arrived from New York and is addressing large and enthusiastic meetings in the interest of the Universal Negro Improvement Association, of which he is President. Fire, on April 1, destroyed the building and stock of the Jamaica branch of the American Tobacco Company; loss, \$1,000,000.

Hundreds of Jamaicans, who have been unable to obtain work on the sugar plantations in Cuba, are returning home and report that orders have been given to all industrial undertakings in Cuba to give preference to Cuban laborers in order to relieve unemployment.

# NORWAY'S INDUSTRIAL INDEPENDENCE

*Capitalizing waterpower in order to dispense with coal and to sell electricity by wholesale to neighboring States—Shadow of German competition over Scandinavian markets—Events in Sweden and Denmark*

[PERIOD ENDED APRIL 15, 1921]

BY harnessing many waterfalls Norway is making strides toward leadership as an industrial country. Though Norway has abundant iron ore, it is handicapped by lack of coal, and the nation's scientific ingenuity is grappling with the problem. Inventors in many lines are at work on it. Norsk Hydro, the great electro-chemical company of Norway, has lately acquired a patent on the invention of Professor B. F. Halvorsen and Mr. Foss, engineer, for making iron without the use of coal by a series of metallurgical reductions.

Unstable exchanges, political uncertainties and social unrest still tend to restrict trade and cripple industry in Norway; the financial stringency, too, and the enormously increased cost of production have aggravated the depression. Financial conditions have adversely affected the engineering and allied industries. Especially hampered were workshops on the west coast engaged in repair and motor work, and foundries dependent on the fishing industry, several of which have had to close down.

The hydroelectric power industry has become the most important of Norway, but has been retarded in new development schemes by the limitation of the capital available for investment. Of the 15,000,000 horse power units latent in the Norwegian water courses only 1,375,000 have been utilized, though practically every farmer has light, heat and power on his land. The Government has continued work upon its power projects of harnessing the waterfalls of Nore and its Hakavik installation. Other operations are in progress.

Of the 6,000,000 horse power latent in Sweden's water courses nearly all is in the north of that country. The Norwegian power is to be carried by air cable across Southern Sweden and by submarine cable

to Denmark. Both Danish and Norwegian capital has been secured in financing the project, and with the financial backing of Sweden it is highly probable that the plans will make noticeable headway in the near future. Ultimately, thinks a Norwegian expert, it will be practicable to lay a submarine power cable from Arendal, Norway, to Jutland, including all three Scandinavian countries in a circular line, with their international co-operation.

Norwegian trade and industry feel the menace of German competition. German exporters can undersell all competitors, even those of Norway, on account of the low exchange value of the German mark as compared with the currency of all other manufacturing countries. Yet, in spite of all the financial difficulties that handicap the country and of the comparative stagnation in Norwegian trade and industry for over a year, there is improvement in certain directions.

A special Norwegian commission set out for Washington early in April for the purpose of reaching a settlement of the claims for ships requisitioned by the United States in the war. The Shipping Board had allowed \$14,157,000 for the commandeered ships, but Norway was not satisfied with that amount, contending that allowance should be made for the speculative value of the contracts, due to the increased price of tonnage during the war.

SWEDEN—King Gustaf V., who occupies a villa a part of every year on the Côte d'Azur, France, arrived in Paris on the morning of March 19. Clusters of flags, Swedish and French, decorated the Gare de l'Est in his honor. Among the personages present were General Lasson, representing President Millerand, and the Swedish Legation, headed by the Swedish Minister,

Count Aehrensvaerd. King Gustaf was accompanied by Count Stedingk, his private chamberlain; M. Sandgren, Minister Plenipotentiary and private secretary; Dr. Olin, court physician and Captain Salander, aide-de-camp. The King responded to the address of welcome by the Government officials and later took up residence at the hotel of the Swedish Legation. President and Mme. Millerand gave a dinner in his honor, and for several days he was the centre of distinguished social functions.

The new Swedish Ministry was finally constituted under the presidency of M. de Sydow, Conservative. The only new member among the other Ministers was M. Beskow. The most striking personality in the Cabinet, in view of his connection with the Aland question, is Count Wrangel, Minister of Foreign Affairs.

About the only progress made toward trade with Soviet Russia by Sweden lies in her becoming a clearing house for Soviet gold. Tons of this metal, according to The Associated Press, were coming from Russia by way of Reval. In Stockholm the gold was melted, given the stamp of the Swedish Mint and thrown upon the markets of the world. The Soviets were hoping that American Consuls in Sweden would approve shipments of gold without tracing them further back than their Swedish origin.

According to reliable reports, the Bolshevik gold reserve totals only 175,000,000 gold rubles. The first shipment of this gold to America, seven tons, was reported to have gone forth on March 20 on board the Swedish steamer Carlsholm. About ninety tons more were left in Stockholm, having been restamped. Swedish bankers, who bought most of the gold, were making large profits. This gold traffic and the curtailment of credits caused a decline in American exchange. The American rate on gold exports amounted to 2,942 kroner per kilogram, the English rate being 2,562. Gold exports to England were very small.

**DENMARK**—Even more than Norway, Denmark is under the menace of German commercial competition. It is feared that

the charge of 50 per cent. exacted on all German goods imported into Great Britain will be prohibitive of the import of German goods into allied countries and will increase their unloading on Scandinavian markets. The Danish trading organ, *Borsen*, quotes statements concerning the efforts of Scandinavian and other neutral countries to secure protests from their respective Governments to the League of Nations against this policy, representing that it is contrary to the interests of the allied powers to allow neutral countries, important as markets and production centres, to face ruin through the unprecedented unloading of German goods.

The Minister of Foreign Affairs announced before the Danish Parliament on April 9 that agents of the Russian Soviet were about to make a proposition for trade relations with Danish organizations, to be followed by negotiations with the Ministry. The proposal had been approved by a committee of influential Danish merchants.

Twenty American students who have been appointed by the American-Scandinavian Foundation to traveling scholarships of \$1,000 each for study in the universities and technical schools of Denmark, Norway and Sweden, are about to embark for these countries. They begin their studies under the terms of the fellowship exchange, which provides also for twenty Scandinavian students at American universities. They will study the Scandinavian languages and literature, hydroelectrical engineering, chemistry, forestry, economics, metallurgy, medicine, physics, fisheries, agriculture, philosophy and church history.

**ICELAND**—As an evidence of increasing activity in the Icelandic air transport service, which kept up inland communications last Winter and has also aided the fishing fleets in locating shoals of fish, the transport company is now enlarging its fleet by the purchase of several American Curtiss flying boats. A regular air service will ply this Summer from Reykjavik, Iceland, to Copenhagen, by way of Leeds, England, a distance of 1,600 miles.

# ITALY'S CRITICAL NEW ELECTION

*A momentous verdict in the nation's life to be given on  
May 15—Bloody reprisals by the Communists and Fascisti*

[PERIOD ENDED APRIL 15, 1921]

ON April 2 the Council of Ministers signed the following remarkable address to King Victor Emmanuel III.:

Sire:

From the fall of imperial Rome until today, when Italian unification is complete, in accordance with sacred national aspirations all new provinces annexed have been allowed to elect representatives.

The events which followed the elections of 1919 and the unrest manifest in certain provinces of the kingdom have served to hasten new elections rather than to retard them.

The will of the nation is the greatest force for the re-establishment of the authority of the law.

Foreign policy will develop in accordance with economic ideals, provided the scope of commercial influence be assured with replenishment of raw materials, new paths for emigration, new markets for our products.

We are confident that the new Chamber will modify Article V. of the Constitution concerning declarations of war and the conclusion of international treaties.

Furthermore, the deficit of 4,000,000,000 lire imposes heavy sacrifices on the people, particularly on the rich.

The ordinances and administration of justice should be reformed and made more active.

State examinations should be imposed in all departments, and a reform of the army and navy administrations, reconciling the necessity of national defense with the minimum expense.

Moreover, co-operative organizations should be perfected by which profits shall be so distributed among the workers as to annihilate the strike.

The representative agricultural industries should be organized; the great landed estates broken up; methods assuring social protection should be perfected.

The workers can doubtless aid in the development of the industries if they shall pass the period of vague revolutionary aspirations. Let us express the hope, therefore, that representatives may be sent to Parliament who are capable of carrying out practical programs.

Thus will Italy be able to pursue with security the task, already showing fruits, of reconstruction of the national heritage, which is in her firm and healthy organism, and victoriously overcome the crisis as it appears.

The new Legislature, we have faith, will be equal to this task.

We have the honor, Sire, to submit to your Majesty the decree dissolving the Chamber of Deputies and calling the elections for the 15th of May next.

On April 7 the following royal decree was issued:

According to Article 9 of the Fundamental Law of the Realm; according to the unique text of the political election law endorsed by royal decree, Sept. 2, 1919, the Council of Ministers is heard, and on the proposal of our Minister Secretary of State for the Interior, President of the Council of Ministers, we have decreed and herewith decree:

Article 1—The Chamber of Deputies is dissolved.

Article 2—The electoral colleges are called for the 15th day of May, 1921, for the purpose of electing the number of Deputies assigned to each one.

Article 3—The Senate of the Kingdom and the Chamber of Deputies are convoked for the 8th day of June, 1921.

We command that the present decree, provided with the seal of State, be inserted in the official records of the Kingdom of Italy and sent to each official concerned, to have him observe it and cause it to be observed. Rome, April 7, 1921.

(Signed) VICTOR EMMANUEL.  
(Countersigned) GIOLITTI.

Thus passed into history the twenty-fifth Legislature, which, in its feverish existence of seventeen months, performed less necessary work than any of its predecessors, leaving unsolved the two great problems of the day: A retrenchment in national finance and co-operation between labor and capital, for both of which the Government had offered rational solutions.

It was never a representative Chamber, and it grew less representative as communism grew, waxed strong, and then waned under the hammer blows of the Fascisti and an aroused middle class bent on enforcing the laws. When it came into power in November, 1919, as the successor of the war Chamber grown stale in vague attempts to readjust itself to peace, it discovered that the determining factor would be the increase of the number of Socialist Deputies from 77 to 156, and the presence of 101 Deputies representing the new Popu-

lar or Catholic Party. The Ministerialists were reduced from 318 to 161. These results had been due to the indifference of the middle class. Humiliated by the defeat of Italy's foreign policy at the Paris Peace Conference, and by the indifference of the Nitti Government to vital domestic questions, the middle class had remained away from the polls. Such a Chamber as resulted could not possibly be constructive, and Premier Nitti, after one attempt to make it representative of the heterogeneous mass of politicians sitting at Montecitorio, went out of office in June, 1920, being defeated by the combination of the left wings of both the Socialist and the Catholic Parties.

He was succeeded by the veteran Giolitti, who, supported by a Ministry representative of the most respectable factions in the Chamber, achieved the masterpiece of the Treaty of Rapallo, but found himself unable to cope with the rising tide of Leninism, and so, for a time, practically abdicated as an executive and allowed the laws for the protection of life and property to become a dead letter.

The more rational of the proletariat soon discovered their mistake, but the extremists kept on, and, heedless of the rebuke of a chastened proletariat and a more circumspect socialism, they attempted a revolution by direct action. It was at this point that the middle class shook off its torpor and began to act. Its weapon was the Fascisti, an organization brought into being by Benito Mussolini, a reformed Socialist, pledged to patriotism and to the purging of the Peninsula of communism, and supported by popular subscription. The emblem of the Fascisti was the Fasces borne by the Lic-tors of ancient Rome; from this they took their name.

The Government working behind the Fascisti gradually recovered some of its authority. But as its induced strength augmented more and more, the impossibility of legislating with the Twenty-fifth Chamber became more and more evident. The only thing that enabled it to stay in office was the growing fear of the Socialist and Catholic Parties, particularly the former, that a defeat of Giolitti would mean dissolution and a new election.

But Giolitti who, as Minister of the Interior, would supervise a new election, did

not wait to be defeated and so lose that valuable political asset.

The election of the Twenty-sixth Legislature on May 15 next will be the most important since the inauguration of the Third Italy. Aside from the vital questions to be decided connoted in the foregoing address of the Ministry to the King, the electorate, by the addition of new provinces, has raised the number of Deputies from 508 to 535. The 27 new seats are thus distributed:

The two new districts in the Trentino, consisting of Revereto-Trento and Bolzano and their included communes, will have, respectively, 7 and 4; the City and Province of Trieste, 4; the Province of Gorizia-Gradisca, with the territory annexed from the Provinces of Carinzia and Carniola, 5; the Province of Istria, with the constituency of Parenzo, 6; Zara and Lagosta, with the annexed Dalmatian territory, 1.

And aside from these additions the Ministry of the Interior, with the aid of the Prefects of the provinces, has made a new apportionment of the old constituencies, with the idea of breaking up the strongholds of communism and anarchy.

While the electioneering so far has shown very little change in the academic political programs of the Conservative Parties, nearly all have adopted anti-communist resolutions, and many of them the emblem of the Fascisti, the Roman eagle surmounting the Fasces of the Lic-tors. Even the Socialists have changed their emblem from the hammer crossed with the sickle to the hammer crossed with the pen.

Benito Mussolini is directing the Fascismo, not as a definite political party, but as a super-party pledged to patriotism; in those constituencies where the Ministerialists are already in the majority the Fascismo refrains from acting as such, while concentrating its influence and action in those constituencies where the Ministerialists are in the minority.

Although the Catholic or Popular Party, owing to the extremists among it and their periodic cohesion to communism, has lost caste among those Liberals who voted the Popular ticket at the last election, nevertheless, its excellent organization, the growing prestige of the Vatican, and the advice of the Pope for all Catholics to ally themselves with law and order, are expected to show little, if any, diminution in the

number of its representatives at Montecitorio.

No sooner had the royal decree dissolving the Chamber been issued than seventeen communist and anarchist Deputies, thus deprived of their Parliamentary immu-

ROLANDO RICCI

*The new Italian Ambassador to the United States*

nity, were arrested, charged with various crimes from arson and murder to treason.

The struggle continued between the Fascisti and the Reds, particularly in the industrial cities of the north, as usual the Fascisti waiting for some overt act to be committed—an attack on public or private property, an assault upon some carabinieri or soldier—when they would solemnly execute the local head of the obnoxious organization and destroy its meeting place. Then, in their turn, the communists would call a strike in revenge, which, in many cases, proved abortive on account of the growing timidity of the strikers and public resentment.

On March 23 a terrible thing happened at the Diana Theatre of Milan. In the midst of the evening's performance before a crowded auditorium a bomb was exploded

which killed 31 persons and injured over 100. While the police were busy making an investigation the Fascisti acted on their own evidence and in their usual way. In Milan and neighboring towns not only the meeting places of communists and anarchists were destroyed, but their newspaper offices met a similar fate. Some of the alleged delinquents, run down by the Fascisti, were turned over to the police; some, concerning whose guilt there appeared to be no doubt, were dealt with in another manner. The arrests made by the police numbered over 100 by April 1; there is no record of those apprehended by the Fascisti.

On April 10 Palo Boselli was made a Senator for life, and the next day Luigi Luzzatti was honored in a similar manner. Both are former Premiers, the first born at Savona, in Liguria, in 1838, and the second of Jewish parents, at Venice, in 1841. When both entered Parliament in 1870, Luzzatti already had a European reputation as a political economist, and was later to hold portfolios in several famous Ministries, besides being President of the Council. He last held office under Nitti a year ago. Boselli has had a similar, although less, distinguished career. He is principally remembered as being the head of the second war Cabinet, from June 19, 1916, till October, 1917, which covered one of the most difficult and glorious periods of Italian national life and prefaced one of the most disastrous—Caporetto.

On April 1 General Count Cadorna's book, "The War on the Italian Front," made its appearance. It is a detailed account of Italy's preparations for the war, and the development of the tactical and strategic plans until after Caporetto. Much of the book is taken up by developing the argument that had the Allies accepted the premise that the war could have been won on the Italian front, there would have been no Caporetto, and the sequence of the German and Austrian surrenders would have been inverted. Although differing from those military critics who believe that the war should have been won where it was won, the book gives a mass of confirmatory evidence to those other critics who continue to believe with Napoleon and Cadorna that the quickest way to reach Berlin is via Klagenfurt and Vienna.

# THE NEW SPANISH CABINET

[PERIOD ENDED APRIL 15, 1921]

ON March 13, five days after the assassination of Premier Dato, the veteran Conservative leader Antonio Maura having failed to form a Cabinet, his followers combined with those of the late Señor Dato and of Juan de la Cierva, and designated Manuel Allende-Salazar as President of the Council, without portfolio. The following slate was accepted by the King:

Premier .....	Señor Allende-Salazar
Foreign Affairs.....	Marquis Lema
Interior .....	Señor Bugallal
War .....	Viscount Eza
Marine .....	Señor Prida
Finance .....	Señor Arguelles
Public Works.....	Señor Lacierva
Public Instruction....	Señor Aparicio
Labor .....	Count Eltzarraga
Justice .....	Señor Pinies

This is a Coalition-Conservative Ministry. Aside from the supporters of Maura and de la Cierva, numbering 44, it can count on those of the late Premier, numbering 127, also on the Catalonian Regionalists, numbering 17, making with the personal factions a total of 232 against a Liberal Opposition led by Count Romanones with 93.

At the Socialist Congress, held on April 14 in Madrid, the communists withdrew from the Socialist Party after a resolution to adhere to the Third International and to the twenty-one Articles of Lenin had been rejected by a vote of 8,808 to 6,025. Thus the Spanish Socialists break up into two parties, as was the case in Italy and Germany, with the communists in the minority, and not, as in the case of Switzerland and France, with the communists technically in the majority.

The convincing influence in Madrid was the revelations made by Señor de las Rios and Señor Anguino, who had studied Bolshevism in Russia, combined with the advice of the leader Largo Caballero, a member of the Madrid City Council, who ap-

pears to be a Spaniard first and a Socialist afterward.

**PORTUGAL**—The new Portuguese Ministry under the Premiership of Bernardo Machado has not encountered any serious opposition in Parliament, as it has the support of the Popular Party, of the Democrats, the Dissident Democrats and the Re-constituent Democrats, and so may be regarded as a sort of Democratic coalition.

The new Premier is not only opposed to amnesty but is even said to have fabricated a new Royalist plot, with the result of many arrests. He takes the view that the political prisoners should be kept in the Penitenciaría "for their own good, to cleanse their souls from guilt." Even the murderer of President Paes, José Julio Costa, after two and a half years, has not yet been brought to trial. Attempts have been made to place Costa in the Lisbon Bombarda Insane Asylum. Its director, however, points out that, as he was not mad when the crime was committed, and has not gone mad since, his admittance would be contrary to the rules of the asylum, incorporated in the decree of May 11, 1911.

According to the *Diario de Noticias*, a Republican paper of Lisbon, some of the newly arrested men were apprehended merely because of their Royalist opinions. Those who were ready to conspire, it declared, had not the consent of any leader of any Royalist Party. This situation was said to apply also to the followers of the late President Paes.

The body of an unknown Portuguese soldier to be buried in the Pantheon in Lisbon was sent to Cape Town from Lorenzo Marquez on March 16. It had been brought from Nyassaland, where the soldier was killed in the war.

# GREECE ATTEMPTS TO IMPOSE THE SEVRES TREATY

*Story of the campaign in Asia Minor and of the Greek Army's endeavors to force Mustapha Kemal to conform to the will of the Allies—Overwhelming political and military difficulties in the way*

[PERIOD ENDED APRIL 15, 1921]

ON March 24 the Greek Army in Asia Minor began its campaign to execute single-handed the Treaty of Sèvres. It did this under the most trying moral and material handicaps. The country's repudiation of Venizelos and its restoration of King Constantine last November had seriously injured its moral status, not only in the chancelleries of the Allies, but also among their peoples. Taking into account this situation and ignoring the fact that one of the intentions of the Treaty had been to remove from the power of the Turk his capacity to injure subject races, Great Britain, France, Italy and Japan at the Near East Conference held at London, from Feb. 21 to March 12, had offered to modify the Treaty at the expense of Greece by restoring certain political and territorial powers to Turkey of which the Treaty had deprived her.

Nor was this all. While these proposals, with certain modifications, were accepted by both the Constantinople and the Angora delegates—the former representing the artificial administration of the Sultan, created and maintained by the Allies under the direction of Great Britain, but which, nevertheless, had declined to ratify the Treaty, and the latter the Nationalists under Mustapha Kemal Pasha—both France and Italy entered into separate engagements with the Kemalists which would prevent Greece, even if victorious over Kemal, from enjoying the fruits of that victory, even though they were limited to the original terms of the Treaty. [See text of pacts, Page 203.]

The military prospect was also discouraging. The campaign was to be fought over the ground which was included in the Italian zone of commercial exploitation, as set down in the treaty; on account of the new accord reached by the Governments of

Constantinople and Angora and with themselves, the Entente powers made no objections to the troops of the Sultan joining the colors of Kemal on the north, while on the south the Franco-Kemalist pact released 30,000 Nationalists, who hastened to join Kemal's left wing. In London and in Paris, respectively, General Foch and General Gouraud, the French High Commissioner in Syria, had urged all military arguments upon M. Gounaris, then the Greek Minister of War, to abandon the enterprise, which could end only in failure, with an unnecessary sacrifice of Greek lives and treasure. In Smyrna itself General Papoulas had succeeded the veteran General Paraskevopoulos as Commander-in-Chief, and with the latter had been retired those other Venizelos officers whose experience had made possible the Greek victories over the Kemalists in June, 1920. Finally, although the reports from Papoulas's General Staff praised the Greek morale and disparaged that of the Turks, reason and a grasp of the circumstances involved seemed to point to the opposite as the truth. In spite of all these handicaps, however, Greece ignored the advice of the Entente, and, remembering only the centuries of Turkish atrocities which the Treaty of Sèvres was intended to end, began her campaign.

The proposals for a modification of the treaty handed the Turkish and Greek delegations at London were published in a British communiqué on March 12. Though the Greeks rejected them in toto, as we already know, the only objection that the Turks found to them was the stipulation of a Greek garrison in the town of Smyrna. According to the official statement, these proposals are to the following effect:

The Allies would be prepared to facilitate the admission of Turkey to the League of Nations on condition that they have proof

of Turkey's readiness to execute the Treaty as now modified.

They would be prepared to withdraw from the Treaty the menace at present suspended over Turkey of expulsion from Constantinople in certain contingencies.

They would be prepared to concede to Turkey the Chairmanship of the Straits Commission, on which Turkey should, moreover, have two votes instead of one as hitherto proposed.

The Allies would admit Turkish membership of the commission to prepare the scheme of judicial reform to replace the Capitulations.

**THE TURKISH FORCES.**—The Allies are prepared to admit the increase of the Turkish forces to 30,000 special elements and 45,000 gendarmerie. The latter would be distributed in agreement between the Turkish Government and the Interallied Commission. The proportion of officers and non-commissioned officers admitted in the gendarmerie will be modified in a sense more favorable to Turkish desires, and the number of foreign officers will likewise be reduced and distributed in agreement between the Turkish Government and the Interallied Commission, which might likewise be able to consent to some extension of the number and nature of military schools. An extension of the periods specified for demobilization, reduction of armaments, &c., would also be accepted.

**THE DARDANELLES AND BOSPORUS.**—Further, in regard to the Straits, the Allies have in mind considerably to reduce the demilitarized zone, which would be limited:—

(1) To the Peninsula of Gallipoli and the Marmora coast up to Rodosto;

(2) On the Asiatic coast of the Dardanelles, from Penedos to Karabigha;

(3) On the two shores of the Bosphorus to a depth of 20 or 25 kilometers [12½ or 16 miles];

(4) To the islands commanding the Dardanelles, in the Aegean and the Marmora.

**CONSTANTINOPLE**—The Allies might also consent to the rapid evacuation of Constantinople, of the Ismid Peninsula, and to limit the allied occupation to Gallipoli and Chanak.

They would also in these circumstances assent to the maintenance by Turkey of troops in Constantinople and to a Turkish right of free passage between Asia and Europe in the demilitarized zone of the Bosphorus.

**TURKISH NAVAL FORCES.**—The Allies might also be prepared to consider the possibility of giving to Turkey more satisfaction in the matter of the strength of her naval forces.

They would further be prepared to withdraw certain stipulations of the armistice still in force and the provisions restricting Turkey's freedom to send officers abroad.

**FINANCIAL CONCESSIONS.**—In the Financial Chapter the Allies are prepared to

make substantial concessions in the sense desired by Turkey.

The Financial Commission would be placed under the Honorary Presidency of the Turkish Finance Minister, and Turkey would participate in the Financial Commission by a delegate with a vote on all questions affecting the internal finances of Turkey and a consultative voice in those affecting more specially the financial interests of the Allies. The Turkish Parliament would have the right to modify the budget prepared in agreement between the Minister of Finance and the Financial Commission, but if these modifications were such as to disturb financial equilibrium the budget would return for approval to the commission.

The Ottoman Government would regain its liberty in regard to the grant of concessions. The Minister of Finance shall, however, examine and decide in agreement with the Financial Commission whether the contracts are in conformity with the interests of the Ottoman Treasury.

The suppression of foreign post offices might also be considered on certain conditions.

Certain modifications in the definition of "nationals of the Allied Powers" might also be contemplated.

**KURDISTAN.**—In regard to Kurdistan, the Allies would be prepared to consider a modification of the Treaty in a sense in conformity with the existing facts of the situation, on condition of facilities for local autonomies and the adequate protection of Kurdish and Assyro-Chaldean interests.

**ARMENIA.**—In regard to Armenia, the present stipulations might be adapted on condition of Turkey recognizing the rights of Turkish Armenians to a national home on the eastern frontiers of Turkey in Asia and agreeing to accept the decision of a commission, appointed by the Council of the League of Nations, to examine on the spot the question of the territory equitably to be transferred for this purpose to Armenia.

**SMYRNA.**—In regard to Smyrna, the Allies would be ready to propose an equitable compromise with a view to ending the present unhappy state of hostilities and ensuring the return of peace. The region called the Vilayet of Smyrna would remain under Turkish sovereignty.

A Greek force would be maintained in Smyrna town, but in the rest of the Sanjak order would be maintained by a gendarmerie, with Allied officers and recruited in proportion to the numbers and distribution of the population as reported by an Interallied Commission. The same proportional arrangement, equally according to the report of the commission, would apply to the administration.

A Christian Governor would be appointed by the League of Nations and assisted by an elective assembly and an elective council. The Governor would be responsible for payments to the Turkish Government of an-

SCENE OF THE GREEK-TURKISH CAMPAIGN

On March 24, when the Greek offensive began, the Greek lines ran north and south, from east of Brusa to Ushak, and hence southwest to Alashehr, or Alasekin (Philadelphia), with concentration of troops at these places; the Turkish Nationalist troops were grouped, north and south, from Geiveh to Denizli, via Eskishehr and Afium Karahissar, just west of, and protecting, the Bagdad railway.

nual sums expanding with the prosperity of the province.

This arrangement would in five years be open to review on the demand of either party by the League of Nations.

The secret treaty made by France with the Kemalists was signed at London on March 9 by M. Briand, the French Premier, and Bekir Sami Bey, the delegate of the Angora Government. So far as could be ascertained up to April 14, it has not yet been signed by representatives of the Sultan, as the latter insist on an increase of the Turkish army. This demand, if accepted, would induce Bulgaria, with much more justice, inasmuch as she has scrupulously observed the terms of the Treaty of Neuilly, to do the same. The document, it will be observed, is not in the nature of a simple armistice convention, as was at first announced, but rather a comprehensive, though preliminary, peace treaty, and is actually stated in the document itself to be preliminary to a final and more general treaty, to all intents and purposes taking

the place of the Treaty of Sèvres, at least as far as the French clauses go.

The text of this secret treaty, and a summary of that concluded by Italy on March 12, will be found on Pages 203-5.

### THE GREEK OFFENSIVE

In a decree dated March 20, King Constantine called under the colors three classes of reserves and addressed the Greek people as follows:

The efforts made to pacify the East within the limits established by an agreement having international authority have been constantly obstructed by the refusal of the organizations of Anatolia. These organizations, by perpetuating a parlous situation, have ruptured the imperative decisions imposed by a just conception of right and of civilization, and by the ceaseless sacrifices of Hellenism and its indefeasible national rights.

Though we were hoping that peace would be re-established without further shedding of blood, a new attempt was made to reverse the order of things established by the Treaty of Sèvres, as is proved by military move-

ments and by the concentration of troops against our front.

These manoeuvres make it necessary to reinforce our troops in order to protect our population exposed to the violence of savage bands and also to obtain definitive peace in the East, an aim which Greece pursues in common with her great allies.

Confident of the patriotism and heroism of the Greeks, I would appeal to the sentiment within them to reinforce the troops charged with imposing peace.

On the opening day of the offensive, March 23-24, General Papoulas had 130,000 men in line on a 120-mile front extending from east of Brusa south and a little beyond Ushak. The enemy lay between this front and the Anatolian part of the Bagdad Railway, from Geiveh south, via Eskishehr and Afium Karahissar (the Black Castle of Opium) to Denizli. At first the enemy numbered 60,000; then about April 1 he was reinforced by the Fifteenth and the Third Army Corps, under Kiazim Kara Bekir, coming from the Transcaucasian front and numbering from 15,000 to 20,000 men.

The enemy was divided into three armies. The northern army for the defense of both Geiveh and Eskishehr was under the command of Ismet Pasha and Refid Pasha, and was made up of the Twenty-fourth, Eleventh, First, Fourth and Sixty-first Divisions. The middle army, under Nar-ed-Din Pasha, for the defense of Afium Karahissar and Ushak, comprised the Twenty-third, Eighth and Fifty-seventh Divisions and the Twelfth, Fourteenth and Eighteenth Brigades. On the left of this army south to Denizli was the Cilicia Army Corps, consisting of the Forty-first Division, reinforced by the Second and Fifth Divisions, all under Sellah Eddin Bey.

The plan of the Greeks, as revealed by their manoeuvres, was to defeat the enemy's right and left wing, make a feint at Eskishehr with a sufficient covering force to hold the spur of the Anatolian Railway, which runs 120 miles east of the Nationalist capital of Angora, and then to direct a formidable attack on Afium Karahissar with the idea of driving a wedge between the enemy's second and third army and occupying the Bagdad Railway.

By March 31 the Greeks had done these things, and General Papoulas dispatched a message to Athens stating that the first part of the plan for defeating the Turkish Nationalists had been accomplished and

that it remained only to advance on Angora. In the five days following, however, in spite of the contradictory dispatches received from Athens and Constantinople, it became evident that the situation had been completely reversed: The Kemalists had at least retaken both Eskishehr and Afium Karahissar, had re-established themselves on the Bagdad Railway, and were seriously threatening the Greek left wing between Ismid and Geiveh and the right wing between Afium Karahissar and Ushak. By April 8 the Greek left wing had retired on Mount Olympus, where it was threatened with isolation, while the rest of the line had fallen back on an average of twenty-five miles west of the railroad.

On April 14 a dispatch from Athens announced that a Nationalist drive composed of 30,000 men, led in person by Mustapha Kemal, had been repulsed on the Afium Karahissar sectors with the loss of 6,000 prisoners.

Proof that the Greek Government intends to continue the war until a definite decision is reached was apparently shown by the statement officially made in Athens on April 14 that the army in the field had been reinforced to 200,000 men, and that the officers, adjutants and cavalry reserves of the classes of 1901 to 1913, inclusive, had been called to the colors. The falseness of one Constantinople dispatch is shown from the fact that on the very day that it announced the death of King Constantine's brother, Prince Andrew, on the battlefield, his Royal Highness was in Athens preparing to sail for Smyrna. It was then expected that the Crown Prince would return from his honeymoon in Paris and take command of the navy, which was engaged in preventing Kemal from being reinforced from the European side of the Straits. On the other hand the Allies would not permit Greek detachments to cross the Dardanelles from the Thracian shore to Mudania, the port of Brusa.

On April 8 M. Kalogeropoulos resigned as Premier, for it was the majority of Demetrios Gounaris in the Bulé which was responsible for the renewal of hostilities, and a revolt of the political factions enabled Gounaris himself to assume the active direction of the Government, though, of course, under the orders of the King. So Gounaris left the War Ministry and became Premier,

with the portfolio of Justice, while M. Theotakis exchanged that portfolio for War, and George P. Baltazis became Minister of Foreign Affairs. MM. Tertiris and Cartales also joined the Ministry but without designated portfolios. The remaining portfolios were distributed as follows:

Minister of Agriculture—JOHN RHALLIS.  
 Minister of Marine—M. MAVROMICHAELIS.  
 Minister of Communications—M. TSALDARIS.  
 Minister of Finance—M. PROTORAPADAKIS.  
 Minister of Interior—M. STAIS.  
 Minister of Public Instruction—THEODORE ZAIMIS.

On March 28 Greek wounded began to arrive in Athens, and at once the papers began to print stories of Turkish atrocities. One stated that the Greek Bishop of Adalia had been arrested and carried off in chains by the Kemalists, under the eyes of the Italians, who made no effort to rescue him. Both the Venizelist and the anti-Venizelist press supported the Government in its war policy and were unanimous in considering

that on Greece has devolved the task of settling the question between Turks and Christians in Asia Minor.

On March 25, Mme. Aspasia Manos, themorganatic widow of King Alexander, gave birth to a posthumous child. It was a daughter. Had it been a son, a serious dynastic problem as to succession might have arisen.

On March 19 General Gouraud, the French High Commissioner in Syria, arrived in Constantinople, and the next day made a statement to the press. He warned the Turks that France's sympathies were subordinated to her alliance with the British, "sealed by blood on the field of battle." He also pointed out that the treaty just completed between Angora and Moscow might "seriously interfere with the fulfillment of the Franco-Turkish agreement, which would secure great advantages to Turkey."

On March 28 the British Commander-in-Chief at Constantinople, Sir Charles Hardington, issued a proclamation declaring British neutrality in regard to the Turko-Hellenic operations. This was made necessary by the fact that the Greek Eleventh Division was guarding the left flank of the British army at Ismid. The British withdrew to a base nearer the Bosphorus, while their places were taken by fresh troops from Athens. On the same day, negotiations were opened for an exchange of prisoners between the British and the Kemalists.

On March 27 it was announced that the French Government would no longer feed the 45,000 survivors of General Wrangel's army who had been interned in the old British camps on Gallipoli, the reason being that General Wrangel's officers at Constantinople wished the formations to remain intact, while the French wished to transport the men where work could be found for them abroad.

Bekir Sami Bey, the head of the Nationalist delegation at the London Near East Conference, reached Ineboli, the port of Angora, on April 14. He came on an Italian cruiser, and brought with him for ratification by the "Grand Parliament," as the Nationalists call the Kemalist "rump," the separate treaties with France and Italy.

On March 16 the Turkish Nationalist delegates at Moscow signed a treaty "establishing fraternal relations between the two

(© Underwood & Underwood)

MUSTAPHA KEMAL PASHA  
 Commander-in-Chief of the Turkish  
 Nationalist Army

countries," which, according to the French Foreign Office, are to be developed from the following four points:

1. The Russians are to recognize Constantinople as the capital of Georgia;
2. Both Russians and Turks demand an international agreement wherein all States bordering the areas in question shall be represented at a conference for organizing the régime of the Dardanelles and the Black Sea;
3. The Turks shall abandon Batum, giving the port to Georgia, and they shall recognize the autonomy of Georgia;
4. Armenia shall disappear both as a territorial and a projected political entity, and shall be divided among Georgia, Azerbaijan and Turkey.

In reply to a telegram sent by the Papal Secretary of State in the name of Pope Benedict XV. to Angora, praying that the Nationalists respect the lives and property of Christians in Asia Minor, Mustapha Kemal assured the Holy Father early in

April that "the safety and welfare of the inhabitants of this country, irrespective of race and religion, is the supreme duty commanded by my humanitarian sentiments, as well as by the Moslem religion."

After keeping him four months in Angoria, Kemal released Izzet Pasha, ex-Grand Vizier and Minister of the Interior in the Constantinople Government, and sent him back to Stamboul, where he arrived on March 19. Izzet is an anti-Bolshevist. On being interrogated by the Sultan, he said that Kemal had told him (Izzet) that he was only playing with Lenin, as Lenin was playing with other statesmen, and that, as soon as the Entente powers had changed their attitude toward Turkey and a formal reconciliation had taken place between Angora and Constantinople, Lenin would find out how much the treaty signed at **Moscow** on March 16 was worth.

## BULGARIA AND THE TURKISH TREATY

[PERIOD ENDED APRIL 15, 1921]

THE disappointment, and even resentment, felt by Bulgaria over the decision of the Allies to modify the Turkish Treaty was frankly expressed by the Sofia press, which drew a comparison between Bulgaria's correct attitude in observing that treaty and the Treaty of Neuilly, a compliance which has met with no reward, and the generous concessions made Turkey because she revolted against the severe terms imposed on her at Sèvres. This discontent more or less colored Bulgarian public opinion during the first half of March, and may account for the "speeding up" of the Government's policies, due not to any intention of emulating Turkey, but to the desire of creating a stronger and more centralized State, ready for any eventuality. The resentment felt, however, was considerably modified by published interviews with Prince Borghese, the Italian member of the Interallied Commission, which was created to aid Bulgaria in executing the Neuilly Treaty. The Prince is known to be anti-Yugoslav, and his expressions of Italian friendship for Bulgaria have had a tranquilizing effect.

The project of a "Green International," conceived and developed by the peasant Premier, M. Stambolisky, has had the effect of diverting the compulsory labor law in the direction of agriculture, and also of inspiring a revolution in education, which should ultimately benefit the farmer in the pursuit of his calling. The scheme has taken the form of a bill, introduced by M. Omartchevsky. Among the Balkan States, the record of Bulgaria for literacy is good. Education is nominally obligatory for both sexes between the ages of 8 and 12. There are 5,000 free elementary schools, with 9,000 teachers and half a million pupils. The University of Sofia is attended by 3,000 pupils, 30 per cent. of whom are women, and it has ninety professors and lecturers. Between these two extremes, however, the secondary education is not well organized, including as it does nearly five hundred non-Bulgarian schools with 50,000 male and 25,000 female pupils, and showing little co-ordination in method or subjects. It is the plan of M. Omartchevsky to divert the basis of education, now principally classical, into practical chan-

nels, particularly by providing instruction in scientific agriculture and by co-ordinating the non-Bulgarian schools under a common system, irrespective of language. Meanwhile, peasant unions are being organized all over the country on a sort of rural socialistic plan. This is expected to have a pronounced effect on manufacturing and transportation, in which at present the "Red International" chiefly prevails.

On March 20 the report of the special commission organized to inquire into the doings of the Radoslavoff Cabinet, which forced the country into the war on the German side, was made public. It is a volume of 218 pages, and deals with the charges under ten heads. The Cabinet's dealings with Berlin, including the borrowing of money and the engagement to declare war on Serbia, its special engagements with Vienna, its diversion of Bulgarian industry to German aid, and the

military measures it took without consulting Parliament are all shown to have been unconstitutional, and hence treasonable.

The Bulgarian port of Varna on the Black Sea has a Mayor and Municipal Council who were, but are no longer, communists. They conceived the brilliant idea, early in March, of sending a delegation of welcome and friendship to the Bolsheviki at Odessa, called "Lenin's Earthly Paradise." The delegation consisted of five Councilmen and M. Kmet, the Mayor. They reached Odessa. The first day the Reds deprived them of their shoes; on the second, they were made to exchange their warm clothing for filthy rags. No food was given them. On the fifth day they managed to escape on a fishing vessel and returned to Varna. They are said to be much chastened and declare that Bolshevism would hardly do for Bulgaria.

## PALESTINE AND THE ZIONISTS

A THREE-FACED campaign has been developing against the British mandate over Palestine and the manner in which it is being executed. First, there is that of the Arabs which is principally confined to the native press, inspired, it is charged, by the old Franco-Syrian colony at Beirut; then there are the objections of the orthodox Jews, who believe that the mandate is not being executed in a practical way, and who object to political Zionism on principle; finally, there are the objections of the "Little Englanders," who believe that the mandate saddles an incubus upon the empire without any advantages.

The Arab press contends that although they have no fault to find with the Jewish immigrants who are now arriving, because they are occupied in manual labor either on the roads or in the fields, they fear the coming of the industrial Jew with foreign capital, who, with this advantage, will exploit the country and so drive out the Arab merchants and manufacturers. A resolution comprising these and other grievances was recently adopted by the Arab Congress at Haifa. This criticism has been answered in two ways: By an address made by Winston Churchill, the British Secretary of

State for the Colonies, in Jerusalem, on March 31, and by a resolution adopted by the influential Beersheba Arabs at about the same time. Mr. Churchill said:

Examine Mr. Balfour's careful words: Palestine: to be "a national home," not "the national home," a great difference in meaning. The establishment of a national home does not mean a Jewish Government to dominate the Arabs. Great Britain is the greatest Moslem State in the world, and is well disposed to the Arabs, and cherishes their friendship. I found since my arrival that the ministrations of the officials make no distinction between Jew and Arab. You need not be alarmed for the future. Great Britain has promised a fair chance for the Zionist movement, but the latter will succeed only on its merits.

Above all, there will be respect for the different religions. Though the Arabs are in a large majority in Palestine, though the British Empire has accepted the mandate in the wider sense, Palestine belongs to the whole world, and this City of Jerusalem is almost equally sacred to Moslems, Christians and Jews, and not only to the dwellers in Palestine, but everywhere. Instead of sharing miseries through quarreling, the Palestinians should share blessings through cooperation.

The manifesto of the Beersheba Arabs reads:

We, the Beersheba Arabs, are the most im-

portant Arabs in Palestine, and have been such for many years, and we declare that since the occupation of the country by Great Britain we have enjoyed freedom, and are thankful for its just ruling, a rule which has respected our customs. We beg that the declaration of the Haifa Congress be not listened to, and the Congress itself made to withdraw its statement.

To the criticism of the orthodox Jews, led by Professor Jacob Dehaan, Mr. Churchill replied:

The success of Zionism will depend upon the good it will bestow upon the whole country. I hope that in a few years there will be a greater feeling of well-being and unity among the Palestinians, and that the Arab fears will prove unfounded. I have read your address with interest, and will lay it before the British Cabinet, who will see the case forcibly presented by both sides. I will do my best to assist Sir Herbert Samuel [the British High Commissioner] in the task the British Government have given him.

The third phase of the criticism is based on an analysis of the mandate, and is principally confined to the British Liberal press. In order to demonstrate that the mandate brings no special advantage to the empire, it is shown that Article XVIII. provides that the mandatary must see that there is no discrimination against "the nationals" of any of the States members of the League of Nations, "as compared with those of the mandatary or of any foreign State in matters concerning taxation, commerce or navigation, the exercises of industries or professions, or in the treatment of ships or aircraft." What is said "to complete the humiliation of the British Empire" is to be found in Article XXIV., which provides that "the mandatary shall make to the Council of the League of Nations an annual report as to the measures taken during the year to carry out the provisions of the mandate."

## THE MESOPOTAMIAN OIL CONTROVERSY

THE diplomatic exchanges between London and Washington on account of the oil concessions to Great Britain in Mesopotamia and growing out of Secretary Colby's note to the British Government on Nov. 20, 1920, remonstrating against special privileges being enjoyed by any nation as a result of the war, may briefly be described as follows:

At San Remo, in April, 1920, England and France reviewed their pre-war concessions received from the Rumanian, Austro-Hungarian and Turkish Governments for working oil wells in those countries, and decided upon a readjustment, particularly in the Turkish concessions in Mesopotamia, so that the New Mesopotamian Government and not Turkey might reap some benefit therefrom. Accordingly, the interests in this region were pooled—62 per cent. was to go to Great Britain, 18 per cent. to France and the remainder, 20 per cent., to the new Government of Mesopotamia.

The contention of the British Government is that at San Remo a readjustment of concessions received before the war was made by it and France, and that therefore the matter is beyond the jurisdiction of the League of Nations, and hence not open to the criticism made by Washington. In continuing the correspondence dropped by Sec-

retary Colby, Secretary Hughes incorporated with the criticism of the Mesopotamian matter the matter of other arrangements made between the Allies without consultation with the United States. This has complicated the matter in the press reports, but in his unpublished note to the State Department on April 5 Lord Curzon, the British Foreign Minister, isolated the Mesopotamian question, presented its entire history dating back to 1906, and proved that the San Remo arrangement was not based on the result of the war, except in so far as it benefited Mesopotamia and not Turkey—the rest was merely a readjustment of pre-war concessions made to Great Britain and France.

\* \* \*

The Mesopotamian nation will be known as Irak; its ruler will have the title of Emir. A general election for Emir will be held, the chief claimants to the throne being the Naqib of Bagdad and the two sons of King Hussein of Hedjaz, either the deposed Feisal or his brother Abdullah.

\* \* \*

Oscar Heizer, the American Consul at Jerusalem, has forwarded to the State Department a report on his recent journey through the region between the Tigris and

Euphrates. He declares that the manna of the Old Testament is still to be found in Upper Mesopotamia and along the Persian frontier. He says that manna falls in the form of dew during September, October

and November, and lodges upon the leaves of oak trees. Immediately after falling, it hardens and assumes the form of grain, which is gathered in sheets spread under the trees.

## PERSIA'S NEW POLICIES

[PERIOD ENDED APRIL 15, 1921]

**T**HE new Government of Persia, which came into power on Feb. 20 as the result of a coup d'état performed by General Reza Kahn, leader of the Persian Cossacks, in order to prevent the country from surrendering to Bolshevism, issued a message to the Persian people on March 11 which declared that complete order and quiet prevailed at Teheran, that cordial relations were continued with all the powers, and that the following reforms in both internal and external policy would be executed with energy and without delay:

1. Reorganization of the army.
2. Dissolution of Government departments which impose heavy charges on the country, and their reconstruction on the basis of modern administration.
3. Dissolution of the old tribunals and the establishment of courts of justice on a solid basis.
4. Distribution of Government land among the peasantry and elaboration of agrarian laws to improve the condition of the peasants.
5. Financial reforms.
6. Educational reforms.
7. Development of trade.
8. Lowering the cost of living by measures to prevent hoarding and application of anti-luxury laws.

9. Improvement of the means of transport.
10. Municipal reforms.

### EXTERNAL POLICY.

1. Maintenance of friendly relations with neighboring and other foreign powers.
2. Suppression of the capitulations [foreign courts for the trial of foreign delinquents] after the establishment of judicial reforms giving guarantees of equal justice to foreign subjects.
3. Revision of certain concessions.
4. Engagement of foreign advisers for the organization of the country.
5. Abrogation of the last Anglo-Persian Agreement.
6. Evacuation of Persia by foreign troops.

The foregoing schedule of policies was conveyed to the Washington Government on April 5, where it was considered that the last two articles of External Policy, if definitely adhered to, would have a far-reaching effect on the Near Eastern problem and would call for the withdrawal of the British forces now in Persia. It would also mean, it was stated in diplomatic circles in Washington, the collapse of the so-called Curzon policy of the British Government with respect to Persia. This opinion is in accord with that of the Wilson Administration, which, as is well known, was not in favor of British predominance in Persia.

# POLAND FOUR-SQUARE FOR THE FUTURE

*Foundation for the Republic laid on a solid democratic basis in the new Constitution  
—Peace with Russia finally signed at Riga—Important defensive treaty with France*

[PERIOD ENDED APRIL 15, 1921]

THE greatest event in Poland's history since the year 1772 was consummated on March 17, 1921, when the Constitution of the new republic was ratified by the Diet. For virtually a century and a half the bitterness of the Polish people over the partition of their national territory, and their ultimate subjection to the iron rule of the Czar, remained undiminished. Only those who have traveled in Russian Poland under the Czar can realize the hatred felt by the Poles for their Russian overlords. Their national spirit was never conquered.

On Nov. 11, 1918, the new-born Poland first arose. On Nov. 28 of the same year elections for the Constituent Assembly were ordered. They were held on Jan. 26, 1919, and the Constituent Assembly met on Feb. 10. The committee for the drafting of the new Constitution was elected on Feb. 25, 1919. This committee worked for nearly a year, finally submitting a tentative draft for discussion on Jan. 21, 1920. This draft went through the three readings requisite, and was finally adopted on March 17, 1921. For the Polish Nation these will be the great, epoch-making dates in the restoration of their existence as a free and sovereign people. [The full official text of the Polish Constitution is published elsewhere in these pages.]

Peace between Poland and Soviet Russia was signed in Riga, the capital of Latvia, on March 18, after months of negotiation. The whole treaty will be in CURRENT HISTORY next month. After the signing, M. Dombksi, the chief Polish representative, delivered an address, in which he dwelt on Poland's long subjection to alien rule. After intolerable hardships, he said, Poland had at last gained her independence, and hoped to live on friendly terms with Russia. As for the people of non-Polish stock to be incorporated with Poland under the treaty, he

declared that it would be Poland's aim to give all such elements freedom and the exercise of all civic rights granted to Polish citizens.

The official announcement of peace was made by M. Witos, the Polish Premier, from the stage of the Grand Opera House in Warsaw on the evening of the 18th. The Premier's speech had been intended for delivery before the Diet, but that body had adjourned before the news came over the wires from Riga. The treaty with the Soviets, the Premier declared, would bring peace not only to Poland, but to the whole of Europe. Poland's energy, he said, which for the last seven years had been devoted to war, would now be directed toward peace, and would secure for Poland her proper position in the comity of nations. The Premier's speech was received with a storm of cheers.

Though Poland and Soviet Russia declared themselves satisfied with the result of the peace negotiations, many Russians in exile, especially the charter members of the new Russian "Constituent Assembly," organized a few weeks ago in Paris, expressed their objections to one feature of the treaty in the strongest terms. Soviet Russia, they declared, had bartered away territory which belonged to Russia and which was inhabited by thousands of Russians, whose numbers were far in excess of the Polish landlords. The viewpoint of these Russians was expressed by their spokesman, Alexander Kerensky, former Russian Premier, in the following terms:

Under the provisions of the Riga treaty Poland obtains, in addition to and beyond the Curzon line established by the Peace Conference, fifteen counties of the Provinces of Volhynia, Grodno, Vilna and Minsk in their entirety, and parts of eleven counties in the Provinces of Volhynia, Minsk, Vilna and Vitebsk. The total area of land taken away

from Russia is about 140,000 square kilometers (up to 87,000 square miles). This is big enough to make a whole country in Europe! This territory is inhabited by about 7,000,000 people, of whom not more than 400,000, or only 6 per cent., are Poles. The fact that the Poles constitute only a small minority on this territory was acknowledged by the Polish delegation in Riga.

If we will, furthermore, bear in mind the fact that this 6 per cent. of Poles are mainly the local land barons, the rest of the population belonging to the peasantry, it will be easy to imagine the state of the future relations between the victors and the vanquished. Here, just as in Eastern Galicia, a forcible Polonization by means of so-called "colonization," i. e., through systematic expropriation of the land from the local inhabitants in favor of Polish settlers from Poland proper, will be inaugurated.

The Riga peace is not a peace of compromise, as Poland's official representatives claim, but a peace of oppression and national subjection. Not only is it a source of great trials for Russia, not only is it capable of causing new calamities in Poland, but in this peace there is also concealed a most serious menace to the peace and tranquillity of all Europe, if the Allies should assume the responsibility for it, together with the Poles. The Polish Government is trying in every way to attain that end. Until now, however, all attempts of official Poland to shift the great powers from the Curzon line have failed. Let us hope that Europe will hereafter also refuse to cross this line of wise prudence and clear foresight.

An official statement published in the Polish Bulletin by the American Committee for the Defense of Poland on March 31 gave the following answer:

Contrary to the belief of those who are under the impression that Poland acquired part of the territory rightfully belonging to the Russian Empire, the Soviet Government did not concede, nor did Poland demand, any territory either historically or ethnographically Russian. When the question of Poland's frontiers was up for discussion before the Congress of Vienna in 1915, Kosciuszko, known particularly for his moderation in presenting the case for Poland's territorial claims, advocated frontiers several hundred miles east of the line fixed at Riga. \* \* \*

Until the partitions of Poland, late in the eighteenth century, Russia never enjoyed nor claimed dominion over the territory known variously as White Russia and White Ruthenia, territory which is not now nor ever has been inhabited by Russians. In the

territory ceded to Poland the population percentages are as follows: Poles, 32.2; White Ruthenians, 21.8; Ukrainians, 22.4; Russians, 3.8; Lithuanians, 2.8; Jews, 10.4; others, 6.6.

The White Ruthenians possess their own language, more akin to Polish than to Russian. Lehtonen, the Finnish historian, records that Russian authorities, after the partitions, had to use Polish to make themselves understood by the population. Economically, White Russia differs fundamentally from Russia, never having known the common ownership of land. The landed properties belong to the Poles, as do also the industries, and most of the business and banking institutions.

Consequently, as White Russia has neither historical, ethnographical nor economic claims to White Russia, it may readily be seen that Poland in the acquisition of but a minor portion of the territory thus described, is not only obtaining no Russian territory, but is not even gaining possession over a great expanse of land to which it has far more claims than has Russia.

A third block in the edifice of a strong Polish State was the treaty concluded with France on Feb. 19. No official version of the terms reached by Marshal Pilsudski with the French Government leaders was given out at the time, and it was generally believed that France had declined to enter into a defensive alliance with Poland. Official advices received in Washington on March 27, however, proved that this belief was erroneous, and that in actual fact Poland and France signed such an alliance, pledging themselves to concerted action for defense in case either of the two countries should be attacked without provocation. Mutual approval of policies affecting Continental and Eastern Europe and mutual assistance in economic reconstruction were provided for. Politically and economically, this treaty was of a peculiarly close and intimate nature, calculated to unite the destinies of France and Poland for a long time to come. It was another concrete expression of France's present policy aimed at building up from the smaller nations of Central and Eastern Europe a barrier between Germany and Russia.

The plebiscite in Upper Silesia was held on March 20, and resulted, in the main, in a victory for Germany. [See Germany.]

# CONSTITUTION OF THE REPUBLIC OF POLAND

*Full text of the new fundamental law, adopted March 17, 1921, under which Poland will henceforth conduct its political affairs—Official English translation*

**A**FTER two years' deliberations, the Polish Constituent Assembly at Warsaw finally completed and adopted the new Constitution of the republic on March 17, 1921. It is the result of compromises of many widely different parties and opinions. In its main lines it follows the United States Constitution, but there are also many features modeled on the French system.

The Parliament consists of an Assembly (Sejm) and a Senate, elected by popular vote of both men and women over 21 years old. The executive power is vested in a President and Cabinet. The President will be elected for a term of seven years by a National Assembly composed of the members of the House and the Senate. The President may be a Catholic or a Protestant. He is Commander-in-Chief of all the military forces in time of peace, but in the event of war the responsibility shifts to the Minister of War, who is empowered to appoint the commander of the army.

Catholicism continues to be the leading faith of the country, but equal rights are accorded to all religions. The relations between Church and State will be legally defined by an agreement with the Vatican, which is to be subject to ratification by the Parliament.

The Constitution provides for free, compulsory education in district and municipal schools. Every citizen has the right to the use of his own language, and a special bill ensures the free development of the minority nationalities living in Poland. The different nationalities are permitted to have their schools and teach their own languages under Government supervision and with partial support by the State.

The full text of the Polish Constitution, translated for CURRENT HISTORY by the Polish Bureau of Information, New York, is as follows:

## PROLOGUE

*In the name of Almighty God!*

*We, the Polish Nation, thankful to Providence for freeing us from a servitude of a century and a half; remembering gratefully the courage and steadfastness of the self-sacrificing struggle of generations which have unceasingly devoted their best efforts to the cause of independence; taking up the glorious tradition of the memorable Constitution of the Third of May; having in mind the weal of our whole united and independent mother-country, and desiring to establish her independent existence, power, safety and social order on the eternal principles of right and liberty; desirous also of ensuring the development of all her moral and material forces for the good of the whole of renaissance humanity, and of securing to all citizens of the republic, equality, and to Labor, respect, due rights and the special protection of the State—do enact and establish in the Legislative Sejm [Diet or Assembly] of the Republic of Poland, this constitutional law.*

## SECTION I.—THE REPUBLIC

**ARTICLE 1**—The Polish State is a republic.

**ARTICLE 2**—Sovereignty in the Republic of Poland belongs to the nation. The legislative organs of the nation are: in the domain of legislation, the Sejm and the Senate, in the domain of executive power, the President of the republic, jointly with the responsible Ministers; in the domain of the administration of justice, independent courts.

## SECTION II.—LEGISLATIVE POWER

**ARTICLE 3**—The domain of State legislation comprises the establishment of all public and private laws and the manner of their execution.

There can be no statute without the consent of the Sejm, expressed in a manner conforming to standing orders.

A statute voted by the Sejm comes into force at the time determined in the statute itself.

The Republic of Poland, basing its organization on the principle of broad territorial self-government, will delegate to the bodies representing this self-government the proper domain of legislation, especially in administrative, cultural and economic fields, to be defined more fully by statutes of the State.

Ordinances by public authorities, from which result rights or duties of citizens, have binding

force only if issued by the authority of a statute and with a specific reference to the same.

**ARTICLE 4**—A statute of the State will determine annually the budget of the State for the ensuing year.

**ARTICLE 5**—The establishment of the numerical strength of the army, and permission for the annual draft of recruits, can be determined only by statute.

**ARTICLE 6**—The contracting of a State loan, the alienation, exchange or pledging of improvable property of the State, the imposition of taxes and public dues, the determination of customs duties and monopolies, the establishment of the monetary system and the taking over by the State of a financial guarantee can take place only by the authority of a statute.

**ARTICLE 7**—The Government will present annually, for parliamentary consideration, the accounts of the State for the last year.

**ARTICLE 8**—The manner of exercising parliamentary control over the debts of the State will be defined by a special statute.

**ARTICLE 9**—The control of the whole State Administration as regards finances: the examination of the accounts of the State; the annual submission to the Sejm of its motion for the granting or refusing of its absolutorium to the Government, are in the hands of the Supreme Board of Control, which is organized on the basis of collegiality and judicial independence of its members, the latter being removable only by a vote of the Sejm representing a majority of three-fifths of those actually voting. The organization of the Supreme Board of Control and its method of procedure will be defined in detail by a special statute.

The President of the Supreme Board of Control enjoys a position equal to that of a Minister, but is not a member of the Council of Ministers and is directly responsible to the Sejm for the exercise of his office and for the officials who are his subordinates.

**ARTICLE 10**—Measures can originate either with the Government or with the Sejm. Motions and bills which involve expenditure from

(Photo Underwood & Underwood)

M. JOFFE, HEAD OF RUSSIAN DELEGATION (LEFT), AND M. DOMBSKI, HEAD OF POLISH DELEGATION, EXCHANGING FINAL WORDS AFTER SIGNING THE PEACE TREATY

the State Treasury must state the manner of their raising and expenditure.

**ARTICLE 11**—The Sejm is composed of deputies elected for a term of five years, to be counted from the day of the opening of the Sejm, by secret, direct, equal and proportional voting.

**ARTICLE 12**—The right to vote belongs to every Polish citizen without distinction of sex, who, on the day of the proclamation of the elections, is 21 years of age, is in full possession of civil rights, and is a resident of the electoral district at least from the day preceding the proclamation of the elections in the Journal of Laws. The right to vote can be exercised only in person. Members of the army in active service do not possess the right to vote.

**ARTICLE 13**—Every citizen having the right to vote is eligible for election to the Sejm, independently of his place of residence, if he is at least 25 years of age, not excepting members of the army in active service.

**ARTICLE 14**—Citizens convicted of offenses which the Law of Elections may define as involving temporary or permanent loss of the right to vote, eligibility, or of being a Deputy, may not enjoy the electoral right.

**ARTICLE 15**—Administrative, revenue and judicial officials of the State may not be elected in the districts in which they are performing their official duties. This rule does not apply to officials employed in the Central Departments.

**ARTICLE 16**—State and self-government employes obtain leaves of absence at the moment of being elected Deputies. This rule does not apply to Ministers, Under Secretaries of State and Professors in academic schools. The years spent in the exercise of the duties of a Deputy are considered as years of service.

**ARTICLE 17**—A Deputy loses his seat on being appointed to a paid office of the State. This rule does not apply to appointment as Minister, Under Secretary of State or Professor in an academic school.

**ARTICLE 18**—The Law of Elections will define the manner of electing Deputies to the Sejm.

**ARTICLE 19**—The validity of unprotested elections is verified by the Sejm. The validity of protested elections is decided upon by the Supreme Court.

**ARTICLE 20**—The Deputies are representatives of the whole nation and are not bound by any instructions given by the voters.

The Deputies make to the Marshal the following vow in the presence of the Chamber: "I do solemnly vow, as Deputy to the Sejm of the Republic of Poland, to work honestly, according to the best of my understanding and in conformity with my conscience, for the sole good of the Polish State as a whole."

**ARTICLE 21**—Deputies cannot be made responsible, either during their term of office or after it has expired, for their activities in or out of the Sejm appertaining to the exercise of their office as Deputies. For their speeches, utterances and manifestations in the Sejm, Deputies are responsible only to the Sejm. For

violation of the rights of a third person, they may be made to answer before a court of law, if the judicial authority obtains the consent of the Sejm thereto.

Criminal, penal-administrative or disciplinary proceedings instituted against a Deputy before his election may, at the demand of the Sejm, be suspended until the expiration of his term of office.

Prescription in criminal proceedings against a Deputy does not run while he retains his office. While he retains his office, a Deputy may not, without the permission of the Sejm, be made to answer before a criminal court, penal-administrative authority or a disciplinary court, or be deprived of his freedom. If a Deputy is caught in the act of committing a common felony, and if his arrest is necessary to insure the administration of justice, or to avert the consequences of the offense, the court is bound to notify immediately the Marshal of the Sejm in order to obtain the consent of the Sejm to his arrest and to further criminal proceedings. Upon demand of the Marshal, the arrested Deputy must be liberated at once.

**ARTICLE 22**—A Deputy may not, either in his own name or in the name of another, buy, or acquire the lease of any real property of the State, contract for public supplies or Government works, or obtain from the Government any concessions or other personal benefits.

A Deputy is also debarred from receiving from the Government any decorations other than military.

**ARTICLE 23**—A deputy may not be the responsible editor of a periodical publication.

**ARTICLE 24**—The Deputies receive compensation, the amount of which is determined by the standing orders, and are entitled to the free use of the State means of communication for traveling over the whole territory of the republic.

**ARTICLE 25**—The President of the republic convokes, opens, adjourns and closes the Sejm and Senate. The Sejm must be convoked to assemble on the third Tuesday after election day, and every year, *at the latest in October*, to an ordinary session for the purpose of voting the budget, the numerical strength and recruiting of the army, and other current affairs.

The President of the republic may, at his own discretion, convoke the Sejm to an extraordinary session at any time, and is bound to do this within two weeks upon request of one-third of the total number of Deputies.

Other cases in which the Sejm assembles in extraordinary session are determined by this Constitution.

An adjournment requires the consent of the Sejm if a previous adjournment has taken place during the same ordinary session, or if the interruption is to last for more than thirty days.

The Sejm, when convoked in October for its ordinary session, may not be closed before the budget has been voted.

**ARTICLE 26**—The Sejm may be dissolved by its own vote, passed by a majority of two-thirds of those voting. The President of the republic may dissolve the Sejm with the consent of

three-fifths of the statutory number of members of the Senate in the presence of at least one-half of the total membership. In both cases the Senate is automatically dissolved at the same time.

Elections will take place within forty days from the date of dissolution, the precise date to be determined either in the resolution of the Sejm or in the message of the President, on the dissolution of the Sejm.

**ARTICLE 27**—The Deputies exercise all their rights and duties in person.

**ARTICLE 28**—The Sejm elects from among its members, the Marshal, his Deputies, the secretaries and committees.

The Marshal and his Deputies continue in office after the dissolution of the Sejm until the new Sejm shall have elected its officers.

**ARTICLE 29**—The standing rules of the Sejm define the mode and order of the proceedings of the Sejm, the type and number of the committees, the number of Marshals and secretaries, the rights and duties of the Marshal. The employes of the Sejm are appointed by the Marshal, who is responsible to the Sejm for their actions.

**ARTICLE 30**—The meetings of the Sejm are public. On the motion of the Marshal, of a Government representative, or of thirty Deputies, the Sejm may vote the secrecy of its meetings.

**ARTICLE 31**—No one may be called to account for a truthful report of an open meeting of the Sejm or a committee of the Sejm.

**ARTICLE 32**—A vote is valid only when carried by an ordinary majority in the presence of at least one-third of the total statutory number of Deputies, in so far as provisions of this Constitution do not contain other rules.

**ARTICLE 33**—The Deputies have the right of addressing interpellations to the Government or to individual Ministers, in the manner prescribed by the standing rules. A Minister is bound to answer, within six weeks, orally or in writing, or submit a statement wherein he justifies his failure to give an answer to the point. At the request of those addressing the interpellation, the answer must be communicated to the Sejm. The Sejm may make the answer the subject of debate and vote.

**ARTICLE 34**—The Sejm may form and appoint, for the investigation of individual cases, extraordinary committees empowered to hear the interested parties, as well as to summon witnesses and experts. The competence and powers of such committees will be determined by the Sejm.

**ARTICLE 35**—Every bill passed by the Sejm will be submitted to the Senate for consideration. If the Senate, within thirty days from the day on which a passed bill has been delivered to it, does not raise any objections to the bill, the President of the republic will direct the publication of the statute. Upon the motion of the Senate, the President of the republic may direct the publication of the statute before the lapse of the thirty days.

If the Senate decides to alter or reject a bill passed by the Sejm, it must announce this to

the Sejm within the aforesaid thirty days, and must return the bill to the Sejm with the proposed changes within the following thirty days.

If the Sejm votes by an ordinary majority, or by a majority of eleven-twentieths of those voting, the changes proposed by the Senate, the President of the republic will direct the publication of the statute in the wording determined by the second vote of the Sejm.

**ARTICLE 36**—The Senate is composed of members elected by the individual Voyerodships, by universal, secret, direct, equal and proportional voting. Every Voyerodship forms one constituency, and the number of Senators is equal to one-fourth of the number of members of the Sejm, in proportion to the number of inhabitants. The right of electing to the Senate is enjoyed by every elector for the Sejm who, on the day of the proclamation of the elections, is thirty years of age and has on that day been a resident of the electoral district for at least one year; the right of voting is not lost by newly settled colonists who have left their former place of residence, availing themselves of the agrarian reform; neither is that right lost by workmen who have changed their place of residence as a result of changing their place of occupation, or by State officials transferred by their superior authorities. Eligibility is enjoyed by every citizen who has the right of voting for the Senate, not excluding members of the army in active service, provided that citizen is 40 years of age on the day of the proclamation of the elections.

The term of the Senate begins and ends with the term of the Sejm.

No one may be at the same time a member of the Sejm and of the Senate.

**ARTICLE 37**—The provisions contained in Articles 14, 15, 16, 17, 19, 20, 21, 22, 23, 24, 27, 28, 29, 30, 31, 32 and 33 have analogous application to the Senate and to its members, respectively.

**ARTICLE 38**—No statute may be in opposition to this Constitution or violate its provisions.

### SECTION III.—EXECUTIVE POWER

**ARTICLE 39**—The President of the republic is elected for seven years by the absolute majority of the votes of the Sejm and the Senate united in National Assembly. The National Assembly is convoked by the President of the republic in the last three months of his seven years' term of office. If the convocation has not taken place thirty days before the end of the seven years' term, the Sejm and the Senate, upon the invitation of the Marshal of the Sejm and under his Chairmanship, unite automatically in National Assembly.

**ARTICLE 40**—Should the President of the republic be unable to perform the duties of his office, or should the office of the President of the republic become vacant through death, resignation, or some other reason, the Marshal of the Sejm will act as his Deputy.

**ARTICLE 41**—In case the office of the President of the republic becomes vacant, the Sejm and the Senate, upon the invitation of the Marshal of the Sejm and under his Chairmanship,

at once unite automatically in a National Assembly for the purpose of electing a President.

Should the Sejm be dissolved at the moment when the office of President of the republic becomes vacant, the Marshal of the Sejm will direct without delay new elections to the Sejm and the Senate.

**ARTICLE 42**—If the President of the republic does not perform the duties of his office for three months, the Marshal will without delay convoke the Sejm and submit to its decision the question whether the office of the President of the republic is to be declared vacant.

The decision to declare the office vacant is taken by a majority of three-fifths of the votes in the presence of at least one-half of the statutory number of Deputies; that is, the number prescribed by the Law of Elections.

**ARTICLE 43**—The President of the republic exercises the executive power through Ministers responsible to the Sejm and through officials subordinated to the Ministers.

Every official of the republic must be subordinate to a Minister, who is responsible to the Sejm for the former's actions.

The President of the Council of Ministers countersigns the appointment of officials of the civil Cabinet of the President of the republic, and is responsible for their actions to the Sejm.

**ARTICLE 44**—The President of the republic signs the statutes jointly with the competent Ministers, and directs the publication of the statutes in the Journal of the Laws of the republic.

The President of the republic has the right to issue, for the purpose of executing the statutes and with reference to the statutory authorization, executive ordinances, directions, orders and prohibitions, and to insure their execution by the use of force.

The Ministers and the authorities subordinate to them have the same right in their respective fields of jurisdiction.

Every governmental act of the President of the republic requires for its validity the signature of the President of the Council of Ministers and of the competent Minister, who, by countersigning the act, assume the responsibility therefor.

**ARTICLE 45**—The President of the republic appoints and recalls the President of the Council of Ministers; on the latter's motion he appoints and recalls Ministers, and on the motion of the Council of Ministers makes appointments to the civil and military offices reserved by statutes.

**ARTICLE 46**—The President of the republic is at the same time the supreme head of the armed forces of the State, but he may not exercise the chief command in time of war.

The Commander-in-Chief of the armed forces of the State, in case of war, is appointed by the President of the republic, on the motion of the Council of Ministers, presented by the Minister of Military Affairs, who is responsible to the Sejm for the acts connected with the command in time of war, as well as for all affairs of military direction.

**ARTICLE 47**—The right to reprieve and to

mitigate punishment, and to abolish the consequences of criminal conviction in individual cases, belongs to the President of the republic.

The President may not exercise this right in the case of Ministers convicted upon impeachment by the Sejm.

Amnesty may be granted only by statute.

**ARTICLE 48**—The President of the republic, in foreign relations, receives diplomatic representatives of foreign States and sends diplomatic representatives of the Polish State to foreign States.

**ARTICLE 49**—The President of the republic makes treaties with other States and brings them to the notice of the Sejm.

Commercial and customs treaties, as well as treaties which impose a permanent financial burden on the State, or contain legal rules binding on the citizens, or change the frontiers of the State, also alliances, require the consent of the Sejm.

**ARTICLE 50**—The President of the republic may declare war and conclude peace only after obtaining the consent of the Sejm.

**ARTICLE 51**—The President of the republic is not responsible either to Parliament or at civil law.

For betraying the country, violating the Constitution, or for criminal offenses, the President of the republic may be made responsible only by the Sejm by a vote of a majority of three-fifths in the presence of at least one-half of the statutory number of Deputies. The cause is heard and the sentence given by the Court of State, according to the rules of a special statute. Immediately upon his impeachment before the Court of State, the President of the republic is suspended from office.

**ARTICLE 52**—The President of the republic receives a salary according to the rules of a special statute.

**ARTICLE 53**—The President of the republic may not hold any other office or be a member of the Sejm or the Senate.

**ARTICLE 54**—Before assuming office the President of the republic takes his oath in the National Assembly, in the following terms:

"I swear to Almighty God, One in the Holy Trinity, and I vow to Thee, Polish nation, that while holding the office of President of the republic I will keep and defend faithfully the laws of the republic and above all the constitutional law; that I will serve devotedly, with all my power, the general good of the nation; that I will avert, watchfully, from the State all evil and danger; that I will guard steadfastly the dignity of the name of Poland; that I will hold justice toward all citizens without distinction as the highest virtue; that I will devote myself undividedly to the duties of office and service. So help me God and the Holy Martyrdom of His Son. Amen"

**ARTICLE 55**—The Ministers form the Council of Ministers under the Chairmanship of the President of the Council of Ministers.

**ARTICLE 56**—The Council of Ministers bears the joint constitutional and parliamentary responsibility for the general direction of the activities of the Government.

Apart from that, each Minister is individually responsible, in his domain, for his activities in office; that is, as well for their conformity with the Constitution and the other statutes of the State, and for the activities of the subordinate organs, as for the direction of his policies.

**ARTICLE 57**—Within the same limits, the Ministers are jointly and individually responsible for the governmental acts of the President of the republic.

**ARTICLE 58**—The parliamentary responsibility of the Ministers is enforced by the Sejm by an ordinary majority. The Council of Ministers or any individual Minister will resign at the request of the Sejm.

**ARTICLE 59**—The constitutional responsibility of the Ministers and the way of its realization will be determined by a special statute.

The decision to impeach a Minister can be made only in the presence of at least one-half the statutory number of Deputies and by a majority of three-fifths of the votes cast.

The causes are heard and judgment is passed by the Court of State. A Minister cannot evade his constitutional responsibility by resigning his office. Immediately upon his impeachment, the Minister is suspended from office.

**ARTICLE 60**—The Ministers and officials delegated by them, have the right to take part in the meetings of the Sejm, and to speak out of the turn of those figuring on the list of speakers; they may take part in the vote if they are Deputies.

**ARTICLE 61**—The Ministers may not hold any other office or participate in the governing or controlling bodies of societies and institutions which work for profit.

**ARTICLE 62**—Should the office of a Minister be held by a provisory head of the Ministry, he will be subject to all the rules concerning the office of a Ministry.

The President of the Council of Ministers will, in case of need, appoint one of the Ministers his deputy.

**ARTICLE 63**—A special statute will determine the number, competence, and mutual relation of the Ministers, as well as the competence of the Council of Ministers.

**ARTICLE 64**—The Court of State is composed of the First President of the Supreme Court as Chairman, and of twelve members, eight of whom are elected by the Sejm and four by the Senate from outside their own membership.

To membership in the Court of State are eligible persons who do not hold any State office and are in full possession of civil rights.

The election of the members of the Court of State is carried out by the Sejm and the Senate immediately upon the election of their officers for the whole term of the Sejm.

**ARTICLE 65**—For administrative purposes, the Polish State will be divided by statute into Voyerodships, districts, and urban and rural communes, which will at the same time be the units of territorial self-government

The units of self-government may combine into unions in order to accomplish tasks which belong to the domain of self-government.

Such unions may obtain the character of bodies of public law only by special statute.

**ARTICLE 66**—The administration of the State will be organized on the principle of decentralization, organs of State administration in the individual territorial units being, as far as possible, joined in one official body under one superior, and on the principle that within the limits determined by statutes, citizens elected for this purpose shall participate in the discharge of the duties of such official bodies.

**ARTICLE 67**—The right of determining affairs belonging to the domain of self-government rests with elected councils. The executive functions of Voyerodship and district self-government rest with organs formed by adding to boards elected by representative bodies, representatives of State administrative authorities, under the Chairmanship of the latter.

**ARTICLE 68**—A special statute will create, in addition to territorial self-government, economic self-government, for the individual fields of economic life—namely, Chambers of Agriculture, Commerce, Industry, Arts and Crafts, Hired Labor, and others, united into a Supreme Economic Council of the republic, the collaboration of which with State authorities, in directing economic life and in the field of legislative proposals, will be determined by statutes.

**ARTICLE 69**—The sources of revenue of the State and of self-government organizations respectively will be strictly delimited by statutes.

**ARTICLE 70**—The State will exercise supervision over self-government activities through superior self-government boards; such supervision may, however, be partially delegated by statute to administrative courts.

Statutes will determine the cases in which decisions of self-government organs may exceptionally require confirmation by superior self-government organs or by Ministries.

**ARTICLE 71**—An appeal from decisions of State and self-government organs will be allowed only to one superior body, unless other provisions are made by statutes.

**ARTICLE 72**—Statutes will put into effect the principle that from penal decisions of administrative authorities, made in the first instance, the parties concerned will have the right to appeal to the competent court.

**ARTICLE 73**—For the purpose of passing upon the legality of administrative acts in the field of State, as well as of self-government administration, a special statute will create Administrative Courts, basing their organization on the co-operation of (lay) citizens and (professional) Judges, and culminating in a Supreme Administrative Court.

## SECTION IV.—JUDICIARY

**ARTICLE 74**—The courts administer justice in the name of the Republic of Poland.

**ARTICLE 75**—The organization, jurisdiction and procedure of all courts will be defined by legislation.

**ARTICLE 76**—The President of the republic appoints the Judges, unless a different provision

is made by statute, but Justices of the Peace are as a rule elected by the population.

Judicial office is accessible only to persons who possess the qualifications required by law.

**ARTICLE 77**—In the exercise of their judicial office, the Judges are independent and subject only to statutes.

Judicial decisions may not be changed either by the legislative power or by the Executive power.

**ARTICLE 78**—A Judge may be removed from office, suspended from office, transferred to a different place of office, or pensioned, against his own will, by judicial decision only, and only in cases provided by statute.

This rule does not apply in the case of the transfer of a Judge to a different place, or his pensioning owing to a change in the organization of the courts decided upon by statute.

**ARTICLE 79**—Judges may not be criminally prosecuted or be deprived of their freedom without the previous consent of the court assigned by statute, unless they are caught in the act, but even in this last case the court may demand that the arrested Judge be freed without delay.

**ARTICLE 80**—A special statute will define the peculiar position of the Judges, their rights and duties, as well as their compensation.

**ARTICLE 81**—The courts have not the right to inquire into the validity of duly promulgated statutes.

**ARTICLE 82**—The hearings before a determining court, as well in civil as in criminal cases, are public, except when statutes provide otherwise.

**ARTICLE 83**—Courts with juries will be called upon to determine cases of felonies entailing more severe punishment, and cases of political offenses. Statutes will define in detail the jurisdiction of courts with juries, the organization of such courts, and their procedure.

**ARTICLE 84**—A Supreme Court for judicial causes, civil and criminal, is hereby created.

**ARTICLE 85**—Special statutes will define the organization of military courts, their jurisdiction, procedure, and the rights and duties of the members of such courts.

**ARTICLE 86**—A special Competence Court [Tribunal of Conflicts] will be created by a statute to determine conflicts of jurisdiction between the administrative authorities and the courts.

## SECTION V.—GENERAL DUTIES AND RIGHTS OF CITIZENS

**ARTICLE 87**—A Polish citizen may not be at the same time a citizen of another State.

**ARTICLE 88**—Polish citizenship is acquired: (a) by birth if the parents are Polish citizens; (b) by naturalization granted by the competent State authority. Special statutes define other rules as to Polish citizenship, its acquisition and loss.

**ARTICLE 89**—Fidelity to the Republic of Poland is the first duty of a citizen.

**ARTICLE 90**—Every citizen has the duty of respecting and obeying the Constitution of the State and other valid laws and ordinances of the State and self-government authorities.

**ARTICLE 91**—All citizens are subject to military service; the character and manner, order and term of service, exemption from such duty, and any duties, contributions or services for military purposes, will be defined by legislation.

**ARTICLE 92**—It is the duty of all citizens to submit to any public burdens services and duties imposed by virtue of statute.

**ARTICLE 93**—All citizens are bound to respect legitimate authority and to facilitate the performance of its duties, as well as to perform conscientiously public duties to which they may be appointed by the nation or the proper authority.

**ARTICLE 94**—It is the duty of citizens to bring up their children as righteous citizens of the mother country, and to secure to them at least elementary education.

This duty will be defined more in detail by a special statute.

**ARTICLE 95**—The Republic of Poland guarantees on its territory, to all, without distinction of extraction, nationality, language, race or religion, full protection of life, liberty and property.

Foreigners enjoy, on condition of reciprocity, rights equal to those of citizens of the Polish State, and have duties equal to those of such citizens, unless statutes expressly require Polish citizenship.

**ARTICLE 96**—All citizens are equal before the law. Public offices are accessible in equal measure to all, on conditions prescribed by the law.

The Republic of Poland does not recognize privileges of birth or of estate, or any coats of arms, family or other titles, with the exception of those of learning, office or profession. A Polish citizen may not accept foreign titles or orders without the permission of the President of the republic.

**ARTICLE 97**—Limitations of personal liberty, especially search of person and arrest, are admissible only in cases prescribed by law, and in the manner defined by statutes, by virtue of an order from judicial authorities.

In case a judicial order cannot be issued immediately, it should be served, at the latest, within forty-eight hours, with a statement of the reasons of the search or arrest.

Arrested persons who have not been served within forty-eight hours with a written statement of the cause of arrest, signed by a judicial authority, regain their freedom at once.

The means of compulsion serving by which the administrative authorities may enforce their orders are determined in statutes.

**ARTICLE 98**—No one may be deprived of the court to which he is subject by law. Exceptional courts are admissible only in cases determined by statutes, which statutes must have been issued before the offense was committed. A citizen may be prosecuted and punishment inflicted only by virtue of a statute actually in force. Punishment involving physical suffering are not permitted and no one may be subjected to such punishment.

No statute may deprive a citizen of access to the courts for the purpose of demanding reparation for injury or damage.

**ARTICLE 99**—The Republic of Poland recognizes all property, whether belonging personally to individual citizens or collectively to associations of citizens, institutions, self-government organizations, and the State itself, as one of the most important bases of social organization and legal order, and guarantees to all citizens, institutions and associations protection of their property, permitting only in cases provided by a statute the abolition or limitation of property, whether personal or collective, for reasons of higher utility, against compensation. Only a statute may determine what property—and to what extent, for reasons of public utility—shall form the exclusive property of the State, and in how far rights of citizens and of their legally recognized associations to use freely land, waters, minerals and other treasures of nature, may be subject to limitations for public reasons.

The land, as one of the most important factors of the existence of the nation and the State, may not be the subject of unrestricted transfer (commerce). Statutes will define the right of the State to buy up land against the will of the owners, and to regulate the transfer of land, applying the principle that the agrarian organizations of the Republic of Poland should be based on agricultural units capable of regular production, and forming private property.

**ARTICLE 100**—The home and hearth of the citizen are inviolable. Infringements of this right by entering the home, searching it and taking papers or movables may, apart from the necessity of executing administrative orders based on a specific statutory authorization, take place only by order of judicial authorities, in the manner and in the cases prescribed by the statute.

**ARTICLE 101**—Every citizen has the liberty of selecting on the territory of the State his place of residence and abode, to move about and to emigrate, as well as to choose his occupation and profession, and to transport his property.

These rights may be restricted only by statute.

**ARTICLE 102**—Labor is the main basis of the wealth of the republic, and should remain under the special protection of the State.

Every citizen has the right to State protection for his labor, and in case of lack of work, illness, accident or debility, to the benefits of social insurance which will be determined by a special statute.

The State has the duty of making accessible also moral guidance and religious consolation to citizens under its immediate care in public institutions, such as educational institutions, barracks, hospitals, prisons and charitable homes.

**ARTICLE 103**—Children without sufficient parental care, neglected with respect to education, have the right to State aid within the limits to be determined by statute.

Parents may not be deprived of authority over their children except by judicial decision.

Special statutes determine the protection of motherhood.

Children under 15 years of age may not be wage earners; neither may women be employed at night, or young laborers be employed in industries detrimental to their health.

Permanent employment of children and young

people of school age for wage earning purposes is forbidden.

**ARTICLE 104**—Every citizen has the right to express freely his ideas and convictions in so far as he does not thereby violate legal provisions.

**ARTICLE 105**—Freedom of the press is guaranteed. Censorship of the system of licensing printed matter may not be introduced. Daily papers and other matter printed in the country may not be barred from the mails nor may their dissemination on the territory of the republic be restricted.

A special statute will define the responsibility for the abuse of this freedom.

**ARTICLE 106**—The secrecy of letters and other correspondence may be infringed upon only in cases provided by law.

**ARTICLE 107**—Citizens have the right of presenting individual or collective petitions to all State and self-government representative bodies and public authorities.

**ARTICLE 108**—Citizens have the right of combining, meeting and forming associations and unions. The exercise of these rights is defined by statutes.

**ARTICLE 109**—Every citizen has the right of preserving his nationality and developing his mother-tongue and national characteristics.

Special statutes of the State will guarantee to minorities in the Polish State the full and free development of their national characteristics, with the assistance of autonomous minority unions, endowed with the character of public law organizations, within the limits of unions of general self-government.

The State will have in regard to their activity the right of control and of supplementing their financial means in case of need.

**ARTICLE 110**—Polish citizens belonging to national, religious or linguistic minorities, have the same right as other citizens of founding, supervising and administering at their own expense, charitable, religious and social institutions, schools and other educational institutions, and of using freely therein their language, and observing the rules of their religion.

**ARTICLE 111**—Freedom of conscience and of religion is guaranteed to all citizens. No citizen may suffer a limitation of the rights enjoyed by other citizens, by reason of his religion and religious convictions.

All inhabitants of the Polish State have the right of freely professing their religion in public as well as in private, and of performing the commands of their religion or rite, in so far as this is not contrary to public order or public morality.

**ARTICLE 112**—Religious freedom may not be used in a way contrary to statutes. No one may evade the performance of public duties by reason of his religious beliefs. No one may be compelled to take part in religious activities or rites unless he is subject to parental or guardian's authority.

**ARTICLE 113**—Every religious community recognized by the State has the right of organizing collective and public services; it may conduct independently its internal affairs; it may possess and acquire movable and immovable property, administer and dispose of it; it remains

in possession and enjoyment of its endowments and funds, and of religious, educational and charitable institutions. No religious community may, however, be in opposition to the statutes of the State.

**ARTICLE 114**—The Roman Catholic religion, being the religion of the preponderant majority of the nation, occupies in the State the chief position among enfranchised religions. The Roman Catholic Church governs itself under its own laws. The relation of the State to the Church will be determined on the basis of an agreement with the Apostolic See, which is subject to ratification by the Sejm.

**ARTICLE 115**—The churches of the religious minorities and other legally organized religious communities govern themselves by their own laws, which the State may not refuse to recognize unless they contain rules contrary to law.

The relation of the State to such churches and religions will be determined from time to time by legislation after an understanding with their legal representatives.

**ARTICLE 116**—The recognition of a new or hitherto not legally recognized religion may not be refused to religious communities whose institutions' teachings and organizations are not contrary to public order or public morality.

**ARTICLE 117**—Learned investigations and the publication of their results are free. Every citizen has the right to teach, to found a school or educational institution and to direct it if he complies with the requirements laid down by statute concerning the qualifications of teachers, the safety of the child intrusted to him, and a loyal attitude toward the State. All schools and educational institutions, public as well as private, are subject to supervision by State authorities within the limits prescribed by statutes.

**ARTICLE 118**—Within the limits of the elementary school, instruction is compulsory for all citizens of the State. A statute will define the period, limits and manner of acquiring such education.

**ARTICLE 119**—Teaching in State and self-government schools is gratuitous.

The State will insure to pupils who are exceptionally able, but not well-to-do, scholarships for their maintenance in secondary and academic schools.

**ARTICLE 120**—Instruction in religion is compulsory for all pupils in every educational institution, the curriculum of which includes instruction of youth under 18 years of age, if the institution is maintained wholly or in part by the State, or by self-government bodies. The direction and supervision of religious instruction in schools belongs to the respective religious community, reserving to the State educational authorities the right of supreme supervision.

**ARTICLE 121**—Every citizen has the right to compensation for damage inflicted upon him by civil or military organs of State authorities, by an official act not in accordance with the right or duties of the service. The State is responsible for the damage, jointly with the guilty organs; action may be brought against the State and against officials, independently of any permission by public authority. Communes and other self-government bodies, as well as their

organs, are responsible in the same manner. Special statutes will define the application of this principle.

**ARTICLE 122**—The rules as to citizens' rights apply also to persons belonging to the armed force. Special military statutes define exceptions to this principle.

**ARTICLE 123**—Armed force may be used only by request of a civil authority under strict obedience to statutes, for the purpose of putting down disturbances or of enforcing the execution of legal rules. Exceptions to this principle are admissible only by virtue of statutes on the state of siege and of war.

**ARTICLE 124**—A temporary suspension of citizens' rights; of personal liberty (Article 97), of inviolability of home and hearth (Article 100), of freedom of the press (Article 105), of secrecy of correspondence (Article 106), of the right of combining, meeting and forming associations (Article 108), may take place for the whole territory of the State or for localities in which it may prove necessary for reasons of public safety.

Such suspension may be directed only by the Council of Ministers, by permission of the President of the republic, during a war or when an outbreak of war threatens, as well as in case of internal disturbances or of widespread conspiracies which bear the character of high treason and threaten the Constitution of the State or the safety of the citizens.

Such a decision of the Council of Ministers, if made while the Sejm is in session, must be immediately submitted to the Sejm for confirmation. If such a decision, to apply on a territory which comprises more than one Voyevodship be issued during an interval between meetings of the Sejm, the Sejm meets automatically within eight days from the publication of the decision in order to take the proper step.

Should the Sejm refuse confirmation, the state of siege immediately loses its binding force. If the Council of Ministers directs a state of siege after the expiration of the term of the Sejm, or after dissolution of the Sejm, the decision of the Government must be submitted to the newly elected Sejm without delay, at its first meeting.

These principles will be defined more in detail by a statute on the state of siege.

A statute on the state of war will define the principles of a temporary suspension of the above enumerated rights of citizens in time of war on the territory affected by war operations.

**ARTICLE 125**—A change in the Constitution may be voted only in the presence of at least one-half the statutory number of Deputies or Senators respectively, by a majority of two-thirds of the votes.

The motion to change the Constitution must be signed by at least one-fourth of the total statutory number of Deputies and notice of such a motion must be given at least fifteen days in advance.

The second Sejm, which will meet on the basis of this Constitution, may revise this constitutional law by its own vote, taken by a majority of three-fifths in the presence of at least one-half the statutory number of Deputies.

**ARTICLE 126**—This Constitution has binding

force from the day of its publication, or in so far as the realization of its individual provisions is dependent on the issuing of special statutes on the day of their going into force.

All legal rules and institutions now in force

which do not agree with the rules of this Constitution, will, within a year from the voting of this Constitution, be submitted to the legislative body in order to be brought into harmony with the Constitution by legislation.

## CHINA "MUDDLING THROUGH"

*Harassed by bankruptcy, famine and civil war, and deadlocked with Japan, the nation still "carries on" and refuses to accept the foreign loans offered by the consortium*

[PERIOD ENDED APRIL 15, 1921]

KIPLING, with India in mind, sang, "East is East, and West is West."

His comparison might well be applied at the present day to China, for that vast empire, with its millions of souls, still manages to "muddle through," despite conditions of demoralization, under which another race less stoical and fatalistic would long ago have succumbed.

Though still split into two nations by the opéra bouffe civil war between the North and the South and with an almost empty treasury, China still holds to her resolution not to treat with Japan over the return of Shantung, and maintains the economic boycott on Japanese goods, which is perhaps more harmful to the Chinese themselves than to the Japanese. The foreign consortium offers them funds, and they prefer to make their loans from Chinese bankers. A state of war exists between Peking and Canton; and yet Envoys and Ambassadors tranquilly interchange visits in all security, and continue endless discussions which seem to lead nowhere. A Chinese garrison is driven out of the capital of Mongolia by a mixed force of Mongolian insurgents and Russian adventurers, and the Tuchuns calmly disregard the Government's orders to retake it or even to organize a punitive expedition, and the Government accepts the situation. The peasants and farmers are robbed and their homes looted by the embattled soldiers, who do everything but fight, and no redress can be obtained. Famine stalks through great provinces, and pestilence rages, and China, as a whole, looks on unmoved. East is east and the great Mongol race, so different from the alert and dangerously active yellow men from across

the strait, continues impassively to go on its ancient way.

And yet, when one studies it, there seems to be a certain logic in the policy which China has been developing. No yielding on Shantung has become a national slogan, and the Chinese Government knows only too well, as a March telegram to the Chinese Minister in Germany showed again, that the opening of any direct negotiations would be dangerous in view of the state of public opinion. Similarly the Government refused to open negotiations with Japan over the occupation of Hunchun and Chientao, on the Korean-Manchurian border, dispatched several thousand troops to the district to maintain order, and repeatedly declared that the presence of Japanese soldiers there was unnecessary. This policy was well advised and effective. It was officially announced from Tokio toward the end of March that the last remaining Japanese forces would be withdrawn on April 1.

As regards the civil war, China's way may be unconventional, and yet perhaps be best adapted to the Chinese character and to the situation that prevails. Actual fighting has virtually ceased. Envoys from Canton and Peking have been admitted to the opposing capital of each section "to talk things over." There is no doubt that many leaders in both Governments are sincerely anxious to bring about a settlement, despite the unyielding attitude of Sun Yat-sen, first Provisional President of China, who remains entrenched in Canton, swearing undying hostility to the Peking Government, which he declares to be corrupt and pro-Japanese.

The revolt of the Mongolians and their

capture of Urga, the capital of Mongolia, in February, was a serious matter for China; the Mongols, who owed their success in driving out the Chinese to the leadership of General Ungern, the associate of General Semenov, crowned the Hutukhtu or "Living Buddha" King of Mongolia on Feb. 25, when the independence of the country was proclaimed. General Ungern had about 500 Russians in his force, about forty Japanese, mostly of the officer class, many Buriats and several thousand Mongols. The Mongols were marching southward about March 18, and had occupied Ude, in the heart of the Gobi desert, sending a wave of alarm into neighboring regions.

Albert Sen, a Chinese telegrapher, who escaped from Urga and reached Peking around March 17, gave a clear and interesting report of the capture of the Mongolian capital. The Chinese garrison, he said, put up a most feeble resistance, though threatened with extermination. The soldiers looted the city before they fled. More than 3,000 of the garrison were slaughtered by the Mongols, who entered the town triumphantly, and were enthusiastically received as liberators. The invaders looted the Chinese shops and banks. When General Ungern arrived, his first act was to hang fifty of the looters. It was also reported that he had ordered the massacre of all Jews and Bolsheviks. Practically all the arms, equipment and stores of the garrison were captured. The wireless station was only slightly damaged.

Financially the Peking Government was at ebb tide, though the Minister of Finance, Mr. Chow Tze-chi, announced in February that the Government had made arrangements to tide over the new year. Large deficits had been met by borrowing on short-term Treasury bonds at high interest. Mr. Chow faced the fact that during the next year the Government must meet liabilities of \$300,000,000, and also vast sums for military and administrative purposes. Assuming that no disbandment of military forces will occur, these two items alone are estimated to total \$450,000,000, bringing the

net total of required expenditure up to \$750,000,000 for the coming fiscal year.

The Government was seeking to raise money through private Chinese bankers, as the foreign bankers represented in the consortium were asking terms which the Chinese Government was unwilling to accept. The Chinese bankers, seeing their opportunity, were bringing great pressure to bear to prevent any foreign loan that is not too big for them to handle themselves. They have organized their strength, and are prepared to shoulder a considerable portion of the Government's debts. A bankers' conference held in Shanghai in December, 1920, showed that the Chinese banks, at least forty of which are now organized on Western lines, realize fully the present situation; they intend, however, to deal with the Government only on strictly business principles, and to oppose by every means the ruinous methods that are getting the country more and more deeply into debt. Resolutions passed by them declared against resort to foreign loans, Treasury bonds or domestic bonds, and especially against the vast expenditure for an unnecessarily large army, which is useless, and worse than useless, "for the tale of mutinies, slaughter and banditry is incessant, and comes from every part of the country." The bankers declared that all these forces should be cut down to a minimum for the maintenance of peace and order. A loan of \$6,000,000 was made on good security for the purchase of railway stock in February, and was easily obtained, whereas another loan of \$4,000,000 for famine relief was obtained from foreign sources only after great haggling with the Legations over the imposition of a surtax on the revenues of the maritime customs.

It was reported on April 10 that China's famine was spreading. The average death rate daily in Honan was 1,000, while deaths in the six northern countries averaged 300 daily. Some 9,000,000 people were utterly destitute, and vast funds were urgently necessary. Charles R. Crane, American Minister to China, in a telegram sent to the State Department, painted an appalling situation. Further large funds were needed to carry the people through to the harvest.

# GERMANY'S SURRENDER ON REPARATIONS

*Detailed story of the allied ultimatum that brought about Germany's final agreement to pay a damage bill of \$33,000,000,000 and saved the Ruhr industrial district from French occupation—Germany's vain attempt to obtain American intervention—Why France still declines to demobilize her new army on the Rhine—Full text of the ultimatum*

THE interminable reparation drama reached its climax and dénouement on May 11, 1921, when Germany, in response to an allied ultimatum and an imminent threat of action by a French army, finally agreed to pay a total sum of \$33,000,000,000 for damage done by the German armies in the World War. This act of surrender was performed by a new German Government, headed by Dr. Julius Wirth, which replaced the Fehrenbach Government for the purpose. The terms had been drawn up by the allied Premiers in London, and transmitted in the form of an ultimatum, the essence of which was that if they were not accepted unconditionally by May 12 the whole Ruhr district, Germany's coal centre and industrial heart, would be occupied by the French Army supported by allied contingents, and held and administered as a guarantee for the payment of Germany's reparation debt. Such an occupation, already effected in part by the Allies, meant ruin to Germany, and she knew it. She had come to the end of her road, had her back to the wall, and could go no further. She accepted the new terms unconditionally, and the allied Premiers, to say nothing of Germany herself, breathed a deep sigh of relief.

The history of the allied dealings with Germany over the question of reparation covers fully two years. Conference after conference was held by the Premiers—at Spa, San Remo, Lympne, Hythe, Paris and London—to determine what the reparation payments should be, and how the Allies should move to compel Germany to make them. Plan after plan was adopted, only to be subsequently abandoned in view of Germany's attitude of unwillingness, her protests, her evasions, and her repeated failure to keep her promises.

At the London conference, held in Paris

in March, the allied leaders had laid down what they believed at that time were their final terms. Germany had countered with offers which were considered by all the Premiers as ridiculous. Dr. Walter Simons, the German Foreign Minister, declared that he could make no new offer, and he was told by Lloyd George in plain language that this meant the application of the penalties prescribed by the Treaty of Versailles. Dr. Simons returned to Germany and was received with cheers. France moved her army forward in the Rhineland, extending its occupation to Düsseldorf, Duisberg and Ruhrort; this, however, had no visible effect upon the German attitude of refusal. The French then announced that, with or without the support of their allies, they would occupy the whole Ruhr district by May 1 unless they received an unconditional acceptance of the London terms. Lloyd George was reluctant to proceed to this extremity, and his reluctance was reflected by Count Sforza, the Italian representative; France, however, was resolute. Grimly M. Briand, the French Premier, supported by almost unanimous French public opinion, awaited the coming of May.

Germany on April 21, in a last desperate effort to stave off intervention, sent an appeal to the United States Government to act as mediator. President Harding in reply declined to play the rôle of arbitrator, but stated that if Germany would make a new, reasonable offer, he would approach the allied Governments in the interest of world peace and strive to induce them to consider it. Greatly encouraged, Dr. Simons, the Foreign Minister, and Herr Fehrenbach, the Premier, whose Cabinet was already tottering from the violent attacks of the German reactionaries, drafted a new offer and cabled it to Washington. Its main features

were an offer to pay 50,000,000,000 gold marks and a demand for the removal of all penalties.

After careful consideration, reinforced with informal soundings of the Allies, the American President, through Secretary Hughes, cabled back to Germany that the new proposals were wholly unacceptable, and advised Germany to enter at once into direct contact with the allied Governments and to lay before them an adequate and satisfactory offer. The weakened Fehrenbach-Simons Cabinet was finished by this blow. It fell May 4. Meanwhile the Premiers met in London on the eve of the new occupation, and after six days' deliberations drafted a new plan of reparation payments, which was to be the ultimate word. Mr. Lloyd George and Count Sforza prevailed upon M. Briand to defer the invasion for another twelve days and to give Germany one last opportunity to comply with the allied demands. He consented unwillingly, fearful of the effect upon French opinion, which clamored for the invasion. The Premiers drew up their last offers and dispatched them to Germany in ultimatum form. The Germans were told that these proposals must be accepted without reservation by May 12 or the Ruhr district would be invaded and held.

#### TEXT OF THE ULTIMATUM

The ultimatum was handed on May 6 to Herr Sthamer, the German Ambassador in London, by Lloyd George in person. Its text was as follows:

The allied powers, taking note of the fact that despite the successive concessions made by the Allies since the signature of the Treaty of Versailles, and despite the warnings and sanctions (penalties) agreed upon at Spa and Paris, as well as of the sanctions announced at London and since applied, the German Government is still in default in fulfillment of the obligations incumbent upon it under the terms of the Treaty of Versailles as regards:

First, disarmament;

Second, the payment due May 1, 1921, under Article 235 of the Treaty, which the Reparation Commission already has called upon it to make at this date;

Third, the trial of war criminals, as further provided for by the allied notes of Feb. 13 and May 7, 1920, and,

Fourth, certain other important respects, notably those which arise under Articles 264 to 267, 269, 273, 321, 322 and 327 of the treaty, decide:

(a) To proceed from today with all necessary preliminary measures for the occupa-

tion of the Ruhr Valley by allied troops on the Rhine under the conditions laid down.

(b) In accordance with Article 235 of the Versailles Treaty, to invite the Allied Reparation Commission to notify the German Government without delay of the time and methods for the discharge by Germany of her debt, and to announce its decision on this point to the German Government by May 6, at the latest.

(c) To summon the German Government to declare categorically within six days after receiving the above decision its determination (1) to execute without reservation or condition its obligations as defined by the Reparation Commission, (2) to accept and realize without reservation or condition in regard to its obligations the guarantees prescribed by the Reparation Commission, (3) to execute without reservation or delay measures concerning military, naval and aerial disarmament, of which Germany was notified by the allied nations in their note of Jan. 29; those measures in the execution of which they have so far failed to comply with are to be completed immediately, and the remainder on a date still to be fixed, (4) to proceed without reservation or delay to the trial of war criminals, and also with the other parts of the Versailles Treaty which have not as yet been fulfilled.

(d) To proceed on May 12 with the occupation of the Ruhr Valley, and to undertake all other military and naval measures, should the German Government fail to comply with the foregoing conditions. This occupation will last as long as Germany continues her failure to fulfill the conditions laid down.

This ultimatum note was accompanied by the full allied terms, as laid down by the Reparation Commission, prescribing the time and manner for discharging the entire obligation. Briefly stated, they amount to this: Germany must pay the 132,000,000,000 gold marks (\$33,000,000,000) fixed by the Reparation Commission in accordance with the provisions of the Versailles Treaty, less sums already paid on the reparations account or subsequently credited on whatsoever basis.

To cover the whole payment, three sets of bonds are to be issued by Germany, secured on all the assets of the German Empire. The first issue is to be delivered by July 1, 1921; the second by Nov. 1; the third issue is to be held by the Reparations Commission until it is satisfied that Germany can pay the interest and sinking fund charges required. Interest payments are provided for at fixed periods. Until redemption of the bonds, Germany is to pay a yearly sum of 2,000,000,000 gold marks (\$500,000,000), as well as a 26 per cent. levy, or an equivalent sum, on the value of her exports as from

May 1, 1921; this amount is to be reducible as Germany discharges her obligations.

Within twenty-five days Germany must pay 1,000,000,000 marks in gold or in three-month bills or drafts; these payments are to be treated as the first two quarterly instalments due on Germany's liability of 2,000,000,000 marks yearly, with the 26 per cent. of exports, as above provided.

The other clauses concern mainly the appointment and duties of the special sub-commission, called the Commission on Guarantees, whose duty it will be to supervise the application of the funds assigned as security for the bond issues. These funds will be drawn from German maritime and land customs duties and import and export duties, as well as from the 26 per cent. prescribed on export duties, from indirect taxes or from any other source proposed by the German Government. This 26 per cent. is to be paid by the German Government to the exporter. The commission is explicitly charged not to interfere with the administration of the German Government.

### THE ALLIED TERMS

The full text of the reparations protocol is given below:

The Reparation Commission has, in accordance with Article 232 of the Treaty of Versailles, to define the time and manner for securing and discharging the entire obligation of Germany for reparation under Articles 231, 232 and 233 of the treaty, as follows:

This determination is without prejudice to the duty of Germany to make restitution under Article 238 or to other obligations under the treaty.

1. Germany will perform in the manner laid down in this schedule her obligation to pay the total fixed in accordance with Articles 231, 232 and 233 of the Treaty of Versailles by the commission, viz., 132,000,000,000 gold marks less (a) the amount already paid on account of reparation; (b) sums which may from time to time be credited to Germany in respect of State properties in ceded territory, &c., and (c) any sums received from other enemy or ex-enemy powers in respect of which the commission may decide that credit should be given to Germany, plus the amount of the Belgian debt to the Allies, the amounts of these deductions and additions to be determined later by the commission.

2. Germany shall create and deliver to the commission in substitution for bonds already delivered or delivered under Paragraph 12C of Annex 2, Part VIII., Treaty of Versailles, bonds hereafter described:

(A) Bonds for the amount of 12,000,000,000

gold marks. These bonds shall be created and delivered at the latest on July 1, 1921. There shall be an annual payment from funds to be provided by Germany as prescribed in this schedule in each year from May 1, 1921, equal in amount to 6 per cent. of the nominal value of the issued bonds, out of which there shall be paid interest at 5 per cent. per annum, payable half yearly on the bonds outstanding at any time, and the balance to a sinking fund for redemption of bonds by annual drawings at par. These bonds are hereinafter referred to as bonds of Series A.

(B) Bonds for a further amount of 38,000,000,000 gold marks. These bonds shall be created and delivered at the latest on Nov. 1, 1921. There shall be an annual payment from funds to be provided by Germany as prescribed in this schedule in each year from Nov. 1, 1921, equal in amount to 6 per cent. of the nominal value of the issued bonds, out of which there shall be paid interest at 5 per cent. per annum, payable half yearly, on the bonds outstanding at any time and the balance to a sinking fund for the redemption of the bonds by annual drawings at par. These bonds are hereinafter referred to as bonds of Series B.

(C) Bonds for 82,000,000,000 gold marks, subject to such subsequent adjustment by creation or cancellation of bonds as may be required under the first paragraph. These bonds shall be created and delivered to the Reparations Commission, without coupons attached, at the latest on Nov. 1, 1921. They shall be issued by the commission as and when it is satisfied that the payments which Germany is required to make in pursuance of this schedule are sufficient to provide for the payment of interest and sinking fund on such bonds. There shall be an annual payment from funds to be provided by Germany as prescribed in this schedule in each year from the date of issue by the Reparation Commission equal in amount to 6 per cent. of the nominal value of the issued bonds, out of which shall be paid interest at 5 per cent. per annum, payable half yearly, on the bonds outstanding at any time, and the balance to a sinking fund for redemption of the bonds by annual drawings at par. The German Government shall supply to the commission coupon sheets for such bonds as and when issued by the commission. These bonds are hereinafter referred to as bonds of Series C.

3. The bonds provided for in Article 2 shall be signed by the German Government as bearer bonds, in such form and in such denominations as the commission shall prescribe for the purpose of making them marketable and shall be free of all German taxes and charges of every description, present or future.

Subject to the provisions of Articles 248 and 251, Treaty of Versailles, these bonds shall be secured on the whole assets and revenues of the German Empire and the German States, and in particular on the assets and revenues specified in Article 7 of

this schedule. The service of bonds A, B and C shall be a first, second and third charge, respectively, on said assets and revenues, and shall be met by payments to be made by Germany under this schedule.

4. Germany shall pay in each year until the redemption of bonds provided for in Article 2 by means of a sinking fund attached thereto: (1) The sum of 2,000,000,000 gold marks. (2) (a) A sum equivalent to 25 per cent. of the value of her exports in each period of twelve months, starting from May 1, 1921, as determined by the commission, or (b) alternately an equivalent amount as fixed in accordance with any other index proposed by Germany and accepted by the commission. (3) A further sum equivalent to 1 per cent. of the value of her exports, as above defined, or, alternatively, an equivalent amount fixed as provided in Paragraph B above. Provided always that when Germany shall have discharged her obligations under this schedule, other than her liability in respect of outstanding bonds, the amount to be paid in each year under this paragraph shall be reduced to the amount required in that year to meet the interest and sinking fund on the bonds then outstanding.

Subject to the provisions of Article 5, the payments to be made in respect of Paragraph 1 above shall be made quarterly on or before Jan. 15, April 15, July 15 and Oct. 15 each year, and payments in respect of Paragraphs 2 and 3 above shall be made quarterly on or before Feb. 15, May 15, Aug. 15 and Nov. 15 and calculated on the basis of exports in the last quarter but one preceding that quarter, the first payment to be made on or before Nov. 15, 1921, to be calculated on the basis of exports in the three months ending July 31, 1921.

5. Germany shall pay within twenty-five days from this notification 1,000,000,000 gold marks, in gold or approved foreign currencies or approved foreign bills or in drafts at three months on the German Treasury, endorsed by approved German banks and payable in pounds sterling in London, in francs in Paris, in dollars in New York or any currency in any other place designated by the commission. These payments will be treated as the two first quarterly instalments of payments provided in Article 4, Paragraph 1.

6. The commission will within twenty-five days from this notification, in accordance with Paragraph 12A, Annex 2, of the treaty as amended, establish a special sub-commission to be called the Committee on Guarantees. The Committee on Guarantees will consist of representatives of the allied powers now represented on the Reparation Commission, including a representative of the United States in the event of that Government desiring to make an appointment.\* The committee shall comprise not more than three representatives of nationals of other powers whenever it shall appear to the commission that a sufficient portion of the bonds to be issued under this schedule is held by na-

tionals of such powers to justify their representation on the Committee on Guarantees.

7. The Committee on Guarantees is charged with the duty of securing the application of Articles 241 and 248 of the Treaty of Versailles.

It shall supervise the application to the service of the bonds provided for in Article II, of the funds assigned as security for the payments to be made by Germany under Paragraph 4. The funds to be assigned shall be: (a) The proceeds of all German maritime and land customs and duties, and in particular the proceeds of all import and export duties. (b) Proceeds of a levy of 25 per cent. on the value of all exports from Germany except those exports upon which a levy of not less than 25 per cent. is applied under legislation referred to in Article IX. (c) The proceeds of such direct or indirect taxes or any other funds as may be proposed by the German Government and accepted by the Committee on Guarantees in addition to, or in substitution for, the funds specified in a or b above.

The assigned funds shall be paid to the accounts to be opened in the name of the committee and supervised by it in gold or in foreign currencies approved by the committee. The equivalent of the 25 per cent. levy referred to under (b) of the preceding paragraph shall be paid in German currency by the German Government to the exporter.

The German Government shall notify to the Committee on Guarantees any proposed action which may tend to diminish the proceeds of any of the assigned funds and shall, if the committee demands it, substitute some other approved funds.

The Committee on Guarantees shall be charged further with the duty of conducting on behalf of the commission the examination provided for in Paragraph 12 B of Annex 2 to Part VIII. of the Treaty of Versailles, and of verifying on behalf of the commission and, if necessary, of correcting the amount declared by the German Government as the value of German exports for the purpose of calculation of the sum payable in each year or quarter under Article IV., Paragraph 2, and the amounts of the funds assigned under this article to the service of the bonds. The committee shall be entitled to take such measures as it may deem necessary for the proper discharge of its duties.

The Committee on Guarantees is not authorized to interfere in the German administration.

8. In accordance with Paragraph 19, Clause 2 of Annex 2, as amended, Germany shall on demand, subject to prior approval of the commission, provide such material and labor as any of the allied powers may require

\* A formal invitation to the United States Government to send representatives to all future allied conferences was sent by the Entente powers on May 5. President Harding's acceptance was transmitted on the following day, and Roland W. Boyden was designated to act as official observer with the Reparation Commission.

toward restoration of the devastated areas of that power, or enable any allied power to proceed with the restoration or the development of its industrial or economic life. The value of such material and labor shall be determined in each case by a valuer appointed by Germany and a valuer appointed by the power concerned and, in default of an agreement, by a referee nominated by the commission. This provision as to valuation does not apply to deliveries under Annexes 3, 4, 5 and 6 to Part VIII. of the treaty.

9. Germany shall make every necessary measure of legislative and administrative action to facilitate the operation of the German Reparation (Recovery) act of 1921 in force in the United Kingdom and of any similar legislation enacted by any allied power so long as such legislation remains in force.\*

The payments effected by the operation of such legislation shall be credited to Germany on account of payments to be made by her under Article IV., Clause 2. The equivalent in German currency shall be paid by the German Government to the exporter.

10. Payment for all services rendered, all deliveries in kind and all receipts under Article IX. shall be made to the Reparation Commission by the allied power receiving the same in cash or current coupons within one month of the receipt thereof and shall be credited to Germany on account of payments to be made by her under Article IV.

11. The sum payable under Article IV., Clause 3, and any surplus of receipts by the commission under Article IV., Clauses 1 and 2, in each year not required for payment of interest and sinking fund on bonds outstanding in that year, shall be accumulated and applied so far as they will extend, at such times as the commission may think fit, by the commission in paying simple interest not exceeding 2½ per cent. per annum from May 1, 1921, to May 1, 1926, and thereafter at a rate not exceeding 5 per cent. on the balance of the debt not covered by bonds then issued. The interest on such balance of the debt shall not be cumulative. No interest therefor shall be payable otherwise than as provided in this paragraph.

12. The present schedule does not modify the provisions for securing the execution of the Treaty of Versailles which are applicable to the stipulations of the present schedule.

### LLOYD GEORGE'S EXPLANATION

The whole scheme laid down in the above provisions was interpreted by Premier Lloyd George before the House of Commons on May 5. After an exposé of the general situation, covering all Germany's defaults in respect to payments pledged, as well as dis-

armament and the trial of war criminals, the Premier laid before the House the new plan which Germany was called upon to accept. The salient passages of his explanation follow:

I have first of all to mention the scheme of payment which has been agreed to by the Supreme Council and adopted by the Reparation Commission and which will be remitted by the Reparation Commission to the German representatives tonight.

The experts of the allied powers framed very carefully a scheme. The Paris scheme was one of forty-two annuities beginning at £100,000,000 per annum and increasing at intervals of two or three years until at the end of eleven years a maximum of £300,000,000 per annum would be reached. Those were fixed annuities, but in addition to that there was to be a variable sum equal to 12 per cent. on German exports.

The proposal of the London conference is that there should be one fixed sum, and that it should be £100,000,000, but that there should be a variable sum added to that per annum which would be equal to 26 per cent. of German exports. Whether that is higher or lower than the Paris proposal depends upon German prosperity. If German exports do not improve, then it will be considerably lower than the Paris total. If German exports approximate to pre-war figures it will be equal to the Paris figure, and only in the event of Germany becoming exceedingly prosperous will that figure exceed the Paris figure. The whole point of the new scheme is that Germany's annual liabilities will vary according to her capacity to discharge them.

In order to enable Germany to meet her liabilities and to adapt her liabilities to her capacity, and also to enable the Allies to have something in hand to raise money for reparations, it is proposed that three categories of bonds shall be issued.

The first, Series A, will be bonds for £600,000,000 gold, to be delivered by July 1. They will bear interest of 5 per cent. and 1 per cent. accumulating for a sinking fund. Series B bonds will be for 38,000,000,000 gold marks, equal to £1,900,000,000 gold, to be delivered by the first of September. Series C bonds for the balance, estimated at 82,000,000,000 gold marks, equal to £4,100,000,000, are to be delivered by the first of November, this year, but with this important reservation: That the commission is only to attach coupons and issue these bonds as and when it is satisfied that the payments to be made under the agreement are sufficient to provide for interest and sinking fund.

The first three series will be issued this year. The Reparation Commission will decide from time to time as to the capacity of Germany to pay and issue bonds accordingly.

Now I come to a very important question, which gave us a great deal of anxiety.

\* It was later given out on German authority that the levy of 50 per cent. on German exports would be virtually suspended in favor of the 25 per cent. laid down by the new terms. No official allied action on this point had been announced when these pages went to press.—Ed.

It is clear that at first there will not be enough to pay interest upon the whole of the amount due. The debt is £6,600,000,000, and 6 per cent. upon that will be £400,000,000. Then comes the question, What is to be done with the interest in respect of the unissued bonds?

Under the treaty Germany was debited with interest at 5 per cent. upon the whole of the debt due from her, with certain powers given to the Reparation Commission to vary the amount. What is proposed to be done is this: That 25 per cent. of exports will be devoted to the payment of the bonds which will be issued. If there is a balance over that for any given year it is to be devoted to payment of interest upon the unissued bonds. But, in addition to that, 1 per cent. will be charged on exports, and the surplus over and above what is available for payment of bonds issued, plus 1 per cent. of the value of her exports, will be devoted to pay interest on unissued bonds.

Beyond that interest will be wiped out. It will not be debited to Germany. It won't accumulate as against her. That is a very important question.

Now I come to the method of payment. All those who have given real attention to this subject know that the practical difficulty with which we are confronted is for Germany to pay outside her frontiers. Payment of a debt of £6,600,000,000 is a serious matter inside one's own country, but to pay outside one's own country even a much smaller amount is baffling to the ingenuity of many financiers.

There will be, first of all, payments in kind. The first payment will be within twenty-five days, a payment of £50,000,000. Germany on the whole has accepted that in her communication to America. There will be no practical difficulty about that. It will be paid in gold, or three months' foreign bills, or Treasury grants endorsed by German banks on London, Paris and New York.

The next item of payment will be in kind—coal. It is coal to make up for the coal which would be produced at present if the French and Belgian mines had not been destroyed. There will also be aniline dyes, timber and material for the reconstruction of France. That I am very glad has been agreed to. I think it is a very sensible method.

To a certain extent there may be labor. That presents very exceptional difficulties, because there are trade unions in France as well as labor. I do not anticipate that there will be any very substantial sum derived from labor, but from material I think there will be a very substantial sum. These sums will aggregate very considerable and will extend over five or ten years. It will take this time at least. The process of reconstruction might take from five to ten years.

The next source of revenue is the duty of 25 per cent. on German exports. You can either collect in the country where the goods are received or collect in Germany. If any country prefers to collect on goods to its own

country in its own currency it can do so. Collection will not be in marks, but in the equivalent of gold—in bills. That depends entirely upon the recovery of Germany's trade. That trade before the war was over £500,000,000. The value of that at present would be somewhere about £1,000,000,000. Twenty-five per cent. upon their exports would be £250,000,000.

A sub-commission of the Reparation Commission will be appointed to sit in Berlin for the purpose of supervising this collection. It will have no authority to interfere in administration, but simply to supervise and control and receive payment. Receipts and materials in kind and 25 per cent. on exports will be hypothecated for the payment of the bonds issued. Other German revenues will also be pledged as security for payment of interest on the bonds, and here the German proposal coincides with the proposal we made. The Germans have offered other revenues for security of their payments.

### GERMANY'S SURRENDER

In Germany the first effect of the allied ultimatum was to cause the fall of the Fehrenbach-Simons Ministry. After a stormy interregnum following its resignation, Dr. Julius Wirth succeeded in forming a coalition Cabinet, composed of Centrists, Majority Socialists and Democrats, which, confronted by the grave danger of French occupation of the Ruhr, swiftly decided that the conditions of the ultimatum must be accepted. Dr. Wirth announced this decision before the Reichstag on May 10, and asked for an immediate vote. He said in part:

Our task in this grave hour is to obtain the decision of the Reichstag with regard to the ultimatum of the allied Governments. Acceptance means that we declare our readiness to bear in voluntary labor the heavy financial burdens demanded year by year. Refusal, however, would mean surrendering the basis of all our industrial activities and the shackling of our entire industrial life; and the effects might be even more terrible for our political existence and for our realm. For these reasons the Government accepts the ultimatum. We know that acceptance, by reason of the place Germany will occupy in the economy of the world, will entail the gravest consequences. The responsibility for this falls upon the Allies. But there is one point concerning which there must be no obscurity. It would be useless to say "Yes," without the resolution to do our utmost to meet the obligations incumbent upon us. Ladies and gentlemen, the new Government, after reflection, advises you in all confidence, to accept the ultimatum.

The vote was then taken. The result was 221 in favor of acceptance, 175 against.

Though this meant a victory for the new Premier by a comfortable majority, it was stated on all sides that the Wirth Cabinet was only a temporary makeshift, decided on after days of political chaos, and placed in power for the purpose of accepting the allied demands. The main supporters of the new régime were the Majority Socialists and Clericals. Dr. Wirth was unfavorably regarded by the industrialist and banking interests, because he had been closely associated with Matthias Erzberger, his predecessor as Finance Minister. For the time being, at all events, the Wirth Cabinet served both Germany's and the Allies' purposes: it accepted, and persuaded the Reichstag to accept, the ultimatum. The acceptance was at once dispatched to London by the Wirth Cabinet, and was delivered to Lloyd George by Dr. Sthamer at 11 o'clock on the morning of May 11. The British Premier at once telegraphed the news to all the Governments concerned. The text of the German acceptance was as follows:

In accordance with instructions just received, I am commanded by my Government, in accordance with the decision of the Reichstag and with reference to the resolutions of the allied powers of May 5, 1921, in the name of the new German Government to declare the following:

The German Government is fully resolved, first, to carry out without reserve or condition its obligations as defined by the Reparation Commission.

Second, to accept and carry out without reserve or condition the guarantees in respect of those obligations prescribed by the Reparation Commission.

Third, to carry out without reserve or delay the measures of military, naval and aerial disarmament notified to the German Government by the allied powers in their note of Jan. 29, 1921, those overdue to be completed at once and the remainder by the prescribed date.

Fourth, to carry out without reserve or delay the trial of war criminals and to execute the other unfulfilled portions of the Treaty referred to in the first paragraph of the note of the allied Governments of May 5.

I ask the allied powers to take note immediately of this declaration. STHAMER.

But though Germany had yielded to the ultimatum, both Great Britain and France manifested doubt as to how she would keep her new promises. The British as well as the French press inclined to the view that

the best way of aiding Dr. Wirth was to remain in readiness to enforce the terms which Germany had pledged herself to fulfill. The fact that both the Nationalist and Industrialist organs in Germany were already assailing the acceptance and calling the surrender note a "scrap of paper" was not lost sight of. France, above all, was suspicious, and the French Government, after receiving news of Germany's surrender, announced that it would keep under the colors the 1919 class of soldiers mobilized for the Ruhr until July 1, by which date Germany has now engaged to complete disarmament.

Up to the last day pending the German reply, the French troops had been pouring into the Rhine district, and closing in around Ruhrort in all directions. Divisions with full equipment had been on the move for days, and everything was in readiness for the final push when the German acceptance was received. Though the news of Germany's surrender was in some sense a relief, the French Government gave every evidence of its determination that this new agreement should not add to the long list of broken promises. To Premier Briand and President Millerand the real test of Germany's sincerity would come on July 1. Would Germany disarm, and thus allow France to demobilize her troops?

As early as May 12 it was stated that painful differences were arising between the French and the British regarding the occupation of the Rhine towns effected some weeks previously, and still in force. The British advocated withdrawal from Düsseldorf, Duisberg and Ruhrort, and the suppression of the Rhine Customs barrier; the French wished the penalties already put in force to stand until France gained certainty that the new German promises would be kept. France's whole attitude has been, and remains, that the threat to occupy the Ruhr must be maintained until the Germans disarm. First, and above all, France wished protection from her old enemy: the rest would come. If the Germans abide by the new terms, alike for disarmament and reparation payments, French finances will be made secure, devastated areas will be restored, and the future of France and of Europe will be assured.

# CAN GERMANY PAY THE INDEMNITY?

BY J. ELLIS BARKER

*A summary of the solid facts on which the Reparation Commission based its indemnity figures—Birdseye view of Germany's agricultural, mineral and industrial resources—Reckless financial management of the nation's affairs the chief peril of the situation*

THE Allies have demanded of Germany a total indemnity of 135,000,000,000 gold marks, and Germany, though she has now bowed to the terms of the allied ultimatum, has long been calling heaven to witness that the war has ruined her; many Germans still insist that, with the best will in the world, they cannot satisfy the demands made. The German spokesmen do not tire of pointing out that Germany is a naturally poor country, and that the treaty of peace has permanently impoverished the people by depriving them of some of their most valuable resources. However, the experts representing the Allies affirm that, whereas vast districts of France have been completely devastated, the German mines and manufacturing industries are intact and the latent resources of Germany are so great that she is easily able to pay. Which of the two parties is in the right?

The wealth of a nation depends on its natural resources and on the number and the abilities of the people who exploit them, converting latent wealth into tangible wealth. Germany, far from being one of the poorest nations in the world, is naturally one of the wealthiest, and she should well be able to fulfil the terms to which she has now acceded.

The Germans are a highly intelligent, able-bodied race. The mere fact that the German population within the frontiers of the old empire increased from 40,997,000 in 1871 to 67,810,000 at the outbreak of the war shows the extraordinary vigor of the race. Besides, during this period millions of Germans emigrated, the majority of whom settled in the United States. The human resources of Germany are very great. They represent a vast potential

wealth. Let us glance at the physical resources which the German people will be able to exploit, taking for our guidance those official German statistics upon which the allied experts have based their claims and calculations.

The principal wealth-creating resources of modern nations are agriculture, mining, the manufacturing industries and trade. In respect of all these Germany has been singularly favored by nature. Each of these four resources may be considered in turn.

By far the larger part of Germany consists of a gigantic, well-watered plain, which possesses an excellent soil. Owing to this natural advantage and the high development of agricultural science, the German soil yields extraordinary crops, as shown by the following figures from the German statistical abstract:

PRODUCTION PER ACRE (KILOGRAMS) IN 1913

	Wheat.	Rye.	Barley.	Oats.	Po- tatoes.
Germany	1,910	2,360	2,220	2,190	15,860
France	1,330	1,060	1,370	1,300	8,560
Austria	1,340	1,380	1,600	1,410	9,060
Hungary	1,280	1,190	1,440	1,170	7,540
United States	1,020	1,020	1,280	1,050	6,080

Germany's agricultural soil is very rich. Per acre it yields twice as much as that of the United States, and 80 per cent. more than that of France, Austria and Hungary. However, the Germans feel confident that they can increase their production per acre by at least 50 per cent. by the lavish application of nitrogen, and they have installed gigantic factories which will produce millions of tons of nitrogen from the air. According to the official German statistics, the harvest has increased as follows:

## THE GERMAN HARVEST

Year.	Rye,		Wheat,		Oats,	
	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
1880.....	4,952,525	2,345,278	4,228,128			
1890.....	5,868,078	2,830,921	4,913,544			
1900.....	8,550,659	3,841,165	7,091,930			
1910.....	10,511,160	3,861,479	7,900,376			
1913.....	12,222,394	4,655,956	9,713,965			

Year.	Potatoes,		Sugar,		Hay,	
	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
1880.....	19,466,242	415,000	19,563,388			
1890.....	23,320,983	1,261,000	18,859,888			
1900.....	40,585,317	1,795,000	23,116,276			
1910.....	43,468,395	1,947,580	28,250,115			
1913.....	54,121,146	2,632,000	29,184,994			

Germany's live stock also has increased prodigiously during the last few decades, as follows:

Year.	Horses.	Cattle.	Sheep.	Figs.
1873....	3,352,231	15,776,702	24,999,406	7,124,088
1883....	3,522,525	15,786,764	19,189,715	9,206,195
1892....	3,836,256	13,555,694	13,589,612	12,174,238
1897....	4,038,495	18,490,772	10,866,772	14,274,557
1900....	4,184,099	19,001,106	9,672,143	16,758,436
1907....	4,337,263	20,589,856	7,681,072	22,080,008
1913....	4,523,059	20,994,344	11,320,460	25,659,140

German agriculture gives a picture of abounding and rapidly increasing prosperity, which is bound to continue, for the Treaty of Versailles has deprived the country of relatively only a minor part of its agricultural resources, while the diminution of German agricultural soil has been accompanied by a similar reduction in the number of the German people.

Previous to the war Germany possessed approximately four-fifths of all the coal on the Continent of Europe. Her extraordinary wealth in coal and iron ore, and especially the former, led to the rapid expansion of her manufacturing industries and of her trade. How fast has been Germany's advance in the production of coal and iron may be seen by comparing the record of that country with that of Great Britain, which yields the following picture:

Year.	Production of Coal in		Production of Iron in	
	Ger- many.	United Kingdom.	Ger- many.	United Kingdom.
	Tons.	Tons.	Tons.	Tons.
1880..	59,120,000	149,380,000	2,729,000	7,802,000
1885..	73,672,000	161,960,000	3,687,000	7,369,000
1890..	89,290,000	184,590,000	4,658,000	8,033,000
1895..	103,960,000	193,350,000	5,465,000	7,827,000
1900..	149,790,000	228,770,000	8,521,000	9,052,000
1905..	173,660,000	239,890,000	10,988,000	9,746,000
1910..	221,980,000	264,500,000	14,793,000	10,380,000
1913..	273,650,000	287,410,000	19,292,000	10,280,000

The Germans bitterly complain that their

manufacturing industries have been ruined owing to the Peace Treaty, whereby Germany has lost a large quantity of her coal and the bulk of her native iron ore. However, there has been much exaggeration on their part. The Sarre coal field, which is temporarily occupied by France, and which ultimately may become French by plebiscite, is quite unimportant. It furnished considerably less than one-tenth of Germany's black coal. The Ruhr Valley alone contains considerably more coal than the whole of the United Kingdom. A large part of the important Silesian coal fields will apparently remain with Poland. However, the Poles will find it in their interest to sell coal at a reasonable price to the Germans, quite apart from the treaty provisions that restrain Poland from hampering the exportation of coal to Germany for some considerable time.

As regards the loss of the bulk of her iron ore to France, the position is not as serious as it is depicted by the Germans representatives. France, it is true, has in Lorraine by far the largest iron ore deposits in Europe, but she lacks the coal with which to smelt them. France is exceedingly poor in coal, and the Sarre coal is unsuitable, because it does not make a satisfactory coke. If coal and iron ore are lying at a distance from one another the iron ore always travels to the coal, for obvious reasons. At present iron ore is sent from French Lorraine to the Ruhr coal district to be smelted, and that process is likely to continue. Besides Germany relies, and has always relied, very largely on rich imported iron ore from Sweden and elsewhere. Hence her iron and steel industries are not likely to be ruined, as has so often been asserted.

Previous to the war Germany produced twice as much iron and steel as the United Kingdom. Her vast military strength was due very largely to her predominant position in the iron and steel industry of Europe. Apparently she will retain her old pre-eminence in that important industry. It is true that her iron and steel industry is at present less productive than it was in 1913. Its shrinkage is due partly to the impoverishment of her customers, partly to the disorder in Germany and elsewhere, partly to an insufficient supply of coal. The shortage in Germany's coal supply is not

so much due to the Treaty of Versailles as to underproduction on the part of the German miners. This underproduction is due to temporary causes, such as political troubles, labor unrest, railway congestion, shortage of trucks, underfeeding in the last few years, &c., which should be overcome before long.

Lately the Germans have discovered some gigantic deposits of lignite, or brown coal. The production of this valuable substitute for coal has increased very greatly. It exceeded 100,000,000 tons in 1920. Germany's difficulties in providing an adequate quantity of black coal have mightily stimulated the lignite industry and have caused Germany to take a greater interest in the production of hydroelectrical power than hitherto. The German rivers may be made to furnish millions of units of electrical horse power, while the unimportant streams of the United Kingdom can provide only a few thousands.

In addition to a vast wealth of excellent coal, Germany possesses gigantic quantities of potash and of other mineral salts. The extent of her salt deposits is not yet exactly known. They are so vast that it is impossible to measure them and to calculate their contents. From year to year the known area of her subterranean deposits of salt and potash has been increasing. At first it was believed that these salts occurred only about Stassfurt and Halle, in the centre of Germany. However, potash has been found in vast quantities also in Thuringia, in the Grand Duchy of Saxony, in Hesse, in Hanover, in Mecklenburg, near Bremen and Hamburg, and in Alsace north of Mulhouse. It is believed by many that almost the whole of the North German Plain and part of South Germany rest on salt deposits so gigantic that they almost defy measurement. Boreholes have been sunk through 6,000 feet of solid but soluble salts of all kinds without coming to the end, and nobody knows how much deeper one has to go to find their foundation. The potential value of these inexhaustible deposits is, of course, quite unknown. At one time the precious potash salts were called rubbish salts and were thrown away. There was a time when waterfalls were worthless. The stupendous salt deposits of Germany may before long prove to be a wealth-creating asset of the most extraor-

dinary value. In addition to coal and salts of every kind, Germany possesses a large store of other valuable minerals, such as zinc, copper, lead, tin, &c. Germany is by far the most highly mineralized country in Europe. Its mineral riches are only partly known. Almost every day new discoveries are made.

The German manufacturing industries have mightily expanded during the last few decades, owing to the great mineral wealth of the country, to the intelligence, industry and number of its inhabitants, and to the favorable position of the country for trade and commerce. Not so very long ago, Germany was mainly an agricultural country and was poor. By 1914 Germany had drawn level with England as a manufacturing country, and had, perhaps, drawn ahead of England, which at one time was the workshop of the world. In the steel, chemical, electrical and other industries Germany was far ahead of the United Kingdom. Her great natural advantages have been diminished by the war, but only slightly; therefore there is every reason to believe that Germany will presently once more astonish the world by the prosperity and the expansion of her manufacturing industries, which have been the principal factor in the creation of her vast wealth.

Nature has favored Germany not only with an excellent soil and climate and with great mineral riches, but has given her a unique position for trade and commerce. Germany occupies the centre of Europe. It is the natural meeting place, storehouse and exchange of the nations around. The great trade of Europe has followed the German rivers since the dawn of civilization, and the German river routes will become of increasing importance in the near future, owing to the vast improvements made and to be made. Seagoing ships can ascend the Rhine as far as Cologne, and before long they will be able to go as far as Strasbourg and perhaps as far as Basle. The gently flowing river can easily be deepened as far as Switzerland at comparatively little expense. Ships and barges carrying up to 3,000 tons of goods are already using the most important waterway in Europe and the world. A further deepening will enable ships of 5,000 tons and more to make use of that wonderful river, which is flanked on one side by the largest coalfield of

Europe, on the other by the largest iron ore field in Europe, and is surrounded by mountains which may be made to yield 20,000,000 hydroelectrical horse power units and more.

The Rhine is already connected by canals with the French system of waterways on the one hand and with the Danube on the other. Better connections are to be made in both directions, and the Rhine will be connected by means of deep canals with the Weser, Elbe and other rivers further east. The development of Germany's commerce has been wonderfully favored by a unique system of rivers, which follow a parallel course, which open up the countries around Germany, and which make Germany the natural market of Continental Europe. This development will be greatly promoted by the important waterways projected and begun, full details of which cannot be given in these pages for lack of space. The importance of the inland waterways for the development of the commerce, the agriculture and the manufacturing industries of the country may be gauged from the expansion of the German river fleet, which has grown as follows:

GERMANY'S INLAND SHIPPING

Year.	Number of Ships.	Carrying Capacity, Tons.
1882.....	18,715	1,658,266
1887.....	20,390	2,100,705
1892.....	22,848	2,760,553
1897.....	22,564	3,370,447
1902.....	24,839	4,877,509
1907.....	26,235	5,914,020
1912.....	29,533	7,394,657

Germany's inland waterways constitute an asset of incalculable value. Between 1880 and 1913 her exports of domestic manufactures quadrupled, because the country is wonderfully favored by the possession of a level plain, great mineral wealth, a most excellent position for commerce and a unique system of waterways. As Germany has retained most of these precious assets, there is no reason to believe that her economic progress will not presently be resumed with the utmost energy. Progress is a term of comparison. We can best realize the rapid advance of Germany in wealth and income by comparing her savings with those of other nations. A comparison of the German and the British savings bank deposits previous to the war shows the following result:

Year.	Savings Banks	Savings Banks
	Deposits In Germany.	Deposits In Great Britain.
1880.....	£130,690,000	£77,721,084
1890.....	256,865,000	111,285,359
1900.....	441,929,000	187,005,562
1910.....	839,028,000	221,158,021
1913.....	984,450,000	241,507,028

Wealth and poverty are terms of comparison. We can best form an idea as to Germany's natural wealth by comparing pre-war Germany with pre-war France. According to the official Statistical Abstract of Germany of 1913, the conditions of the two countries may be summarily compared as follows:

	Germany.	France.
Area, sq. kilometers.	540,858	536,464
Population .....	64,925,993	39,602,258
Average increase per year during decade.	856,901	70,003
Production of wheat and rye, tons.....	15,959,000	9,960,000
Production of barley, tons .....	3,482,000	1,086,000
Production of oats, tons .....	8,520,000	5,069,000
Production of potatoes, tons .....	50,209,000	12,774,000
No. of horses kept..	4,516,297	3,236,110
No. of cattle kept...	20,158,738	14,435,530
No. of pigs kept....	21,885,073	6,719,570
No. of sheep kept....	5,787,848	16,425,330
Production of sugar, tons .....	1,347,951	465,395
Consumption of cotton, tons.....	1,770,286	987,843
Coal production, tons.	260,000,000	41,000,000
Iron production, tons.	17,853,000	4,872,000
Railway, kilometer...	61,936	50,232
Merchant marine, tons, net.....	3,023,725	1,462,639
Foreign trade, marks.	21,256,300,000	11,669,800,000

The comparisons given make it obvious that Germany is naturally far richer than France; that Germany, far from being one of the poorest countries in Europe, is one of the richest, being endowed with the most valuable and the most varied resources, notwithstanding the absence of a genial Mediterranean climate.

Previous to the war Germany had become, according to leading German financiers, economists and statisticians, by far the wealthiest country in Europe, and it was believed that, owing to the vastness and expandability of her natural resources, her national wealth would continue growing so rapidly as to put England and France utterly in the shade. Herr Steinmann-Bucher

wrote in his book, "350 Milliarden Deutsches Volksvermögen":

Formerly we were told that the wealth of Germany amounted to £10,000,000,000, that of France to £10,000,000,000, and that of Great Britain to £12,500,000,000. Today we may say that Germany's wealth comes to £17,500,000,000, France's wealth at most to £12,500,000,000, and that of Great Britain to £16,000,000,000. In twenty years, in 1930, Germany will have a national wealth of £30,000,000,000, which should compare with a wealth of £15,000,000,000 in the case of France and of £21,000,000,000 in the case of Great Britain.

Herr Helfferich, a former Director of the Deutsche Bank and an ex-Minister of Finance, in his book on "Germany's Wealth," estimated that the wealth of the country had increased from 200,000,000,000 marks in the 90's of last century to 300,000,000,000 marks previous to the war, and that it had of late years been increasing by about 10,000,000,000 marks [\$2,500,000,000] per annum.

The facts and figures given indicate that, although Germany has lost the war, the principal sources of her abounding wealth have suffered but little. Economic distress over there is due to the war and its after effects, and it is by no means limited to Germany, but is universal. It is noteworthy that at present the country suffers proportionately far less from unemployment than England and the United States. Germany's official representatives protest that their country has been utterly ruined by the war; that its principal wealth-creating resources have been lost or destroyed, and they have tried to prove Germany's inability to compensate the Allies by drawing attention to the ruinous state of the nation's finances and the poverty of those who live on fixed incomes, and who formerly, indeed, were rich or well-to-do. It is true that Germany's finances are in disorder, and that those people who live on fixed incomes have in many cases been reduced to poverty by the depreciation of the German currency. However, the true wealth of a nation consists not in its paper securities and in its paper money, but in its great economic resources, such as agriculture, mining, the manufacturing industries and trade. Moreover, the existing chaos in Germany's finances was created more or less deliberately, in order to enable Germany's negotiators to plead poverty. Unscrupulous business men who do not wish to

pay the money they owe know how to tie up their resources, to obscure their accounts and to assume the appearance of poverty by wearing their oldest clothes. That has been Germany's policy to some extent.

Up to the time of the revolution some kind of order was kept in Germany's finances. At the time of the armistice the bank notes of the Empire came to about 26,700,000,000 marks. At that time the discount at which the German mark stood in foreign markets was small. The new democratic Government voted funds with the utmost lavishness for all and sundry, while keeping taxation low, and it raised the gigantic sums which were to be spent by printing bank notes in unheard-of quantities. By now the sum of bank notes outstanding is approximately four times as large as it was at the time of the revolution, and the mark has fallen to considerably less than one-tenth its normal value, with the result that prices in Germany are about ten times as high as they were previous to the war. This extraordinary depreciation has naturally ruined countless people who have to depend on a fixed income from investments.

The Socialist Government, which at first assumed power, was followed by middle-class men who stand under the domination of the great industrialists, among whom Hugo Stinnes is the most prominent. The middle-class Government has continued the policy of financial recklessness pursued by the Socialists. On the one hand, money is squandered in untold millions, and on the other hand no serious effort is made to balance the national accounts, which continue causing the most gigantic deficits. The State railways, the State post office and other national undertakings are run at an enormous loss. For the forthcoming year the budget estimate allows for a deficit of 12,000,000,000 marks on the railways, which probably will be exceeded very greatly. Goods and persons are carried by the State far below cost. The post office and the telephones likewise are to be worked at a gigantic loss. Coal and food have been sold to the people below cost, and the State has paid the difference. Hundreds of thousands of unnecessary officials have been appointed, who are kept in idleness at the cost of the State.

On the other hand, taxes in Germany are

far lower than in many other countries, and the worst is that the German taxes, though nominally high, remain unpaid to a very large extent, for the State does not press for prompt payment. The International Financing Conference of Brussels recently published figures according to which taxation per head was in 1920 as follows:

## TAX PAID BY EACH INDIVIDUAL.

	Per Head.
In the United Kingdom.....	\$87.90
In the United States.....	56.50
In France .....	34.60
In Norway .....	27.90
In Australia .....	27.80
In Denmark .....	20.40
In Holland .....	18.70
In Sweden .....	18.10
In Belgium .....	15.20
In Germany .....	12.50
In Spain .....	10.60
In Finland .....	10.40
In Italy .....	5.60

It will be noticed that Germany is near the bottom of the list, that taxation per head was seven times as heavy in the United Kingdom as in Germany. Of course, it may be argued that this comparison is quite unfair, because it does not take any notice of the difference in the income of the nations enumerated. The experts, recognizing the strength of such an objection, carefully calculated the income of eight nations for which fairly reliable figures could be obtained, and showed how large a percentage of the national income was claimed by the tax collector. Their calculations may be summed up as follows:

## PERCENTAGE OF TAX REVENUE FROM NATIONAL INCOME.

	P. C.
In the United Kingdom.....	27
In France .....	18
In Italy .....	13
In Japan .....	13
In Germany .....	12
In Canada .....	11
In Australia .....	9½
In the United States.....	8

Once more Germany is near the bottom of the list. The fact that Germany is under-taxed is undeniable, although, of course, existing taxation is absolutely ruinous for those unfortunate people whose income has been reduced to one-tenth or less, owing to the criminal levity with which the national finances have been handled since the revolution. Their outcries are perfectly justified

and their poverty is very real. On the other hand, the business men and the working classes are prosperous and they are by no means overtaxed.

The above figures give a fair picture of the tax burden borne by the various countries, as far as statistical calculations allow us to estimate the wealth, income and taxation of nations. Of course, no statistics are absolutely correct. Every statistical figure ever produced can be challenged. However, independent investigation shows that the tables given have been drawn up with the utmost care and impartiality. As the currencies of so many nations have depreciated and are constantly fluctuating, the experts reduced income and taxation to American dollars at the prevailing rate of exchange, because the United States is the only great country which possesses a currency based on the gold standard. Hence the American dollar was chosen as the universal denominator.

The impression that Germany is prosperous and relatively lightly taxed, which is created by the study of the statistics given, is confirmed by investigation on the spot. Luxury in Germany is widespread, and it is by no means limited to the profiteers. At no time in Germany's history have such vast amounts been spent on horse racing and gambling, on champagne and tobacco, on theatres and amusements of every kind. The workers and the officials, who were formerly not allowed to smoke during business hours, are now smoking continually. The most sumptuous books and periodicals are being published. The popular restaurants are overcrowded. The popular newspapers contain innumerable advertisements of races, sports meetings and expensive amusements of every kind. Travelers in Germany are amazed at the prosperity of the people, excepting, of course, the new poor, who have been ruined by the spectacular depreciation of the mark.

Among the nations outside Germany it has long been clear that Germany had the means to pay the Allies, but lacked the will. By passive resistance she strove to nullify the treaty of peace. The disarmament of Germany could be brought about only by repeated ultimatums and by the application of force. The wealthiest part of France has been ruined by the Germans, while the economic outfit of Germany is intact. Ger-

many is vastly superior to France in resources and in man power. The French believe, and not without reason, that it will not only be economically ruinous to them if Germany fails to compensate them, but they believe in addition that it will be militarily dangerous for an industrially crippled France to be faced by a German nation which can overwhelm France by reason of its vast superiority in men and in those resources which can rapidly be converted into weapons of war. Unless France is compensated by Germany, she may become bankrupt and may sink into poverty and obscurity, while Germany forges ahead. The French came to the conclusion that Germany could be made to pay only by seizing some of the most valuable assets of the country, holding them as security and, if necessary, exploiting them. Hence the threat to seize the Ruhr Valley, a threat that France now withdraws only so long as Germany meets her acknowledged obliga-

tions. The Ruhr coal deposits are both the power house and the arsenal of Germany. The mineral contained in it is of incalculable value. Germany is dependent upon the Ruhr coal for its very life. To Germany the Ruhr Valley is as indispensable as the Port of New York is to New York State or as Liverpool is to Lancashire.

Germany can pay at best only a small fraction of the damages which she inflicted upon the nations she attacked. Of course, it is difficult to gauge her future ability to pay. However, if we glance back at her meteoric development and if we take stock of her wonderful and varied resources, it seems clear that the demands of the Allies were not unreasonable, and that Germany, if she faces the task with the proper will and purpose, can meet the colossal bill of damages which she owes to the nations which she has wronged.

## GERMANY'S POLITICAL CHANGES

*Personnel of the "Cabinet of Surrender"—The Rhineland custom regulations put into effect—Split among the Communists—Germany's remarkable industrial recovery*

[PERIOD ENDED MAY 15, 1921]

**A**FTER managing to maintain itself since June 25, 1920, the People's Party-Centrist-Democratic Cabinet of Germany headed by Konstantin Fehrenbach (supposedly representative of "big business"), which had conducted the negotiations with the allied powers leading up to the presentation of the ultimatum on May 5, handed in its resignation to President Ebert on May 4. It was replaced on May 10 by a Majority Socialist-Centrist-Democratic combination, with Dr. Julius Wirth, the Centrist Minister of Finance in the old Cabinet, as Chancellor and Acting Foreign Minister. [For details of reparation settlement see first pages of magazine.]

As the three People's Party members of the Fehrenbach Cabinet, under orders from the business political group headed

by Hugo Stinnes, did not intend to share what they and the Junker Nationalists called the odium of accepting the Allies' terms, especially as there was a chance that the Reichstag would vote against such acceptance, the collapse of the Ministry in which Dr. Walter Simons was Foreign Minister became inevitable. On May 10, immediately before the Reichstag voted, 221 to 175, to approve the acceptance of the Allies' terms, Dr. Wirth announced the make-up of his Cabinet as follows:

Chancellor and Acting Foreign Minister—Dr. Julius Wirth (Centrist).

Minister of Finance and Vice Chancellor—Gustav Bauer (Majority Socialist).

Minister of Economics—The Rev. Dr. Heinrich Brauns (Centrist).

Minister of Justice—Herr Schiffer (Democrat).

Minister of Labor—Robert Schmidt (Majority Socialist).

Minister of Transportation—General Groener (Democrat).

Minister of Posts and Telegraphs—Johann Giesberts (Centrist).

Minister of Agriculture and Foodstuffs—Andreas Hermes (Centrist).

Minister of the Interior—George Gradnauer (Majority Socialist).

Minister of Defense—Dr. Gessler (Democrat).

Minister of Reconstruction—Herr Silberschmidt (Majority Socialist).

Dr. Gessler, Herr Hermes, Herr Giesberts and General Groener held the same positions in the Fehrenbach Cabinet, and Dr. Brauns was Minister of Labor in that body. Herr Bauer was chosen National Chancellor in June, 1919, to head the Cabinet which accepted the Treaty of Versailles and served for almost a year. Although General Groener formerly was classified as non-political, it seems from the cable dispatches that he has become allied with the Democrats. Dr. Wirth, the new Chancellor, was born in Freiburg, Dec. 15, 1845, and has a long record of public service, especially in financial positions.

Dr. Otto Goeppert, Director of the Peace Section of the Foreign Office, resigned on May 13.

The new Ministry was generally regarded a "Signing Cabinet." It was freely predicted that it would not long survive the attacks of the Nationalists, People's Party and Communists, unless it could obtain the support, or benevolent neutrality, of the Independent Socialists, something which would involve making important concessions in the interest of the German workers, and might alienate some of the more conservative members of the Centre, Democratic Party and the Bavarian People's Party. Of the 469 members of the Reichstag, the combination back of Dr. Wirth's Cabinet controls only 216, but it can count upon the support of the 21 members of the Bavarian People's Party and the five German Hanoverians under ordinary circumstances. With the neutrality, or support, of the 61 Independent Socialists, its position would be secure, provided its original elements could be held in line.

In an appeal directed to the working people on May 14, the Executive Committee of the Independent Socialist Party asked them to support the new Government in its

efforts to carry out the economic penalties and the Allies' demands for disarmament and the trial of Germans guilty of war atrocities. It also asked the Government to seize a big share of the profits of the big capitalists.

### CUSTOMS REGULATIONS

While the main question of fixing the final amount and terms of the reparation to be made by Germany was occupying the attention of the world the Interallied Rhineland Commission was quietly going ahead with the enforcement of the customs regulations and other penalties that went into effect on April 20 throughout the old and new occupied territory. Some difficulty was encountered at first through the resignation of a number of the German customs officers and there was considerable congestion of railroad traffic on the borders, but this was soon adjusted. The German Minister of the Interior sent a note to the occupied zone saying he could not force the German officials to work under the new régime, but that they could do so without any fear of future punishment. Business slackened off materially in the zone, but unemployment did not reach as serious proportions as had been predicted before the sanctions went into effect.

No differences of any importance were reported between the occupying troops of France, Great Britain and Belgium, and the inhabitants, although in Düsseldorf there was some dissatisfaction at the so-called excessive requisitioning of quarters for officers and "non-coms." On May 1 the President of the Provincial Government of Rhenish Prussia told an American newspaper man that "Our relations with the French authorities thus far have been correct on both sides."

A demand by the Interallied Commission for the extradition from unoccupied Germany of persons wanted under indictments issued by the military authorities of the zone was acceded to on April 29.

A call by the Reparation Commission on April 16 for the transfer of the entire gold stock of the Reichsbank, some 1,100,000,000 marks, to Coblenz or Cologne, where it would be under the eyes of the Allies, was answered by Germany with neither a refusal nor a denial, but by a note to the effect that, as the demand was probably due to

the fact that the second paragraph of Article 248 of the Peace Treaty prohibiting the exportation of gold from Germany would become inoperative on May 1, the German Government would see to it that legislation was enacted to prolong the ban. On April 28 the Reichstag passed a bill prohibiting the export of gold before Oct. 1, 1921, without the consent of the Allies.

Further steps toward the trying of the German officers and soldiers accused by the Allies of having committed atrocities during the World War were taken when the Supreme Court at Leipsic sent representatives to London to hear the deposition of fourteen witnesses against the accused Germans, and when the Reichstag, on May 4, passed a bill providing for the trial of all the men named in the Entente's list, regardless of the quality of the evidence. During the hearings in the Bow Street Court in London a number of ex-service men made a hostile demonstration against the German representatives.

Surprise was registered in Paris on April 17 when German representatives admitted to the Reparation Commission that the German Government's estimate of 4,600,000 tons of German shipping turned over to the Allies on account of reparations was incorrect and that the Allies' figures of 2,113,545 tons were right.

In reporting on May 14 that Germany was still short 140,000 horses in its reparation deliveries to France and Belgium, a Berlin cablegram said the Government had bought a trial shipment of horses in the United States and that they had pleased the allied experts greatly.

Six members of the Central Committee of the Communist Party, including Herr Brandler, who, with Walter Stoecker, was supposed to run the party on orders from Moscow, were arrested.

In connection with a protest by the German Government to the League of Nations against the presence of French troops in the Sarre Valley, the President of the Governing Commission of the Sarre explained that these troops were not being used as a garrison of occupation, but merely to supplement the Sarre police force, which was too small to maintain order.

The principal results of the abortive Communist uprising in March [described

in detail in CURRENT HISTORY for May] was the splitting of the United Communist Party and the strengthening of the hands of the Junker reactionaries in their stand for the retention of arms by the agrarians and the city bourgeoisie in defiance of the Peace Treaty. All through the period, the extraordinary courts set up by President Ebert to handle the cases of some 3,500 Communists and mob leaders arrested during the "putsch" were busy handing out more or less lengthy prison sentences to those found guilty of either high treason or common crimes. Although the Communist, and also the Independent Socialist, press was filled with bitter editorials against the activities of the "white terror," there was no report during the month of any of the revolt leaders' being executed, despite the fact that several bandits masquerading as Communists were condemned to death. This was doubtless due to a clause in the order establishing the extraordinary courts providing that the death sentence could only be carried out after the President of the Republic had formally refused to exercise his pardoning power. In Munich Wendelin Thomas, a Communist member of the Reichstag, was tried before an ordinary court (Bavaria was almost untouched by the "putsch") on a charge of promoting rebellion and sentenced to two years in prison. Of the eleven persons arrested in connection with the attempt to blow up the Column of Victory in Berlin on March 13, six were found guilty of violating the explosives law with treasonable intent and were sentenced to six years' imprisonment. Two of the others were sentenced to six months for illegal possession of weapons, and the other three were acquitted.

Due to the fact that the great majority of the well-known leaders of the Communists had been opposed to the agitation for an uprising and took no part in it the lists of those being tried contained few names of importance in the Communist movement. Max Hoelz, the so-called Saxon bandit who bobbed up soon after the beginning of the "putsch" and took charge of the Red forces in the Halle section, was arrested in Berlin, but the courts seemed in no hurry to try him. Considerable indignation was aroused in labor circles by statements by alleged eyewitnesses of the shooting of Wilhelm Sylt, the leader of the Berlin elec-

trical workers who had tried to induce his followers to answer the Communist call for a general strike, that Sylt had been deliberately murdered by the police and not shot while attempting to escape, as alleged in the official version of the affair.

Figures given out by the Prussian Government put the number of Security Police killed during the uprising at 24, with 53 wounded. No data were given as to the casualties among the revoltors. The property damage in Saxony was put at 9,000,000 marks by the Saxon authorities.

The split in the United Communist Party was precipitated by the publication by Dr. Paul Levi, the chief of the Communist group in the Reichstag, of a pamphlet entitled "Against Putschism." In this he lamented the fact that the Communist Party, with its 500,000 members, and 1,200,000 voters in Prussia alone, had been so shattered by the anarchistic tactics of an Executive Committee taking its orders from abroad that its very existence was in danger. The Central Committee of the party promptly expelled Dr. Levi from the organization. This was immediately followed by a declaration of solidarity with Dr. Levi signed by Clara Zetkin, Adolph Hoffmann, Curt Geyer, Ernst Daumig, Otto Brass, Paul Eckert, Heinrich Malzahn and Paul Neumann, all leading lights of the Communist Party, in which the convening of a special party congress was called for. In its answer, the Central Committee insisted that its attitude regarding the outbreak had been correct and pointed to a message of approval from the Executive Committee of the Communist International in Moscow as evidence to that effect. The committee, however, agreed to call the special congress as soon as it considered the time propitious for such a move. Later the Central Committee asked the protesting Deputies to suspend their functions as legislators until further notice. This drew sharp protests from a large number of prominent Communists. It was generally believed that the convention would result in a definite division in the Communist ranks, the more moderate element going back to the Independent Socialist Party, while the extremists would unite with the non-political group known as the Communist Labor Party of Germany. In the meantime several Communist Deputies and other high officials

have left the party, and in the shop council elections in Central Germany the disgust of the workers with the Communists has been shown by their failure to choose Red representatives.

On May 13 Dr. Levi and his crusaders notified the Central Committee that they did not purpose to abide by the committee's decision, but would take their case to the third congress of the Communist International, due to open in Moscow on June 3.

The approval by the Moscow Executive Committee of the Communist International of the "putsch" did not prevent the German Government from completing and signing a trade agreement with the Russian Government. [See Russia.] Berlin evidently drew a fine distinction between the Bolshevist Government and the Communist International.

Die Rote Fahne, the Berlin Communist newspaper, was suppressed half a dozen times during the period for publishing wild calls for fresh revolts. Its editor, August Thalheimer, was arrested, and released, and it continued to appear intermittently. Its last reported suppression occurred on May 7, when it printed an appeal to the German workers to rush to Upper Silesia to help the workers there to seize the mines and other property and proclaim a Soviet Republic. [See article on Upper Silesia.]

On May 14 Die Rote Fahne printed documents purporting to prove a plot by the German military authorities to invade upper Silesia. The Ministry of Defense denied the charges and began an action against the paper for high treason.

Adam Stegerwald, the Centrist Deputy and leader of the Christian Labor Movement, resigned April 20 from the Premiership of Prussia, to which he had been elected by the new Landtag on April 9 by a vote of 332 out of a total of 388, because of his belief that he had been chosen under a misapprehension. He was re-elected the next day by a vote of 227 to 100 for Otto Braun, the retiring Social Democratic Premier, 21 for Deputy Ludwig, an Independent Socialist, and 1 for Deputy Busch, a Centrist. Stegerwald will hold his place as long as he enjoys the united support of the Democrats, Centrists, People's Party (the Stinnes group) and the Nationalists, as their combined forces number 251 out of a

total membership of 428. The Socialists of all shades refused to co-operate with the People's Party or the Nationalists.

In the midst of the chorus of protests asserting Germany's inability to pay the amount fixed by the Reparation Commission, German private concerns continued to expand at home and reach out for trade abroad. The seven companies making up the dye and chemical trust decided to increase their common stock from 745,640,000 to 1,620,000,000 marks, bringing their total capitalization in stock and bonds up to 1,915,220,000 marks, and to increase their dividend rates to from 15 to 20 per cent. against from 12 to 18 per cent. for 1919. Although a mark is worth only about 1 $\frac{3}{4}$  cents at present exchange rates, the common stock of the chemical companies sells at from three to five times its par value, so the capitalization approximates \$120,000,000. The increased cost of raw materials was given by the companies as the main reason for raising their capitalization, but German financial writers did not fail to point to past glories in foreign trade and to predict that in the not too distant future German dyes would again rule the world markets. The total fresh capital called for

in the first four months of the year was about 3,500,000,000 marks for various industrial concerns.

Hugo Stinnes, the German industrialist, was rebuked when the Hamburg-American Line stockholders refused to re-elect him to the Board of Directors because he had started a competitive service to South America. A dividend of 8 per cent. for 1919 and 1920 was declared. German exports to the United States in March totaled \$30,502,988, against \$20,940,496 in March, 1920, according to figures given out in Washington on May 2. Germany's imports from this country amounted to \$7,367,780.

Deposits in private savings banks at the end of the first quarter of the year totaled 14,975,000,000 marks and there were 8,730,000,000 in the Postal Savings Bank.

An indication of the condition of finances of the German State was found in the fact that for the first twenty days of April the receipts of the National Treasury from taxes, customs, levies, &c., amounted to only 2,534,200,000 marks, while the expenditures totaled 5,098,100,000 necessitating an issue of 2,564,000,000 marks in Treasury notes, making the total floating indebtedness 168,893,200,000 marks.

# THE SILESIAN CRISIS AND KORFANTY

*A grave international situation precipitated in Upper Silesia by the invasion of armed Polish bands, under Polish agitator, pending the allied decision on the plebiscite—Allies, outnumbered, give ground after serious fighting—Friction between England and France*

IT was expected by the allied Premiers that the plebiscite held in Upper Silesia under the auspices of the League of Nations in March would bring a solution to the vexed problem of apportioning this rich mining territory between Germany and Poland. The returns from the plebiscite showed that although the district, in general, had voted to remain with Germany, the richest coal-mining areas of the South-east had elected to unite with Poland. This complicated the situation, the Germans at once demanding, on the ground of the general result, that all Upper Silesia be allotted to them, the Poles insisting that the districts which had voted for Poland be incorporated in the Polish boundaries. The granting of this demand, however, meant to Germany that she had lost rather than won the plebiscite, inasmuch as she especially desired to gain possession of the coal fields.

While the Plebiscite Commission was still considering in Paris the most equitable policy of reconciling the vote in full justice to both parties, the whole situation was thrown into confusion by the irruption across the Polish frontier into Silesia of a large Polish force, directed by Adalbert Korfanty, who had but recently given up his post as Polish High Commissioner of the Plebiscite. This force, estimated at 50,000 men, was highly organized, and possessed machine guns, bombs, firethrowers and even airplanes. The allied forces, outnumbered and outfought, retreated, and the Polish adventurers, acting on the conviction that the Allies intended to give the mining districts to Germany, moved forward and occupied the whole of the mining area, even spreading toward the North. Some seventy allied soldiers were killed in the fighting that occurred, the Italians, especially, fought stubbornly. The French fought in some areas, in others remained inactive or withdrew. The news created great excitement in both Poland and Germany, and cast consternation into the hearts of the English. Mr.

Lloyd George denounced the Polish Government, which disclaimed all responsibility, and indirectly blamed France for this invasion. The British Premier even declared that he was in favor of accepting Germany's offer to send troops to suppress the movement. Germany's official request to be allowed to do this, however, was flatly refused by the French Government, and the strained feeling between France and Great Britain, which had arisen over the Rhine problems, was increased.

The plebiscite for Upper Silesia was attended by difficulties from the start, owing to strong racial animosities between the German and Polish elements. Herr Horsing, the Social Democratic Imperial Commissioner for Silesia and West Posen, put down a Polish uprising which occurred in August, 1919, by military force; he declared subsequently that the rebellion was due to the

THE SHADED AREA SHOWS THE REGION SEIZED BY KORFANTY'S POLISH FORCES IN DEFIANCE OF THE ALLIED COMMISSION. THE CHIEF COAL MINES ARE INDICATED BY CIRCLES

intention of the Poles to gain absolute possession of Upper Silesia before the ratification of the Peace Treaty. The elections which took place in November, 1919, resulted in a sweeping victory for the Poles; on the basis of this result, the Polish Government asked the Supreme Council to accept this as decisive, without the holding of a plebiscite. This solution the allied Ministers rejected. It was decided on Nov. 4 that the Chairmanship of the Interallied Plebiscite Commission should be given to France, and General Lerond was ultimately appointed to this post.

The Commission, including the British and Italian members, reached Upper Silesia on Feb. 12. The military occupation of the whole plebiscite area had been completed by the allied contingents shortly before. The Commission took over all the German and Prussian powers, and issued a proclamation declaring its firm intention to maintain peace and order and to insure a free vote upon both sides. Stern warnings were sounded to all persons who attempted to break the peace or to coerce either element of the population.

The date of the plebiscite, long deferred, was at last fixed for March 20. Mutual complaints from both elements against the acts and attitude of others drew from the Council of Ambassadors on March 18 an official note to both Governments, reminding them that the task of keeping order in Upper Silesia during the plebiscite period was solely the affair of the Interallied Commission, and that any intervention by troops of either side would be undertaken at the responsibility of the offending party.

The plebiscite occurred at the date set, and was attended with no disorders, though the Poles bitterly complained that the Germans, availing themselves of the allied sanction, had imported fully 200,000 Germans from Germany and from all corners of the earth on the ground that they had been born in Silesia and had the right to participate in the vote. The result, as Germany expected, was a victory for the Germans. Fully two-thirds of the district had elected to remain with Germany. The area on the Polish border, however, including most of the coal mines, cast an estimated vote of 53 per cent. for Poland, notwithstanding the German vote given by the towns.

The final results were established and the full official report forwarded to the Interallied Commission and to the Supreme Council for the ultimate decision. This, however, was slow in coming.

Early in May, while the decision was still pending, the Polish workmen who form the population of the mining districts of Rybnik and Pless, misled by a false announcement, said to have been published in a German paper, that the Allies had decided to give these as well as other coal-mining districts to Germany, declared a general strike. This was followed by news that lawless Polish bands had appeared and were terrorizing the country. These uprisings had resulted in fighting between the French and the Polish rebels at Beuthen, Kattowitz and Tarnowitz. The conflagration spread, and on May 4 came the news that organized Polish forces numbering many thousands had occupied all of Upper Silesia south of a line running from Kosel to Tarnowitz, with the exception of a few large towns, and were moving further northward. Colonel Bond, the British control officer at Gross Strehlitz, opened fire on some 3,000 Polish insurgents who were striving to take the city. Italian troops at Rybnik were surrounded, but were putting up a spirited fight against superior numbers. The fighting continued for four days, during which the allied forces, numbering about 15,000, found themselves impotent to stem the tide, and the Polish rebels, directed by Korfanty in person, attained all their objectives. Korfanty, who, the Germans declared, had been preparing this coup for months, at once set up a government of his own, and issued proclamations defending the movement, and stating that he had taken over full power as Governor.

The excitement was intense in Germany. After a long Cabinet session it was decided that German troops should be sent to aid in putting down the insurrection only in three eventualities: First, if the Entente should express a desire that this should be done; second, if, after the Entente finally decided which part should be given to Poland and which part to Germany, the insurgents should transgress these limits; and, third, if the Poles, inflamed by their success, should attempt to invade German territory, notably East Prussia.

Though both the Interallied Commission and the Council of Ambassadors issued statements assuring the Polish elements that no decision of any kind had been

reached, the situation remained disquieting in the extreme, and it was said that the German elements of Silesia were organizing for defense. Notice was also sent to the Polish Government to exercise all its influence to calm the excited Poles. At this date it developed that the German Government on May 5 had sent an identical note to Paris, London and Rome charging that the Polish bands were committing wholesale murder and other atrocities, that the allied powers were responsible for maintaining order, and demanding that more allied troops be sent to control the situation. It then made a formal offer to aid the Allies in this task by sending its own troops, composed of German Reichswehr. To this sug-

gestion the French Government returned a categorical refusal.

Premier Lloyd George, speaking before the House of Commons on May 13, declared that the situation created by the Korfanty coup was menacing in the extreme. He declared for fair play for Germany, even to the point of allowing her to offer armed resistance if the Poles insisted on defying the provisions of the Treaty of Versailles and the plebiscite held under it. He censured the Polish Government bitterly for not restraining Korfanty and his "insurgents," and declared that the Polish population under Korfanty had tried to rush the allied decision and to confront the Supreme Council with a *fait accompli*. Upper Silesia, as a matter of fact, he declared, had not been Polish for 600 years, and the Polish claim was based wholly upon the mining population.

This speech created a commotion in Paris and greatly disturbed the French Premier, who in a public interview outlined the French position. France, he implied, was taking no orders from any other power regarding her policy. He defended Poland, saying that she had fulfilled her duty and had closed her frontier to prevent further Polish recruits from joining the insurgents. He also asserted that France had likewise done her full duty, and registered a formal protest against Lloyd George's statements. As to Germany's intervention in Silesia, he declared that France would never give her sanction to it. He laid the blame for the whole uprising on the publication of the false report above referred to in German newspapers.

The immediate outcome of the trouble, it was stated, would be the holding of a new allied conference at Boulogne. Such a meeting had been asked for by Lloyd George and M. Briand had agreed to it. The English press generally lauded the Premier's speech before Parliament and declared that a firm hand must be used in dealing with both France and Poland. The general French sentiment was one of flaming indignation against Great Britain for her alleged favoring of Germany at the expense of Poland and France.

# THE MONTH IN THE UNITED STATES

*General Pershing made new Chief of Staff—House fixes army at 150,000—Economy in Panama Canal Zone—Draft deserters listed—New Annapolis head—Naval Bill—Peace resolution—Supreme Court decisions—Budget system—Emergency tariff—Railroad situation—Trade conditions—Marine strike*

[PERIOD ENDED MAY 18, 1921]

**D**OUBT concerning the future status of General John J. Pershing in the American military establishment was removed on May 13, when Secretary of War Weeks announced his selection to be Chief of Staff of the Army in place of Major General Peyton C. March, effective July 1.

General Pershing was made Chief of Staff to enable him "legally" to perform the functions recently announced by Secretary Weeks when he stated that he proposed to inaugurate in time of peace a skeletonized General Headquarters headed by General Pershing, the purpose of which was to be instantly prepared for active military operations in case of war.

Major General James G. Harbord, who rose from the rank of private through various grades in the American Army to the rank of Major General, was appointed Executive Assistant to the new Chief of Staff, succeeding Major General William M. Wright.

General Pershing will be the tenth officer to hold the title of Chief of Staff since its organization in 1903 by Elihu Root, then Secretary of War.

**T**HE House of Representatives on May 10 confirmed its decision of ten weeks previous that the size of the United States Army should be 150,000 men. An amendment to the Army Appropriation bill proposed by Representative Byrnes of South Carolina, limiting the size to the number indicated, was adopted by a vote of 193 to 159.

In the last session of the Sixty-sixth Congress the House placed the size of the army at 150,000, but the Senate insisted that 175,000 should be the figure. A compromise was finally reached on a total of 156,666. President Wilson, however, vetoed

the bill, which thus had to be reintroduced in the present Congress. The Senate had not acted on the House measure up to May 18.

**G**ENERAL PERSHING on May 8 issued a statement with regard to the citizens' military training camps, in which he emphasized the obligation of every citizen to

prepare himself to serve his country in time of danger. He strongly advocated the training to be furnished in the

camps to be held this Summer under the direction of the War Department. He also urged the perpetuation of the veteran National Guard and National Army units as a foundation for the great citizens' army on which the nation must rely. "It is my belief," he stated, "that if America had been adequately prepared, our rights would never have been violated nor our safety threatened."

**C**ONSIDERABLE criticism was evoked by the publication by the War Department of lists of alleged draft deserters that were found on examination to

contain many names of men who had served honorably in the army or navy.

Among those thus falsely stigmatized as draft evaders or army deserters were many who had won rank and medals because of distinguished war service. So many of these errors were found that many newspapers refused to publish the lists. In defense of its action, the War Department, through Major General Peter C. Harris, the Adjutant General of the Army, who had charge of the publication of the lists, issued a statement

May 9 in which he declared that the department had done everything in its power to insure the correctness of the published lists and had succeeded in cutting down to approximately 155,000 names the original total of 489,003. "Everything that is humanly possible," he declared, "has been done by the War Department to insure the correctness of the lists."

**A**DMIRAL HENRY BRAID WILSON, Commander-in-Chief of the Atlantic Fleet, was on May 10 selected by President Harding as the next Superintendent of the

<p>ADMIRAL WILSON TO HEAD ANNAPOLIS</p>	<p>Naval Academy at Annapolis. He succeeded Rear Admiral Archibald H. Scales, who for several years</p>
---	---

had been in charge of the Academy. The change was to be effective at the end of the present academic year. Admiral Wilson was stationed at Brest during the war, and since his return had been in command of the Atlantic Fleet, which had been brought to a high state of efficiency.

**W**ITHOUT a record vote, the Senate on April 26 passed the budget bill. The bill provides for a bureau of the budget in the Treasury Department to prepare the estimate of appropriations

<p>BUDGET SYSTEM ADOPTED</p>	<p>needed by the various departments. The bureau would have as its head a director of the budget, appointed by the</p>
--------------------------------------	--

President with the consent of the Senate for a term of seven years, with an annual salary of \$10,000.

The offices of Controller and Assistant Controller of the Treasury would be abolished under the proposed bill and in their stead offices of Controller General and Assistant Controller General would be created. Their removal would be permitted by joint Congressional resolution, which requires the President's signature.

The House on May 5 passed the budget bill by a vote of 344 to 9. The measure differed in some minor particulars from that passed by the Senate. Arrangements were made for a prompt conference between the two houses so that the bill might have the differences adjusted and be sent to the President in time, if approved, to

permit the inauguration of the new system at the opening of the next fiscal year, July 1.

**B**Y a vote of 49 to 23 the Senate on April 30 adopted the Knox resolution declaring the state of war between the United States on the one hand and Germany and Austria-Hungary on the other to be at an end. The importance of

<p>ADOPTION OF KNOX RESOLUTION</p>	<p>this action was overshadowed, however, by an announcement made by Senator Lodge, Republican floor leader, which was construed to imply that a new peace treaty would probably be negotiated with Germany.</p>
--	--

Senator Lodge was not explicit in his statement, but conveyed the impression that the Versailles Treaty, even if modified by the elimination of the League covenant and addition of reservations to prevent the United States from becoming involved in European politics, would not be submitted to the Senate for ratification. This impression was later modified by the Senator, and a statement from the White House left the impression that the President had not let it be known whether he would again submit the treaty.

The resolution was then sent to the House, where up to May 18 no action had been taken.

**T**AKING the broad ground that in case of public exigency the limitation of the rights of real property was warranted, the United States Supreme Court handed down opinions on April 18 upholding the

<p>SUPREME COURT DECISIONS ON HOUSING LAWS</p>	<p>New York housing laws and a similar rent restriction enactment by Congress for the District of Colum-</p>
--	--

bia. The court divided 5 to 4, and on the same lines in each case. Justice Holmes wrote the majority opinion, which was concurred in by Justices Clarke, Day, Brandeis and Pitney. The minority opinion was handed down by Justice McKenna, with Chief Justice White and Justices McReynolds and Van Devanter joining in the dissent. Justice McKenna held that the rent laws infringed on the constitutional pro-

vision that private property cannot be taken for public use without just compensation. He suggested that the principle of interference with contract smacked of socialism.

**T**HE Naval Appropriation bill, which provided for expenditures of approximately \$396,000,000, was adopted by the House on April 28 by a vote of 212 to 15, without important changes, despite the effort to obtain amendments that would urge on the President early action in calling an international conference on disarmament.

One amendment added was that money should be expended only for work on vessels now under construction; a second prevented expenditures for buildings or shore stations unless specifically authorized. A proposal by Representative Blanton to reduce the appropriation for construction from \$90,000,000 to \$10,000,000 was defeated by an overwhelming vote. The Senate had not acted up to May 18.

**F**OLLOWING a series of conferences looking to a settlement of the wage dispute between the American shipowners, the Shipping Board and the marine workers, an order was issued by Admiral Benson, head of the Shipping Board, to all operators of Government merchant craft to reduce wages 15 per cent., effective at midnight of the day the order was issued, April 30.

This action led on May 1 to a general strike among the marine workers. Six thousand marine engineers in New York harbor left their posts. These were followed by many members of the seamen's and firemen's unions, and a general paralysis of shipping operations was the result. Appeals were made for a revision or revocation of the order, but Admiral Benson insisted that the announced reduction would stand. He served notice on the members of the marine unions who were on strike that the full power of the Government would be employed to move its vessels. He further announced that private interests operating vessels to which the Shipping Board had title must put the 15 per cent. reduction into effect if they wished to retain their

ships. Backing up this position on May 12, he issued a formal order taking from the United Transport Company of New York six ships, aggregating about 55,000 dead-weight tons, on the ground that the company had failed to put the reduced rate into effect.

The strikers on May 17 gave Secretary of Labor Davis full power to make a settlement with the ship owners and the Shipping Board on their behalf. The owners on the same date voted to reject all contracts with Marine unions.

**S**ECRETARY OF WAR WEEKS announced on April 20 that he purposed visiting the Canal Zone shortly, with the view of gathering data on which to base a reorganization of the entire method of administration, which, he declared, was now conducted extravagantly.

Employes of the Canal Zone, the Secretary said, received much higher wages than Government employes in the United States proper, and in addition were allowed sixty days' leave a year, free quarters, the privilege of buying all commodities at cost from Government commissaries and other perquisites. The present cost of administration of the Canal Zone, exclusive of the military forces, is about \$800,000 a month.

**I**T was announced by the Federal Trade Commission on April 29 that formal complaint alleging unfair competition in interstate commerce, in violation of Section 5 of the Commission's Organic act and Section 2 of the Clayton act, had been issued against the United States Steel Corporation and eleven subsidiary companies, upon application made by the Western Association of Rolled Steel Consumers and other users of steel products.

The complaint was based on the system known as the Pittsburgh base price and Pittsburgh plus price, under which all steel except rails, wherever made, was sold at the Pittsburgh base price, plus an imaginary freight rate charge, equal to the actual freight rate charged from Pittsburgh to

the point at which the product was sold. It was claimed that this practice retarded the natural steel manufacturing growth of other sections of the country and placed a premium on the establishment and maintenance of steel fabricating factories in Pittsburgh.

ON May 2 the conviction of Senator Truman H. Newberry of Michigan of conspiracy to violate the Federal Corrupt Practices act during his Senatorial campaign was reversed by the Supreme Court. The Senator had been found guilty in the lower court, sentenced to two years' imprisonment and fined \$10,000.

NEWBERRY  
CONVICTION  
REVERSED

Justice McReynolds handed down the opinion, in which he held that Congress did not have authority to regulate primaries. Justice Pitney submitted an opinion, in which Justices Brandeis and Clarke agreed, concurring in the reversal, but on different grounds, and asserting that Congress had unquestioned power to control primaries. Chief Justice White presented an opinion dissenting from the view that primaries could not be controlled by the Federal laws, but concurring with modifications in the reversal. Senator Newberry resumed his seat in the Senate after the decision.

WASTES amounting to a billion dollars annually were laid to managerial inefficiency on American railroads in a detailed exhibit placed before the Railroad Labor Board April 20, as part of union labor's fight against a reduction of wages. Recoverable wastes were estimated by the employees at \$578,500,000 a year, and other wastes, impossible of estimation, would equal that amount, it was declared.

Recoverable and easily estimated wastes were divided by the exhibit under nine heads, having to do largely with construction and care of locomotives and shop machinery, cost accounting and labor turnover.

The wastes which the unions said could not be estimated in terms of money included a variety of subjects, ranging from defective train equipment and tracks to allega-

tions of incompetent and extravagant management. In the latter class, emphasis was laid upon publicity and advertising and on what the unions thought were unnecessary legal expenses. Such expenditures, it was claimed, had served to increase the operating costs, and had been wrongly charged against them.

The operators' side of the wage controversy was presented in part by Mr. Julius Kruttschnitt, Chairman of the Board of Directors of the Southern Pacific, who appeared as the first witness, May 10, before the Senate Committee on Interstate Commerce, which began an exhaustive inquiry into the transportation situation.

The witness declared that the chief reason for the increase in operating expenses of the railroads was the added labor bill of more than \$2,225,000,000 since the Adamson law went into effect in 1916. Before that law became operative, the labor bill of the carriers stood at \$1,468,576,394. In 1920 it was \$3,698,216,351.

Expenses over which the railroads had no control, because of prices fixed by the Government or by general market conditions covered 97½ cents out of every dollar of operating expenses in 1920, asserted Mr. Kruttschnitt, adding that 64 cents out of every dollar of operating expenses in that year were paid out to labor, and the wages of labor were fixed by the Government.

The national agreements between the railroads and the workers, which were framed under Government supervision, were stated by the witness to be wasteful, in that expenditures were forced on railroads and the efficiency of the employees was decreased.

THE failure of retail prices to come down to the level warranted by declines in wholesale prices is retarding readjustment, according to an announcement made

May 1 by the Federal Reserve Board in its review of general business and financial conditions for the month of April.

Heavy transportation charges, high wage levels and high prices for coal and steel were cited as contributing factors, but throughout the review the retail price situation was emphasized as the most important element in retarding business revival.

The board called attention to the fact that statistics prepared by the Department of Labor showed a decrease of but 1 per cent. in retail food prices for the month of March. It pointed out also that the index figures fixed by the Federal Reserve Board showed a reduction since January of 11 per cent. in raw materials, as compared with 3 per cent. in prices to the consumer. The index figure on May 1 stood at 50 per cent. above the 1913 average.

saving, based on current operations, would amount to about only half that sum, or \$58,000,000. The average wage, including day workers and salaried employes, last year was \$2,173. The reduction announced brings this to \$1,639.

**T**HE Kellogg bill, authorizing the President to regulate and license landings of submarine cables in this country, was passed by the Senate on April 26. Cable companies are prohibited under the bill from landing or operating cables connecting with this country without a Presidential permit, and the President is authorized to revoke licenses should such action be in the Government's interests.

The bill was written and pressed by Senator Kellogg of Minnesota at the request of the State Department after the dispute between the department and the Western Union Telegraph Company over the latter's cable landing at Miami, Fla. There was no opposition to it in the Senate, and no record vote was taken.

**A** REDUCTION was announced by the United States Steel Corporation on May 3 of 20 per cent. in the wages of day laborers in all of its manufacturing plants, to take effect May 16. Other rates, including salaries, were to be equitably adjusted, according to an official statement issued by Judge Elbert

H. Gary. The 20 per cent. reduction affected the wages of about 150,000 men and brought the wage scale to the level which existed during the early months of 1918.

Last year the Steel Corporation, according to its annual report, paid out approximately \$581,000,000 in wages to 267,345 employes. These figures were based on full operation, and the 20 per cent. reduction would mean a saving of about \$116,000,000 annually, but as the corporation is now employing only between 125,000 and 150,000 men, the

**A**N emergency tariff bill, carrying the anti-dumping and American valuation clauses and the Knox dyestuffs protection amendment, was passed by the Senate on May 11 by a vote of 63 to 28, seven Democrats voting with the Republican majority and one Republican with the minor-

ity. All efforts to amend the bill as reported by the Finance Committee or to strike out provisions that the opposition objected to failed by substantial majorities. The only amendment on which the vote was comparatively close was that offered by Senator Reed of Missouri that would have denied the benefits of the measure to American exporters who sell their goods more cheaply in foreign markets than at home. This failed by a vote of 50 to 40.

The bill then went to conference. A similar measure, with the exception of certain amendments, had been passed by the House April 15 by a vote of 269 to 112. The conferees agreed and the bill went to the President on May 16.

**D**ESPITE popular belief that unemployment has lessened, the Department of Labor announced on May 5 that the actual figures revealed that conditions at the close of April were four-tenths of 1 per cent. worse than at the close of March.

The reports received showed that of fifty-three industrial centres east of the Mississippi, twenty-eight showed decreases in employment, as against twenty-five showing improved conditions. The Pacific Coast was shown as having lost ground through April, inactivity in shipbuilding and lumbering accounting for much of the reduction. In the Middle Atlantic States, including New York, Pennsylvania and New Jersey, little industrial improvement had been noted in April.

# SANTO DOMINGO'S BITTER PROTEST

By HORACE G. KNOWLES

Former Minister of the United States to Rumania, Serbia,  
Bulgaria, Santo Domingo and Bolivia

*A blistering denunciation of the continued American occupation of Santo Domingo—Former Minister to the Island Republic declares that the Military Government has brought it to the verge of bankruptcy and continues to abuse its powers*

THE continued occupation of Santo Domingo by the United States authorities is a blemish on the American escutcheon. The facts supporting this declaration were frequently presented to the Wilson Administration during its last days by high authorities who could not be refuted; but this injustice continued, and the suppression of the sovereign rights of a friendly republic was maintained by our powerful nation. This state of affairs is continuing under the present Administration, to the surprise and regret of many of its most ardent supporters. The facts are known in Washington. President Harding has promised to act, and more recently Secretary of State Hughes announced that the United States will withdraw its force from Santo Domingo. The Wilson Administration, in its expiring days, in a kind of deathbed repentance, declared the United States has no longer cause to remain in Santo Domingo and indicated that the evacuation would be effected within six months from Dec. 23 last. But nearly six months have elapsed without the departure of a single marine or bayonet. On the contrary, Washington has just announced the appointment of a new Military Governor for the republic. It seems that only the pressure of public opinion can avail to correct the grave injustice done the Dominican Nation and aid this administration to bring about an early end of the regrettable conditions that we have forced upon it.

The maladministration and extravagance of the American Military Government have brought the unfortunate little country to the very verge of national bankruptcy, and today representatives of the United States and its military Government in Santo Domingo almost in desperation are operating between Washington and Wall Street in an effort to secure a Dominican foreign loan

for \$10,000,000, so deep in the hole of insolvency have the invading authorities plunged that little and now almost completely ruined country. To the last man, woman and child, the Dominican people oppose such an unauthorized loan and financial yoke, and if against their consent and protests it is negotiated by the offenders and wrongers of their country they declare they never will recognize or pay it.

To one business house in New York alone the military Government has involved the Dominican people in a debt that exceeds \$800,000. More than \$80,000 was spent for vaccine points for a small country where smallpox is unknown.

The well-known Clyde Steamship Company, which has been in direct and constant touch with the island and country for more than forty years, and in that period has provided almost the total transportation facilities for passengers and freight between the Dominican Republic and the United States, stated publicly a few days ago that the economic and financial conditions of the country under the American Military Government, which has continued uninterruptedly for five years, are the very worst that it has known or experienced during the forty years of its relations with the island.

President Harding in his campaign speeches severely and very justly criticised the Wilson Administration for its doings in Santo Domingo, and since March 4 Secretary Hughes has announced that the United States will withdraw its forces from Santo Domingo, but weeks and months are passing without anything definite being done, so far as the Dominican people can see. In the meantime they see the economic, commercial, financial and educational conditions of their country going from bad to

worse. The unanimous cry and appeal of the Dominicans to the American people and the Administration at Washington is: "Please give back to us that which you wrongfully took from us, and go away and leave us alone. We were better off and happier before you came, and we will be better off and happier after you leave. Please, go away!" Unwelcome when we arrived, and after an enforced stay of five years unwanted! Is it possible that President Harding and the American people can be deaf to such an appeal (and arraignment) as that?

To these brief introductory remarks I append the following letter, written by me to United States Senator Moses, who is a member of the Foreign Relations Committee of the United States Senate. Every statement therein is susceptible of proof and can be sustained by documentary evidence.

I may add that I have Senator Moses's permission to print this letter in THE CURRENT HISTORY MAGAZINE, and he states that he will be pleased if it is given the widest publicity.

#### LETTER TO SENATOR MOSES

New York City, April 30, 1921.

*My dear Senator:*

There cannot be the slightest question as to the contention that the last Administration made worse than a blunder when it ordered the invasion and occupation of the Dominican Republic. In accordance with such order a very large force of American marines was landed on Dominican territory; an American Admiral set himself up as Military Governor of the country, and immediately thereafter and with force of arms deposed the duly elected President of the country; dismissed the Ministers of State; dissolved the National Congress; grabbed the National Treasury; prohibited the holding of elections of any kind; enforced a censorship on tongue and pen, mail and wire, in the severest manner possible; and completely seized the country and every governmental function in it, in a no less imperious and subjugating way than the Germans did in Belgium and Rumania. Incredible all this may seem, but it is absolutely true.

What our Government did in that country and to that little friendly nation only a declaration of a state of war would justify. But we did not declare war against the Dominican Republic—only Congress could do that—and yet we took possession of the country in the same way we would have done had there been such a declaration or state of war. As a matter of fact, we actually waged war

on that country, and have for five years maintained there a state of war. Had the Dominican Republic not been a small and defenseless country, as against such a powerful aggressor; had it been England, France, Japan, Argentina, or even Mexico, our action—invasion—would have been considered an act of war, as in fact it really was, and would have plunged us at once into a terrific conflict.

In the proclamation of occupation it is stated that the cause for the occupation was that the Dominican Republic had violated a certain clause of the Treaty of 1907, which is not true. But, even if the charge had been true, there is absolutely nothing in the treaty that authorizes the United States to take such drastic action. There could be nothing in a treaty that would authorize or warrant our country invade and occupy to the country of the other party to the treaty. Never would any country make such a treaty with us or we with them.

Our Government in one fell swoop made the Dominican Republic a subject nation, and as much so as though we had been at war with it—the little nation trying to fight back with its "big brother" and we conquered it. We invaded and occupied its territory, and we trampled under foot its sovereignty, we took from the people their liberty and independence, and violated not only our treaty with with them, but international law, the very principles of the Monroe Doctrine, and our own Constitution. And, moreover, while in such unlawful action, our forces short, killed and maimed the natives, tortured them and burned their homes.

Our Government was made to act in a criminally careless way. The order to use the bludgeon on a little, and it must be admitted, always friendly nation, that had committed no wrong against us, and a nation of the same sovereign rights as the greatest nations of the earth and our own, the home and last resting place of Christopher Columbus, must have been given and the blow struck without looking into or showing the least regard for the rights of the Dominican Republic, or the rights of our own country in attacking another nation and invading its territory. The solemn treaty of friendship we made with them, in which we recognized and promised always to respect their sovereignty; our own Constitution and international law were not examined or consulted; nor were the guaranties we have always maintained and the promise the Monroe Doctrine gives the American republics, taken into consideration; nor was our own resolution urged upon and passed by The Hague Tribunal in 1907, given a thought.

Indeed, it appears, of only one thing we were sure, and that was, we were going to commit an act of war against a small and not a large nation, against a helpless and not a strong people, and that we had force enough to subjugate them quickly. Then, in ignorance or willful criminality on one hand, and with assurance of our safety

on the other, and then without the shadow of right to support us, and without giving the least warning or notice, we made the attack and invasion, and when resistance was made we shot the patriots, and then added to our cowardice and shame by calling—branding—the unfortunate victims as they fell facing our guns and bayonets and lay quivering on their native land, “revolutionists.” They were the same kind of “revolutionists” that fell before the British at Lexington and Bunker Hill. The Dominicans were trying to repel an invading foe, and fell fighting for the sovereign rights of their native land.

Thus they were, in fact, more in the right in resisting our forces than we were in attacking the British. How many of the brave Dominicans were thus shot down remains to be told. Besides those who made the supreme sacrifice there are innumerable ones that suffered untold indignities, injuries, cruelties and even torture. Economically, the country has been ruined by the extravagance, wastefulness and maladministration of the American military Government. Because of a dissipation of the people's money and a worse than incompetent self-imposed Government, the public school system has been paralyzed—the university and all schools closed.

This action of ours in Santo Domingo will make the blackest pages found in our national history.

Every statement I have made I am pre-

pared to support by ample proof, and will be ready to appear any time before you, or your committee.

The State Department has admitted—confessed—to me and to others that our Government had absolutely no right to invade and occupy Santo Domingo. That is the truth and it can never be concealed, and, moreover, to our great discredit and detriment it is known to every Latin-American country, many of which have already made representations and formal protests and appeals to our Government. Then, if it be the truth, there is but one thing for our Government to do, and that is at once to quit the country we have wrongfully and illegally invaded, and to withdraw from it in the way and at the time the *injured party* and not the *offender* shall indicate, and then make due reparation for our wrongful action. Would that not be in accord with Secretary Hughes's recently declared policy of “justice” in our dealings with the Latin-American—our sister—republics?

This shameful and disgraceful procedure and the resulting condition in Santo Domingo should not be permitted to continue another day, unless this Administration and our Government and people want to approve the wrong and outrage committed by the thoughtless and heedless last Administration, and it is intended to repudiate the pre-election promise made on this subject by President Harding.

[SIGNED] HORACE G. KNOWLES.

## PROTEST OF SANTO DOMINGO'S DEPOSED PRESIDENT

BY FRANCISCO HENRIQUEZ Y CARVAJAL

President of the Dominican Republic since 1916; graduate of the University of Paris in Medicine and Law, and member of The Hague Tribunal

**E**XACTLY five years ago, on May 15, 1916, the United States marines entered the City of Santo Domingo. These forces were commanded by Rear Admiral Caperton. The Admiral and the American Minister, William Russell, announced to the country as a whole, and to the Dominican Congress in particular, that the entrance of these troops had been undertaken for the sole purpose of aiding the Dominican people to restore peace and administrative order, momentarily disturbed by certain discords which had arisen between President Jimenez and his War Minister, General Desiderio Arias. The President, from patriotic reasons, had resigned from office rather than accept the offer of the Military Command to bear him triumph-

antly into the capital, which was held by the War Minister with a force of not more than 300 men.

The Dominican Congress wished to elect a new President to complete the term of Jimenez, in accordance with the prescription and the powers granted for such an emergency by the Dominican Constitution. Admiral Caperton and the American Minister asked the Congress to defer the election for a few days. Meanwhile the United States marines, under the command of Brigadier Pendleton, completed their occupation of all strategic points of the Dominican territory. The Dominican Congress, after waiting for two months and a half, elected a President, who assumed office on July 31 of the same year.

After the new Government was installed, the American Minister, supported by the occupying forces, demanded of the President that he accept the following proposal of the American Government: That the President of the United States should appoint a Financial Counselor and a Military Governor for Santo Domingo, the first to control the Treasury, the second to control the Dominican Army. It was implied that the authority of these new officials would be greater than that of the President himself, and that they would possess all the authority and the legislative rights of the Dominican Congress.

The President refused to accept this demand, despite the pressure the military occupation brought to bear on the payment of salaries and of all administrative expenses. As a consequence of this refusal, Rear Admiral Knapp, who had replaced Admiral Caperton, proclaimed officially that the Dominican Republic would remain subject to the American Military Government and that its people would be ruled by martial law. The President then left the country, protested to Washington against this violence and informed all Latin America of what had occurred.

At first the Military Government closed its own annual balances with a surplus of from \$3,000,000 to \$4,000,000. This result was pointed out more than once by officials of the Administration as an honorable justification of the military occupation.

Although the Occupation Government had destroyed the whole governmental system of the country, both national and municipal, it zealously undertook certain works of public utility, such as lengthening the highways, constructing bridges and public buildings and organizing elementary public instructions. Many rural schools were opened. It was declared in public documents that because of this great number of newly created schools a total of 100,000 children were finding instruction in the educational nurseries. They even went so far as to define this success as the culminating glory of the military intervention.

Of no importance was the fact that in the fields were dying men, women and children, some at the point of the bayonet, others as the victims of stupid reconcentration orders as bad as those of Weyler in Cuba. It was

of no importance that the people were gagged, robbed of all individual liberty and terrorized, that all journalists who dared to protest against the cruelty of the occupation were cast into prison, threatened and even shot, for the sole crime of having defended the liberty and independence of their country and of having advocated passive resistance to the invader and his occupation. All these facts, it seemed, were dimmed and eclipsed by the radiance of those twin glories—the schools, the public works.

But quite suddenly, perhaps because an expert and far-sighted official was no longer in control of the Treasury, the surpluses disappeared. The budget grew larger every year; from four millions it rose to five, to six, to eight, and finally to eleven millions. The commercial crisis which still afflicts the world today struck Santo Domingo. Prices went down, trade diminished, the economic condition of the country suffered the same shock which it had suffered in other countries of Latin America. The Military Government was unable to foresee this crisis. On the contrary, as the result of its inexperience of public affairs, it prepared to plunge into it by the widest door, leading by every sign to bankruptcy. Debts were paid with increases. It was decreed that the total debt could be wiped out in thirty-two years before the time limit fixed with the lenders. No more alluring prospect could be conceived. Only the Dominicans kept bad accounts. The Military Government now considered itself able to execute a budget plan calling for more than \$11,000,000, while the Dominicans, who kept such bad accounts, had estimated their highest budget at not more than \$4,500,000.

Such was the prospect. A change came overnight. The revenues decreased. The budget could be covered. But they began to cut salaries and to reduce personnel. The employe who received \$100 was paid only \$40. In an office where there were four employes, only two were left. The courts of justice were suppressed in various places. Some of the schools were suppressed; where there had been scarcely 600, only 300 remained. But this was not enough. Public works were discontinued. How could they go on with them? The only recourse left was to create a new public debt.

What they are now seeking is a new loan

of \$10,000,000 at 8 per cent. interest, whereas the country is paying on the previous debt only 5 per cent. But the people are refusing to support this new loan. They are protesting, in the press, in speeches, at meetings, to the Washington Government. They prefer misery, hunger, to this loan. To impress on the people the necessity of the loan, the Military Government has resolved to suppress, not a part of the schools, but the whole system of public instruction, from the university down to the smallest primary school. The people are raising their voice against this method of persuasion, never used before in their country, not even in its saddest days of revolts and misery. But though they protest against this measure, they also say: "No matter, we will support our schools, we will dispense with salaries, but we will not have this loan." This is the most formidable protest that a people can make against a loan which they do not wish. There are today no public works, no paid schools, no public offices for the Dominicans—but there will be no new loan with the consent of the Dominicans.

To justify the necessity of the loan, a certain person called in New York a meeting

of business men who are in commercial touch with Santo Domingo. The firm of Clyde said at this meeting: "In the forty years we have been working in that country, we have never seen such a grave situation as that which prevails there at present. The American Military Government has spent there \$800,000 in improvement of the harbors, and yet the harbors have never been in such a bad condition as they are today."

The Military Government intervened in Santo Domingo under the pretext that the American Government had made debts without the consent of the President of the United States. A later investigation showed that the financial situation of the Dominican Republic was excellent. After five years of a government of intervention, salaries are not paid, public offices are suppressed, courts of justice are suppressed, the whole educational system is suppressed, considerable sums are owed to commerce, a bond issue is made covering a total of \$1,200,000, without the consent either of the Dominican people or of the American Government, and the Military Government now wishes to save the situation by raising a loan of \$10,000,000, to which the Dominican people refuse their consent.

## FOREIGN POLICY OF THE UNITED STATES

THE month under review was marked by a number of events tending to clarify the foreign policy of the United States under the new Administration. The rejection by President Harding of Germany's new reparation proposals, submitted after a special appeal for American intervention, was accompanied by a note showing plainly the President's belief that the allied reparations policy was justified. The allied Governments were sufficiently encouraged by President Harding's attitude to send him on May 5 an invitation to participate through duly accredited representatives in all future allied conferences. The Washington Government replied at once, saying that the United States "though maintaining the traditional policy of abstention in matters of distinctly European concern" was "deeply interested" in the future settlements, and was ready to co-operate within the limits described. George Harvey, the new Ambas-

sador to Great Britain, was appointed unofficial observer on the Supreme Council; Myron T. Herrick, Ambassador to France, was to act in a similar capacity on the Council of Ambassadors at Paris, and Roland W. Boyden on the Reparation Commission. This change of policy, even under reservations, was received jubilantly by the allied press.

Official correspondence showed that the Harding Administration was holding firm both on the dispute with Japan over Yap, and on the issue with Holland over the participation of American interests in oil concessions in the Dutch East Indies. The address of the President at the unveiling of the Bolivar Statue on April 19 showed a similar firmness in regard to the upholding of the Monroe Doctrine. The whole subject of American foreign policy will be fully treated in the July issue of CURRENT HISTORY.

# ITALY'S ELECTION ONE OF WORLD IMPORTANCE

*Conservative parties win by an overwhelming majority, and the Bolshevik elements lose a large part of their former strength in Parliament—What the results signify*

[PERIOD ENDED MAY 18, 1921]

THE elections to the twenty-sixth Legislature of Italy took place May 15, in accordance with the decree of the King dissolving the twenty-fifth Legislature and convoking the new Chamber with the Senate for June 8. The importance of these elections is not confined to the Kingdom of Italy. In other countries the same forces which produced them have reached various stages of conflict, but in Italy the climax had come: Should the Government continue to abdicate to political theorists and fanatics, or should it give heed to the demonstrations of the middle-class majority and ask for a new set of lawmakers?

The returns to May 18 show that the various parties of the Coalition Constitution-  
alists, on which the Giolitti Government can depend, have raised their representation from 189 in the old Chamber to 266, that the combined Socialist factions have lost 36 seats, that the Popular or Catholic Party returned the same number of Deputies which it had at the beginning of the old Chamber, that Nitti's personal party has been reduced from 23 to 15, that the 10 Outlanders returned from Bolzano and Istria may indicate that Italy has an Alsace-Lorraine on her hands, and, finally, that there must be one or more uncertain seats, as the total, 536, is one over the number required. The returns are:

Constitutional Coalition .....	266
Socialists (all factions).....	134
Popularists (Catholics) .....	101
Republicans .....	10
Nitti Liberals .....	15
Slavs .....	6
Germans .....	4

The election of the twenty-sixth Legislature was held under the same law which produced the twenty-fifth—the Election Law of Sept. 2, 1919, when the number of election districts was changed from the number of Deputies to be elected to an

arbitrary number designated by the Minister of the Interior, and the manner of voting was changed from what is called the *scrutin d'arrondissement* to the *scrutin de liste*.

Thus, there were just 508 constituencies for the Chamber elected in October, 1913—the one which survived the war—and only 54 constituencies for the late Chamber elected in November, 1919. The new Chamber, which will take its seat on June 8, was elected from forty constituencies and produced the ordinary 508 Deputies, and, from the additional constituencies carved from the territory recovered from Austria-Hungary, numbering 6, producing 27 Deputies, thus making the twenty-sixth Legislature contain 535.

The reduction of the 54 constituencies to 40 was made in order to neutralize the Socialist vote in the great manufacturing centres, where several towns had set up Soviet municipal Governments.

The line-up of the Chamber on the eve of dissolution was not exactly the same as when elected, for meanwhile, in accordance with the law of July, 1920, each Deputy had been obliged to declare his party adherence, as follows:

Liberal Democrats .....	87
Republicans .....	10
Reformists (War-Socialists).....	18
Official Socialists .....	155
Liberals .....	23
Popularists (Catholics) .....	98
Radicals .....	57
Progressives .....	33
Mixed group .....	18
Non-political President .....	1
Vacant seats .....	8
Total .....	508

The greatest deflection had been from the Liberal Democrats, Premier Giolitti's party, on account of the manoeuvres of his predecessor, Signor Nitti. The Official

Socialists refer to the regular Socialist Party, which included the Syndicalists of the preceding Chamber and the new Communists, who were to separate from the party at the Leghorn Congress of last December, numbering about twenty; the Popularists represent the Catholics, who had been organized into a party in January, 1919, although in the Chamber of October, 1913, there had been twenty-four individual Catholics without a recognized party; the Mixed Group is made up of Nationalists, ex-service men and independents. With the Constitutionalists, or Ministerialists, made up principally of the Liberal Democrats, Liberals, Progressives, some of the Mixed Group, and a strong contingent of Radicals, the usual division in Parliamentary business was as follows:

Constitutionalists .....	189
Socialists .....	170
Popularists .....	100
Radicals .....	36
Republicans .....	13
Total .....	508

The prominent features in the life of the late Chamber which made themselves felt in the electoral campaign begun after the dissolution were the "repudiation" of the Communists by the Socialists and the consequent gains by the Reformists—Socialists who placed Italy above the fetish of the International—the turning of several Popularists to communism, the encouragement by the Constitutionalists of the Fascismo movement as a means of preserving the waning prestige of the Government, if not always its authority, and finally the attempt of the Socialists to make the cause of labor their own without, however, abandoning the academic communist program—they merely reverted to the ballot instead of direct action in order to gain the millennium.

Without questioning the sincerity of the Socialists, it is therefore apparent that whatever may have been the political or social affiliations of the parties which met on May 15 at the polls, the voters, however classed, represented movements superior to all parties; the one led by the Fascismo for the perpetuation of democratic government, the other led by the Socialists for the destruction of that government and the establishment of a new form in which the proletariat should dominate at communist dictation.

The Fascisti reaffirmed the necessity for

Italy's entering the war in 1915; they celebrated Vittorio Veneto, the "immortal legion" at Fiume and its leader; they demanded an end of State collectivism and a return to economic freedom; they favored the labor movement, so far as it did not clash with the interests of production and national necessities; and, finally, they wanted Italy to free herself both from Leninism and from the thralldom of being dependent on other States for raw materials. As a result of their punitive conflicts with the communists on the eve of the election, provincial Prefects had been obliged to remove five Soviet Mayors; three had resigned, and over 200 buildings used for treasonable intercourse had been destroyed. With the Fascismo the International is synonymous with treason. Benito Mussolini, the converted Socialist who helped to mold the ex-service men of Italy into one of the most wonderful organizations in the world, said of the Fascisti: "We are not a party, we are a movement"—*Non siamo un partito siamo un movimento*.

But this is also what the Socialists claimed to be, after they had been so often mistaken for communists by the Fascisti that they complained to the Government of their treatment and threatened to stay away from the polls, for they said in their manifesto: "The Socialist Parliamentary group has no purely parliamentary aims of its own; it aims at Socialist results, therefore its tactics cannot but be uncompromisingly opposed to any bourgeois government."

They then selected from the Government program, published in the address of the Ministerial Council to the King asking for dissolution, such items as they thought might especially appeal to the proletariat and made them their own—in their own way:

Our program in Parliament is to back the labor organizations in the class struggle; to help them win the workers' control in the industries today, to help them eliminate the exploitation of tomorrow. \* \* \* We want to promote co-operative enterprises on a large scale, and without any dividends, as a substitute for the individualistic forms of production and exchange. We want to promote the socialization of the soil; we want the collective management of food supplies; of the storage, packing houses) and the useful industries. \* \* \* We want to abolish the

standing army; to protect labor, the old and the sick, promote the moral and physical life of the proletariat by means of cultural improvement, combine manual and scientific work; free justice by appointing judges through the ballot; compensate the war victims, reorganize the invaded regions, &c.

Moreover, it will be seen that the repudiation of the Reds by the Official Socialists was merely an expedient forced upon them by public opinion and the activities of the Fascisti and proclaimed with the idea of winning the support of the workers at the polls, for the manifesto deliberately declares:

From Parliament our Socialist Deputies, even in their minimalist parliamentarian program, looking to the needs of the working class, will aim at our maximalist program, which is communism in the full sense.

By April 25 the nomination lists of candidates were complete. The Socialists, with 195 candidates, presented themselves in 37 out of the 40 constituencies; independent of these were the communists, with twenty-four lists; the Popularists, or Catholics, were prepared to contest the election in thirty-four constituencies; the Fascisti in only two. On the other hand, the various parties forming the Constitutional bloc were, on an avowed scheme of coalition, prepared to contest 35 constituencies.

On May 11 Signor Giolitti, in his capacity of Minister of the Interior, sent the following order to the Prefects of the Provinces, under whose direction national elections are held:

As election day approaches, the more careful must be your efforts to assure to all parties, without distinction, freedom for propaganda. The electoral battle must be fought within the limits of legality, especially where the conflict of ideas is most acute and personal animosity is sharpest. Violence must be averted, whether by members of the Fascisti, communists or other parties.

The local measures taken to execute this order were generally effective. On election day the Fascisti ceased their punitive expeditions and assisted the Carabinieri in preserving order at the polls.

A repercussion of the campaign in Italy was felt in Fiume, where, on April 24, the first national election was held in accordance with the Treaty of Rapallo. The principal contest was between the Italian annexationists, led by the former lieutenants of d'Annunzio, and the autonomists, led by Riccardo Zanella. The latter won by 1,000 votes. They, thereupon, instigated by the communists, usurped the power of the constituted Government before their time and seized government buildings. Then the Fascisti arrived from Trieste, and in their turn seized the power, reinstated the old Government, and destroyed the ballot boxes, declaring that the election had been fraudulent and ordering a new one. In the end they were removed by the Italian Regulars and order was restored under a High Commission, which, headed by the former Mayor Bellasich, is identical with the old provisional Government.

## THE DUTCH OIL CONTROVERSY

A CONTROVERSY has arisen between the United States and Holland over the right of aliens to prospect for oil in Sumatra. The Djambi oil fields in the Province of Palembang have long been the object of a struggle among the Standard Oil, the Dutch East Indies and the Shell group of oil producers. Three Standard Oil officials in April made a bid for one-half of the Djambi concession on the Dutch Government's own terms, the contract for which came before the second chamber of The Hague Parliament on April 26. The bill, it was pointed out, would give the Royal Dutch Company the exploitation not only of the Djambi concessions but of all the Dutch Indies oil fields in the future.

As amended and passed on April 29 by a vote of 49 to 30, the bill provides for the exploitation of the Djambi fields for forty years by a combination of the Dutch Indian Government and the Batavia Oil Company, the latter belonging to the Shell group. The capital of 10,000,000 guilders will be equally divided, but the company will be under control of the Dutch Government, and the Directors must all be Dutchmen, while the Minister of the Colonies will nominate the President, Vice President and one other member of the board.

A vigorous note had previously been addressed to the Dutch Government by Secretary Hughes, insisting that American oil companies must have equal opportunities

with the Royal Dutch Company or any other in the development of the Djambi oil fields in Sumatra and elsewhere in the Dutch East Indies. The note made it plain that if American capital did not receive such equal opportunity, access to oil under public lands of the United States would be denied to foreign capital.

Holland's reply was received in Washington on May 12. The Dutch Foreign Office points out that the American note came too late, as the law passed by the second chamber had been already drafted, and the question, pending the approval of Parliament, had been settled. The Minister says there are rich oil fields in addition to the Djambi concession, both in Sumatra and Borneo, and the Minister of the Colonies would be

glad to make with other companies contracts similar to that already made with the Dutch company. No more concessions, he declared, would be given for the exploitation of oil fields, but the Netherlands East Indian Government would either develop the oil fields itself or do so by contract with persons or private companies having previously been authorized to do so. These companies must be incorporated either in the Netherlands or the Netherlands East Indies. The managing and directing boards are to be subjects of the Netherlands or the Netherlands East Indies.

The decision of the second chamber was not final, for it was still to come before the first chamber, the debate there being expected to begin about May 17.

## HUNGARY UNDER A NEW GOVERNMENT

[PERIOD ENDED MAY 15, 1921]

SINCE the solution of the Ministerial crisis caused by the unexpected appearance in Hungary of former King Charles, interest has centred in the new Cabinet and the sensational trial of a group of suspects charged with instigating the murder of Count Stephen Tisza, former Premier of Hungary, the "iron man" of Central Europe.

The new Cabinet, headed by Count Stephen Bethlen, on April 19 offered its program to the Parliament in Budapest. The Premier significantly declared that a new policy must be inaugurated, and that it would be a fatal mistake to let things continue as Count Tisza had left them. He further declared that although the Government espoused the Christian idea and a national and agrarian program, it strongly condemned anti-Semitism. His Government would not permit disturbance of social order by individuals or groups or organizations, but would punish, and if necessary destroy, all who caused strife or offered resistance. He expressed desire for close co-operation among all classes of the nation, but especially between the farmers and intellectuals. Unequivocally he denounced demagoguery and radical tendencies bearing the seeds of disorganization and bloody conflicts. He advocated constructive measures free from catchwords and wrong appeals to mob psy-

chology. In picturing a brighter future for the nation, he appealed to all to go to work and cease debating legal questions. He promised democratic legislation, without bowing to extreme demands. The first step in this direction would be made, he said, in the restoration of the rights of a free press and free assembly.

Among bills to be introduced, he mentioned especially one to reform the electoral franchise; another to modernize State administration, and a third regarding restoration of the upper chamber of the Parliament. The second bill would contain a broad outline as to how the Government proposes to bring about a just distribution and taxation of the land in the creation of small landowners.

Toward succession States the Premier counseled patience, but he expected them to show the same attitude, and, despite the enormous benefits they reaped through the assistance of the Entente, to be mindful of their obligations as established in the peace treaty. He hoped that commercial intercourse would open in the near future and that economic barriers would be lifted.

As an echo to the recent dynastic plot to restore King Charles of the Hapsburgs, he said that exercise of the royal prerogatives had ceased by virtue of a law adopted

in time of the revolution; any one opposing the new state of affairs would be punished. The ultimate decision regarding the monarchy would be left to a time, he declared, when conditions had become stable and when the will of the nation could express itself freely in Parliament without undue pressure from within or without.

Although support was pledged to the new Government by the National Assembly, the Government will find it hard to survive. The Christian Nationalists seem to think it concedes too much to the Liberals, while the latter oppose it because of a charge that the Cabinet is monarchistic and desirous of restoring the aristocracy to its former privileges. They argue that an attempt to call into life an upper house, in which the scions of privileged classes should sit as lawmakers, is a retrograde step and shows that talk of promoting democracy is but an empty phrase. On the other hand, while a large majority of the Farmers' Party is solidly behind the new Cabinet, the so-called radical wing vigorously opposes the same and predicts a short life and unpleasant one for Count Bethlen's Ministry.

A large majority of the Farmers' Party favors a dissolution, because this party is anti-Hapsburg and sees a wonderful opportunity to go before an electorate on a platform of free election as to who shall be the future head of the nation. Such an attitude was clearly revealed at a party conference held on the night following the new Cabinet's first appearance before the National Assembly. There a resolution was adopted demanding that the Government prosecute all who had a hand in the restoration plot.

Count Julius Andrássy, known as one of the foremost legitimists or Carlists, reminded the National Assembly that the question of the right to the Hungarian throne can be decided only by the law of the land, which is in favor of the former monarch, since his right to the throne has never been abrogated and he is still the lawful King of the country. Incidentally he offered support to the new Cabinet, but wished the extermination of groups addicted to violence and the doing away with anything that savors of military rule.

The return of King Charles to his Swiss exile has by no means quieted the agitation in Hungary. There is still a strong public

sentiment both for and against Charles. Not only Hungarian and Austrian aristocrats and clericals are interested in his restoration, but also a powerful French military clique supported by royalists, some publicists, and even diplomats. Marshal Lyautey is freely mentioned in the French group, while in the second group almost all royalist and clerical newspapers can be counted, especially Philippe Millet's papers. Opposition papers agree that the coup was frustrated mainly by Regent Horthy and the Little Entente.

The trial of the suspected instigators of the murder of Count Tisza is of absorbing interest to the populace of the Hungarian capital. Because of the intrigues behind the bloody deed, the political aspirations of some of those connected with the first revolution under Count Karolyi, and the character of some of the leading figures, the trial is historically important. At a previous trial Hüttner, Stanykovszky and Dobo were sentenced to death. Now the instigators are being tried, Stephen Friedrich, Prime Minister after the overthrow of the Bolshevist régime, being the most conspicuous figure on the criminal docket. Dobo died in prison, while Hüttner and Stanykovszky are the chief witnesses against the former Premier. Hüttner testifies strongly against Friedrich, but there is doubt regarding his trustworthiness. Fényes and Kéri, both publicists of radical tendencies, and Vago-Wilhelm, once a commissary under Bolshevist rule, are the principals among the accused. Frequent reference is being made to Count Karolyi as to one who had some knowledge of the criminal conspiracy.

Some uneasiness is caused by the French Parliament's delay in ratifying the Peace Treaty with Hungary. Hungarians are little elated over England's ratification, despite the fact that some of the foremost leaders in both houses of the British Parliament unreservedly denounced the pact. Its territorial and economic clauses were strongly assailed, and Hungary's insurmountable hardships in existing as a self-supporting nation were pointed out; yet, the treaty was adopted without modifications.

The finances of Hungary are rapidly improving, and State expenditures and income balance each other.

# WHAT THE GREEKS ARE FIGHTING FOR

BY PAXTON HIBBEN, F. R. G. S.

AUTHOR OF "CONSTANTINE I. AND THE GREEK PEOPLE"

*A plain narrative of what really happened in Greece at the time of Constantine's abdication and of his recall to the throne—Events as interpreted by an American eyewitness, who holds that the Allies, not the Greeks, were to blame for unfavorable developments*

WHOEVER regards the present struggle between Greece and the Turkish Nationalists as a new war is in error. It did not even begin in 1917, when, under pressure of France, Great Britain and Italy, Greece was finally dragged reluctant into the allied camp. In the very nature of things, there can be no truce between Greek and Turk. They represent two wholly antagonistic conceptions of life: the Greeks, passionately democratic, their King chosen by popular vote, practical, diligent, business-like, and Christian; the Turks, essentially feudal, with the Sultan a religious as well as a political figure, amiable, indolent, corrupt, and Mohammedan.

In 1912, Constantine's victorious armies struck the first Greek blow that seemed seriously to threaten the Ottoman power. That the whole fabric of the Turkish Empire did not crumble was due to the intervention of the Western European powers, especially Russia, moved by fear lest the Greeks regain control of the ancient capital of the Byzantine Empire, Constantinople. The Greeks have made no concealment of the fact that this is their ultimate goal. When, therefore, the second Balkan war, with the harsh terms imposed by the Treaty of Bucharest, made a potential enemy of Bulgaria, Greece merely parried the danger by reaching an alliance with Serbia providing for definite joint military action against Bulgaria in any future Balkan conflict that might arise, and kept her powder dry for the great struggle with Turkey.

When the World War broke out, Greece was untouched by it. On Aug. 2, 1914, M. Venizelos's Government informed Serbia that Greece would maintain a "benevolent neutrality" toward her ally. Two

days later, King Constantine categorically rejected overtures of his brother-in-law, the German Kaiser, to join Germany in the war, and declared that Greece would remain neutral, nor touch any of Germany's friends, Greece's neighbors, "just so long as they do not touch our local Balkan interests." The Entente powers were likewise informed of Greece's "benevolent neutrality," and the Greeks as a whole adopted much the same attitude as the Americans at the same period: friendly to the Allies, but unwilling to be dragged into the conflict.

The first division in Greek opinion arose on Aug. 18, 1914. The Russian Minister had made the suggestion that Greece join the Allies and send 150,000 Hellenic troops to fight the Austrians on the Danube, "as an ally of Serbia." The evident purpose of this move, at a time when Turkey's participation in the war on the side of Germany was already foreseen, was so to employ the bulk of the Greek forces that in the event of a campaign against Constantinople in which Greece might be induced to share, Greece would be in no position to dispute, militarily, Russia's claim to the Turkish capital. M. Venizelos favored the idea, but as the consensus of Greek opinion was strongly opposed to jeopardizing in any such way Greece's aspirations to possess the ancient byzantine capital, the project was abandoned.

## GREEK SENTIMENT DIVIDED

But from that moment forward there were two camps in Greece: those who, led by M. Venizelos, favored immediate intervention in the war on any front and under any conditions suggested by the Entente Powers; and those of whom King Constantine subsequently came to be regarded

as the leader, who opposed Greece's participation in the war except under circumstances and guarantees consonant with the aim of all Hellenic history for eight and a half centuries, namely, not merely concessions for Greece in Asia Minor, but the destruction of the Ottoman Empire.

This latter point of view King Constantine authorized his Minister, on Aug. 23, 1914, to express to the Allies, advising them that Greece

thought it her duty to declare to the Entente Powers that, if Turkey went to war against them, Greece would place all her military and naval forces at the disposal of the Entente for war against Turkey, always provided that Greece were guaranteed against the Bulgarian danger.

It was not until Nov. 1, however, that Turkey openly espoused the cause of Germany. If Greece were to be free to carry out King Constantine's offer of participation in the war against Turkey, it behooved the Entente to find some way of conjuring the danger that Greece, once engaged in the struggle with Turkey, would suddenly be attacked in the rear by Bulgaria.

With Russia claiming Constantinople and a hinterland in Thrace as spoils of victory, there was nothing to offer Bulgaria, save at the expense of Greece, Serbia or Rumania. That part of Greece which the Entente Powers proposed to pay Bulgaria as the price of her co-operation, or at least her neutrality, was precisely the territory which Greece had fought the second Balkan war, the year previous, to gain, and which once in Bulgaria's hands would cut Greece off forever from any land connection with the coveted capital of Byzantium. To the Greeks, vague offers of possible compensations in Asia Minor made through M. Venizelos were meaningless. Asia Minor would always be separated from Greece by the sea, and Italy, France or Great Britain, not Greece, would always control the Mediterranean. Greece had Kavalla and Eastern Macedonia, while Smyrna was still in Turkish hands. A bird in the hand is worth two in the bush is also a Greek proverb.

But if the campaign against Constantinople were made with a sufficient joint force to handle Bulgaria, whatever her attitude, there was no danger of a surprise attack. It was a carefully worked out cam-

paign on this basis that King Constantine proposed to the Allies at this juncture.

On Nov. 3, 1914, an allied bombardment of Kum Kale, at the mouth of the Dardanelles, had put the Turks on their guard. When, therefore, on Feb. 19, 1915, a second effort to take the Dardanelles by

PRINCE GEORGE OF GREECE  
*Brother of King Constantine and Chief Commander of Greek Navy in present war with Turks*

sea failed, King Constantine's proposal of a joint land and naval campaign received serious consideration.

It was at this moment that Russia, on March 4, secretly declared her "annexation" of Constantinople, Thrace, the two Greek islands of Imbros and Tenedos, and a considerable territory in Asia Minor, while at the same time interposing a veto upon the use of any large Greek force in the campaign against Constantinople, or the entry of Greek troops into the ancient Byzantine capital, should it fall to allied arms. This, of course, left Greece nothing to hope for from co-operation with the Entente, and King Constantine broke off negotiations the instant he learned of Russia's attitude. M. Venizelos, who had been

the spokesman of the Entente in urging Greece's participation in the war on any terms, resigned his Premiership on March 6, while the allied fleet, as if Greece's co-operation were a matter of no consequence,

KING CONSTANTINE

*Restored Greek ruler, who has taken up the war against the Turkish Nationalists*

made a third attempt to force the Dardanelles by sea.

### POLICY OF THE ALLIES

The attempt failed, with heavy losses, and the Entente Powers returned to negotiations with the Greeks. Tranquilized by French and British acquiescence in her "annexation" of Constantinople, Russia withdrew her veto upon Greek participation in the campaign. On March 22, Premier Gounaris offered Greece's co-operation in the war against Turkey on conditions defined, on April 14, as (1) a guarantee of the integrity of Greece and (2) a definition of what compensations Greece had to expect.

Entangled in a web of secret agreements with Russia and secret negotiations with Italy, the Entente Powers could grant

neither of these conditions. To have defined what Greece might expect to receive in Turkey would have been to reveal what Greece could not receive, because already allotted to Russia. On the other hand, in the negotiations then in progress for Italy's entry into the war, Italy was being offered part of the territory in North Epirus won by Greece in the first Balkan war. Between Italy and Greece, the Entente Powers did not hesitate; they chose the former, at the expense of Greece. The Pact of London was signed on April 26, 1915.

M. Venizelos was re-elected on June 13, 1915, on much the same basis as President Wilson was re-elected in 1916—as the man who had kept Greece out of the war. His record was good either way; twice he had categorically refused to leave neutrality, and twice he had proposed to do so. But his support of every shifting phase of the Entente policy in Greece had convinced the allied statesmen that he could be depended upon to deliver Greece whenever and under whatever conditions they liked. No sooner was he elected, therefore, than Greece was no longer consulted; she was merely informed that Kavalla would be ceded to Bulgaria as the price of Bulgaria's neutrality, while Greece would be expected to fight in addition to losing one of the richest bits of land in the world.

The best efforts of M. Venizelos were unable to awake enthusiasm in the Greeks for war under these conditions. Moreover, every one in Greece was aware of what the Entente statesmen were blind to, namely, that Bulgaria was on the eve of joining, not the Allies, but the Central Empires. To strengthen his position, M. Venizelos invoked Greece's obligations under the Greco-Serbian alliance, which his own Government had repudiated in 1914. But Serbia was no longer able to fulfill the military requirements of that pact, which called for a Serbian contingent of 150,000 combatants to co-operate with the Greek Army against the Bulgarians. M. Venizelos, therefore, on Sept. 21, went secretly to the French and British Ministers in Athens and asked them to send to Serbia the 150,000 combatants that Serbia could no longer furnish.

On Sept. 23, M. Delcassé replied that France was "ready to furnish the troops which had been requested." A year later, in the Chamber of Deputies, M. Delcassé

admitted that France had not been ready to carry out this pledge, and that he knew it when he made the promise. Moreover, the landing of foreign troops on Hellenic soil without authorization of the Hellenic Parliament was in contravention of Article 99 of the Greek Constitution. The step which M. Venizelos had taken in secretly provoking a violation of the fundamental Greek law was a grave one. Had France sent the 150,000 troops promised, it might have passed unchallenged; but France sent only 13,000 men, who arrived too late to be of any aid to Serbia or to stem the Bulgarian advance. The whole manoeuvre revealed on the part of the French an attempt to "trick" Greece into the war, as a French Deputy put it, which struck a body blow at allied prestige in Greece and caused King Constantine to dismiss M. Venizelos, the Minister who had been responsible for the fiasco, and who had come so near to involving his country in an overwhelming disaster.

#### THE ARMY AT SALONIKI

Though the Entente Powers had been impatient with the Greeks for their reluctance to attack the Bulgarians without proper equipment or sufficient force, the Entente army in Saloniki was no more eager to attack than the Greeks had been. To explain at home this inaction, resulting as it did in considerable criticism of the Saloniki adventure, it was consistent with war psychology that both the high command in Saloniki and the governments in London and Paris responsible for the expedition should blame the situation on the alleged "pro-Germanism" of King Constantine and assert that, if only M. Venizelos were in power in Greece, a decisive military campaign could at once be undertaken from Saloniki. In much the same way, for the first year and a half of the war, the French press and public assailed President Wilson as "pro-German" and insisted that, had only Theodore Roosevelt been President, America would have joined the Allies and the war have been won long since.

New elections in Greece were ordered for Dec. 19, this time with a view to deciding definitely and unequivocally the will of the Greek electorate as to war or peace. Confident of M. Venizelos's ability to carry the

elections, and uncertain as to the moral effect at home of the abandonment of the Saloniki adventure, the Entente Powers decided to leave the handful of French and British troops that had begun to arrive in Saloniki on Oct. 5 in Greece, in the hope that the return of M. Venizelos to power would add the Hellenic Army to the allied force and render military operations in Macedonia possible. In this hope, also, the Island of Cyprus was offered to Greece as an inducement to leave neutrality. But the situation of the allied Saloniki army was so perilous, the whole enterprise had been undertaken with such little foresight, that not only were the Greeks unwilling to enter the war, but it soon became clear that M. Venizelos would not be returned at the approaching elections.

Left in this embarrassing predicament by the Entente Powers, whose cause he had espoused so consistently, M. Venizelos was forced as a political manoeuvre to take the ground that a dissolution on Nov. 4 of a Parliament elected in June was an unconstitutional act, and to save his face by abstaining from voting in the elections. As there are numerous precedents in recent Greek history for King Constantine's act in dismissing his Minister and calling for new elections, the Greeks did not take this contention seriously, nor was it intended they should. It was a position taken entirely for foreign consumption. The Entente Powers were seeking some pretext to intervene actively in the internal affairs of Greece to compel Greece's participation in the war. By Article 4 of the Convention of May 7, 1832, it had been stated that

Greece, under the guarantee of the three Courts [Great Britain, France and Russia] shall form a monarchical and independent State.

#### ALLIED INTERVENTION

In the Treaty of July 13, 1863, the word "constitutional" had been added to this guarantee of Greece's independence. If therefore now it could be shown that the constitutionality of the Government in Greece had been endangered, the "guaranteeing powers" might make a case to satisfy conscience for intervention. The fact that they had, themselves, been the first to violate the Hellenic Constitution by landing troops on Greek soil could be ignored, as could also the employment of the Greek

Island of Corfu as an Entente military and naval base, in violation of the pledge of perpetual neutrality contained in Article 2 of the Treaty of March 29, 1864.

While the Entente Powers were seizing Greek islands, ports, railways, public build-

CROWN PRINCE GEORGE

*Future ruler of Greece, who recently married Princess Elizabeth of Rumania*

ings and forts in connection with their occupation of Saloniki, the Bulgarians were not idle. On May 26, 1916, they moved seven miles inside the Greek frontiers and took possession of the Pass of Rupel. A great hue and cry was at once raised in London and Paris that the Hellenic Government was permitting a violation of Greece's neutrality by Bulgaria. While only the peculiar psychology of war can account for the serious advance of such a thesis by those who were themselves daily violating the neutrality of Greece, the fact served as a pretext for that direct intervention in Greek internal affairs that the Entente Governments had decided upon.

On June 21, 1916, after a fifteen days' blockade of Greek ports, an ultimatum was dispatched to Premier Skouloudis demanding

1. The demobilization of the Hellenic Army.
2. The resignation of the Skouloudis Cabinet, which had succeeded the Ministry of Alexander Zaimis on Nov. 6, 1915.

3. Dissolution of the Greek Parliament and new elections; and

4. To enable M. Venizelos to carry the new elections, the surrender of the control of the Greek police to a partisan of M. Venizelos.

Greece was in no position to resist these demands, and Alexander Zaimis returned to power to accept the terms of the ultimatum. The demobilization of the Greek Army began at once, and as the Greek troops were withdrawn from Eastern Macedonia in compliance with the allied demand, the Bulgarians naturally followed, occupying the very territory Constantine's army had wrested from Bulgarian control in 1913. Part of a Greek army corps, caught in Kavalla and refused transport to old Greece by the allied warships on guard, was even interned by the Bulgarians.

The advance of the Bulgarian forces into Eastern Macedonia on Aug. 26, though an obvious consequence of the Entente's ultimatum, aroused the greatest indignation in Greece. Hitherto the Greeks had had no reason to fight Bulgaria; but now they had. On Aug. 27 Rumania joined the Allies, and offered Greece an extraordinary opportunity, by co-operating with Rumania, to take Bulgaria on both flanks and crush her between an army from the north and one from the south. On Sept. 1 King Constantine offered Greece's participation in the war on the side of the Allies, with this in view, to the British Minister in Athens, Sir Francis Elliot.

#### THE FRENCH ULTIMATUM

The French, however, had demanded new elections in the ultimatum of June 21, with the idea of using General Sarrail's army and their widely extended secret police throughout Greece to carry the elections for M. Venizelos, and they preferred to gamble on the success of this plan. The same day, therefore, that King Constantine offered Greece's departure from neutrality, an allied fleet under French command arrived off the Piraeus and presented another ultimatum requiring the surrender to allied control of the Hellenic posts, telegraphs and wireless, as well as the right for the Franco-British secret police to proceed to arrests of individuals within Greece, without due process of law.

Of course no sovereign Government could grant such terms; but Greece was not in a position to choose. Premier Zaimis ac-

cepted, and resigned at once, to be succeeded on Sept. 11 by Nicholas Kaloguyeropoulos, whom King Constantine had selected to put into diplomatic form the proposal he had already made to join the Allies. Under French leadership, however, Premier Kaloguyeropoulos was not recognized by the Entente, and his formal offer of Greece's participation in the war was ignored.

But the Entente's activities in behalf of M. Venizelos hurt him. It became increasingly evident that the French policy had been in error, and that M. Venizelos could not be elected, despite allied control of police, posts, telegraphs and railways in Greece. Rather than risk another defeat at the polls, M. Venizelos, therefore, on Sept. 25 left Athens secretly on an allied warship, and inaugurated, with active French backing, a revolution against the Constitutional Government of Greece from Saloniki. It was hoped by the French that the great majority of the Greek people would follow M. Venizelos and flock to Saloniki to form—under his leadership—an army to fight Bulgaria, under French command. Nothing of the sort took place, however, and the result of the French policy was merely to embitter the Greeks by loosing civil war in the country, with no corresponding advantage to the allied force in Saloniki.

Having embarked on a wrong course, the French felt that their prestige was at stake, and determined to proceed with the policy they had adopted, instead of accepting King Constantine's offer of Greek military cooperation with the Allies, to which no answer had yet been given. On Oct. 10, the French Admiral demanded the surrender of the entire Greek light flotilla of 24 war vessels, and the following day seized the ships. On Nov. 15, he followed this by demanding the surrender of virtually the entire military equipment of the Hellenic army. But matters had reached a crisis. The patience of the Greeks was exhausted. Much of their territory, their second city, their merchant marine and their war fleet, their railways, posts, telegraphs and police had passed, through ultimatum after ultimatum, into foreign control. There was civil war in the country, and a surrender of their arms meant, and was intended to mean, a triumph of the revolutionary army over the Constitutional Government. The

new demand was therefore refused and the French Admiral was informed that Greek public opinion was so excited that even were King Constantine, as Constitutional Commander-in-Chief of the Hellenic army, to order the Greeks to surrender their arms, he would not be obeyed.

#### BOMBARDMENT OF ATHENS

Nevertheless, Admiral Dartige du Fournet announced his intention of seizing the armament he had demanded, by force, on Dec. 1, if it were not delivered to him before that date. He was repeatedly warned that any such invasion of Greece would be resisted; but he had gone too far to draw back. A Venizelist uprising in Athens had been planned to take place simultaneously with the Admiral's landing, and the French staked everything on the triumph of the Venizelist movement, which they had fostered and financed. Therefore, when the arms were not delivered on Dec. 1, Admiral Dartige du Fournet led in person a landing force of 3,000 men, who marched on Athens.

The struggle was brief. The French Admiral's party was surrounded and virtually made prisoner. Surprised and chagrined at his failure, a bombardment by the Allied fleet of the open city of Athens was ordered, without the customary warning to enable the women and children to depart. After about half an hour of shelling of the city, to save further loss of life among the civilian population, King Constantine agreed to surrender part of the armament demanded. The Venizelist revolution broke out on schedule time, but was put down by the Government in 48 hours, and order restored.

French pride had, of course, been wounded. It was promptly claimed in Paris that Admiral Dartige du Fournet's landing force had been "ambushed" by the Greeks and a number of French sailors "murdered." Just how an armed body of 3,000 sailors happened to be in a position, in a friendly country, to be ambushed by an army is not clear. I witnessed the entire operation myself, and know of my own observation that the story of an "ambush" is absurd. At the same time, nothing was said in France about the bombardment of the city of Athens, and a rigid censorship

kept knowledge of the facts from the rest of the world.

A drastic blockade was promptly clapped on Greece, and maintained with intermittent severity for six months. On Dec. 14, another ultimatum was delivered demanding the internment of the entire Greek peace army in the Peloponnesus, where they became virtually prisoners of the Entente Powers. The revolutionary movement led by M. Venizelos in Saloniki was a failure; it was evident to the French that if they were to get M. Venizelos back into power in Greece, it must be done not only without but against the will of the Greek people.

When the Briand Ministry fell on March 19, steps were therefore taken by Premier Ribot to gain at least the acquiescence of Great Britain in direct action in Greece to place M. Venizelos in power and to dethrone King Constantine, by force if need be. The British Government was reluctant to approve a course in contempt of the will of the Greeks, while at the same time posing as one of the guarantors of the independence of Greece; Italy was decidedly opposed to the course France proposed, while Russia's approval was also lacking. The United States, then associated with the Allies in the war, was kept in ignorance of the plan which the French projected in Greece.

#### CONSTANTINE'S ABDICATION

It was therefore not in co-operation with France's Allies, but with M. Venizelos, that Senator Jonnart, French High Commissioner to Greece, on June 7, arranged for (1) the invasion of Thessaly from Saloniki, by General Sarrail's army; (2) the occupation of the Isthmus of Corinth by a French naval force, to cut off the Greek army; and (3) a landing of French troops near Athens in connection with a naval demonstration within gunshot of the Greek capital. These measures were not preliminary to a demand that Greece leave neutrality, to which the British Government had consented, but to a demand for the abdication of King Constantine and the return of M. Venizelos to power, the French plan.

On June 10, the program was carried out. At the express order of King Constantine, as Commander-in-Chief of the Hellenic army, the Greeks offered no re-

sistance. King Constantine designated his second son, Alexander, to exercise the constitutional functions of sovereignty *ad interim*, and left Greece on June 12. To tranquilize the Greeks, Senator Jonnart declared:

1. The protecting powers have no intention whatever of imposing a general mobilization on the Greek people.
2. The abdication of King Constantine is temporary. It is within the power of the people after the war to call the King again to the throne.
3. M. Venizelos under no circumstances is to come to Athens, and the powers have no intention of establishing him in power.

Despite these assurances, Senator Jonnart, on June 21, summoned M. Venizelos from Saloniki, and on June 24 informed King Alexander that M. Venizelos would be the new Premier of Greece. There were no elections, and, as parliament was hostile to M. Venizelos, Senator Jonnart summoned the last parliament in which M. Venizelos had had a majority, to give the rule of M. Venizelos a color of legality.

The first act of M. Venizelos was to decree a general mobilization of the Hellenic army, which, thereafter, participated in the war until the armistice with Bulgaria on Oct. 30, 1918. But Kavalla was not reconquered, nor were the Bulgarians driven out of Eastern Macedonia. As the Greek army was not used against the Turks, no decision was reached in the age-old struggle between Greek and Turk. Greece merely served as one of the twelve nations actively engaged in hostilities against the Central Empires, suffering losses less than any other European country except Portugal.

#### AT THE PEACE CONFERENCE

But the close relationship in which M. Venizelos had stood to France assured him of a large rôle at the Peace Conference, where, owing his Premiership to France, he was expected to repay at the peace table his obligation. It was in close co-operation with France, also, that on May 14, 1919, before peace terms with Turkey had even been broached, M. Venizelos ordered a Greek military occupation of Smyrna, where French business and banking interests are heavy. Unfortunately, however, excesses by the Greeks against the Turks in Smyrna prejudiced public opinion against

the claims which M. Venizelos was pushing to Greek sovereignty over Smyrna and its hinterland, in respect of which certain assurances less than promises had been given Greece at various times during the negotiations for Greece's entry into the war. At the same time, also, tentative negotiations for the cession of Cyprus to Greece were dropped by Great Britain.

When the draft of the peace treaty with Turkey came to be presented to Tewfik Pasha on May 11, 1920, Greece was to receive thereby only a two years' tenure of Smyrna. Yet, though already bankrupt, Greece was forced to continue her army mobilized to assist in policing the territory occupied by the Allies. In view of the comparatively small part played by Greece in the war, the concessions made to Greece appeared to the rest of the world enormous. But the Greeks found them pitifully inadequate compared with the vast Hellenic Empire of which M. Venizelos had talked as an assured thing, when he was trying to persuade the Greeks to support him in his attempts to hold and regain power. Realizing that his prestige with his own people was slipping, at Hythe on June 20, M. Venizelos offered the use of the Hellenic army to compel the Turks to accept the treaty terms, promising, as he had declared at Spa on May 25, that "Greece would win a complete victory over the Turkish Nationalists much quicker than the world thought possible."

This boast was unfulfilled. After eighteen days of desultory fighting, the Turkish Nationalist army was still undefeated, and the Greek campaign in Asia Minor gave way to the occupation of Thrace, allotted to Greece by the terms of the Turkish Treaty. The Treaty of Sèvres was finally signed on Aug. 10. But in the secret partition of Turkey into zones of influence and exploitation by the British, French and Italians, Greece had no part.

In Greek eyes the Treaty of Sèvres spelled disillusionment. A sector 80 miles deep and 150 miles wide about Smyrna was a long way from the 125,000 square kilometers M. Venizelos had promised; nor was even that to be Greek. Greece, it is true, obtained Thrace, but not Cyprus. The Dodekanese Islands were secured, but independent of the Sèvres settlement and on the same terms of concessions to Italy that

they might have secured them at any time. The Sultan was still in Constantinople; Smyrna still flew the Turkish flag. By dint of secret agreements and commercial concessions, Mustapha Kemal was slowly winning both Italians and French from the support of their Greek allies. While the rest of the world was hailing M. Venizelos as victor in a great diplomatic struggle, the Greeks were undeceived. They knew that he had obtained much less than he had promised, and far less than they had hoped.

The Treaty of Sèvres, also, left Greece increased in size, but overwhelmed with debt. During M. Venizelos's régime the Greek Government had spent three times its income. Much of this had been paid for second-hand war material, on which there had been enormous graft. The Greek debt had been increased by \$800,000,000, without counting that part of the Turkish debt Greece was required to assume in return for the territory she had received.

#### ERRORS OF VENIZELOS

Moreover, immediately upon becoming Premier again in 1917, M. Venizelos had dismissed 9,057 public officials and replaced them by his own henchmen; he had similarly replaced 1,218 officers in the Hellenic army, in time of war; he had caused the arrest and trial by courts-martial of his leading political opponents, one of the most brilliant of the opposition leaders, John Dragoumis, even being shot by his guards, in the streets. In the navy, the Church and the university, the same spoils system had been followed. Martial law was maintained; no elections were held, even when the Parliament—called by Senator Jonnard without legal authority of any kind—had long outlived its constitutional span. Censorship of press, mail and telegrams, and prohibition of travel and of free speech, irritated the Greeks, while constant trials for "treason" disposed of any critics of M. Venizelos's Government.

Under these circumstances, when elections were finally held on Nov. 14, 1920, for the first time since Dec. 19, 1915, M. Venizelos was overwhelmingly defeated, the Premier even losing his own district.

To the Greeks, King Constantine, in exile in Switzerland, embodied the idea of constitutional government as opposed to the military dictatorship which M. Venizelos,

with the aid of foreign troops, had imposed on the country since his return to power at the behest of France in 1917. King Alexander's death had left the question of the succession open, and Demetrios Rhallys, who had succeeded M. Venizelos, called King Constantine to return to Greece.

But King Constantine was just as eager to have his position in the Greek body politic rest on a popular vote as M. Venizelos had been reluctant to consult the will of the people. He therefore insisted on a plebiscite. It was held on Dec. 5, 1920, and King Constantine received the suffrages of 98 per cent. of the Greek electorate, despite the effort of the Entente Powers to affect the voting unfavorably by the issue of a joint note on Dec. 2 warning the Greeks that the return of King Constantine would mean a financial boycott of Greece.

#### SINCE CONSTANTINE'S RETURN

On Dec. 19 King Constantine returned to Greece and was received in extravagant triumph. The European press had explained to its own satisfaction that the defeat of M. Venizelos had been due to war weariness on the part of the Greeks, and on this assumption the French Government, believing that the Greeks would no longer fight to retain the territory they had received by the Treaty of Sèvres, proposed a revision of that instrument, at the expense of Greece and to the profit of both French and Turkish interests. A conference was called in London on Feb. 21, 1921, for this purpose.

Under the leadership of the French an attempt was made at this conference to cut the temporary Greek control of Smyrna to a mere shadow, Smyrna definitely remaining Turkish, albeit autonomous. When this proposal was submitted to the Greek Parliament by Premier Kaloguyeropoulos, it was promptly rejected. But on March 10 the Greek delegates were advised that the Treaty of Sèvres would be revised along the lines laid down, and on March 11 both France and Italy secured payment from the

Turkish Nationalists for their services, in the form of secret agreements by which both countries were granted large concessions for the exploitation of the Ottoman Empire, re-established through their efforts.

This was reckoning without the Greeks. On March 20 King Constantine called three classes to the colors and Greece prepared to fight, single-handed if need be, to maintain the provisions of the Sèvres Treaty. The campaign began immediately, and it was clear that the French assumption that the Greeks would not fight was based, as usual with the French policy toward Greece, upon an erroneous conception of the motives that had moved the Greek people in recalling King Constantine.

The early Greek successes were followed by reverses, but without decisive result either way. More Greek troops have been called to the colors, and, despite French and Italian aid of the Turks, the end is not yet in sight.

So far as the Greeks are concerned, their disgust with the alleged peace which has followed the war is profound. At first blaming M. Venizelos for having failed to obtain at the settlement what he so freely promised when he was seeking election, the Greek people are more and more placing the blame on the great European powers, who have shown a sordid readiness to sacrifice the principles, for which they claimed to have been fighting, for commercial and financial gains.

The Greeks recall the stubbornness with which King Constantine refused to leave neutrality without specific, written guarantees that Greece would not be sold out at the final settlement. They realize that M. Venizelos's policy of tying Greece to the chariot wheels of France has brought only ruin. Crushed under a debt of over \$200 for every man, woman and child in Greece, and with the financial boycott instituted by the powers slowly stifling all Greek economic life, the Greeks today declare with bitterness that "the Turks are the only victors of the World War."

# FRANCE'S DEBT TO MYRON T. HERRICK: REVEALED BY AN EX-PRESIDENT

BY RAYMOND POINCARÉ

FORMER PRESIDENT OF FRANCE\*

**M**YRON T. HERRICK has consented to serve again as United States Ambassador to France. He will find here only old friends. When he returned to Paris several months ago he was welcomed everywhere—in the offices of the various Ministries, in the City Hall and at social gatherings—as one of those Americans who, in these last few years, have best understood and best loved France.

At the brilliant reception given him by the Municipal Council he uttered with deep emotion certain words which went to the hearts of all those present, and which recalled to many there some tragic memories. Among other things, he recalled, with great exactness of detail, the visit which he paid me at the Elysée on Wednesday, Sept. 2, 1914—a visit which is the best evidence of his sincere love for France. Now that Mr. Herrick is again to represent the United States among us, I find myself, naturally, recalling the many friendly conversations which I had with him in those former days, during his first Ambassadorship, and also those which I have held with him more recently, during the trips which he has made to Europe since the war. But the strongest impression which I retain is that left on me by the interview of Sept. 2, 1914, concerning which so many absurd reports were subsequently circulated, and which Mr. Herrick recently related so faithfully in his eloquent address at the City Hall.

Several days before this date, General Joffre and General Galliéni, not wishing to be embarrassed in their military movements by the presence of the Government, had asked M. Millerand, then Minister of War, to prepare for the Government's departure from Paris. The Council of Ministers had been confronted with this painful decision since Aug. 29, but, in agreement with the military command, had deferred action. There occurred on Sunday, Aug. 29, a new

RAYMOND POINCARÉ

*President of France during the World War*

survey of the situation, at which General Galliéni and the Presidents of the two Chambers were present. General Galliéni explained that the trench system for protection of Paris was far from complete, but stated that even if all the missing links could be rapidly joined up, the capital would be unable to resist a sudden attack supported by heavy artillery. He very wisely, therefore, advised that instead of allowing Paris to be invested we should create out of three or four corps a new army and place it under his command, to form the left wing of the entire French Army, and that wing would fight before Paris. This, as you see, was an anticipated outline of the battles of the Marne and of the Ourcq. While he was laying before us his arguments a German

\*Translated from the Paris Temps, issue of April 11, 1921.

airplane was flying over Paris. It dropped three bombs on the Valmy Quai and into the Rue Vinaigriers, which did not disturb for an instant the population's admirable calm.

The news from the front was somewhat more favorable on Monday, the 31st. Our retreat had slowed down; we had counter-attacked successfully at several points. General Joffre did not insist on the immediate departure of the Government, but he asked that the decision should be agreed upon in principle and that only the fixing of the day for departure should be deferred. Several of the Ministers and I, myself, before taking this decision wished to await the outcome of the battle which was about to take place before Paris; but after repeated conferences with Generals Joffre and Gallieni, the Minister of War declared that he could not assume the responsibility for this delay.

During the course of the same day I had gone to the Saint-Martin Hospital to visit the wounded men evacuated from Mangiennes, from Péronne and from Charleroi, and I had found them sublimely calm. In the streets the crowd, with magnificent unconcern, were shouting: "Long live France!" It was frightfully sad to think of leaving so many good people, and to seem to be deserting them. But M. Doumergue, a member of the Government, described in a few very noble words the cruel obligation incumbent on us: "Duty," he said, "in this crisis consists in appearing to be cowards. But there is perhaps more courage needed to face blind reproaches than to risk being killed or taken prisoners."

On Tuesday, Sept. 1, the army of General Manoury fell back on Paris, and the Minister of War did not deem it possible to delay the departure of the Government beyond Wednesday evening. German aviators had again flown over the city and had dropped menacing proclamations for the amused people to read. On Wednesday, Sept. 2, one of these Taubes, which seemed quite inoffensive, was manoeuvring above the Elysée. The Post Commander deemed it necessary to mount his men on the balconies and to order a section fire. This fusillade had no effect upon the German aviator, but it did frighten the birds of the park, and one of them flew into my office as a place of refuge.

The members of the diplomatic corps had announced their intention to accompany the Government to Bordeaux. Myron T. Herrick alone had announced that he would stay in Paris. "If the city is occupied by the

MYRON T. HERRICK

*Ambassador to France, who will also represent the United States in the Council of Ambassadors*

Germans," he said, "my presence may not be useless. My country is neutral, and I myself am covered by diplomatic immunity. I shall undoubtedly be able to render some service."

Wishing to thank the Ambassador for his kind offer, I had asked him to come to see me on Wednesday. When he entered my office his face, usually so jovial, was sad and overcast, and the moment we began to speak his eyes, which gazed at one so frankly and directly, filled with tears. These were his words:

"No, I will not leave Paris. Some one must stay here to defend the people's rights. Who will protect your monuments, your museums, your libraries? I shall be able to speak in the name of the United States, and be assured I shall find means to prevent all massacre and pillage."

I told him how deeply it pained me to leave the city, and I swore to him that we would continue the struggle until we won to victory. He answered: "I know that, and I congratulate you. As for me, I do not doubt that you will be victorious. France cannot perish."

In every one of these words there was such a vibration of the soul, such a depth of sentiment, that even if I had not known before his love for France, I should have been convinced that day that we had few friends as true and devoted as he.

He loves us, because he has seen French life from the inside, because he has been able to observe and to appreciate certain fundamental qualities which strangers often do not see. Long before the war he understood that we were not, thank God, the showy, frivolous and corrupted people which the German writers have so often depicted. He described us to his compatriots as we were yesterday, as we are today, and he told the truth about us before the Marne and Verdun revealed to the world a France too little known. In the future delicate negotiations which it still remains for us to conduct with the United States he will be, I doubt not, in time of need our witness and our bondsman. It is not he who will remain silent when calumny insinuates that France is an ambitious, turbulent, and imperialistic State. Like M. Viviani and M. Jussarand, like his own successor and predecessor, Hugh Wallace, he will remain what he has always been—a good worker for the Franco-American entente.

M. Henry de Jouvenel said the other day, from the Senate platform:

We behold, perhaps, one of the most singular and deplorable misunderstandings of history when we see how the great American people came to the aid of France, disembarked here hundreds of thousands of men, who died shoulder to shoulder with ours, and then departed without having learned to know France.

And amid the loud applause of the Assembly the orator added keenly:

The explanation is that a million of them came to make war, while only one came to make peace.

Yes, only one came to make peace, and with our national mania for personification we imagined that he was all America. I can still see before my eyes the wildly enthusiastic welcome which President Wilson received on Dec. 14, 1918, along the avenues of the Bois de Boulogne and the Champs Elysées. He himself seemed overcome by it. It was not a man which had come to us: it was a world. According to certain people who posed at that time as the only interpreters of our guest's mind and heart, it was our duty to treat him as a kind of sacred being. I was severely blamed by these persons when, in the toast which I addressed to him that day, I was so bold as to advise him to go directly to the devastated regions, adding: "For the suffering and sadness of yesterday, peace must bring reparation; for the perils of tomorrow it must be a guarantee."

In conclusion I would say that since Mr. Wilson forgot the existence of an American Senate, we believed ourselves justified in forgetting it also. Somewhat late we have awakened from our long dream to realize that the mind of America was not contained solely in the fourteen points of Mr. Wilson. But this blunder can still be redeemed today, if not completely, at least in large measure. Happily, America has not ceased to love France, nor has France ceased to love America. Men pass, nations remain. The inherent reasonableness of the nations will enable us to fashion out of peace with Germany a reparation and a guarantee.

# THE DRAMA OF BRITISH LABOR

BY FRANK DILNOT

*An illuminating explanation of the English labor movement, the new power of the trade unions since the war, their apparent threat of revolution, and what restrains them from a violent use of their strength—Historical antecedents of the coal miners' strike*

THE story of organized British labor reaches back to the times when what we know as the English people was in the making. The present challenge of the miners and railwaymen and of other trades is but the culmination of a long serial, and the narrative throughout manifests on the part of the contestants a special spirit—a spirit which, for want of a better term, we may characterize as Anglo-Saxon—a mingling of conservatism and forceful resolution, a persistence in action rather than loud words, above all a tenacity which has descended from one generation to another. These qualities have been shown on both sides and are being shown now. They would inevitably lead to tragedy were it not for some other Anglo-Saxon qualities, and notably a desire for achievement rather than for triumph, a willingness for compromise, if essential aims can be secured; in other words, a common-sense moderation when the final issue has to be faced.

Back before the Reformation there was what was known as the Guild system in Britain, definable as a combination in various industries for the common benefit of those industries. In the time of Henry VIII. this Guild system was submerged, but with the growing commercial activities of Britain in the seventeenth century, and especially in the eighteenth century, there were renewed indications of the coming together of workmen in the effort to protect and improve their conditions. Before the time of the American Revolution there were in existence at least some organizations which had resemblance to the modern trade unions, although they were frowned upon by employers as being opposed to the general interest. Indeed, the Combinations Laws, as they were called, made it illegal for workmen to combine to increase wages. Nevertheless, in the first twenty years of the

nineteenth century many trade organizations were formed, and there were contests and repressions, and not a little tyranny by those in authority. The struggles led to the repeal of the Combinations Laws in 1825. It is thus within the span of a hundred years that we find the trade unions in Britain have advanced from being under the ban of the law to being practically law-makers. There is a possibility that before the century is completed the trade unions will be forming the law of the land which, four generations ago, considered their purposes as criminal.

The War of Independence in the United States, followed by the French Revolution, stimulated enormously the minds of the common people of Britain. This leaven worked more and more powerfully under the exploitation-pressure arising from the development of the factory system, which herded men, women and children together at starvation wages for long hours of work—a result of the increase of population, of modern invention, and of the increasing world trade and demand for British goods. And thus we arrive at the ferment which was the beginning of the British labor movement as we know it today.

For many years trade unions were regarded in England with dislike and contempt, and they were forced to wage a continuous and bitter fight, although all the time they were growing in power and substance. The rights of man, as distinct from the rights of property, steadily made their way in popular esteem, and about fifty years ago an act of Parliament established the legal status of trade unions with a protection for their funds. During the next twenty years, from 1870 to 1890, the British trade unions forged ahead, slowly at first, but latterly with increasing momentum. It is interesting to look back and see how the

opinions held by the leaders—opinions which we should now regard as those of very moderate Liberals—were labeled at that time as the tenets of dangerous revolutionists. It must be remembered that those whom we now class as Socialists were in that period but scattered individuals classed as visionaries outside the pale of practical consideration. It was the trade unionists who were the real labor movement. And in spite of the loud vocal effort of the Socialists of today, it is the trade unionists who remain the real labor movement of Britain.

A few figures will show how the trade unionists have progressed. There is an annual congress of the trade unions which delegates from the various societies attend, and the number of union members represented has been tabulated for each year. Here are the figures, at intervals of ten years from the start of the congress:

1868.....	118,367	1898.....	1,200,000
1878.....	623,957	1908.....	1,777,000
1888.....	816,944	1918.....	4,552,085

When the figures for 1921 are available it will probably be found that the trade unions of Britain total about 6,000,000.

A little over twenty years ago it became increasingly evident to some of the wiser heads of the rapidly growing labor movement that what is called industrial action—that is to say conflicts and agreements between employers and workmen—was not effective as a means of realizing in their full scope the humanitarian aims of the great mass of the community represented by the unions. There then sprang into existence what was known as the Labor Party—distinct from the comprehensive labor movement—whose methods were to be political rather than industrial, and which organized to elect members to Parliament and to the local municipal bodies. The Labor Party consisted principally of trade unionists, but it also took in Socialists and other sympathizers. Many trade union leaders were Labor Party leaders, and there was and still is a good deal of overlapping with the leading personalities of one filling an important part in the other, although the trade unions and the Labor Party have remained distinctly separate institutions. When we speak of the labor movement we mean the whole body of labor, as represented both by the Trade Union Congress

and the Labor Party. The labor movement, therefore, includes constitutional trade unionists and theoretical Socialists like Ramsay McDonald and Philip Snowden.

It is thus explainable that there are wide divergencies of opinion in the movement,

ARTHUR HENDERSON, M. P.  
Leader of the British Labor Party

ranging from extremist groups to a multitude of members who are of what may be called the moderate type. It is important to note that this moderate type probably outnumbers the others by ten to one. The Socialists and extremists, however, are more gifted in expression and more forceful in temperament, and thus they often secure an unwarranted influence in the councils of the labor movement as a whole. They draft many of the resolutions; they form much of the policy. Small groups of them in the unions sometimes bring to bear a disproportionate influence in industrial action—in strikes, for example. The actual trade union element in the labor movement may be gauged by the fact that at the beginning of war the outside Socialists numbered 50,000, as compared with over 3,000,000 trade unionists.

When hostilities began labor had a spe-

cial party in the House of Commons numbering about forty, which for some years had exercised considerable influence, not only in debate, but also in the modification of Government policies. That group of

*Labor leader in British Parliament, and former Food Controller*

forty constituted the political voice of the trade unionists who make up the mass of workers in all the great industries, and who, after fifty years of struggle, have forced themselves into a position of equality in negotiations with employers. There were 15,000 trade union branches throughout the country. Every union which had organized itself for individual and separate action was, with an occasional exception, a member of the Trade Union Congress, the general Parliament of Labor, which met for a week each year to formulate policies near and distant, and to decide on various forms of administrative action for the coming months. This was the situation when war broke on the country.

Although both the labor leaders and the rank and file rapidly united in patriotic ef-

fort, fears were openly expressed that the labor movement would be adversely affected as a result of the war. Those fears were intensified in the next month or two, when in order to speed up special war production it became necessary to ask the Trade Unions to abrogate many of their cherished and hardly won privileges. It was necessary to impose restrictions against workmen leaving one factory and going to another for higher wages, necessary to establish piece work where piece work had hitherto been forbidden; it was necessary to admit women and boys to certain departments of industry, and to engage the unskilled or half-skilled to do work that had hitherto been expressly reserved for the expert members of the trade. All these and many other changes were assented to only under the pressure of war, and with many forebodings for the future. The Government, it is true, promised to re-establish the old state of affairs when the war was over, but Governments were regarded as untrustworthy in their relations with labor, and war might well provide an excuse for breaking up an organization established by fifty years of effort and hardship.

Never were fears so groundless. The war had not run half its course before it was seen that Labor was to be not weakened, but strengthened; strengthened beyond measure. It was a war of peoples, not of Governments, and the war was to be won not only by the workmen who were fighting in the trenches, but also by the workmen on the farms and in the factories, and by their wives, and sisters, and sweethearts.

Several labor leaders went into the Ministry. One of them, Mr. Clynes, eventually became Food Controller of the whole country. Meanwhile Trade Union membership went up by leaps and bounds. Here are the official figures of Trade Union membership for the four years of the war:

1915.....	2,677,357	1917.....	3,052,352
1916.....	2,850,547	1918.....	4,552,085

Consciousness of power in the labor movement was one of the new factors. Another was the change of mood induced by the sufferings and sacrifices of the war. Men and women who had struggled for a livelihood in the old days had acquired a new outlook on life; they wanted new arrangements which should give them a better time all

around. And this mood, combining with the realization of new power, has been the great motive force in bringing about all that is happening now.

The keener brains in the labor movement began to organize for the future. The first sign of this was in 1918, when membership in the movement, which had been previously confined to manual workers, was thrown open to brain workers as well. Even more significant, however, was the organized campaign set afoot to secure a greatly increased number of candidates for Parliament. What general policy did this enlarged and vitalized labor movement have in mind? I quote from the official "Labor Party" book, which gives a summary of the proceedings of the big conference held in June, 1918, and which speaks of the new program thus:

It lays down the doctrine that what has to be constructed after the war is not this or that Government department, or piece of social machinery, but society itself. The party declares that whether in opposition or in office it will not tolerate the revival of the social and economic system the war has destroyed, but will seek to build up a new social order built on a plan of co-operation in production and distribution for the benefit

of all who labor by hand or by brain. Four propositions are laid down in the memorandum, propositions upon which the party proposes to establish a democratic control of all activities of society:

Universal enforcement of the national minimum (of wages).

The democratic control of industries.

The revolution in national finance.

The surplus wealth for the common good.

The report goes on to say that what is contemplated is not only the wholesale nationalization of railways, mines, shipping and canals, but also the retail distribution by the Government of commodities like coal and milk.

Even when all allowance is made for the sweeping rhetorical assertions of political parties in formulating their program, there is sufficient definiteness in these words to cause some anxiety about the future among those who think that the leaders of the labor movement leave out essential factors in human nature in their decisions, and in their enthusiasm are inclined to take short-sighted views. It is necessary, however, to bear in mind that English political progress has always been a step-by-step affair, a matter of common-sense expediency. History has shown that the British proceed

through experiment, and not through great idealistic conceptions. It is a racial tendency, and the tendency is as strongly marked among the rank and file of the trade unionists as it is among other classes of the community. In surveying the circumstances it is impossible for an impartial observer to avoid the conclusion that violent revolutionary schemes will defeat themselves owing to the nature of the English people, without distinction of class. It is just a question of whether that after-the-war mood, the new financial needs and circumstances, and the added power of labor, will be sufficient to break down the traditional conservatism.

One department of labor that has been strengthened by the war is what is called the Triple Alliance, a special sectional combination for common purposes of the three great unions representing the miners, the railway men and the transport workers. It is unnecessary to say that common action by these three unions would hold the nation up to ransom. From time to time, when one or another of these three parties has

been engaged in a dispute, there has been talk of united action by the three, but it has never yet come to pass. In this hesitancy one gets a view of the caution of the workers as a whole. What is going on at the present moment is a psychological battle between these common-sense tendencies and the combined new moods and new circumstances arising from the war with their urge toward violent methods. The sinister possibilities of the general labor situation in Britain have been demonstrated several times in the last year or two, and they all point in the same direction. Impatience under a sense of injustice, and a consciousness of overwhelming power have led a great number of workers to consider a short cut to a new order of government.

"Direct action" is the phrase which comprises the new-vised policy, and it means that one union or a group of unions with power over a vital industry shall stop that industry until political, as well as industrial, demands are granted. For a long time past it has been tacitly agreed that the workmen as represented by the unions have the right

either to give or to withhold their labor when the question at issue is a matter of wages or of conditions of work. But a new interpretation has been put upon this prerogative coincident with labor's growth in power. Labor has contended in effect that it has the right to call a stoppage of work in order to impose a policy on the nation. Labor leaders defend this view by the assertion that labor is banded in a political party whose right it is to form conclusions as to what is best for the whole community, and imply that since the workers are the larger part of the population they have the right to say how life shall be lived.

The opposition view, as represented for the moment by the Government, declares that what this comes to is a demand by one section of the people that it shall hold all the people up to blackmail in order to push some special political desire, which may be right or wrong. It is held that this is the antithesis of democratic government, and that all alterations in the laws should be made by the House of Commons elected by the votes of people of all classes. In other words, there is a tendency in the labor movement—not yet pushed to an extreme point—to challenge the Constitution.

Most of the recognized labor leaders are men with a good deal of training and responsibility, men who foresee that the overturning of the British Parliamentary system would lead nowhere. A new system would have to be devised, and there has not yet been suggested any kind of plan which would equal the popular advantages of the present Parliamentary arrangement. Labor has only to secure enough votes to have an instrument to its hand in the existing Constitution.

The threat of direct action was made in the big railway strike of 1919. It has reappeared during disturbances created by the miners since then. In August, 1920, a joint consultation of the labor movement threatened to instruct all trade unionists to lay down tools if there was war between the allied powers and Russia on the issue of Poland. In July, 1920, Robert Smillie said:

Rightly or wrongly, the miners believe that the public ownership and development of the mining industry will be in the interests of the safety of the mining community. That is a point on which I am not prepared to

allow the general views of the people to weigh against my own.

One of the demands made last year was that troops should be withdrawn from Ireland, and this demand was accompanied by another threat to down tools. Nothing was done because the vast mass of the common people in Britain realized that, whatever the incidental evils, the Government could pursue no other course than to strive to restore law and order in Ireland. Aided by the general discontent arising from the war, the extremists have gained considerable power in the labor movement, and it is they who are responsible for many of these resolutions and decisions. The more prominent labor leaders are not blind to the dangers of the situation. In the course of a speech last year J. H. Thomas, the leader of the railwaymen, said:

Half the difficulties we are experiencing are due to the fact that trade unionists always allow the minority to do their business. If the men consider their leaders obsolete, they know how to deal with them; but nothing but disaster will overtake the great working class movements unless a spirit of loyalty and majority democratic rule be exhibited by those who call themselves trade unionists.

There was also a pronouncement from John Hodge, one of the most successful trade union leaders in the country. His words go to the root of the matter:

At the general election the rank and file of the workers had the opportunity of voting for labor men, and had they done so consistently there would have been a bigger Labor Party in the House of Commons today. Even in the subsequent by-elections there has been no great evidence of the workers rallying to the support of labor candidates. What is the reason? It is simply this, that the extremists are damaging the labor cause by their advocacy of political methods that destroy themselves by their violence and scare away a great body of sympathetic electors.

The revolution in money matters produced by the war has a good deal to do with the situation. All previous standards are upset. Prices have risen enormously and wages have also gone up. There are disputes as to the actual ratio, but it may be taken as a pretty general guide that the cost of living and wages have both risen 100 per cent., although there are naturally many anomalies and inequalities. And in this connection it has to be remembered that the workers are claiming not merely

pre-war standards, but a better scale of living arrangements, in relation both to hours and to wages. The following official tables concerning the miners, prepared by the Government a few months ago, show the increase of workers, the decrease in product and the rise in wages:

**MINING WAGES AND OUTPUT**

Number of workers:	
1913.....	1,110,000
1920.....	1,206,000 <sup>1</sup>
Increase.....	96,000
Output:	
1913 (tons).....	287,500,000
1920 (tons).....	240,500,000
Decrease .....	47,000,000

**AVERAGE ANNUAL EARNINGS**

(All classes of mine workers, including boys:)

1913.....	£82	1920.....	£222
-----------	-----	-----------	------

It may be added that miners are supplied with free or cheap coal for their own consumption to the value of £8,000,000 a year.

Similar results are shown for another class of workers—namely, the agricultural laborers in England and Wales. Here are the figures:

**AVERAGE WAGE, 1914**

	Shillings	Pence
Special classes .....	20	6
Laborers .....	18	2

**AVERAGE WAGE, 1920**

	Shillings	Pence
Special classes .....	51	5
Laborers .....	42	7

(By special classes is meant workmen who are employed as stockmen—that is, horse-men, cattlemen and shepherds).

If the stable element in the labor movement is able to withstand the encroachments of the new spirit—and I think on the whole that this is more probable than the triumph of the latter—then there must be hammered out some line of progress to enable labor to move forward coincidentally with the welfare of the nation as a body. Labor is certain not to lose a great part of the power which has so dramatically come within its grasp. The general election following the war increased the Labor members in Parliament from forty to sixty, and this was under adverse circumstances for labor. It is certain as anything can be that there will be a large increase in members at the next election. Meanwhile, in industrial

fields, labor by its organizations will be stronger than ever. It will be able to dictate terms up to the point where employers will have to shut up their business rather than suffer a loss.

What, then, short of revolution, is the probable course of events? There are several indications. What are called the Whitley Councils provide the best illustrations. In the early part of 1917 an official committee under the chairmanship of Mr. Whitley, Deputy Speaker of the House of Commons, reported as follows:

In the interests of the community it is vital that after the war the co-operation of all classes, established during the war, should continue, and more especially with regard to relations between employers and employed.

The Government took up this proposal, and organizations for working people were started in many industries; these have been continually added to since the beneficial effects of the new procedure were made apparent. Industrial councils in each case take into consideration not only wages and hours, but the general surroundings of the business and all connected circumstances. Such questions as the best way of conducting the business and of fixing prices enter into the discussion. There is in effect a continual consultation as to the welfare of the business as a whole, in the realization that the fate of the workers is linked together with that of the employers. Sixty industries, comprising 3,000,000 workers, have already set up industrial councils of this kind. And although the procedure is yet in its infancy, and though some mistakes have been made and there have been here and there disappointments, yet the general results are so encouraging that in the development of this Whitley Council idea may be found a new method of common effort which will satisfy the needs and ambitions of labor, and which, at the same time, will build up the interests of the community. There are some individual movements running on parallel lines to the Whitley Councils. The general stream of tendency is well marked. It is this new method of co-operation which is bound to be the rival of revolution, and the instincts of the British people make it reasonably sure that this line will be followed.

The course of events has been sufficiently

demonstrated by the present miners' dispute (May, 1921), which, for a time, seemed likely to involve the Triple Alliance in a challenge to the nation. All the various moods which I have cited were in operation, and it seemed almost to the last moment as though violence was to triumph. The mine owners wished to reduce wages, and, in view of the freeing of the mines from Government control, it was apparent that adjustments would have to be made if the industry was to be saved from bankruptcy. The Government had said in effect that it was unfair that the community, as a whole, hard pressed in many directions, should subsidize the coal-mine industry in order to better the lot of the miners as a class; the industry must pay its way, like every other industry.

The miners resented the reduction of wages and demanded that the coal-mining of the country should pool its profits so that the profitable mines should provide higher wages for the mines which were unprofitable. This, of course, amounted in effect to a demand for nationalization of the industry. The British Government took a firm stand on the ground that political changes must be produced by political means, namely, through the elected House of Commons, and not through the influence or threat of any particular class of men.

The miners enlisted the sympathy of the railwaymen and the transport workers, but at the last moment these other organizations broke away, owing to the fact that large numbers of them shared the view of the community outside of labor, a view that was effectively put forth by Mr. Lloyd George on behalf of the Government. And thus again British common sense prevented catastrophe.

The struggle is not over. Even when this miners' dispute is settled there will be other labor uprisings from time to time. There may be more threats of revolution, but there will be no revolution in the ordinary sense of the word. There will almost certainly be a more or less gradual transformation of the system of wages and profits, which historians, centuries hence, may be justified in classing as a revolution of the kind which has not been uncommon in British history—a revolution effected by the general will of the people, as a whole, to meet the needs of the present and the future. In this sense the labor movement of Britain will be making history from now onward, not only for the British people, but possibly, also, in some directions, for other countries as well; for it is inevitable in these days that fundamental social changes should have their reactions quite irrespective of national frontiers.

## CANADA'S NEW HALL OF FAME

BY JOHN GLADSTONE GRACE

**F**AME has been described as the flickering white light that lures some ambitious men to imperishable glory, and others to destruction. "Antony sought for happiness in love; Brutus in glory, and Caesar in dominion, but each found destruction." These, however, are extreme cases, and each nation of the world today has its roll of famous men whose lives have been given to their country's service, at home or on the battlefield. These names it is only fitting to commemorate. This Canada plans to do by the creation of a Hall of Fame in the new Parliament building constructed at Ottawa to replace the edifice so mysteriously destroyed in 1916. This Hall of Fame in the palatial Canadian

Capitol will surpass anything of the kind on two continents. The work has now progressed so far that the niches are almost ready for the statues.

The idea of a Hall of Fame has long ceased to be a novelty. The State of Ohio has its Hall of Fame in the Capitol at Columbus, where the bust of President Harding will ultimately be added to Ohio's honored trinity—Garfield, Grant and McKinley. The truly representative Hall of Fame for America, however, is at present on the grounds of the New York University. Canadians were much interested to learn that among the seven new names recently added to this gallery were those of Patrick Henry and Mark Twain, who will hence-

(Photo Wide World Service)

THE NEW PARLIAMENT BUILDING AT OTTAWA, CANADA, THE MOST BEAUTIFUL STRUCTURE OF THE KIND IN THE WORLD

forth be recognized as belonging to the canonized benefactors of the great Republic.

W. H. Northrup, K. C., who for twenty-five years was a leading member of the House of Commons and of the Ontario bar, will have temporary charge of the Canadian Hall of Fame, pending the election of a tribunal whose duty it shall be to select the candidates for immortality. It is hoped that this tribunal will be composed of men of broad mental calibre and unerring judgment. The whole value of the project will depend on the mode of selection.

Above all, this new temple of national patriots must be symbolic of Canada's past and its rise to unity. To all Canadians, including the 300,000 Canadian soldiers who fought on the fields of Flanders, the former Parliament building at Ottawa—destroyed, it is believed by many of us, at the behest of Germany—was the symbol of Canadian Confederation. It was a tangible reminder of the great Gladstone, who in 1854 saw the shadows of disintegration coming, and who advocated a united Canada. It was also a monument to such men as Darcy McGee, who was the pioneer leader in bringing about confederation. McGee, to a much greater extent than Macdonald, Tupper, Brown, Mowatt, Cartier and

others, was international in the sweep of his vision. The actual existence of Canada's national Parliament dates back to the year 1860, when the late King Edward, then Prince of Wales, came from England to lay the cornerstone. It is interesting now to note that there was strenuous opposition to Ottawa as the Dominion capital; had it not been overcome, some other Canadian city would have been chosen as the seat of government, just as Georgetown, in all probability, would have been selected as the capital of the United States, had not Washington, Jefferson and Madison insisted on the present location.

The Canadian Hall of Fame will be devoted mainly to Canadian patriots, but it will also recognize some international figures. The Canadian Committee will aim to avoid the chief faults discernible in Westminster Abbey. The deans who guard posterity, and who decide who shall or shall not rest in England's famous Pantheon, were startled recently, when revising the names of the celebrities interred there, to find several whose family trees it was quite impossible to trace and whose title to fame could not be discovered. There was no more record of these persons than if they had walked in from the street and registered. The Canadian Committee will

not waste space on mere titles and patents of nobility. Only merit will count in our Hall of Fame. Knighthood is no longer in flower in the Dominion, for the law of 1918 prohibits any citizen of Canada—with the exception of war veterans—from accepting any decoration or title from any source.

There will, of course, be differences of opinion as to who should be among the first to have their statues niched in the new Hall of Fame, but some there are whom the Canadian nation, by common consent, will wish to honor. These will include the Confederation's first Prime Minister, Sir John Macdonald; the Hon. Edward Blake, founder and leader of the Liberal Party, and the empire's foremost lawyer; Darcy McGee, already mentioned, statesman, poet and orator; Baron Thomas Shaughnessy, head and largely the creator of the Canadian Pacific Railway; Sir William Osler, one of the world's foremost physicians and scientists; Sir Wilfrid Laurier, famous orator, for forty years in Parliament and for fifteen years Prime Minister of the Dominion; Dean Harris, scientist, geologist, theologian and author; Sir Charles Tupper, distinguished parliamentarian and empire-builder.

What will the Hall of Fame be like?

This Dominion Court of Honor in the finest parliamentary building in the world will stretch from the Memorial Tower, which rises 300 feet above the main entrance, directly across the entire structure, to the Library at the rear, which overlooks the "Lovers' Walk," the Ottawa River and the Gatineau Mountains beyond. Flanked on the east by the Senate Chamber and on the west by the House of Commons, the Hall is about 300 feet long and 30 feet wide. The whole is adorned with a barrel-vaulted marble ceiling. The Dominion is proud of the fact that the material for the whole building was found within its own boundaries, with the exception of small quantities of Tennessee marble and Vermont granite used for color-blends, and of teak-wood and ebony from distant India and Africa, used for finishing. The estimated cost of the Parliament Houses, in which the Hall of Fame is lodged, is approximately \$10,000,000.

In the Memorial Tower will be preserved the fame of Canada's soldiers in the great war. A special war chamber in this tower will contain the names of the entire Canadian Expeditionary Forces, and here will be inscribed with due recognition the names of the 65,000 Canadian heroes who sleep in Flanders fields.

## TREATY DAY WITH THE CANADIAN INDIANS

ONCE yearly there takes place in the far northland of Canada one of the most picturesque of scenes, an event which is historic, but of which the outside world has heard nothing, probably because few travelers enter the region. This annual event, known as Treaty Day, has been repeated yearly for a little over half a century, and will probably continue for countless years to come. Treaty Day is the day on which a member of the Canadian Government ratifies an agreement with the nomadic Indians of the far northland. In payment for taking over the Indians' lands, the Government, during the reign of Queen Victoria, promised as follows:

Her Majesty agrees that each chief after accepting the treaty shall receive a silver medal and a suitable flag, and every third

year thereafter shall also receive a suit of clothes.

The headman of each band also receives a suit of clothes. To every common member of the tribe the sum of \$5 is given; the chiefs receive \$25 and the headmen \$15 each. There are also given to each person ammunition and material for net-making to the amount of \$1 per person. The treaty adds that this agreement shall be ratified "forever and aye."

The meeting places agreed upon—generally the site of some trading post on the bank of one or other of the great northern rivers—are yearly visited by the Indians upon a set date. Here, upon the open plain, the Government agent stands, surrounded by the Indians. Upon a box or table lie huge bundles of \$1 and \$2 bills; bills larger than these are not looked on

(Photo Francis Dickie)

INDIANS OF NORTHERN CANADA WAITING TO RECEIVE TREATY PAYMENT FOR THEIR LANDS. THESE PAYMENTS ARE MADE BY THE CANADIAN GOVERNMENT EVERY YEAR AT VARIOUS POSTS IN JUNE AND JULY

with favor by the Indians. Beside the money lies a book in which the names of all the tribesmen are inscribed. According to their standing in the tribe, the men and women come forward; first the grave and dignified chiefs, next the headmen, and then the younger tribesmen and squaws with their papooses.

The Indian agent, who is always a man familiar with the Indians from long years of dwelling in the north country, and who generally speaks several native languages, knows a great many of the people by sight. For one and all, as he makes the allotted payment, he has a kind word and question as to their welfare. Sick members are inquired about, and medicine is sent to those whose cases the agent can diagnose from hearing a description of their ills. Once in a while some squaw, unaware of the system of the white man, tries to carry out a mild fraud. Gathering around her several children belonging to other mothers, she marches them up to the agent along with her own one or two children, and unblushingly pretends that they are all her own. If she could succeed in this fraud, it would be very profitable for her, as \$15 is paid her for each child. But in his book the white man has her name, and the fact is noted that last year she received treaty money for only two children. So now,

when she presents herself with five, the agent points out that though such a rapid increase to the family would no doubt have gladdened the heart of the late Mr. Roosevelt, the Canadian Government cannot possibly accept the view that any woman can have three new children in one year, particularly as several of them are three or four years old. So the ambitious lady finds that the white man has some knowledge that is beyond her reckoning, and goes sadly away.

Annually about \$100,000 in \$1 and \$2 bills is paid out to these nomadic Indians for the Government's use of their land. Since the land thus paid for yearly was never owned by the Indians, in the white man's sense of the term, and since the Indians roam as freely today as they ever did, with their hunting, fishing and trapping rights absolutely unrestricted, the Government's treatment is indeed generous. As this land will probably always remain much as it is today, the clause which says that the treaty shall be ratified yearly, "forever and aye," bids fair to be fulfilled. Each year, certainly, when the ice goes out on the northern rivers, and for a very long time to come, will see the Government agent on his way with his wooden boxes full of bills to pay the money promised by the "Great White Queen" more than half a century ago.

TYPICAL SUMMER HOME, OR TUPIK, OF THE ESKIMOS IN THE HUDSON BAY DISTRICT OF NORTHERN CANADA

## THE ESKIMO OF TODAY

BY FRANCIS DICKIE

TO those who have imagined the Eskimo in the Canadian arctic regions as a fairly numerous race, it may come as somewhat of a surprise to know that, according to the latest Mounted Police census, the entire Eskimo population in the Hudson Bay district was only 1,107, made up of the following tribes: Kenipitumiut, Padlingmiut, Shaunuktungmiut, Avilingmiut, Iglulingmiut, Nechillingmiut. The first-named tribe is today practically extinct. Probably four of the tribe might be found after a careful search of the Hudson Bay region near to the coast. The tribe of Iglulingmiut has also lost its identity as a separate body through absorption by the Avilingmiuts. There are several other tribes throughout the vast arctic stretch of the Canadian northland that do not come within the population figures given above. Some of these Eskimos on the Pacific side of the continent are very primitive, living almost like men of the Stone Age. It is, therefore, impossible to make an accurate census, but with the available data, supplemented by the estimates of Mounted Police and missionaries, it is safe to say that the entire Eskimo population of Canada today does not exceed 3,000 persons, if indeed the number actually reaches this figure.

From years of contact with whalers, exploring parties and visiting scientific men,

the Eskimos on Hudson Bay and along Coronation Gulf and Beaufort Sea on the western side of the continent have become to some extent modernized, so that they know the use of guns and many of the white man's tools. They have also formed a taste for tea and sugar and tobacco; tea and tobacco are specially prized. Some of their Summer homes, or tupiks, have stoves; if not a whole stove, at least a stovepipe. The stovepipe is a valuable article of trade among them, and where there is no stove to go with it, it is still put through the roof to carry off the smoke from the oil lamp, as well as to waft away the varied and wonderful odors common to a people living under these conditions.

In spite of adopting many things from the white man, however, the Eskimo still remains much like his forefathers. Living by hunting in a land of almost eternal frost, drinking blood and eating meat almost entirely, mostly very fat and often rancid, the Eskimo, as might be expected, is not overly clean. What little water he does use is melted at great labor over a stone bowl filled with seal oil, for which a bit of dry tundra moss serves as a wick. But for all his savage diet, and his not unnatural uncleanliness, the Eskimo is one of nature's noblemen, and has been spoken of favorably by every explorer, scientist, and whaler who

has come in contact with him. It may safely be said that the majority of these men have found the Eskimo superior to the Indian in business honesty, in ability to cope with his environment and as a companion.

A particularly interesting and almost unique thing in connection with the modern Eskimo is that though none of the natives of the northland had a written language a hundred years ago, they have one today and books are published in it. This written language is phonetic, and was invented by a missionary named Evans. Nearly a hundred years ago Mr. Evans came out from Scotland to the settlement of Selkirk, a Red River trading post in what is now Manitoba, Canada. After years of personal contact with various tribes of Indians, he created this written language, which was so successful that slowly it spread westward and northward to the shores of the Arctic

Ocean and the Pacific, until today the illiteracy among natives of the northland in proportion to the population is less than that existing in some of the cities of civilization. The principal books published are Bible; and hymn books; the hymns appeal to the Eskimo particularly.

The Eskimo religion, if such it may be called, is a great collection of myths, with a vast and complicated system of things taboo. To a white man it is difficult to comprehend how these people can remember all the things they must not do at certain times, all the rites to be observed and all the spirits that have to be propitiated.

A brief recital of a few of these is enough to show how hard, after all, is the way of the good Eskimo who lives up to his beliefs. When the men are away hunting sea animals, such as the walrus, seal or polar bear, the women must do no work on the hides of land animals. Also when the men are hunting land animals, such as the caribou, musk-ox or white fox, the taboo works in the opposite way. The men must do no work on iron for three days after hunting the polar bear. This is a modern taboo, arising since contact with the white men. The first seal killed must not be brought through the door of the dwelling, but through a special hole cut for its entrance. Before bringing the seal in a knife is run into its dead eyes to prevent its soul from seeing the interior of the home. It is very often difficult to understand the Eskimo's explanation of certain things. When the men are hunting on the ice, the women must not touch any of the bedding in the dwellings, for fear of causing ice cracks to open and thus cut the men off from land by open water. But one could go on for dozens of pages and still overlook some of the minor taboos.

The Eskimo idea of a future life is very vague, but in many ways it resembles the Indian conception, in that it is believed that the body still lives on and retains its corporeal wants. These wants are always supplied abundantly by the relatives of the deceased. When an Eskimo man dies, his body is carefully wrapped in fur. It is then buried under a great cairn of stones, probably for the reason that the ground is always frozen too hard to permit of grave digging. Around the grave are placed all the possessions of the deceased—guns,

canoe or kyak, his lamp, cooking utensils and other objects destined for the chase or for domestic use. Among the stones is erected a tall pole, at the top of which are placed some rags or moss. This "flag" by blowing in the breeze fends off evil spirits. For five days after the man's death his nearest of kin, generally the oldest son, goes daily to the grave and holds a one-sided conversation with the corpse. This is to keep the spirit from getting lonely, for it is not supposed to leave its earthly shell until five days after death. At the end of this time the communications cease. The goods of the dead man may then be removed, as these are needed only for the few minutes consumed by the spirit in making its journey to the next world. The kyak, rifles, tools, cooking utensils, &c., may be disposed of by relatives of the deceased to Indians or white men, but on no account to any other Eskimo. In case no whites or Indians happen to be in the vicinity, the things are destroyed. If it is a woman who dies, or a young person of either sex, these rites are not adhered to, as women and children are too inferior to receive such attention.

The principal deity of the Eskimo is Nuliaok. Unlike most deities, Nuliaok is

conceived to be of human origin. Around this beautiful Eskimo maiden is woven the Eskimo myth of the creation of the water animals, and the origin of the different races of people. The first tale is a very interesting one. The second story is also interesting, but, like many of the Eskimo legends, deals with matters impossible to reproduce in print. Many of the Eskimo religious rites, known as the Angekok, are of a highly improper order, judged by European standards, though seemingly accepted with all naturalness by the primitive Eskimo. The missionary influence, of course, has caused a cessation of many of these rites in recent times.

Nuliaok, according to the first story, was a beautiful Eskimo maiden living on the shore of Hudson Bay. Nourak, the god of the gulls, fell in love with her. But Nuliaok's father, Anautlick, was opposed to the match. One day when the father was away the gull, in the form of a beautiful young man, came for Nuliaok and carried her away in a boat. When Anautlick arrived home, he at once set off in pursuit in his kyak. Being a very swift paddler, he quickly caught up with the eloping pair, who were riding in an oomyak, or family boat, which was much harder to row, owing

(Photo Francis Dickie)

AN ESKIMO GRAVE IN THE FAR NORTH, WITH THE CANOE, GUN AND OTHER BELONGINGS OF THE DEPARTED. THE POLE IS ERECTED TO DRIVE AWAY EVIL SPIRITS

to its greater size. Just as Anautlick came abreast, the cowardly gull, instead of defending his loved one, changed back to his original shape and flew away. Nuliaok was then forced to climb into her father's boat. He started paddling home with her, leaving the oomyak to drift away.

The god of the gulls, however, controlled the storms, and in revenge immediately caused high winds to blow and the sea to rise. Anautlick's little kyak was not built to carry two people, so to save himself he threw his daughter overboard. But Nuliaok clung desperately to the boat's side, threatening the frail craft with capsizing. In anger and fear, her father drew his knife and slashed off the first joints of her clinging fingers. These dropped into the sea and from them sprang the race of Natchuk, the hair seal. Still the girl clung on. Next the father slashed off the fingers to the second knuckle, and from them came Oog Joug, the ground seal. When she still clung on, her father cut off the rest of the fingers to the last knuckle, from whence sprang Ivik, the whale. Then Nuliaok sank to the bottom of the sea, where she became the

goddess of the sea animals. To her all the souls of animals go after death.

Though the Eskimo population is much smaller today than fifty years ago, it cannot be said that the Eskimo is a passing race, but rather one in which the number remains almost stationary. Much intermarriage has occurred with whalers in the last half century, so that today you will find Eskimo children with kinky hair and a chocolate complexion, explained by the fact that the father was a negro deckhand on one of the visiting ships. There are also children who are half Norwegian, half American or half Scotch; in fact, these Eskimo children are halved with almost every nationality in the world, for the crews of whalers are a mixed lot. Perhaps the interfusion with blood from other parts of the world will help to perpetuate this simple, kindly race of people. Though the main Eskimo branches have now been known to white men for several centuries, there are still some small detached tribes in the extreme north that have had almost no contact with white people, and who yet remain to be investigated by ethnologists.

# TREATING INCOMING ALIENS AS HUMAN BEINGS

BY FREDERICK A. WALLIS

United States Commissioner of Immigration for the State of New York

*The stirring and deeply human story of Ellis Island and of the improved methods now used there—What is being done to bar out unfit immigrants and to make the others happier—Pathetic scenes at the gateway of the nation*

NOTHING more affects the political, social, economic and industrial conditions of this nation than the foreign-born, and no problem is greater than that of the immigrant. He is the most vital, the most profoundly serious subject that confronts Congress today. Our problem is the immigrant, not immigration. The widespread antagonism to immigration unquestionably lies in the lack of a true understanding of its importance to our present economic system. The problem of the immigrant himself, both socially and economically, can best be met by scientific selection, intelligent distribution, and broad assimilation.

Europe has ninety-one persons to the square mile more than the world's average, while North America, peculiarly blessed with earthly resources of great wealth, has thirteen persons to the square mile less than the earth's average. It requires no science of logarithms and differential calculus to estimate that, even should immigrants come to this country at the rate of a million per annum, it would require centuries to bring about an equality with Europe in the matter of population to the square mile.

It is quite obvious that in view of the great number who would like to come, there is no reason why this nation should not have the privilege of picking its 1,000,000. In other words, we can skim the cream off European immigration, taking the finest and the best, and still have more immigration than the ships can possibly handle, should we desire the maximum. Alarmist statements, either by the open door advocates or the total exclusionists, will, in my opinion get us nowhere along the path of a correct solution of the important problem of immigration. The immigrant is here, has always been here, will always be here. The nation itself is largely the work of his

hand and brain. He founded the country, cleared the forests, developed its resources, fought for it, died for it, and the last war proved that the new immigrants were not greatly different from the old.

Face to face with the immigrant on Ellis Island, day in and day out, a business man learns to look upon immigration as a very simple business proposition after all. As one looks upon the upturned faces of the great throng of aliens in the inspection hall and finds all eyes fixed upon the desk of the inspector as

FREDERICK A. WALLIS  
Commissioner of Immigration

though it were some holy shrine of deliverance, one's mind turns back countless pages of history to the chapter of Genesis, which tells how Cain crossed over into the land of Nod; or to the book of Exodus, when the Israelites fled Egypt; or to that chapter in our own national history about the Pilgrim fathers. It is the same old story; the immigrant of today is coming here to better his condition. To let him do so without lowering our standards of living is the whole question, and it is the purpose of this article to discuss the methods with which the nation has equipped its immigration service to meet the task.

At the nation's main gateway on Ellis Island, the Government, at a cost of many millions, has established its immigration station. There are two main buildings, one for inspection and detention of immigrants, the other a hospital for treating or holding under observation the mentally or physically defective. The hospital is under the direction of the Public Health Service, a bureau of the Treasury Department. The immigration building is a part of the immigration service, which is a bureau of the Department of Labor.

When immigrants arrived in New York Bay, those of the steerage class are taken to Ellis Island. The cabin passengers are inspected aboard ship, and if passed on preliminary inspection are permitted to land directly from the ship without having to go to Ellis Island. But if there is a doubt about the admissibility of a cabin passenger he, too, must be taken across the bay to the immigration station for closer inspection.

When the immigrant lands upon Ellis Island he, or she, is taken first to the medical inspection rooms. Lined up in single file, the aliens appear one by one before the doctors, who stand ready to look them over. These doctors wear the khaki-colored uniforms of the army and are thoroughly informed upon all matters of medical science, particularly upon the maladies which disqualify, under our laws, an alien seeking admission to the United States. By turning back the eyelids of the immigrant the doctors make inspection with a view to detecting trachoma, a most common stumbling block of the alien at our gates in point of physical fitness. The scalps of the aliens are closely inspected with a view to

detecting favus and ringworm. Never have we had so many scalp cases. Because of the contagious nature of these diseases many aliens are denied entrance to our country. Cripples are carefully studied to ascertain whether they may or may not become public charges, and mental defectives are promptly certified and barred. But a real, thorough examination of the alien will never be made until our Government orders every alien stripped and examined physically from head to foot. Only suspicious cases, showing some outward sign of inward disability, are stripped, and many of the great social loathsome diseases go by undiscovered.

### METHOD OF INSPECTION

Having passed the medical inspection, the line of aliens proceeds upstairs to the great hall of inspection. Some twenty or thirty tall desks stand in a row at one end of this large room; behind each desk are an inspector, an interpreter and a guard or matron. This little group composes a court of preliminary inspection. To them is entrusted the task of measuring the law to the immigrant. This duty is not as easy as it may seem. The immigrant must be registered; his passport must be carefully scrutinized to see if it has been properly issued by his own Government and whether it has been viséd by the American agent nearest his home and again by the American Consulate at the port of embarkation. It must be borne in mind that we are still enforcing the wartime regulation about passports and will probably continue to do so for a long while to come, because it is by this means only that we can practice any handpicking on the other side, where it is so essential.

We are presented with hundreds of passports whose visés are "faked"; our Government revenue stamps upon them are also often counterfeit. Counterfeiters and producers of fake visés are working overtime in Poland, Greece and Italy, and many immigrants are heartbroken at this station to find that they are scheduled for immediate deportation because of imperfect passports or visés. The long trip has been made and all their money has been spent with the sole result that they are rejected at the gateway.

Then the literacy test must be applied. The immigrant must show that he can read

forty words of some language. It is not required that he read English, but any language he may select, or any dialect. Psalm texts, or some of the books of the Old Testament, are usually handed to the immigrant, printed in whatever language he may select, and if he fails to read the requisite amount he is held for further examination by what we call a Board of Special Inquiry. The literacy test does not apply to children under 16 years of age, for it is assumed that they will be sent to school under the system of whatever State may be the future home of their parents.

The immigrant must answer the preliminary inspector's question as to whether he is under contract to do any kind of work in this country. This we call the contract labor law, and so rigidly is it enforced that if an alien should say that a friend or relative had written him, saying he could get employment at any specified place for any specified pay, the alien is held as a contract laborer under the law, and is detained for the Boards of Special Inquiry to deal further with his case.

Under the classification "liable to become a public charge," a great majority of the women and children now coming to the United States have their greatest difficulty in passing. Herein lies one of the many inconsistencies of our immigration laws. If a person shows that he or she has positive assurance of a means of making a living, the contract labor law is a pitfall. If that person shows that he or she has no such means of earning a living, then comes the danger of being classed as liable to become a public charge. Both requirements are necessary, even though they seem to be absurdly inconsistent.

It is quite the fashion to find fault with our immigration laws, but my observation has been that this criticism is due mainly to popular ignorance of the letter of the law. With a few exceptions, such, for instance, as the literary test, which was passed by Congress under wartime stress over the veto of President Wilson, and which had been vetoed by two other Presidents, Cleveland and Taft, the close student of our immigration laws will find little to criticize and much to approve. Outside the literacy test, which is alleged by many to be nothing short of a farce, the national immigration law could hardly be improved, if

vigorously enforced in letter and in spirit. Under the law at present we are empowered to exclude the following classes of aliens:

All idiots, imbeciles, feeble-minded persons, epileptics, insane persons; persons who have had one or more attacks of insanity at any time previously; paupers, professional beggars, vagrants; persons afflicted with tuberculosis in any form, or with a loathsome or dangerous contagious disease; persons who have ever been convicted of any crime or misdemeanor involving moral turpitude; polygamists, or persons who practice or believe in polygamy; anarchists or persons who believe in or advocate the overthrow by force or violence of the Government of the United States, or of any Government, or persons who affiliate with organizations founded upon such beliefs; prostitutes, or persons coming into the United States to practice immorality; persons likely to become a public charge; persons whose passage is paid for by any corporation, association, society, municipality, or foreign Government, either directly or indirectly; stowaways, except that any such stowaway, if otherwise admissible, may be admitted in the discretion of the Secretary of Labor; all children under 16 years of age unaccompanied by, or not coming to one or both of their parents, except in the discretion of the Secretary of Labor.

In addition to the foregoing classes that are excluded, we have what we term the barred zone by which Asiatics in a certain territory are excluded. In the case of the Japanese, we have "the gentlemen's agreement," by which Japan agrees to give no passports to the laboring class of emigrants from that country to the United States; this agreement serves as an eliminator, with the exception of teachers, merchants or professional men.

#### EXCLUDING THE UNFIT

Of exemptions there are many, and the discretionary powers given to the Secretary of Labor have a wide range. All immigrants excluded by our Boards of Special Inquiry, unless mandatorily excluded, have the right under the law to appeal to the Secretary of Labor. They may employ a lawyer, if they desire, but the lawyer is allowed to charge a fee of only \$10, and few of them find it profitable to practice in the immigration field. Inspectors and employes on the island give their services gladly in this ministry of filing appeals in Washington, and the records show that 95 per cent. of the appeals are granted, leaving only such

(© Underwood &amp; Underwood)

YOUNG IMMIGRANTS OF A VIGOROUS AND DESIRABLE TYPE RECEIVING A HOLIDAY DINNER ON THEIR ARRIVAL AT ELLIS ISLAND

deportations to be executed as are mandatory under the terms of the law.

That the Boards of Special Inquiry are strictly applying the immigration laws on Ellis Island is witnessed by the large number of detentions, crowding the buildings far beyond their capacity, with all the consequent evils of congestion. That strong pressure is brought to bear upon Washington, oftentimes by political influence, on behalf of the detained and excluded ones, is witnessed by the large number of "excluded" let out temporarily upon bonds and by the few who are ultimately deported. The percentage of deportations in comparison with arrivals during the last year has been running less than one per cent., although the number of "exclusions" by the Ellis Island Boards of Special Inquiry have amounted to thousands.

The public has doubtless noted that several of the bills recently introduced in Congress to regulate immigration provide for a change in the exercise of this discretionary power by appointing a high court, or commission of immigration, whose sessions would be held at the immigration station, and whose privilege it would be to see personally each alien who appealed for exemption under the selective tests or asked for temporary admission. Herein lies one of the problems of immigration. No two immigrants are exactly alike. The personal

equation must be recognized. I believe the most practicable and businesslike method would be to designate the Commissioner of Immigration at Ellis Island as an Acting Secretary in appeal cases, so that he could personally pass on doubtful or excluded cases. He would have the immigrant in person before him; this would afford a better opportunity for more thorough and effective examination; furthermore, the heads of the Boards of Special Inquiry, or any of the Ellis Island officials, could be called in for conference, and the immigrant given every chance to prove his case. This would immediately relieve the congestion at Ellis Island. Above all, it would make for efficiency in service. It hardly seems reasonable that appeals should be forwarded to Washington when some competent official at Ellis Island could be entrusted with this function of the law. Appealing to Washington has often delayed the admission or deportation of the immigrant a month or longer.

#### THE ILLITERACY TEST

Some idea of the difficulties of applying the law to aliens may be gained by scanning the exemptions to certain of the selective tests. Let us consider the exemptions in the literacy test, for instance:

(© International)

A STUDY IN FACES OF IMMIGRANTS PHOTOGRAPHED AT ELLIS ISLAND WHILE THEY WERE BEING ENTERTAINED BY FOLK DANCES INSTITUTED BY COMMISSIONER WALLIS TO CHEER THE HOURS OF WAITING

The following classes of aliens over 16 years of age are exempted by law from the illiteracy test, or from the operation thereof, viz.:

Persons who are physically incapable of reading.

Persons of any of the following relationships to United States citizens, admissible aliens, or legally admitted alien residents of the United States, when such persons are sent for or brought in by such citizens, admissible aliens, or admitted aliens: Father, if over 55 years of age; grandfather, if over 55 years of age; wife, mother, grandmother, unmarried daughter, or widowed daughter.

Persons seeking admission to the United States to avoid religious persecution in the country of their last permanent residence.

Persons previously residing in the United States who were lawfully admitted, have resided here continuously for five years, and return to the United States within six months from the date of their departure therefrom.

Persons in transit through the United States.

Exhibitors and employes of fairs and expositions authorized by Congress.

Agricultural laborers from across the border of Mexico or of Canada.

A most effective way of evading the rigorous tests of our immigration laws is for the foreigner to come as a seaman. The door is thus open for all kinds of undesirable aliens to arrive in this guise. The desertion of seamen has been very heavy. The steamships of one nation reported to me last week that in less than ninety days 2,000 seamen had deserted their ships at this port. A ship's crew, made up of Arabs, Turks and Armenians, lost seventy-three of

its number while here. It is doubtful if any of them would have been admissible under our immigration laws.

Desertion has been so heavy of late that it has been necessary for the immigrant inspectors to examine the seamen between the Quarantine Station and the piers at Manhattan. Before the ship can make fast to the pier these seamen rush from the boat like rats from a burning building. They run off the ship, swing out to the pier by the use of ropes, and resort to almost any hazard to go ashore, where they are lost in the great crowds upon our streets. If we continue to inspect seamen at the same rate as they have been coming to us in the last six months, we will actually inspect 800,000 seamen in this port during 1921. Some forty-three Chinamen were recently picked up and deported as seamen deserters.

Under these exemptions thousands of illiterates have been admitted to the United States, while just 1,810 were deported during the fiscal year ended June 30 last; 1,639 of them excluded at ports of entry throughout the whole country and returned to countries whence they came, and 171 deported under warrant, after having gained entrance to the United States. When this illiteracy test was passed over the President's veto, the main argument advanced in its favor was that it would prove a great factor in restricting immigration. But experience has proved that as an eliminator it has been a failure, and it has in-

(© Underwood &amp; Underwood)

TYPICAL GROUP FROM A SHIPLOAD OF GREEK IMMIGRANTS THAT INCLUDED 300 YOUNG WOMEN WHO HAD COME TO THIS COUNTRY TO MARRY MEN WHOM THEY HAD KNOWN ONLY THROUGH THE MEDIUM OF LETTERS AND PHOTOGRAPHS

flicted unspeakable hardships upon a few by separating parents and children, brothers and sisters, while thousands of illiterates have been admitted under the exemptions, or under bond.

It is difficult to see how the most ardent and sincere champion of the literacy test could ever believe that it would be effective as a factor in keeping out the mean and malevolent immigrant or dangerous radical. The latter class will usually be found among the educated foreigners. We recently deported one group of communists from Ellis Island consisting of twenty-three men and women. Each one of them could read in from three to five different languages, and pretended to know the theories of Karl Marx by heart and backwards. On the day of their departure from Ellis Island, my attention was called to the case of a big, honest, strong-armed, blue-eyed Czechoslovak blacksmith, who had been excluded because he could not read. He could shoe a horse, and was a wheelwright, besides, and he had brought his young wife and two children to this country, hoping to find honest work and learn the English language. His wife could read, but he could not, so he was sent back while

the wife and children were admitted, in the care of a brother of the unhappy husband. Leaving Ellis Island, this man vowed that he would learn to read forty words and return.

On another occasion my attention was called to a young Jewish woman, who had been parted from her brothers and sisters and ordered deported because she had failed to pass the literacy test. She was sobbing aloud in the hallway near my office. I inquired of her why she had never learned to read, as her sisters and brothers had done. I ascertained that she had to stay at home and work to educate the sisters and brothers. I could not help feeling that she was the worthiest one of the family, even though she had to be parted from them and sent back to a homeless, friendless land.

The record of arrivals, debarments and deportations under warrant recorded at Ellis Island for the last ten months of 1920 and the first two months of 1921 shows that immigration steadily increased from about 30,000 in March, 1920, to about 75,000 in October of the same year, and decreased from about 61,000 in November, 1920, to about 35,000 in February, 1921. The immigration in these twelve months

totaled 647,414. The number of debarred and deported in the same period ranged from about 180 to about 290, and totaled 3,200. Aliens deported under warrant proceedings rose from 59 to 142, and totaled 913. Statistics, however, it should be remembered, have two aspects. If 60,000 to 80,000 aliens are admitted every month, about half that number are leaving the country in the same period. If about 100,000 are annually becoming naturalized citizens, their families are automatically becoming naturalized, bringing the real number up to about four times as many.

The statesman who will eventually solve the immigration problem for the American people will be the one who shows the way to speeding up industry and increasing production, making proper and effectual use of the stranger within our gates; distributing labor to the geographical location of our national needs by making those fields of industry remunerative to owner and worker, and meeting the selected foreigner half way with cordial feelings and humane treatment, thus giving to the immigrant the most practicable and sensible examples of Americanization.

Like a mighty river flowing to the ocean is the continual stream of eager and picturesque immigrants passing daily through Ellis Island. No sooner have they landed than they scatter to all points of the compass, most of them going to the cities. According to an authority, the territory where nearly 80 per cent. of them go is well defined. If a line were drawn from the northwestern corner of Minnesota down to the lower corner of Illinois, and then eastward to the Atlantic Ocean, passing through the cities of Washington and Baltimore, it would cut off less than one-fifth of the area of the United States. But contained in the portion marked off there are located more than 80 per cent. of the immigrants coming to this country. The remaining 20 per cent. are divided between the Southern States and those west of the Mississippi River. Only about 3 per cent. percolate through to the Southland.

Perhaps our greatest problem in immigration is the absence of authority or system to send the alien not only where he is most needed and could make most money, but where he would find more favorable

conditions under which to raise his family, thus building a happier, stronger and more contented America. We must interpret to the foreigner the better things of life, and we must interpret them in terms of fairness and good will. The assimilation of the immigrant, his absorption into our life, is a slow process. Americanization can be best achieved through the force of environment, night schools, better living conditions, sufficient wages, hours which guarantee a healthful life; in other words, Americanization is for the most part an economic problem. You cannot any more force Americanism down an alien's throat than your minister can cram religion down your throat. Americanization is a work of patience, not pressure.

#### CHEERING UP THE NEWCOMERS

It was Summer when I assumed charge at Ellis Island. There was no place for recreation or diversion. I immediately directed that the people be put outdoors, where they could see the skyline of the city, watch the passing of the big ships, breathe the fresh atmosphere and bask in the sunshine of a June sky. I was told that the alien did not like either the sun or the air. The real trouble was that certain employes did not like the extra work involved. Much to the surprise of every one, it was with greatest difficulty we induced the aliens to come in at close of day. When the weather grew cold, a large storage room was converted into a bright recreation hall, capable of seating over two thousand immigrants.

Out of this grew our wonderful concerts. Sunday afternoons we have the finest musical and operatic talent that New York affords. The impression the concerts make upon the alien is indescribable. No more interesting study can be found than to sit before this great audience of foreigners, hailing from every port on earth, representing every nationality, every race and creed, some in laughter, some in tears. It is exceedingly fascinating and absorbing to watch these people respond as if by magic to music, the common language of the world.

Surely there has been more crying and shedding of tears on Ellis Island than in any place on the face of the earth. It is not only the most interesting spot in the world but it is also the most human spot in the

world, and it is interesting because it is human. I found men, women and children crying everywhere. Virtually it was a vale of tears. My first step, after eliminating officiousness and discourtesy, was to proceed to humanize the island and to organize it into more efficient and effective service that it might no longer be a disgrace to the world, but function to the credit and glory of our Government and to the relief of mankind.

It has been said that when you begin mixing sentiment with organization, humane motives with efficient management, you are scheduled for trouble, but that theory has been exploded at Ellis Island. It did not interfere with intelligent directions when we converted a huge storeroom into an examination section, which saved tired men and women and children the exertion of carrying their heavy belongings up and down long flights of stairs.

Humanity is the better since the rooms were cleaned up and made more sanitary and comfortable; mankind is grateful for drinking water in the dining rooms, which, I am told, had not been there for years; aliens have a different impression of America since they have been supplied daily with soap and towel, and they have also a different impression of the steamship companies since we have insisted that breakfast be served when they are called at 5 o'clock in the morning to be inspected; mothers, babies and little children are healthier and freer from hunger because they now have warm milk and crackers served at stated hours, day and night, on the island; life is sweeter because the immigrants now have sugar on the tables. Many of them had not seen sugar for six years. Four men were knocked out and one carried to the hospital with three broken ribs in their scramble for sugar when they first saw it in the dining room.

It does not dehumanize the immigrant, nor pamper him either, if a large auditorium is equipped with a piano, with facilities for reading and for amusement during what to him often seems an interminable detention. Fresh air is always better than foul; and music, lectures, motion pictures three nights in the week, and courteous and humane treatment are regenerating influences that change the spirits of men.

I am daily asked from what country is

all this immigration coming. My reply is from the countries nearest the vessel last sailing, though I am sure the two greatest nationalities are the Jews and Italians; these are followed hard by the Greeks, Czechoslovaks, Spaniards and Northwestern Europeans. Indeed, the immigrants are coming from everywhere. There is much fine immigration in the flow; there is also much driftwood. No one watching the movements of the world can doubt that there is a mighty stir among the peoples of the globe, and that America is the goal of their ambition and the fulfillment of their dreams.

### LETTING IN THE RIGHT ONES

The problem in immigration is to see that no one gets into this country who should not get in, and also to see that no one is kept out who should get in. Recently an eminent immigration official of Canada made the statement that 15,000,000 non-English-speaking people would like to come to Canada. The Canadian Government is restricting immigration from Central Europe, Russia and Poland. It is actually spending money to keep people away, and has agents in such centres as Havre and Antwerp. All this affects greatly the United States. Unquestionably, much of our immigration is composed of people whose ultimate aim is to cross the invisible line that separates us on the north.

Steamship companies have been bringing to this port large numbers of aliens, who have to be detained under our immigration laws. It has been found necessary to hold 85 per cent. of all steerage arrivals from some steamships. We had 1,100 aliens on three ships who had less than \$1 each, and 1,700 who had less than \$20; one woman, with five children, with scarcely enough on to be decently clothed, was going to Chicago with no ticket and only \$1.08. I could name hundreds of cases as bad or worse. Our detention rooms and dormitories are crowded day and night, and it is only by constant attention that these rooms and their equipment can be kept clean and sanitary. Every immigrant is now given fresh blankets daily, and every precaution is exercised to prevent disease. The island was built to accommodate but one-half of the number we are receiving.

I have no war to make on the ships.

Many of our best ships come into the port clean, fresh and sanitary. But there are some ships that come in that are so insanitary, dark and filthy that they should not be allowed to stick their nose in the port of a civilized country. Not long ago I took some Congressmen on a ship which had 1,923 steerage passengers. We had been on the boat only a few minutes when every one had to make for a porthole. The stench was unbearable, and the conditions indescribably filthy. Men, women and children were sitting in the dark on the floor in the passageways, eating their supper out of a bucket with spoons. Many were eating from the same bucket. It was so dark on the boat that we stepped upon people sitting on the floor. Congress asked for our findings on this ship, and our report was recently published in the Congressional Record. We detained 983 of these arrivals at Ellis Island.

Another big ship came into port shortly after a snowstorm. The conditions on that boat were intolerable. I have sent several affidavits to Washington to the effect that no one could get drinking water in the steerage without paying for it, and that even after the ship came into this harbor and was detained several days at Quarantine, it was impossible for them to get water with which to wash their hands and faces. The only way they could wash their hands was to gather up the dirty snow in basins from the deck of the ship. There were many other inhumane conditions on the ship, which are a matter of record. Under no shipping regulations are conditions such as these warranted. Since the steerage rate has jumped from \$25, before the war, to \$150 in the last two years, there is not the slightest excuse for insanitary and inhumane conditions. During the rate-cutting war between the ships, immigrants could go from Berlin to Chicago for \$11. Now it costs from \$110 to \$150 to come steerage from European ports to New York.

I have also no war to make upon the railroads. Most of the roads are now giving the aliens good accommodations. But we must bear in mind that the aliens pay the same amount for their tickets as all first-class passengers. There is no longer any third-class or immigrant railroad rate. The immigrants are certainly entitled to the ordinary conveniences of travel. I

found at one station that aliens were regularly detained until 1 o'clock in the morning, awaiting the departure of the immigrant train on its westward journey. Some were huddled together in a large room upstairs over a freight pier; others outside in a pen. In neither place were there seats, drinking water, toilet accommodations, or any other conveniences. The women with children and babies had to stand or sit on the floor until the small hours of the morning. This was corrected immediately, and the train went out at 8 P. M. instead of 1:15 A. M.

#### CLEANING UP THE ISLAND

I found at Ellis Island an enclosure where immigrants were detained in numbers from 200 to 600. There was so much filth and dirt on the floor that one would actually slip in the slime while walking, and yet little children were playing on the floor. I called for the man in charge of that part of the building, and when I pressed the question, he told me that this floor had not been washed for probably four months.

In another room where hundreds of immigrants were detained, the atmosphere was so foul and stifling as to be sickening. When I asked the guard why he did not keep the door open, so that the immigrants could get fresh air, he replied: "If I leave the door open, the immigrants ask me too many questions."

I found mothers, children and babies crying on one of the large floors. When I investigated the cause of so much crying, I found that the babies and children were hungry. Somebody had been serving the children with sour milk and cold milk. Orders were at once issued for warm sweet milk and crackers to be served at regular hours of the day and night the year through. I found another room where many detained aliens were behind locked doors. Men, women and children were all using the same toilet.

In the dining room for immigrants, where some days over 10,000 meals are served, I observed that there was not a drop of drinking water in sight. Yet there were two hydrants, one on either side of the room. I told the waiters that those people were entitled to water, certainly to common hydrant water; that many of them

were used to light wines on the other side. When I asked why they did not turn on the faucets, their excuse was that the tiled floor around the hydrants would become sloppy. We turned on the water immediately. The immigrants were so thirsty, we could scarcely get them away from the hydrants.

One night, at about 10 o'clock, I started with a guard and a matron on a round through the dormitories. We first came to the women's dormitory, where there were probably six or seven hundred women. Every window in the room was closed tight. These alien women seemed to know nothing about how to retire. All of them went to bed with their clothes and shoes on. From there we went to the men's dormitory. All had retired except two or three who were in one corner of the room washing their hands. When I inquired as to how many towels and how much soap were used daily on the island, the guard said he had been on the island eight years and that he had never seen an alien with a towel during the entire time. The next day we began furnishing every man, woman and child with towels and soap. They looked like an army of new people the next morning. Their faces were bright and they seemed to have an ambition to keep clean. Physical cleanliness always inspires moral cleanliness. A new atmosphere seemed to pervade the detention rooms.

You can make an immigrant an anarchist overnight at Ellis Island, but with the right kind of treatment you also can start him on the way to glorious citizenship. It is first impressions that count most. Two of the New York papers said recently that Ellis Island had been transformed from a house of tears to an island of sunshine. I feel that this is true.

It ought not to be difficult for a nation of our education and intelligence to frame humane laws that will exclude those who are physically and mentally and morally unfit. On the other hand, a welcome worthy of the honor and dignity of this nation should be extended to those whose energies may contribute to this upbuilding of our undeveloped communities, provided always they are in sympathy with American ideals. Above all things, I believe that this great immigration question should be protected from the manoeuvring of politics, because it

is from the standpoint of policy too important and from the standpoint of humanity too sacred to be exploited by partisan or private interests.

Revision of the system of handling these people is needed before this nation can be assured of getting the better class of immigrants. Some method of preferential selection must be immediately put in operation at the ports of embarkation. There is nothing so inhuman and certainly nothing so unbusiness-like as to bring millions of people to America and begin here the process of sifting the chaff from the wheat or separating the dross from the gold. I believe that 90 per cent. of the "culling" process could be done on the other side at the ports of embarkation.

### WRONGS DONE TO IMMIGRANTS

Every day is Judgment Day for many people at Ellis Island, and the great final day of assize will not disclose sadder scenes than we see daily enacted at this station. Families are being cut in twain, husband and wife separated, children taken from their parents, or one taken and the other left. It is all wrong.

These people have been saving for years, denying their families many little luxuries in order that they might get together sufficient funds to come steerage. After years of sacrifice and saving, they come to this port only to be sent back to Europe. And sent back to what? Literally to the devil and his angels. Europe is worse off today than during the war. These people go back with no home, no business, broken in pocket, and, a thousand times worse, broken in spirit. No one can ever picture the scenes of anguish of spirit that we see at this port. We frequently find it necessary to carry people bodily from the building and put them on the ship, many of them going into hysterics and threatening to jump overboard.

It is said by many that the other nations would not permit us to come to their shores and pick the desirables from those seeking emigration to this country. If this policy were adopted, either through diplomacy or legislation or both, I believe it would be only a short time before public opinion in those countries would so assert itself that the nations would be asking us to send our doctors and our inspectors to their ports.

Inspection over there is infinitely better than rejection over here. The day must come when there will be a change in this inhumane and unbusinesslike system of bringing the immigrant to our shore.

A most effective way of evading the rigorous tests of our immigration laws is for the foreigner to come as a seaman. The door is thus open for all kinds of undesirable aliens to arrive in this guise. The desertion of seamen has been very heavy. The steamships of one nation reported to me last week that in less than ninety days 2,000 seamen had deserted their ships at this port. A ship's crew, made up of Arabs, Turks and Armenians, lost seventy-five of its number while here. It is doubtful if any of them would have been admissible under our immigration laws.

Desertion has been so heavy of late that it has been necessary for the immigrant inspectors to examine the seamen between the quarantine station and the piers at Manhattan. Before the ship can make fast to the pier, these seamen rush from the boat like rats from a burning building. They run off the ship, swing out to the pier by the use of ropes, and resort to almost any hazard to go ashore, where they are lost in the great crowds upon our streets. If we continue to inspect seamen at the same rate as they have been coming to us in the last six months, we will actually inspect 800,000 seamen in this port during 1921. Some forty-three Chinamen were recently picked up and deported as seamen deserters.

### HUNDREDS OF STOWAWAYS

Another menace that threatens the safety of the country is that of the stowaways. A book could be written upon this subject alone. The story is romantic and thrilling. Never in the history of the nation have stowaways been coming in such great numbers. Recently we have had three ships with eighteen stowaways each, two with sixteen, one with nineteen, one with twenty-three, and another with forty-three. The other day one ship came in with fifty-four stowaways.

Two stowaways recently jumped from a big ship at the Narrows. One of them was drowned. The other was picked up at Hoffman Island. After much persuading he gave some interesting information. There was a stowaway organization on the

other side, he said, working from Greece out to the Mediterranean coast and up to Liverpool. This organization sells passage to the stowaways for from \$25 to \$30 apiece. The regular fare is \$130. They stand in with the seamen, who hide the stowaways in the ship and feed them all the way across the sea. This stowaway further said that when his ship left Trieste they put ashore eighteen stowaways. The vessel then proceeded to Palermo. A thorough search was made there and sixteen more stowaways were put ashore. Then the ship moved up to Naples. The marines at Naples assisted the officials in searching the vessel. Fourteen more stowaways were put ashore.

This stowaway told us that twelve more stowaways could be found in the hold of the vessel. The officers of the ship, the Captain included, all refused to go down into the hold to make the search. They said that they would do so only at the risk of their lives. Finally nine policemen and detectives with drawn guns searched the ship and the twelve stowaways were brought out. When these twelve stowaways saw their comrade, who had disclosed their hiding, they said to him. "When we get you back in Naples, we'll cut your heart out." The young man began to cry. We assured him he would not be sent back with the other stowaways.

The stowaways, as a class, are made up of the scum of the country from which they come. They are, with but few exceptions, ex-convicts, criminals and degenerates. We are told that they are frequently assisted in going aboard vessels by the police officials of those countries. However, sometimes we find among the stowaways a worthy case, but to determine the admission of any of the stowaways is an exceedingly difficult undertaking.

One of the most pitiful class of cases is that of the immigrant who comes to this port believing himself fully qualified for admission, only to find, after passing the doctors and inspectors, that his passport has a fraudulent visé. There is a well-organized band of counterfeiters and forgers on the other side, who are systematically exploiting the immigrants by persuading them to pay exorbitant sums for the viséing of their passports. This includes two classes of cases: those who have been refused visés

by the American Consuls and those who come from interior points and have been waiting for weeks in line to appear at the American Consulate. The passport thieves pass along the line, persuade these people to leave it, and take them to some part of the city, where they use a facsimile of the visé stamp and the signature of the Consul. They also use counterfeit \$10 fee stamps. These stamps are good imitations of the American revenue stamp, except that they are a shade off in color. Immigrants arriving with fraudulent visés must be deported, no exceptions being made in these cases. Many women and children are the sad victims of this new phase of robbery and extortion on the other side.

### PROBLEMS OF QUARANTINE

One of the worst menaces in immigration is the danger of bringing loathsome and dangerous diseases from the plague spots on the other side. We are told that at the frontiers of the nations in Europe, quarantine officials are confronted by a singular problem. Most of the refugees' clothing is so rotted that it will not stand the strain of disinfection. If new clothing be not at hand, it is not less than criminal to disinfect the old. Therefore many of the immigrants cannot be made safe for society under existing conditions. If Ellis Island needs anything in the world next to a new Ellis Island, it needs a great system of baths so that every man, woman and child passing through our gateway should receive a disinfectant bath before entering the buildings. While they are being cleansed their luggage could be sterilized and made free of disease germs and vermin. This bath was required of every soldier when he returned home. Not a mother's son could enter this country until he had been washed and all his luggage fumigated.

An erroneous impression seems to prevail in some quarters that the immigration authorities at United States ports are responsible for the enforcement of quaran-

tine laws and regulations. This is not a fact. The immigration officials have nothing to do with the enforcement of quarantine laws. Our sole duty is to enforce the immigration laws after quarantine has granted "pratique" to arriving ships.

When the immigration officials have determined that an alien is eligible for admission, it is their duty to land him promptly, irrespective of his destination. The strict and impartial enforcement of the immigration law will continue to be the diligent and untiring aim of the Ellis Island officials.

As we look out over the world we see humanity stunned, bruised and bleeding, but, thank God, still free. This country has been urged to save Europe. We are willing to do what we can for humanity's sake. We must revive, recreate and reconstruct what the war has laid waste; and, more, we must feed and clothe Europe, and also furnish the money to defray the cost of relief.

Europe's plight is very grave. We had no hand in bringing it about, but we contributed very heavily in relieving it when we sent over our men to help to stop the war. The great pity is that we did not keep on till we reached Berlin, in order to settle the question decisively once for all. Congress has its hands full, but I have every confidence in the intelligence, courage and patriotism of Congress and the new Administration to safeguard America and American interests.

So far as my administration is concerned, the gates at Ellis Island swing both ways. They swing inwardly in cordial reception to the alien in sympathy with American ideals, who is willing to work and become a corporate part of the United States. But these same gates swing outwardly, eternally and impassably, to the man or woman who by word or deed would destroy the peace and tranquillity of the nation or threaten the overthrow of its free institutions.

(Graphic Diagram from the Literary Digest)

THE SIZE OF THE HUMAN FIGURE IN EACH CASE INDICATES THE RELATIVE NUMBER OF ALIENS OF THAT NATIONALITY IN THE UNITED STATES

*Current Hist 1921*

# NEW LAW RESTRICTING IMMIGRATION

A LAW restricting foreign immigration into the United States to 3 per cent. of the foreign-born persons in this country in 1910 was passed by Congress in the closing days of the Wilson Administration, but President Wilson vetoed it by leaving it unsigned when he went out of office. The Sixty-seventh Congress has now enacted the same law, practically unchanged, and at this writing it awaits only the signature of President Harding. The House passed it on April 22, 1921, without a rollcall. The Senate passed it on May 3 by a vote of 78 to 1, the only adverse vote being cast by Senator Reed of Missouri. Numerous amendments proposed in both houses, notably a provision permitting immigration of victims of religious or political persecution, were rejected by decisive majorities.

The new law will become effective within fifteen days after being signed by the President, and will continue in force until June 30, 1922. By limiting the number of immigrants to 3 per cent. of the foreign-born

persons of each nationality in the United States as determined by the census of 1910, the new law will permit only about 350,000 immigrants to land here in the next thirteen months, divided as follows:

NORTHWESTERN EUROPE.	
Belgium .....	1,482
Denmark .....	5,440
France .....	3,523
Germany .....	75,040
Netherlands .....	3,624
Norway .....	12,116
Sweden .....	19,956
Switzerland .....	3,745
United Kingdom.....	77,206
Total N. W. Europe.....	202,212
OUTSIDE NORTHWESTERN EUROPE.	
Austria .....	50,117
Bulgaria .....	345
Serbia .....	139
Greece .....	3,038
Montenegro .....	161
Italy .....	40,294
Portugal .....	1,781
Rumania .....	1,978
Spain .....	663
Russia .....	51,974
Turkey in Europe .....	967
Turkey in Asia.....	1,792
Total outside N. W. Europe.....	153,249
Total N. W. Europe .....	202,212
Grand total.....	355,461

There was a frantic rush, especially in Southeastern Europe, to get into the United States before the new restrictions were imposed, and American representatives abroad reported in May that they could handle only a small percentage of the applications for visé of passports.

## AMERICA'S FOREIGN-BORN MILLIONS

THE Census Bureau at Washington on April 23 gave out statistics, based on the 1920 census, regarding the persons of foreign birth now living in the United States. Our foreign-born population last year totaled 13,703,987. This was an increase of 358,442, or 2.7 per cent., over 1910. In the decade ended with 1910 the increase had been 30.7 per cent.; the greatly les-

ened increase in the last decade is ascribed to the almost complete absence of immigration during the war, and to the considerable emigration in the same period.

A view of the comparative standing of foreign countries in the number of immigrants sent here shows that Germany still leads with 1,683,298, though this figure means that there are now 818,035 fewer

Germans in the United States than there were in 1910. Italy takes second place in the number of her citizens now in this country; in the preceding census she was fourth. Russia has taken the third rank from Ireland, while Poland falls into fourth place. Canada is fifth, but with a figure considerably less than in the preceding decade. Ireland's total of 1,035,680 represents a decrease of 316,571, a much greater decrease

than that of the decade 1900-1910. Mexico increased its contribution of human exports to the United States by nearly 100 per cent. in the last decade, raising the total from 254,761 to 476,676. Austria, formerly sixth on the list, is now ninth, representing the second largest numerical decrease. The Census Bureau's general table of foreign-born residents, arranged alphabetically by States, is as follows:

FOREIGN-BORN WHITE POPULATION OF THE UNITED STATES

State	Foreign-Born White			Increase 1910-1920		Increase 1900-1910	
	1920	1910	1900	Number	P.Ct.	Number	P. Ct.

CRUDE CARNOTITE OR RADIUM ORE AS SHIPPED FROM THE MINES IN SACKS

# THE STORY OF RADIUM IN AMERICA

BY THOMAS C. JEFFERIES

*Truth about the mysterious metal, worth 180,000 times as much as gold—Though Mme. Curie discovered it in Europe, it is now produced almost solely in the United States—Limitations of its use for the cure of cancer—Romance of radium mining*

**A**LITTLE over half a century ago, or, to be more definite, in the year 1867, there was born in the City of Warsaw, Poland, a woman who was destined to become world-renowned through scientific research, and especially as one of the co-discoverers of the most wonderful mineral in the world. This woman was Mme. Curie, who is now visiting the United States, and the mineral, which for the first time was isolated by her and her French husband, Professor Curie, was radium. Hence the appropriateness of the movement to raise \$120,000 and present her with a gram of radium for experimental purposes.

Dr. Robert Abbe of New York has given us much interesting information regarding this remarkable woman in his book called "Madame Curie." He tells us that her father was a Polish Jew named Ladislaus Sklodowski, who was a professor of physics at the University of Warsaw. Her mother was a Swede. As a young woman she went to Paris to pursue advanced work in science. While there she led an austere life combined with intensive studies, which

greatly increased her store of scientific knowledge and experience. She was welcomed into the Latin Quarter, and eventually became associated with the famous physicist and X-ray investigator, Professor Henri Becquerel. While engaged with this scientist in important experiments, she met Professor Curie, then a professor of chemistry, who later became her husband. With him she became the co-discoverer of the mineral with which their name will always be associated.

Radium has proved itself so valuable in the treatment of human disease that every effort should be made to conserve it after it has been isolated. The life of radium is estimated at 1,760 to 2,000 years. Experienced surgeons say that if radium were useful for nothing else, the relief from pain it gives in certain forms of cancer makes it worth its whole cost. Radium cures some tumors which, before this substance was discovered, were successfully treated only by severe operations. That it does not cure all cancers or all tumors is beside the mark. Its value is sufficiently proved without claiming for it universal application.

The price of radium within the recent past ranged from \$90 to \$120 per milligram for the element contained in a salt. Since the war most of us have learned to regard the necessities of life as representing rather high standards of value when measured in terms of gold dollars; but imagine a substance that in volume and quantity is 180,000 times the value of gold, or, in other words, a substance of which a quantity the size of a five-dollar gold piece is worth \$900,000! Considering, however, the hardship and the privation that both man and beast are obliged to undergo in order to obtain this precious mineral, and the long, complicated and expensive process by which the ore must be treated before its valuable residues can be secured for the use of humanity, the present writer, who spent some years in the radium fields, and who later,

in the laboratory and the clinic, has seen many cases of malignant growth retarded or cured completely, has become convinced that the vast monetary value of this mineral has not been overrated.

Some one has told us that heaven knows how to place a proper price upon its wares. With this in mind, we may regard the almost inaccessible deposits of radium ore, their distance from such necessities as fuel, food and water, and the difficulty and enormous expense of reducing the ore to its precious content, as nature's compensatory method of price fixing.

Radium is found in quantities so exceedingly small that it is never visible even when the material is examined with the aid of a microscope. Radium ore ordinarily carries only a small fraction of a grain of radium to the ton, and radium will never be found in large masses because it is formed by the decay of uranium, a process that is amazingly slow, while in its natural state radium itself decays and changes to other elements so rapidly that it does not accumulate in visible masses.

Radio activity, or, in other words, the characteristic manner in which radium manifests its presence, was accidentally discovered by Professor Becquerel while carrying some radium in a tube in his waistcoat pocket. The burning of his body about the chest led to his discovery of the therapeutic value of the substance. Even after Mme. Curie's discovery of radium it was still regarded as a scientific curiosity until Professor Becquerel's accident. With this evidence that radium would destroy tissue its later employment in fighting malignant disease was but a question of time and experimentation.

Radium crystals give off minute explosions at the rate of about 360,000 per second. These explosions form a gas, and it is this gaseous emanation which is the therapeutic agent. There is no remedial action in the powder itself. The presence of radium is manifested by the repelling of disks and sheets of tinfoil that form a part of a testing apparatus.

Radium minerals are generally found in granite formation. Most of the original radium minerals, such as uraninite, samarskite and brannerite are black, and are seldom found in quantities of much commercial value. Pitchblende is of practically the

MME. MARIE CURIE  
*Discoverer of Radium, now visiting the  
United States*

same composition as uraninite and of the same general appearance, excepting that it shows no crystal form and occurs in veins. It has been found in but few places, among them Bohemia, Southern Saxony, Cornwall and in Gilpin County, Colorado.

When these original radium minerals break down through the effect of the elements upon them other radium elements are formed from them, such as antunite, tyuyamunite and carnotite. The latter two are the most abundant and furnish the bulk of the world's radium. To the naked eye they appear exactly alike, both being of a bright canary yellow. They are powdery, of very fine crystals, although in rare instances they are of a claylike nature. Carnotite is technically known as potassium uranium vanadate. Tyuyamunite, which is similar in composition, contains lime instead of potash. Large deposits of this last substance have been found in Russian Turkestan. The greatest known deposits of the two minerals, however, are found in Southwestern Colorado and Southeastern Utah, where both are associated with fossil wood and other vegetation in friable, porous, finely grained sandstone. It is reported that small quantities of carnotite also have been produced at Radium Hill, near Olary, South Australia.

In America radium has been obtained chiefly from carnotite ore, the principal deposit of which is in the southwestern section of Montrose County, Colorado, in a valley called "Paradox," because, unlike most valleys, it runs at right angles to the mountain ranges which enclose it. This ore deposit extends over into Utah, but the Paradox Valley may be regarded as America's radium fields proper. This section is rich with legend and tradition of the American red man, for our radium fields are located on the site of a famous old Indian playground—a reservation once occupied in peace and contentment by the Ute tribe of Indians.

Radium ore seems always to be found in places that possess potential hardships. Most camps, when new, are tented villages. So it was in the camp in Paradox Valley in which I once sojourned. Offices, bunks and mess were under canvas. They have since been more permanently established in frame buildings, as shown in the photograph (Page 453) of headquarters camp in the

radium fields. The "front yard" of radium headquarters is an expanse of alkali desert land, cactus and sagebrush; the back yard is a mountainside of jagged rocks and scrubby piñon trees. One of the few remaining open cattle ranges in this country is in this region, and during much of the year large numbers of range cattle graze and roam at will. Cattle raising, however, has become merely an incidental occupation; most thoughts and dreams there run to the precious radium. That is the chief subject of conversation for prospector, miner and operator. When some one tells of a new radium claim located, or a new body of good ore uncovered, eyes widen and listening ears eagerly catch each word.

As a rule, radium miners come from gold and silver mining districts. Many come into Paradox from Telluride, the nearest large quartz mining camp, about seventy-five miles to the southeast. At that place are situated such large mines as the Tom Boy, Smuggler Union, and, a short distance further, the famous Bird Mine at Ouray. Hard rock miners as a rule are ignorant concerning both the nature and the location of carnotite ore. The miner in quartz must learn the mining game over again when he goes to the radium fields. Deep shafts and long drifts are seldom required, radium mining frequently being conducted by quarrying operations. Most miners of carnotite develop a hacking cough, caused by the fine dust raised by the handling of this ore.

There must be a well-equipped camp, located conveniently near wood and water, both of which are scarce in the radium fields. Within the camp there must be plenty of good, substantial food and clothing. The operator must also have many thousands of heavy canvas sacks available, and needles and twine with which to sew the sacks when they are filled. Production requires picks, shovels and drill steel and a forge, for mining tools must be kept sharpened. There must be powder, caps and fuse and a burro train for packing the ore from the mountainside to the foot of the hill. Not only is the original cost of production of radium-bearing ore high, but long hauls and handling and rehandling en route increase it. The use of tractors in freighting the ore in recent years is proving successful.

Mankind owes a debt of gratitude to the courageous and unselfish pioneers who supplied the means with which this work was carried on during the days when no commercial return came back to them. Long before a ray of light broke through or a dollar returned for the bread they cast upon the water, these men had demonstrated their faith to the extent of \$500,000, and were content to keep going in the thought that the final result of their efforts would be of great benefit to humanity. Unfortunately, Joseph and James Flannery, the pioneers in this work, have both died within the last two years, and can in no event share in humanity's verdict.

Many times I have heard Joseph M. Flannery relate the circumstances that influenced him to enter the course that made him the world's largest radium producer. Several years ago, when the spectre of death crossed the threshold of the Flannery home at Pittsburgh, and cancer bore away one of its members, Joseph Flannery, with all the solemn determination of a head thus bowed and a heart thus weighted, imposed upon himself an obligation to find a cure for the disease whose ravages he had witnessed, a scourge that has disregarded time, geography, race and circumstance. He dis-

patched experts to Europe, who reported back to him that radium would do the work, and forthwith he set out to obtain the precious substance in quantity. He established at Pittsburgh the largest and most complete radium laboratory in the world, and his mines in Colorado attained an output of over 100 tons of ore a month, from which one gram of radium was obtained. Flannery, shortly before his death, stated that the production of the world's annual ounce of radium involved the use of not less than 1,400 carloads of raw material, of which 1,500 tons is carnotite ore, the basic ore that is found in Colorado.

### RADIUM'S WAR ON CANCER

Radium is not yet "ex-mystery." Although it has been used in the treatment of cancerous growths for several years, its curative properties are not wholly understood. It is generally admitted that, in the main, radium is still in the infancy period of investigation. Questions in the form of experiments are still being addressed to nature on the subject. Its value, however, has been sufficiently demonstrated to induce many European cities to equip municipal hospitals with a working supply of the costly mineral. One great obstacle to investigation and experiment, both in Europe and the United States, has been the almost prohibitive cost of the substance. Mme. Curie herself has had to forego further study owing to the fact that she possessed no radium, and had not the means to purchase it. And yet, before the war, the world's supply of radium came from Europe. Since 1914 that leadership has been transferred to America. When hostilities ceased, the United States was producing almost the entire world output, which amounts to but an ounce, or approximately a teaspoonful, annually, and it sells readily at \$3,500,000. It is estimated that the total amount of radium in the United States at the present time does not exceed twenty-five grams, and that not over 100 grams can be located in the whole world.

Despite the cost and scarcity of the substance, however, the use of radium goes on apace. A gram of it, worth about \$120,000, has been purchased for clinical and experimental purposes by the Post-Graduate Medical School and Hospital of New York. This is the largest amount of radium ever as-

EXTRACTING RADIUM FROM ORE.

sembled for instruction purposes. The State of New York, furthermore, has purchased for the State Institution for the Study of Malignant Diseases at Buffalo two and one-fourth grams of radium, for which the sum of \$225,000 was paid. Though the whole purchase could readily be contained in an ordinary fountain-pen barrel, it is enough to be a great permanent asset to the State and to do untold good to suffering humanity.

Though the action of New York State marks a forward step in the treatment of cancer, victims of that disease have been treated free in New York since 1889, at the Memorial Hospital for the Treatment of Cancer and Allied Diseases. Since 1914 that hospital has treated these diseases exclusively. Its medical staff, in affiliation with the Cornell Medical School, has been studying the application of radium to the treatment and cure of cancer since 1912. Through the generosity of the late Dr. James Douglas, eminent mining engineer and metallurgist, the Memorial Hospital in 1917 received over three grams of radium, valued at about \$300,000, and later the hospital received by deposit from the United States Government, through the Bureau of Mines, over one-half a gram of radium to be used for the treatment of soldiers and sailors of the United States. This is said to be the largest deposit of the substance

held by any public medical institution in the world. It is used exclusively for the treatment of cancer, and the condition under which the radium was obtained was that the poor should be treated liberally, and, when possible, gratuitously. In addition to the radium on deposit with the hospital, that institution recently erected a laboratory, at a cost of \$75,000, which is fully equipped for the study of cancer in its relation to treatment by radium and radium emanation, and also maintains a staff of eminent physicians and physicists.

Radium gives off three different kinds of rays: alpha rays, which reach about one-half inch from their source; beta rays, which are projected three times as far, and gamma rays, which continue for a much greater distance from their source. A film of tin foil will serve as an effective filter to bar the alpha rays and permit the continuance of the other rays, or even a sheet of paper will do this. A barrier of lead a millimeter thick is sufficient to arrest the beta rays, but the gamma rays penetrate through seven and one-half inches of iron, and lose thereby only about 1 per cent. of their intensity. The gamma rays are the ones the surgeon employs, on account of their effect in retarding abnormal growths. In fact, they sometimes induce actual retrogression. The rays must always be confined to the diseased part when they are

ENTRANCE TO THE THUNDERBOLT MINE, IN COLORADO, WHERE MUCH VALUABLE CARNOTITE ORE WAS TAKEN OUT

FIELD HEADQUARTERS OF STANDARD CHEMICAL COMPANY, LARGEST RADIUM PRODUCING CONCERN IN THE WORLD, FOUNDED BY THE LATE JOSEPH M. FLANNERY OF PITTSBURGH

applied; otherwise, new growth is likewise retarded, and inflammation or ulceration in healthy tissues may be superinduced.

Actual practice has shown that in superficial conditions, where radium is easily applied, it has been 95 per cent. successful. This applies to cancerous diseases of the skin, lips, eyelids, &c. As for malignant growths, the head of the Department of Pathology of one of our large universities, who has long occupied a prominent position in the world of medical and scientific research, has stated that in many cases radium has replaced the knife in the treatment of such cases, and that in many others it has supplanted the knife with effective results. A leading radium therapist has declared that the best effect of radium does not consist in merely killing cancer cells, but in the symptoms of change and stimulation that mark the healing process. Some of the disadvantages are overtreatment, the ill-advised attempt to control too large an area of tissue, and the attempt to use radium on hopeless cases. A little radium improperly used can do much harm. It is highly important that its limitations should be recognized, so that its failures outside of its proper field should not prejudice its legitimate claims.

The somewhat complex physical laws governing the action of radium, the variations

in quantity, duration and distance in the dosages of different operators, the wide range of filters employed, the varying effect of alpha, beta, gamma and secondary rays, the conflict of opinion and advice between enthusiasts and uninformed critics, have all contributed a share to the confused history of radium therapy to date. What radium therapy most needs is the active co-operation of the workers and clinics, the standardization of methods and the concentration of the work, so far as possible, in large clinics thoroughly equipped with radium, technicians and trained medical specialists.

We have heard of many disastrous burns received by workers from radium and X-rays. In the leading radium clinics, however, the workers are protected from the dangerous effects of the rays, and, as a further precaution, they work with these rays only on alternate days.

It is a regrettable fact that tumors often follow X-ray treatment. Radium, however, is considered a more efficient agent, although some cases have been satisfactorily treated with radium in combination with the X-ray. In such cases, of course, great care and attention must be given to the matter of sequence and the intensity of the different applications.

There has been some difference of opinion

between surgeons and advocates of X-ray or radium treatment, but, since each of these agencies contributes its share to the general advancement of scientific treatment of disease, there is little reason to expect anything but co-operation in the future. The necessity for this is emphasized by certain cases that are encountered and that demand a combination of different treatments. Sometimes, in treating cancer of the breast, for instance, the diseased part is exposed to radium rays, after which X-ray treatment is applied. In the treatment of cancer of the stomach, tubes containing radium have been swallowed. Certain cancerous conditions must be exposed with the knife before the diseased area can be treated with radium rays.

As stated recently by a prominent scien-

tist, "the practical limitations to the use of radium in cancer are numerous and formidable, and in any but experienced hands it is a dangerous agent. Until these difficulties are more widely recognized or overcome, a general recommendation of the use of radium, especially in place of competent surgery, is inadvisable. Although the available supplies of the metal are limited, and the indispensable skill in application so restricted, it would be specially unwise to spread among the general public the impression that radium is ready to supplant surgical treatment of operable cancer. On the other hand, these precautions should not be permitted to stand in the way of the normal and legitimate extension of the radium treatment of cancer."

## STOPPING ROBBERIES OF MAIL CARS

AT a conference of freight claim agents and operating officials of railways in the Southeastern United States, held in Atlanta, Ga., on April 23, 1921, it was authoritatively stated that the railroad loss in 1920 from robbery and damage of freight amounted to \$104,000,000. The loss of the railroads from robberies alone averaged nearly \$2,000,000 a month during the same period.

Mr. Will Hays, the new Postmaster General, declared in Washington on April 25 that mail robbers had stolen a value of nearly \$6,000,000 in 1920. About \$3,000,000 of this had been recovered. Steps were to be taken at once, said the Postmaster General, to remedy this "absolutely intolerable" condition. In addition to the distribution of arms to postal employes, he stated, the standing offer of \$5,000 to any employe of the department who brought in a mail robber had been widened to include anybody at all who performed that public service. At a luncheon of the American Newspaper Publishers Association, held in New York on April 29, the Postmaster General, in referring to the robberies, said:

We are arming postal employes. The War Department has given us 10,000 automatic

revolvers, 1,000,000 rounds of ammunition and several hundred riot guns. We simply have to go back to the old Wells Fargo days, and shoot to kill, and we are going to do it.

Postmaster William B. Carlisle of Chicago, at the suggestion of Mr. Hays, has arranged for Federal troops to patrol posts at the Federal Building, the Federal Reserve Bank, the Custom House, at railroad stations and at fifty-two Post Offices and substations. More than one thousand soldiers are to be used in Chicago, which has lost a total of over \$1,000,000. The Chicago Postmaster charged that one highly organized band was responsible for this entire loss. As a further step the Government is constructing armored mail cars of steel, built in separate compartments in the style of safes that are both burglar and fireproof. The first car of this kind, built by the New York Central Railroad, made its initial trip with mail from New York to Chicago on May 7. It had already had several weeks' successful test as an express carrier. The car is built with nine separate and removable containers, which, besides being robber-proof, are so rapidly handled that the whole car can be unloaded in twenty minutes.

# A STATE'S SOVEREIGN POWERS

BY FRANK PARKER STOCKBRIDGE

*A glance into the forgotten history of the formation of our States—How several States came into being—A State is "on an equal station with the other Nations of the Earth"*

WHAT with New York and New Jersey negotiating and ratifying a treaty with each other as solemnly as though they were at Versailles, and citizens gravely discussing the proposal to divide the State of New York without so much as saying "by your leave" to Washington, the man in the street who has had the idea that somehow the whole question of State sovereignty was settled in the negative by the Civil War finds himself in doubt as to how seriously he needs to take either the projects themselves or the language used to describe them.

Doubtless the term "treaty," as applied to the agreement just concluded between New York and New Jersey (or New Yersey, as it is spelled on the old maps) for the unified control and development of the whole port area around New York Bay, seems to many to carry no implication of an agreement between sovereignties or independent Governments. And in the light of the only method familiar to the present generation of adding new stars to the flag—creating States out of Federal territories—the average citizen suspects that discussion of the proposed State of Manhattan is mere conversation unless the Government at Washington decides upon it.

What has really happened in the matter of the New York-New Jersey treaty, and will happen if the proposed division of New York is carried out, is merely a repetition of history. We have to go back to the beginning of the Republic to find the same things being done on any important scale, but the underlying principle—that in every matter in which it has not surrendered its rights to the Federal Government, each State is an independent nation, with all the rights, powers and privileges of an independent nation, including the right to fix its boundaries by agreement with its neighbors and to divide itself into two or more States at will—is not only unchanged since the Revolution, but is upheld in

numberless court decisions, both before and since the Civil War.

We have become so used to writing "The United States is" instead of "The United States are" that we have lost sight, largely, of the distinction between the terms "Federal" and "National," a distinction that is much more than merely technical. In an earlier day that distinction was never lost sight of, and the records of the disputes and treaties between the States, incident to the "shaking-down" of the loose relationship under the Articles of Confederation into the more compact alliance under the Federal Constitution, throw interesting sidelights on the current history of interstate relationships and intrastate divisions.

Some of these half-forgotten curiosities of American history occasionally are recalled because of their bearing upon matters of present moment. Such, for example, was the treaty between New York and Massachusetts that left the title to a considerable part of the bed of Lake Ontario vested in Massachusetts, although New York is the only State bordering upon the lake. Not long ago the City of Rochester wanted to extend certain piers at the mouth of the Genesee River, and it was necessary to obtain the consent of the State of Massachusetts, since New York's dominion ran only to the water's edge.

This curious state of affairs arose out of the claim of Colonial Massachusetts to ownership of all the land west of a line drawn southward from what is now Oswego to the northern boundary of Pennsylvania, and extending between these north-and-south limits to the South Sea, as the Pacific was then known. The treaty between France and Great Britain at the end of the Seven Years' War limited the western boundary of this and other similar Colonial claims to the Mississippi River, but it was not until 1786, when the young Republic was well under way, that Massachusetts

yielded its claim to this territory and by treaty with New York relinquished all right to lands lying *south* of Lake Ontario. But the title of Massachusetts to this land, derived from royal grants, extended to the boundary between the States and Canada, which lies in the *middle* of Lake Ontario. This fact was overlooked or regarded as negligible in framing the Treaty of 1786, so the technical claim of Massachusetts still holds to all the land under water within the territorial limits of the United States between Oswego and Youngstown.

Out of the same conflict of claims to territory comes the curious little triangular extension of Northwestern Pennsylvania, in which the city of Erie is situated. Pennsylvania was one of the few colonies the boundaries of which were completely defined prior to the Revolution, and as a State it laid no claim to the western lands that most of the others were anxious to possess. West of Pennsylvania, Virginia, Massachusetts, New York and Connecticut had set up claims that overlapped at many points. New York was the first to relinquish its claims to western lands, and in 1780 had established its own western boundary on the meridian of the westerly extremity of Lake Ontario. Connecticut and Massachusetts both withdrew their claims in 1786 and Virginia's claim had never covered the territory lying between the westerly extension of the north boundary of Pennsylvania and Lake Erie.

This left the triangle formed by the new western boundary of New York, Lake Erie and the northern line of Pennsylvania a genuine "No Man's Land," owing sovereignty to none of the States, so the new Government under the Articles of Confederation adopted the orphan and gave it to Pennsylvania, thus giving that Commonwealth the right to share with New York the distinction of stretching from the Atlantic to the Great Lakes.

West Virginia and Kentucky, as the heirs of Virginia in the premises, still have technical ownership of the bed of the Ohio River, from the Pennsylvania line to the Mississippi, in spite of the fact that Ohio, Indiana and Illinois all border the river on the north. Here, again, is a curious situation arising out of the old Colonial claims that were not settled until after the new Republic had become established.

Virginia extended west to the Mississippi and claimed ownership of everything east of the Mississippi and west of New York and Pennsylvania, as far as Canada. Connecticut had a colorable claim to a strip extending from Pennsylvania to the Mississippi and from latitude 41 degrees to 42 degrees 2 minutes. When Connecticut, in 1786, composed its differences with New York, it relinquished to the Federal Government all but the easterly 120 miles of this strip; this portion retained by Connecticut formed the "Western Reserve," out of which a dozen Ohio counties have been carved and which contains the City of Cleveland among others; from the sale of these lands Connecticut established a school fund that still aids in maintaining her educational system.

But when Virginia, in 1784, ceded its claims to the "Northwest Territory" to the general Government, the deed of cession read "all lands *north* of the Ohio River." And Virginia—or the States since erected out of what was Virginia—still claims the bed of the Ohio. Numerous efforts to arrive at an agreement that would give Ohio a claim to joint ownership in the river have failed. The Virginia-Ohio Boundary Commission of 1848 held many sessions, but could come to no mutually satisfactory conclusion, and the matter is still subject to future treaty agreement between the States interested.

The process of settling boundary lines in the early days was accomplished by the construction of new States. Even before the Revolution the "Green Mountain Boys" had claimed independence for what is now Vermont, but was then claimed by the colonies of New Hampshire and New York. New York's claim rested on the royal grant to the Duke of York of all lands west of the Connecticut River; New Hampshire's on a patent conveying rights to within twenty miles of the Hudson River. New Hampshire relinquished its claim in 1780, but it was not until 1791 that New York finally consented to the separation of the Green Mountain country from its domain and the erection of that country into the State of Vermont, the first new State to be taken into the United States after the Federal Constitution went into effect.

A year later, in 1792, the settlers in that part of Virginia lying west of the Cumber-

land Mountains, and known as Kentucky County, had the satisfaction of being admitted to the Union as a separate State. They had held nine conventions to demand separation from Virginia, and Virginia had agreed to let them go provided the Federal Congress would accept the territory as a new State.

Splitting off new States from old did not stop with Kentucky. The North Carolina settlers west of the mountains began soon after the Revolution to try to break the tie between themselves and the mother State. North Carolina would not deal with them directly, but undertook to cede the territory to the Congress under Articles of Confederation. The Congress refused to accept the cession, but the inhabitants of the country went right ahead and formed the State of Franklin, which existed for nearly four years, 1785-88, before the North Carolina authorities took steps to annul its acts. After the Federal Constitution had been ratified and the permanent Federal Government established, North Carolina again in 1790 ceded the land beyond the mountains to the Government, which accepted it under a pledge to grant Statehood when there should be 60,000 free white inhabitants. The new State of Tennessee thus came into the Union in 1796, and was the first State to be erected out of the public domain, the territory having become the property of the Federal Government and ceased to be a part of North Carolina for a considerable period before its admission as a State.

With two exceptions, all the States since admitted have been created out of the public domain, territorial government under the direct control of Washington having first been set up. But both Maine and West Virginia were split off from original States, the former by mutual consent of the inhabitants of the two parts and the latter as a war measure.

Maine's case more closely parallels the proposed splitting of New York State than that of any of the other States added to the original thirteen. As a province of Massachusetts, Maine's interests developed along different lines from the rest of the States. Isolated geographically, many of its residents felt that they could manage their own affairs better than they could be run from Boston. Through the influence of their representatives in the General

Court they obtained the passage of an act providing for a referendum in Maine on the question of separate Statehood. The first referendum failed of a sufficient majority, owing to the opposition of shipping interests, who feared that the establishment of another customs district would necessitate the clearance of all vessels plying between Boston and Maine ports on every voyage. This objection was overcome by an act of Congress, the passage of which was procured by the influence of members who were anxious to have Maine admitted in order that the votes of its two Senators should counteract those of the two Senators to be chosen from Missouri, which was then clamoring for admission as a slavery State. The second referendum resulted in an overwhelming vote in Maine in favor of Statehood, and the new State was admitted in 1820.

Not since then, except in the case of West Virginia, has a new State been carved out of an old one. If, however, the citizens of Greater New York desired to do so, and could by any means persuade the Legislature at Albany to permit it, it would be no concern of anybody's outside the present State of New York if the plan proposed for the division of the Empire State into two parts were carried through. The admission into the Union of the new State of Manhattan, or whatever it might be called, would be a foregone conclusion.

The problem involved is practical rather than legal. It is doubtful whether the right of a county or group of counties to secede from the jurisdiction of the State without the consent of the Legislature or authority of a referendum of the people of all the State could be seriously maintained. And under the Constitution of the State of New York the City of New York can never, no matter how large a proportion of the State's population inhabits its five boroughs, have a majority in either house of the Legislature. "Up-State" saw to that many years ago. It is extremely doubtful whether the "agrarian" section of the State, controlling the Legislature as it does and always will, would ever give its consent to the separation from it of the city that pays three-quarters of the running expenses of all the State. And that is the only way the proposed new State can be set up. It is not a matter in which the Federal Government can interfere.

In this, as in all other matters, power over which has not been delegated by the States to the Federal Government, New York, like its sister Commonwealths, is a sovereign nation. The precise status of the States was expressed in 1833 by the United States Circuit Court of New Jersey in the famous "Pea Patch" case, in which the Federal Government attempted to dispossess the tenant of an island in the Delaware River which Delaware had ceded to the United States. The tenant set up the claim that the island never was part of Delaware, but appertained to New Jersey. The Commissioners appointed to investigate upheld this contention, and the court ruled that not even the United States Government could compel the occupant to vacate without the consent both of the State of New Jersey and of the tenant.

"For all purposes and objects not affected by the Constitution of the United States," said the court in this case, "these States are foreign to each other. They became free, sovereign and independent States by their own declaration of independence, which placed them severally on an equal station with the other nations of the earth, before the treaty of peace with Great Britain, which was merely a recognition and not a grant of their independence."

This doctrine has never been challenged; the dictum of the court in 1833 is still an accurate statement of the status of each one of the States. It is as States "foreign to each other" and "on an equal station with the other nations of the earth" that New York and New Jersey have just ratified their port treaty.

## MACAULAY'S WARNING TO AMERICA

AN interesting letter written in 1857 by the historian Macaulay to Henry S. Randall of Cortland, N. Y., and republished recently from an old file of Harper's Magazine, expresses Macaulay's grave fears of the results of democracy as he saw it developing in the United States. "I have long been convinced," he said, "that institutions purely democratic must, sooner or later, destroy liberty and civilization or both." Repeatedly Lord Macaulay stressed his belief that democracy meant, in the essence, spoliation of the rich by the poor, leading either directly to general ruin or indirectly, through the establishment of a strong military despotism, to the loss of liberty. The salient passages of the letter are quoted below:

You may think that your country enjoys an exemption from these evils. \* \* \* But the time will come when New England will be as thickly peopled as old England. Wages will be as low and will fluctuate as much with you as with us. You will have your Manchesters and Birminghams, where hundreds of thousands of artisans will assuredly be sometimes out of work. Then your institutions will be fairly brought to the test. Distress everywhere makes the laborer mutinous and discontented, and inclines him to listen with eagerness to agitators who tell him that it is a monstrous iniquity that one man should have a million while another cannot get a full meal. \* \* \* Through

such seasons the United States will have to pass in the course of the next century, if not this. How will you pass through them? I heartily wish you a good deliverance. But my reason and my wishes are at war, and I cannot help foreboding the worst. It is quite plain that your Government will never be able to restrain a distressed and discontented majority. For with you the majority is the government, and has the rich, who are always a minority, absolutely at its mercy. \* \* \* On one side is a statesman preaching patience, respect for vested rights, strict observance of public faith. On the other is a demagogue ranting about the tyranny of capitalists and usurers, and asking why anybody should be permitted to drink champagne and to ride in a carriage while thousands of honest folks are in want of necessities. Which of the two candidates is likely to be preferred by a workingman who hears his children cry for more bread? There will be, I fear, spoliation. The spoliation will increase the distress. The distress will produce fresh spoliations.

There is nothing to stop you. Your Constitution is all sail and no anchor. As I said before, when a society has entered on this downward progress, either civilization or liberty must perish. Either some Caesar or Napoleon will seize the reins of government with a strong hand, or your republic will be as fearfully plundered and laid waste by barbarians in the twentieth century as the Roman Empire was in the fifth, with this difference, that the Huns and vandals who ravaged the Roman Empire came from without, and that your Huns and vandals will have been engendered within your own country by your own institutions.

# JAPAN'S POLICY OF EXPANSION

By LYNE O. BATTLE

*How the Island Empire has carried out its program of expansion at the expense of its neighbors—Acquisition of Formosa, Korea, Saghalien, Shantung, and the former German islands—Japan's hold on Manchuria and Siberia—Threat to Philippines*

THE determined expansion policy of Japan is of interest to Americans for several reasons. The most important of these is that, at present, the British Empire, Japan and America constitute the great sea powers of the world, and it is only a sea power that offers any threat to our national welfare. In making the preceding general statement, I have not lost sight of the nearness of our next-door neighbor, Canada, for the ratio of population between Canada and the United States is so much in favor of the latter that a threat from Canada, unsupported by the rest of the British Empire, would amount to nothing; without Britain's sea power, any support to Canada from overseas would be impossible.

The expansion of Japan, by encroachment on China, grates upon America in two respects. In the first place it violates the American sense of fair play. In a struggle between China and Japan, the former is the under-dog; she is helpless now, in a military way, when dealing with Japan, and will probably remain so far beyond our time. If, therefore, China receives no more than moral support from other nations, Japan will be able to take Chinese territory at such time and in such amounts as are best suited to Japanese policy; there is no more to prevent Japan from doing her will on China than there was in the case of Korea. In the second place there is the natural desire of Americans to share in the profit to be made in the development of Chinese resources and in a fair share of a growing Chinese trade.

## BASIS OF FRICTION

To the average American mind the origin of any lack of cordial relations between America and Japan is not in the hornet's nest stirred up by the defeat of the American laborer in his competition with the Japanese on the Pacific Coast. That trouble is local, to a great extent, and attracts but

little attention in the central and eastern sections of our country.

The cause of friction with Japan goes deeper; our growing distrust, or, to be more explicit, our growing fear of future trouble with our transpacific neighbor, lies in our dread that the new Pacific power will become too strong—that Japan may become so powerful that eventually, when interests clash, America may be forced to measure strength with a giant.

For the reason, then, that America is, as she should be, deeply concerned with the future, it is of interest to look into the expansion policy of Japan; to see what has been done in the past in the territorial growth of our present rival for power in the Pacific. This may serve as a guide to show us what to expect in the future, and will enable us to consider the situation with clearer heads.

## JAPAN'S POLICY OF AGGRESSION.

The aggressive policy of Japan is not of new growth. As far back as 1582 a Japanese army swept over Korea, but was finally driven out by the Chinese. In 1873 the Ministry, which included Okuma and Ito as members, planned annexation of Formosa, Korea, Manchuria and a part of Siberia. The various stages by which Japan reached her present position of power may be traced as follows:

Although her expansion plans had been under discussion for a number of years, the first actual increase of Japanese territory, beyond the four main islands occupied at the forcible reopening of Japan by Commodore Perry, did not take place until 1875. At this period Russia and Japan both claimed the southern half of Saghalien and the Kurile Islands. By the treaty of 1875 Japan accepted the Kuriles and agreed to the validity of the Russian claims in South Saghalien. This is of interest mainly be-

cause it marked the beginning of Japanese expansion.

The Loochoo Islands were next on the program. Their sovereignty was in doubt; sometimes they paid tribute to China, sometimes to Japan. Fortunately for the Japanese plans, in 1872 some fishermen from one of the Loochoo Islands were stranded on the east coast of Formosa, where they were killed by head-hunters. This gave Japan an opening to further her claims to sovereignty over the islands, and she demanded that China punish the Formosans. China demurred, holding that the head-hunters in the interior and on the east coast were beyond her jurisdiction. Finally, after much diplomatic wrangling, she consented, in 1874, to a Japanese expedition against the Formosans. This so strengthened the position of Japan that she seized the Loochoos in 1876, and almost precipitated the war between Japan and China, for which the former was not yet ready.

America now intervened as peacemaker, suggesting that China and Japan divide the Loochoos equally between them, both agreed to this solution. Later on, China receded from the agreement, hoping, no doubt, eventually to secure the whole. Japan, however, kept the Loochoos, and still has them.

#### GETTING HOLD OF KOREA

About 1884 trouble again cropped out between China and Japan, this time over Korea. The Hermit Kingdom, which had been more or less a vassal of China, had finally opened its doors to foreign embassies, and one or more of its ports to foreign trade. The Japanese legation, occupied in building up the interests of its country in furtherance of the expansion policy, was attacked by a Korean mob, assisted by Chinese soldiers, and the legation building was burned. War was narrowly averted at this time through negotiations between Ito and Li Hung Chang; in a treaty, drawn up by them, both China and Japan agreed to withdraw all troops from Korea, and to send no more without previous notification. They decided that Korea should indemnify Japan, but left China the upper hand in matters of Korean internal policy.

The next ten years were spent by Japan in preparation for the war her statesmen could so plainly foresee. China, ignorant of her own military weakness and of the

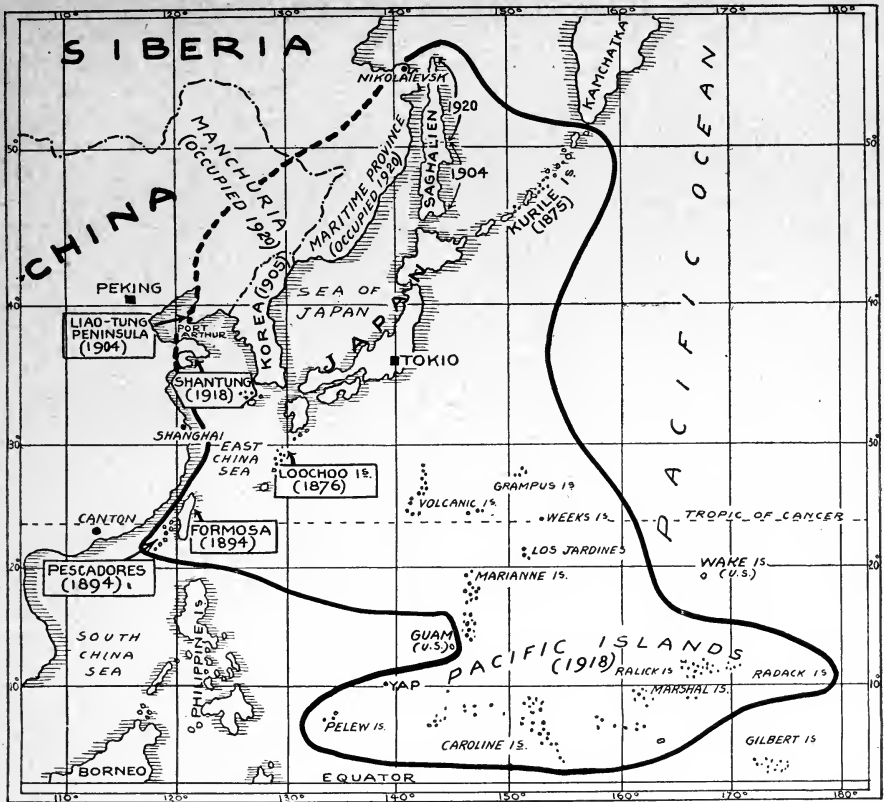

growing strength of Japan, did nothing. In the struggle with China over Korea, the guiding motive in Japan was expansion, pure and simple. Later on, in the struggle with Russia over the same territory, the motive became more nearly one of fear. With Korea in the hands of a nation weak in military forces, like China, there was little to fear. Korea in the hands of Russia, however, was quite a different matter. It was a "dagger pointed at the heart of Japan."

The inevitable war between China and Japan came in 1894, as soon as Japan was ready for it. As we are dealing simply with the remarkable expansion of Japan, resulting from a well-considered policy, the details of the war with China will not be considered. It was a quick war, for which Japan was fully prepared, and the result was never in doubt. By the peace terms, Japan obtained Formosa, the Pescadores Islands (between Formosa and the China coast), and the whole of the Liao-tung Peninsula. As Liao-tung lay west of Korea and formed a wedge between that kingdom and China, Korea now passed under Japanese influence. One of the clauses of the treaty was almost humorous—both China and Japan recognized the independence of Korea! The indemnity to be paid Japan was £12,000,000, and it was agreed that Japan should hold Wei-hai-wei, on the north coast of Shantung, until the indemnity was fully paid.

The excellent strategic position obtained by Japan as a result of the war with China gave her command of the Yellow Sea and of all the approaches to Peking. If the peace terms were allowed to stand, it meant paramount Japanese influence in Far Eastern affairs, and would have shut out Russia, Germany and France from what they considered a fair share of influence in China and from any partition of Chinese trade and territory.

#### FORCED TO YIELD LIAO-TUNG

These European nations never had any intention of standing idle while Japan gained the ascendancy in China, so the latter country now became a European "grab-bag." This policy began with a combined note to Japan from France, Germany and Russia demanding that Japan recede the Liao-tung Peninsula to China. Japan, always efficient in sizing up a situation,

THE BLACK LINE INDICATES THE EXTENT OF JAPANESE TERRITORIAL CONTROL, INCLUDING PORTIONS OF CHINA AND SIBERIA OCCUPIED BY JAPANESE TROOPS. DATES GIVEN ARE THOSE ON WHICH JAPAN GAINED POSSESSION IN THE COURSE OF HER RAPID EXPANSION

concluded that the combination was too strong for her, and bowed to superior force. For one reason or another, Germany, Russia, France, and even England took slices of Chinese territory in 1897, or around that time. Germany took Tsing-tau and got her hold on Shantung; Russia took Port Arthur, on the Liao-tung Peninsula, the very territory that Japan had won in the recent war; France got Kwang-chau Bay in the south, while Great Britain was satisfied with additional territory at Hongkong and Wei-hai-wei Bay, still in the hands of Japan.

It was only natural that Japan was furious at being thus robbed of her spoils of war, but she could do nothing else than respect such a strong combination of powers. She had gained some territory, however, and had replaced the Chinese influence in Korea.

Russia, seemingly secure in possession of

Port Arthur, now took the place of China as the opponent of Japan in Korea; and for another ten years Japan bided her time and prepared her army and navy for the war with Russia. A bitter diplomatic struggle between Japan and Russia was carried on at the Korean capital with varying success, depending on which party had possession of the Korean King. Up to this time Japanese political ethics had been no better and no worse than those of European nations. They all, England included, acted on the principle that "might makes right," and seized whatever they coveted. The deepest blot on the Japanese escutcheon came from the official murder of the Korean Queen.

In 1902, Japan's hand in Far Eastern affairs was greatly strengthened by the alliance with Great Britain. The main benefit derived by Japan from this treaty was that it broke up the combination of

France, Germany and Russia, which had forced Japan to give up some of the territory gained in the Chinese war. The gist of the treaty was that, should one of the signatory powers become involved in a war with another power, the other signatory was to remain neutral—but when attacked by *more* than one power, the other signatory was to come to its assistance. Incidentally both high contracting parties guaranteed the independence of China and *Korea* in this treaty.

Japan was now protected from the European coalition and free to go to war with Russia, which she did in 1904. At the end of the war the Japanese policy of expansion was rewarded with the southern half of the island of Saghalien and with the Liao-tung Peninsula; Russia also recognized the suzerainty of Japan over Korea. The fact that the Liao-tung Peninsula belonged to China, and that both Russia and Japan had guaranteed the independence of Korea, was forgotten by both parties in the Peace Conference.

#### ANNEXATION OF KOREA

Having beaten Russia and cleared her path of active armed opposition in the Orient, Japan now brought into play, in Korean affairs, the political strategy which resulted later in the incorporation of Korea as an integral part of the Japanese Empire. Japan and the British Empire were now the most influential powers in the Orient, so the first step of Japan, in the plan to take over Korea, was to bring about a change in the treaty of alliance with Great Britain. In the 1902 treaty Japan and Great Britain recognized the independence of China and Korea; in the 1905 treaty they again recognized the independence of China, but of China alone. Great Britain admitted that Japan possessed paramount political, military and economic interests in Korea, and further recognized the *right* of Japan to take such measures of guidance, control and protection to safeguard and *advance* those interests as Japan deemed necessary. Russia had been crowded out; Germany, France and England naturally made no effort to prevent the rape of Korea, for they were equally guilty in China.

The story of Korea from 1905 until 1910 is a pitiful one of gradual absorption of all governmental power by the Japanese Resident General. Most of the papers re-

linquishing Korean rights were signed literally at the point of the sword. The best Korean lands were taken by the Japanese; some were paid for at as low as one-twentieth of their real value, some were not paid for at all. Korean objectors to such harsh treatment were thrown into prison and in many cases were tortured. In 1907 the abdication of the Korean Emperor in favor of his weak-minded son was brought about; in 1919 his Majesty the Emperor of Korea made complete and permanent cession to his Majesty the Emperor of Japan of all rights of sovereignty over the whole of Korea!

#### AMERICA DECLINES TO INTERVENE

The action of America in the case of Korea is an interesting sidelight and is of great significance with respect to the expansion policy of Japan. It occurred in 1905, when the United States had one of the strongest Presidents we have ever had—Theodore Roosevelt—and when Elihu Root was Secretary of State. Though the American Government, unlike most of the European nations and Japan, had never guaranteed the independence of Korea, it had, nevertheless, signed a treaty to use its influence in favor of the continued independence of Korea. The Emperor sent an emissary to the American President with a pitiful letter, telling of Japanese aggression, and stating that he was forced to sign away Korean rights “at the point of the sword.” The Korean agent was never received by Mr. Root, but he received word from the American Secretary of State that “the letter from the Emperor has been placed in the President’s hands and read by him \* \* \* it seems quite impracticable that any action should be based upon it.”

Roosevelt’s own explanation, some years later, was as follows:

To be sure, by treaty it was solemnly covenanted that Korea should remain independent. But Korea itself was helpless to enforce the treaty, and it was out of the question to suppose that any other nation, with no interest of its own at stake, would do for the Koreans what they were utterly unable to do for themselves.

The end of the World War brings Japanese expansion up to date. The Treaty of Versailles, signed by all the interested nations save China, and finally disapproved by the United States Senate, gave Japan

the German rights in Shantung and made her mandatarly over all the former German islands in the Pacific Ocean north of the equator.

### JAPAN'S PRESENT POSITION

The Japanese Ministry of 1873 took a long look ahead when it planned annexation of Formosa, Korea, Manchuria and a part of Siberia. In forty-eight years much of the plan has been carried out, for Japan has incorporated into the Empire of the Rising Sun, Formosa, the Loochoos, the Kuriles, all of Saghalien, the Pescadores and Korea. In addition Japan has possession of the Liao-tung Peninsula and Shantung, and has a strong hold on part of Manchuria and Eastern Siberia.

Shantung forms a Japanese wedge for entering China, just as Korea formed a stepping stone to the Asiatic mainland. But Japan has promised to give back Shantung to China. Yes; but Japan, by treaty, solemnly guaranteed the independence of Korea at least four separate times!

During the Peace Conference at Paris a representative of one of the great American newspapers, in conversation with a Japanese official, spoke of the trouble Japan would inevitably stir up by a penetration of China, and asked why Japan did not aim further north at Eastern Siberia. The reply was laconic: "Too cold."

This reply contains a warning for the Filipinos, in their pressure for independence, and also a warning for the United States. Americans, as a people who love freedom, will no doubt grant independence

to the Philippines as soon as they feel that those islands have any chance to succeed in self-government. As soon as the Philippine Islands receive their independence there will be nothing whatever to prevent Nippon from seeking a warmer climate there, instead of going where it is "too cold."

The action of the Supreme Council in awarding to Japan the former German islands north of the equator has placed an impassable barrier to any attempt of America to go to the assistance of the Philippines, once they are granted their independence. The Caroline and Marshall Islands extend 2,400 miles east of the Philippines; they are only 1,800 miles from the Hawaiian Islands. Guam, the second stepping stone of America on her way to the Philippines, is now surrounded by Japanese islands.

When the Philippines and Guam fall to Japan, which is certain to occur in case of war between Japan and America, the line of communication to any American force sent to the assistance of our former colonies must pass close to Japanese ports for a distance of 2,400 miles.

It is true that Japan took the Carolines and Marshalls with the understanding that they should not be fortified; but it is also true that Japan, on four or more separate occasions, guaranteed the independence of Korea.

The object of this paper, however, is not to predict the future, but simply to tell what Japan has accomplished in the way of territorial expansion. Those who read are able to draw their own conclusions.

### PROGRESS IN CONTROLLING AUTOMOBILE TRAFFIC

**T**HE curious lighthouse towers that stand at intervals in the middle of Fifth Avenue, New York, flashing red, green and yellow lights to stop and start the endless automobile traffic, have proved to be a boon both to the pedestrian and to the motorist.

Dr. John A. Harriss, Special Deputy Police Commissioner in charge of traffic, originated the tower signal system and built the five present structures at his own expense. New and more beautiful towers, which are about to be substituted for the original ones by the Fifth Avenue Associa-

tion, are to contain a new device designed by Dr. Harriss, by which the police can stop any car in the avenue suspected of carrying criminals. By signals and telephone all traffic can be stopped and the suspected car dislodged for investigation or arrest. Dr. Harriss has also prevailed upon New York City to try a plan which is intended ultimately to control the traffic of the whole city at night, and which makes each policeman a sort of walking signal tower by means of electric lanterns worn on a belt.

# SIBERIA AND THE JAPANESE

BY FREDERICK A. OGG

Professor of Political Science in the University of Wisconsin

*How Russia extended her dominion over Siberia and pushed toward the South—The situation at the outbreak of the World War, which led to the allied occupation and to Japan's present hold upon Eastern Siberia—Japan at the parting of the ways*

THE war remade the map of Central Europe, of Africa, of the Pacific, and of the Near East. The Bolshevik revolution in Russia is today doing the same thing for Northern and Central Asia, and the transformations east of the Urals are on a larger scale than those that have taken place in any of the other regions mentioned. A single new State here is six times the size of France, twenty-seven times the size of Ohio, and slightly larger than that part of the United States lying between Kansas and the Pacific Ocean.

Events in this quarter have raised questions which deeply concern the world at large, and particularly the United States. Is Bolshevik Russia, like Czarist Russia, to be an Asiatic as well as a European power? Are Bolshevised "buffer States" to plant themselves menacingly along the Mongolian and Manchurian frontiers of China? Is the new Far Eastern Republic to be a really independent State, or only a blind for Japanese control in Siberia? Is the open door for which John Hay labored to exist north of the Amur, or are American and other western manufacturers and traders to be barred from the growing markets of that region? Is the outlet for Japanese emigration, which is denied by the United States, Canada and Australia, and for Japanese imperialistic enterprise, which is narrowed by international opposition in China, about to be opened wide in the Siberian maritime provinces?

Back of these questions looms the query, What is Siberia, and what Russian, Japanese, Chinese, American and other national and international interests centre on its soil?

The term "Siberia" has commonly been used in a loose way to designate the whole of the former Russian dominions in Asia. On both geographical and political grounds, however, this is inaccurate. Siberia proper

does not include Turkestan and the other Transcaspian lands formerly under the Russian flag. Its southern boundary runs, rather, from the sources of the river Ural to the Tarbagatai range (following the watershed between the Aral and Irtysh basins), thence along the Chinese frontier to the vicinity of Lake Baikal, and thereafter along the Argun, Amur, and Ussuri rivers to the Korean border in the neighborhood of Vladivostok. Even so, the country is 10 per cent. larger than China, with all her dependencies, and 50 per cent. larger than the Continental United States. The State of New York could be set down in it one hundred times, with room to spare.

Few western people have outgrown the schoolboy notion of Siberia as an interminable sheet of ice and snow, with here and there a colony of shivering, starving exiles; but in the main as a waste, the eternal stillness of which is broken only by the yelping of wolf-packs in pursuit of the luckless traveler or explorer. Of the 30 per cent. of the country which lies within the Arctic Circle, this is a sufficiently true picture. But of the great stretches traversed by the Trans-Siberian Railway, the vast regions included in the upper valleys of the northward-flowing Ob, Yenisei and Lena Rivers, and especially the broad provinces bordering the Sea of Okhotsk northward to Kamchatka, the description is no more true than it would be if applied to Saskatchewan and Manitoba, or even Maine and Montana.

Large sections of the country are very similar climatically to Southern Canada, and are no less adapted to wheat growing, stock raising and other branches of husbandry. The Summers are short, but sufficient for the ripening of crops. Vegetation is luxuriant while it lasts; the eighteen or twenty hours of broad daylight, with hot sunshine, more than counteract any ill-effects of the brief nights, even when they

are chilly and possibly frosty. Although the country as a whole has never been self-supporting, this is because of primitive modes of cultivation and inadequate means of transportation, and not on account of any lack of capacity for production. Southern Siberia is, indeed, one of the world's great undeveloped farms. Particularly is this true of the Amur and Ussuri Provinces, in the southeast, with a combined area of 880,000 square miles, which is more than four times the area of France.

There are other important forms of natural wealth. Vast regions are heavily forested, and it is not impossible that Siberia may some day be our main source of lumber supply. Coniferous trees are most plentiful, but oak, maple, ash and other familiar deciduous trees of North America also abound. Birch is especially common, and the paper-pulp industry was beginning to grow when the war cut off access to markets.

There is also mineral wealth. Gold-dust is found in paying quantities in almost all parts of the country. Under normal conditions, the output is a million ounces a year, and this represents a mere scratching of the surface. Probably the richest gold fields remaining in the world today are in Siberia. Silver and silver-bearing lead ores are abundant, as are also copper, cinnabar, tin and graphite. From the Altai region come all manner of precious and ornamental stones, including jasper, malachite, beryl and dark quartz. There is some coal and much petroleum, although apparently not much iron. Finally may be mentioned, among resources, the country's enormous yield of furs and the unlimited opportunity for the development of fisheries on the eastern coasts.

Until within the memory of men still living, the world at large knew next to nothing about Siberia and had no interest in it. The Russians were permitted to extend their control over it with no competition, and with never a word of protest until, near the middle of the nineteenth century, they began to use the country as a base for expansion southward in the direction of Persia, India and Korea. Even then, no one challenged the Russian position in Siberia proper.

The story of Russian rule in Siberia

stretches through three and a half centuries. It begins with the conquest of the central Irtysh valley by the Cossack chieftain Yermak in 1582, and moves forward as a great epic comparable with the story of the westward expansion of white population and dominion in our own land. The loves and hates, the daring deeds and homely labors of land-seekers, fur-traders, hunters, gold-diggers, adventurers of every sort, make up the warp and woof of one story as of the other, save for the sombre figure of the Russian political exile, which has no counterpart in the making of the new America.

Once started, Russian sovereignty advanced through Asia at an average yearly rate of 20,000 square miles—half the area of Ohio—for 325 years. There were no great wars of conquest. Rather, the method of expansion was to reach out successively into new regions, plant trading posts protected by garrisons, and from these centres to bring under control the restless and predatory native tribes of the vicinity. In this way Tobolsk was founded in 1587, Tomsk in 1604, Yeniseisk in 1619, Yakutsk in 1632, Verkhneudinsk on Lake Baikal in 1648, Albasin in 1663.

The same instinctive desire for a free outlet to open water that led toward the Baltic and the Black Sea turned inevitably toward the ice-free waters of the Pacific Ocean; and this desire was satisfied as early as 1686, when Cossack explorers came within sight of the Sea of Okhotsk. After a fierce struggle with the aborigines, a fort was built on the coast in 1647.

Two hundred years were required to round out and consolidate Russian dominion in Siberia proper. Then new lines of advance were started. The first of these led toward China and its nominal dependency, Korea. Count Nicholas Muraviev, who became Governor of Eastern Siberia in 1847, initiated this phase of Russian policy and carried it far toward realization. In 1850 the Muscovite flag was unfurled at the mouth of the Amur River; in 1858 China was manoeuvred into a position where there was nothing for her to do but cede to the Russians all of her rich territories on the left bank of that stream; and two years later another cession added the maritime province between the Ussuri

GENERAL VIEW OF SIBERIA AND ITS PRINCIPAL CITIES AND RIVERS

River and the sea, and conferred the right to occupy Vladivostok.

The second line of southward advance lay in Central Asia, and was directed toward the Persian Gulf and the frontiers of India. Action began in this field about 1864, and by the close of the reign of Alexander II. (1881), Muscovite domination had been established throughout almost the whole of the vast expanse of territory lying between Siberia on the north and Persia and Afghanistan on the south, and stretching from the eastern coast of the Caspian to the Chinese frontier. The greater part of the territory was formally incorporated in the empire, and the petty potentates, such as the Khan of Khiva and the Amir of Bokhara, who were allowed to retain a semblance of their former sovereignty, became obsequious vassals of the White Czar.

Hardly was Russian power recognized in these newer possessions before the great push toward the south entered upon a new stage, in both west and east. In the west it took the form of penetration of Persia and Afghanistan, and was halted only in 1907, when, by recognizing a Russian sphere in Northwestern Persia, Great Britain secured from the Czar's Government an agreement to keep its hands off both in Southern Persia and in Afghanistan.

In the east the lure was the fertile lands of Manchuria and the warm-water harbors

of Korea, and the pretext for aggression was found in the construction and defense of the Trans-Siberian Railway. The bold idea of linking up European Russia with the Pacific by flinging a road of steel across 5,000 miles of Siberian wilderness originated with Count Muriaviev-Amurski, founder of the Russian Empire in the Far East, and a route was marked off by an army engineer in 1866. Funds were at last obtained, mainly from France, and in 1891 work was begun on seven sections simultaneously. By the opening of the present century a rail and steamer route was open for traffic from Moscow to Vladivostok. Its itinerary was as follows: Rail from Moscow to Lake Baikal, steamer across the southern end of the lake, rail again to Stretensk on the Upper Amur, steamer down the river to Khabarovsk, and rail thence southward to Vladivostok.

Meanwhile, however, interest in the lower Amur route yielded to a plan to carry the rail line further south, across Chinese territory, to Vladivostok, and possibly to ports still more favorably situated; and this decision influenced the course of Far Eastern affairs as has nothing else in the past half century, save the great war itself. What it led to immediately was the formation of the Eastern China Railway Company and of the Russo-Chinese Bank, the building of a Russian-controlled railroad from the Trans-Siberian line at Kaidalovo southeast-

ward across the Chinese province of Manchuria to Vladivostok, and (after the Russian lease of the Liao-tung Peninsula in 1898) the construction, of a yet more important Russian road southward from Harbin, in Central Manchuria, to Mukden, Port Arthur and Talien-wan, renamed Dalny, on the Gulf of Pechili. What the decision led to eventually, of course, was the clash of Russian and Japanese ambitions in Northern China, the defeat of Russia in the war of 1904-5, and the conversion of Japan from an Oriental into a world power.

In the story of Siberia these great Russian projects toward the south are vital, for in later decades Czarist policy in Asia was determined almost exclusively with reference to them. In the eyes of the political and military strategists at St. Petersburg, Siberia was the great bulwark, the base, from which Russia's successive drives for territory and power in both Far East and Middle East were to be launched. Large opportunities for economic development in the northern country were habitually ignored because of the feverish desire for exploitation and aggrandizement further south.

None the less, Siberia, in the years before the great war, was becoming truly Russian. From the first entrance of Muscovite power down to 1900, the country was a penal colony, and a considerable share of its present Russian-speaking population is composed of freed hard-labor convicts or their descendants. But there has been a large amount of voluntary Russian immigration. At certain stages, this movement was stimulated and directed by the Government itself. For example, when the Amur and Ussuri provinces were acquired, the State gave families free transportation thither, provided temporary accommodations on their arrival, gave each head of a household 200 or 300 acres of land, sold necessary agricultural implements at cost, and made long-term loans without interest. At other times, the authorities tried to curb the movement.

Regardless, however, of the official attitude, serfdom, conscription and religious persecution could always be counted on in earlier days to keep the stream flowing; and in later times, ease of transportation, the abandonment of the exile system, and increased ability of the liberated peasant to move about supplied fresh impetus. For a

decade prior to 1914, settlers were pouring into Siberia's vacant lands at the rate of 300,000 a year; and when one considers that in the year mentioned the entire population of the country, both Russian and native, was less than three times that of Greater New York, it is obvious that the scale, in the matter of numbers as well as in types of civilization, was fast being inclined in the Russians' favor.

The major part of this growing Muscovite population was to be found, however, in Western, rather than Eastern, Siberia, and many Russians considered that the increase in the latter quarter was not sufficiently rapid to insure permanent possession. The rival that was feared, of course, was Japan. It is true that the war of 1904-5 was scarcely ended before the St. Petersburg and Tokio Governments began to draw together; and successive agreements in the ensuing decade brought them outwardly into complete accord on Far Eastern affairs. But Russians east of Lake Baikal saw with increasing apprehension Japan's absorption of Korea, her veiled exploitation of Southern Manchuria, and her economic penetration of Inner Mongolia, and many of them were convinced, before 1914, that Japan would some day come aggressively to Siberia.

Among those who took this view was Nikolai Gondatti, Governor General at Vladivostok at the time when the great war broke out. Rabidly anti-Japanese, he had for years left no stone unturned to block the ingress of Japanese commerce and to prevent Japanese encroachment upon Russian fishing interests; and finally he had made it the chief policy of his administration to shut out all alien labor, Chinese and Korean, as well as Japanese, although in this he was not wholly successful.

Hence it was not simply China that sensed disaster when the war unexpectedly spread to the Orient; despite the Russo-Japanese alliance, the East Siberian Russians were similarly apprehensive. Japan's professed motives in seizing Kiao-chow were discounted, and her promises to maintain Far Eastern peace were regarded as having been made only for effect.

Nothing happened for more than three years—in other words, until the Bolshevik revolution turned European Russia upside down and precipitated the Asiatic dependencies into chaos. But that event created a

situation in the Far East which brought Japan and her allies and associates to vigorous action, and raised an international problem which promises to vex the chancelleries of the world for a long time to come.

The situation, in a word, was this: Soviet Russia was making peace with Germany. The latter was now free, not only to mass most of her divisions on the western front, but to overrun Russia and to turn to her own use foodstuffs and other supplies which were known to be distributed liberally along the Trans-Siberian Railroad. At Vladivostok alone 600,000 tons of food and indispensable war materials lay in the warehouses and in great heaps on the wharves. Two hundred thousand released German and Austrian prisoners of war were capable of being organized by Bolshevik commanders in Eastern Siberia for use against the Allies. Apparently, Siberia was about to be converted from an allied resource into a German base.

Another factor in the situation calls to mind one of the most romantic episodes of the war, namely, the expedition of Czechoslovak soldiers across Siberia on the way to the western front in France. Never before, perhaps, had an army undertaken to turn a retreat into an advance by circumnavigating the earth and coming at the enemy from the opposite direction. Organized from Czech and Slovak prisoners taken by the Russians in the early stages of the war, this indomitable army of 50,000 men turned to fighting on behalf of the captors, and during the last few months before the Bolshevik revolution it was the only really effective army on the Russian front. Finding itself cut off, after the revolution, from the Czechoslovak Army on the western front, it seized all the engines and cars within its reach and set out—eighty train loads in all—eastward with the intention of going to the battlefields of France by way of America. By the Spring of 1918 it had reached Western Siberia, but was beset by the Red forces and was reported to be in danger of annihilation.

Predisposed by these circumstances to favor intervention, Great Britain and France received with cordiality a suggestion of Japan that she be given a mandate by the Allies to throw a military force into Siberia. "Germany," said Marshal Foch

in February, 1918, "is walking through Russia. America and Japan, who are in a position to do so, should go to meet her in Siberia. Both for the war and after, America and Japan must furnish military and economic resistance to German penetration."

At Washington, the proposal was not immediately welcomed. On the contrary, disapproval was expressed, on the ground that the Central Powers could and would make it appear that the invaders of Siberia were doing in that quarter exactly what Germany, with a view to "restoring order," was doing in Russia. At all events, the United States, it was given out, would have no part in the campaign.

The project was, however, only momentarily halted. The murder of two Japanese in a riot in Vladivostok in early April caused a detachment of Japanese marines to be landed forthwith in that city; and the increasing seriousness of the general military situation overcame all inclination to hesitate longer. With the full assent of the Allies, Japan began sending regular troops; Great Britain and France decided to take an active part; and, by an extraordinary reversal of policy, the United States also agreed to participate. In all, about 100,000 men were despatched to the scene of action.

Historians will probably always disagree on the results, as well as the justification, of this venture. Some already hold it a gigantic fiasco, which accomplished nothing except to add to the difficulties of maintaining peace and justice in the Orient. Others consider that, in view of Germany's impending collapse, it was unnecessary, though this could not have been perceived at the time. Still others believe that, by disarming and placing under restraint the former German-Austrian prisoners and by fighting the Bolsheviks in the vicinity of Vladivostok and along the Amur, it stayed the tide of Bolshevik conquest and possibly saved China and Korea from invasion.

The one aspect of the undertaking which is indisputable is that it was deliberately turned by the Japanese to their own national advantage. It is true that the Tokio Government entered upon the campaign reaffirming its "avowed policy of respecting the territorial integrity of Russia, and of abstaining from all interference in her internal politics," and promising that upon

realization of the announced objects of the intervention it would "immediately withdraw all Japanese troops from Russian territory." But, in the first place, though it had been agreed that no power should send more than 7,200 soldiers, Japan sent 72,000; and, in the second place, the campaign, the principal commander of which, on the basis of seniority, was the Japanese General Otani, was carried out in Japanese fashion and with thinly disguised Japanese ends in view.

Admiral Kolchak's anti-Bolshevist Government at Omsk was nominally supported while it lasted, but emissaries from Tokio took advantage of its weakness to extort a number of commercial concessions. Semi-independent Cossack chiefs, notably Semenov and Kalmykov, were aided, with the general effect of discouraging the rise of a strong Government of any kind in Siberia. The country was flooded with Japanese manufacturers, shipped under the guise of military stores at a time when it was impossible for the merchants of other nations to secure shipping facilities for their goods. The Japanese constructed their own military telegraph, which they reserved entirely for their own purposes, military and commercial, and almost every strategic city and railroad junction received its Japanese garrison or guard. In short, by the close of 1918, Japan dominated the Far Eastern situation and had at her mercy not only the Russian sphere in Northern Manchuria, but all Siberia east of Lake Baikal.

These things were, of course, not unknown to the western powers, and they roused much indignation. It was, indeed, repeatedly rumored that Japan had a secret understanding with Germany under which the former was to acquire all Trans-Baikal Siberia, though this was categorically denied at Tokio. So long as the war lasted, no protest could be made. But when the armistice became assured, Secretary Lansing pointedly urged upon the Japanese Ambassador at Washington that the military party under whose dictation Japan was obviously acting in Siberia be checked in its mad course. The request caused an upheaval in Japanese political circles, and the militarists were for defying American opinion. Better counsels, fortunately, prevailed; and as an evidence of good faith more than

half of the Japanese troops in Siberia were recalled.

The question then arose whether all of the powers should not withdraw completely. The objects for which intervention was undertaken had been attained or were no longer desirable. The country's political status was still unsettled; Kolchak's Government was tottering and Soviets were being set up in the eastern cities. But the powers, including Japan, had said that they had no intention or desire to control Siberia's political future, and by midsummer of 1919, when Kolchak's régime finally collapsed, American, British and French public sentiment unmistakably demanded that the entire enterprise be brought to an end. The American withdrawal took place early in 1920, and that of the British and French soon afterward.

Japan stayed on. She reiterated that it was no part of her plan to annex Siberian territory, and she publicly promised to withdraw all of her soldiers when "the political situation in the regions contiguous to Japanese territory is settled, the danger to Korea and Manchuria removed, the lives and property of Japanese residents protected, and the freedom of communication safeguarded."

It was, of course, easy for people who suspected Japan of ulterior motives to point out the ambiguity of this pledge; precisely when the political situation in Siberia was to be regarded as "settled" and Japanese interests were to be considered duly "protected" was likely to be viewed very differently in Tokio and in London or Washington. Furthermore, Japanese actions in succeeding months lent fresh color to the charge that there was no real intention to withdraw at all. The number of troops stationed in the country was increased until it totaled 100,000; Vladivostok was practically converted into a Japanese fortress; Nikolsk, near by, Khabarovsk, on the Amur, and other important railway towns were brought under strict control; in 1920 occupation of the Maritime Province was extended and, despite protest from the United States, possession was taken of the northern, i. e., the Russian, half of the island of Saghalien.

A section of Southeastern Siberia three times the size of New England still lies in the hollow of Japan's hand, and Japanese

influence is a main factor in the political and commercial situation westward to Irkutsk.

Rarely has a nation been more sorely tempted. Japan is a small country—hardly larger than Montana—with very limited resources. Her people multiply at the amazing rate of 12 per cent. per decade. The average density of population is 380 per square mile, as compared with 35 in the United States. The only solution of the problem of subsistence which can be immediately effective is emigration; and artisans, shopkeepers and laborers leave the country by the tens of thousands every year. Yet this emigration not only brings the empire into troubled relations with the peoples around the further shores of the Pacific, but robs it of man power that may some day be needed. Consequently there is strong desire for territory in which the Japanese may settle in unlimited numbers without being lost to the home land. Southern Siberia, although further north than the empire's emigrants would prefer to go, offers an outlet of precisely this sort. And the Japanese are already practically in possession there.

Confronted with this temptation, Japan stands at the parting of the ways. If she allows herself to be led by the militarist elements which have been the invisible powers behind the throne in recent years, she will repudiate her pledges and defy international sentiment by formally annexing some large portion of Siberia, or will perhaps seek to attain the same ultimate object by disguised control through the

intermediary of a native state or federation of States. If, on the other hand, she yields to the guidance of men who, though perhaps imperialists at heart, are conservative and cautious—men of the type of Viscount Kato, leader of the Kenseikai party—she will call her soldiery home from Siberia and try to solve her national problems on less perilous lines. Whatever her decision proves to be, world politics in the next quarter century will be profoundly affected by it.

The future of Siberia, therefore, can be laid out only in terms of possibilities. That part of the country situated west of Lake Baikal is likely to go whatever way European Russia goes. At present its connections with the Moscow Government are tenuous. Siberia east of Lake Baikal seems likely to become permanently independent, notwithstanding its predominantly Russian character. This may add to the family of nations one large State, either the Far Eastern Republic, the creation of which at Chita was announced early in the present year, or some similar political establishment. Or a series of buffer States may arise—under the more or less open control of Japan. Such an arrangement has been seriously discussed at Tokio as a means of erecting a barrier against the conquest of the Far East by Bolshevism. In any case the historic balance in the Far East would thus be overturned. Japan would become a great continental power quite as truly as if the territories had been formally annexed to the empire—an alternative which, incidentally, is not outside the possibilities of the situation.

## IMPROVING THE WORLD'S TRANSIT FACILITIES

**T**HE League of Nations Commission on Transit and Waterways ended its deliberations at Barcelona on April 21, 1921. Two conventions were signed. The first dealt with waterways, and laid down as a principle the absolute freedom of navigation for all nations without any special customs duties, taxes, or other dues. The same freedom was granted for the use of rivers harbors. The second convention dealt with the question of transit overland, and agreed that there should be absolute equality for all States in transporting goods through a country when such goods are neither em-

barked nor disembarked in the country in question. It was agreed by the delegates that a technical consultation commission should be set up in Geneva on an international basis, for the settlement of all waterways and transit disputes. It was reported at that time that Mr. Rowell, one of the Canadian delegates at Geneva, had protested against this establishment of a new commission by the Barcelona Conference as contrary to the League Assembly's rulings. M. Hanataux, who presided at Barcelona, delivered a farewell address emphasizing the unanimity of the decisions reached.

# BUSINESS CONDITIONS IN SIBERIA

BY WALTER IRVING

*This article was written in Vladivostok and sent to CURRENT HISTORY from that port on March 22, 1921. Its author is connected with a leading business establishment there, and his description of the economic and trading situation in Siberia is based on intimate personal knowledge. His summary of political happenings since the fall of Kolchak, coupled with his clear-eyed view of present business conditions throughout Siberia, has special interest at a time when both the Soviet Government and the leaders of the Far Eastern Republic are talking of giving vast concessions to foreign capital.*

WITH the retreat of the Kolchak forces, which began about the beginning of November, 1919, and continued until February, 1920, the territory evacuated by them came under the rule of the Central Soviet Government in Moscow. The remnant of the Kolchak forces, an army of about 40,000 officers and men under the command of General Kappel, was forced to retreat on foot, the railway to the east being heavily overburdened with the evacuation of the Czechoslovak and other allied forces. This retreat was made in the depth of the Siberian Winter. The Kappel force was closely pursued by the Red Army, and was continually engaged in rearguard actions with the enemy. When this force arrived outside the town of Irkutsk it found the town in the hands of the Reds, so that the army was forced to make a detour to the northward, in order to avoid being surrounded. Crossing the frozen Lake Baikal into the Transbaikal Province, it eventually joined up with the anti-Bolshevist force of General Semenov, whose headquarters were in Chita. This retreat of General Kappel's force a distance of some 2,000 miles, through hostile country, and in the depth of the terrible Siberian Winter, took a heavy toll. Of the 40,000 that retreated from Krasnoyarsk, only about 20,000 reached Chita. General Kappel himself died on the way, and his body was brought to Chita for interment.

It was only the presence of the Japanese forces in Transbaikalia that prevented the Reds from pursuing the anti-Bolshevist forces further than Irkutsk. The communist Government which was eventually formed in Western Transbaikalia, with headquarters in Verkhneudinsk, and which was supported by the Soviet authorities, afterward attacked the anti-Bolshevist forces, but as the latter were materially and actively sup-

ported by the Japanese, they were more than able to hold their own. Eventually an agreement was signed between the Japanese and the Verkhneudinsk Government, whereby Verkhneudinsk undertook not to move its armed forces further east than the Yablon Mountains, which practically cut Transbaikalia into two equal parts. Two Governments were formed, the Verkhneudinsk Government ruling Western Transbaikalia, and the Government of General Semenov, Eastern Transbaikalia. These events, so far as the Russian Far East was concerned, had the effect of making the Siberian territory west of the Yablon Mountains a sealed book, as there was no free intercourse between Eastern and Western Siberia, and no postal, telegraphic or railway communication. This vast territory, therefore, both politically and economically, came under the direct influence of the Moscow Government, and the form of government prevalent in European Russia was extended to Western and Central Siberia.

The Russian Far East, composed of five provinces—Transbaikalia, Amur, Maritime, the Island of Saghalien and Kamchatka—after the fall of the Kolchak Administration, was administered by four separate Governments—Western Transbaikalia by the Verkhneudinsk Government, Eastern Transbaikalia by the anti-Bolshevist Government of General Semenov, the Amur Province by the communistic Government of Blagoveshchensk, and the Maritime Province, together with the Island of Saghalien and Kamchatka, by the Vladivostok Government, which was a coalition Government, with the communists in the majority. Each Government had its own special administration and its own paper currency, each issuing paper with a face value of millions of rubles, but in reality worth hardly more than the paper it was printed

on. Each Government had also a certain amount of gold and silver at its disposal, these metal reserves being parts of the Russian metal reserve which had been captured by the Kolchak Government, and which, when the Kolchak forces had been obliged to retreat, was evacuated to the east. The Blagoveshchensk Government, which had no metallic funds, was overjoyed when the Vladivostok Government evacuated the Kolchak gold, some 2,000 poods, to Blagoveshchensk for safe keeping. Naturally the Vladivostok Government never saw this gold again, Blagoveshchensk thinking that it had quite as much right to it as Vladivostok. The metal reserves of the different Governments had to be held strictly for the supplying of the population with the necessities of life, for the purchase of grain, flour, meat, &c.

As the trading and economic status of the whole of the Russian Far East had collapsed, such commodities had to be obtained from Northern Manchuria, and as the Chinese merchants would sell their commodities only for good "hard cash," it was not long before the supplies of metal were exhausted. Then came the time of nationalization and requisition from the peasants in the territories that had been evacuated by the Japanese forces. What effect these requisitions had on the economic life of the country will be described later.

With the withdrawal of the Japanese forces from Transbaikalia and the subsequent withdrawal of the support to General Semenov's Government, it soon became evident that an agreement must be come to between Chita and Verkhneudinsk, or that the Chita Government must capitulate. Several attempts were made to come to an agreement, but owing to the various demands made by Verkhneudinsk, some of which were not acceptable to Chita, it was evident that military operations were inevitable. These eventually came to a head. The Semenov and Kappel forces put up a hard fight, but they were obliged to retreat into Chinese territory, where they were disarmed by the Chinese military authorities. In accordance with their wishes they were transported to the Maritime Province, where they are now trying as far as possible to eke out an existence by peaceful labor.

With the fall of the anti-Bolshevist Gov-

ernment of Chita a movement was started for uniting the whole of the Russian Far East under a central Government as an autonomous democratic State, and with headquarters in Chita, to serve as a buffer State between Japan and Soviet Russia. This project was eventually brought into being when the Amur Government subjected itself to Chita. Vladivostok, after many discussions in the local National Assembly, subjected itself under certain conditions, the principal one being that the local National Assembly should still exist as a provincial apparatus for the administration of the province, in order to ward off the danger of the military occupation of the province by the Japanese forces, should the administration not meet with the approval of the Japanese command.

As the Chita Government was entirely composed of communists who were under the direct influence of the Moscow Government, it was only to be expected that a form of government exactly similar to that in force in Soviet Russia and Siberia would be brought into being by the Government of the Far Eastern republic. It is true that, in accordance with the declaration of the Chita Government, freedom of the press, free trade and the inviolability of private property were guaranteed by the buffer State, but there are plenty of ways of gaining the desired end, and a communist can generally find a way, even if he has to repudiate a whole series of previous declarations. Vladivostok and the surrounding districts, owing to the presence of the Japanese forces, has not as yet felt the full force of the "Proletariat's Paradise," and the Vladivostok authorities, although in reality subject to Chita, bow to its authority only when such bowing will not upset the Japanese; whenever there is a possibility of a conflict with the Japanese, should the local authorities accede to the demands of Chita, such demands fall upon deaf ears, and Chita has no redress.

\* \* \*

The Japanese forces in Siberia are said to number three army divisions, a total of about 30,000 officers and men. With the forming of the Central Government in Chita, and Vladivostok's submission, it seemed as if a conflict between the Japanese and Chita was inevitable, the Japanese command openly declaring that it would

not allow a communist form of government in the territory occupied by the Japanese forces. In spite of the Chita Republic's declarations of a democratic form of government the Japanese will have nothing to do with it, and they maintain connections only with the local authorities in Vladivostok, all disputes being brought before the Russo-Japanese Conciliatory Committee, which was formed after the operations of the Japanese forces in the Maritime Province on April 4 and 5, 1920. This committee is still functioning.

A great deal of discussion is going on in the Russian and Japanese press regarding the evacuation of the Japanese forces from Siberia, but in my opinion this will not be soon, as the local Japanese residents have signed a petition to their home Government demanding adequate protection of their lives and property, and as the Japanese Parliament has voted all the credits for the upkeep of the Siberian expedition.

A word might also be said here about the comments in the world's press regarding the actions of the Japanese in Eastern Siberia. The foreign business man, be he Japanese, British, American or French, feels that his business and capital are safe from nationalization and requisition only as long as the Japanese forces remain here, and one cannot doubt for a moment that, were the Japanese forces to be evacuated, Vladivostok and its surrounding districts would suffer the same fate as the other territories of Siberia. Besides, as no other nation thinks fit to go to the expense of protecting the lives and property of its nationals in Siberia, except perhaps America, which has a cruiser permanently stationed here, what nation can question the right of the Japanese to protect the lives and property of their nationals, who, next to the Chinese, form the largest part of the foreign population of the Russian Far East? Moreover, the political, economic and national welfare of the Japanese Empire is threatened by the extending of Bolshevik influence to its territories, and who can deny Japan the right of taking the measures which she thinks fit to prevent such a possibility?

\* \* \*

According to official statistics of the Imperial Russian Government for 1911, the

Government income and expenditure for Siberia were as follows: Income, 111,500,000 rubles; expenditure, 298,300,000 rubles; excess of expenditure over income, 186,600,000 rubles.

The income and expenditure were divided among the Siberian provinces as follows:

Province.	Income in Millions of Rubles.	Expenditure in Millions of Rubles.
Tobolsk .....	1.0	7.5
Tomsk .....	42.7	65.5
Akmolinsk, Semipalatinsk and Semiretschensk.....	15.8	24.0
Western Siberia.....	59.5	97.0
Yeniseisk .....	8.6	12.8
Irkutsk .....	15.5	47.3
Transbaikalia .....	10.0	44.0
Yakutsk .....	1.0	1.5
Central Siberia.....	35.1	105.6
Far East.....	16.9	95.7
Total for Siberia.....	111.5	298.3

The further to the east, the greater the expenditure became. If, for instance, we take the income for the various regions of Siberia as 100, the expenditure would be as follows:

	Income.	Expenditure.
Western Siberia.....	100	160
Central Siberia.....	100	300
Far East.....	100	570
Siberia .....	100	260

In general the expenditure of the Imperial Russian Government in 1911 for Western Siberia was one and one-half times the income, for Central Siberia almost three times, for the Far East almost six times, and for the whole of Siberia two and one-half times the income.

From the above it will be seen that the Russian Far East, including Transbaikalia, cost the Imperial Government Treasury some 113,000,000 rubles. With the financial budget of the Soviet Government in the state it is, owing to a heavy annual deficit for the last three years, it was natural that Moscow should find a way of ridding itself of this burden, which at the present state of the depreciated currency would not be, say 113,000,000, but as many milliards. What better way could be found by Moscow than that of granting the Far East its autonomy?

Another reason for the granting of autonomy was the need of Moscow for a respite from military operations in the east,

thereby giving her the possibility of putting her house in order in the reconquered territories; the Moscow Government had hopes, which to a great extent were fulfilled, of relieving the great shortage of first necessities felt in European Russia from the cutting off of stocks in Siberia. A conflict with the Japanese would have upset these plans, as Moscow would have been engaged in military operations against a strong foe, with the added danger of having a line of communications which was liable to be cut at any moment. In spite of the numerous demands and petitions from the Far East for a reunion with Soviet Russia, the edict went forth from Moscow that a buffer State must be formed, and that to appease the Japanese this new State must have a democratic form of government.

In reality there is no difference between the form of government in force in European Russia and the Russian Far East, as Chita is under the direct influence of Moscow, and in Chita Moscow's orders override all others. Only in Vladivostok and the surrounding districts is there a less radical form of government, due to the presence of the Japanese forces.

\* \* \*

Financially, Siberia and the Russian Far East are in a deplorable state. All the Siberian territories are flooded with paper currencies of every sort and design. Among them might be mentioned Romanoff paper, Kerensky paper, Soviet paper, paper of the Verkhneindinsk Government, Amur paper money and, last but not least, paper money of the Vladivostok Government. At present in Vladivostok and its surroundings the Vladivostok paper money has almost entirely disappeared from circulation, which is not surprising, seeing that one can buy some 3,000 Vladivostok paper rubles for one Japanese yen. Vladivostok district is the only territory in Siberia which has a stable currency. The principal circulating medium is the Japanese yen, although American and Chinese dollars have free circulation and are accepted at the current rates. There are also small Russian silver coins in circulation.

Naturally, the purchasing power of the Russian Far East has fallen away to nothing, as nobody cares to accept paper money

in exchange for his goods. The peasant, when he brought his commodities to market, would not accept this worthless paper money for them, but would exchange them only for some commodity of which he was in need. Later, the only way in which the Government could obtain the necessary supplies for the population was by requisitioning these commodities from the peasants, for which they paid paper money at fixed rates, in exchange for which the peasant could not buy anything. Now the peasants have become wise and do not produce any surplus commodities, but only enough for their own needs, so that the town population can no longer be supplied from this source. All the metallic funds which the various Governments had at their disposal have long ago been expended for necessities, the biggest part having gone to the merchants of Northern Manchuria, so that Siberia, one of the former granaries of the world, that used to export grain and foodstuffs for millions of rubles yearly, is now on the verge of starving, the population just eking out a bare existence. The authorities have been obliged to take extraordinary measures to supply the population with the necessities of life and are sending armed detachments into the villages for the requisition of commodities from the peasants. The latest news states that not only European Russia, but the whole of Siberia, is in revolt, this being the direct result of these forcible requisitions.

Although no definite news has been received regarding the success of these revolts, even should they fail, the Soviet Government will be forced to moderate its policy in order to satisfy the peasants, who form 80 per. cent. of the population.\*

Since the fall of the Kolchak Administration there has been a steady decline in the trade of the country, till at the present time it has about reached its limit. The former prosperous import and export trade through Vladivostok has fallen away to nothing. The decline in the import trade is due to the low purchasing power of the population, also to the fact that the merchants do not care to take the risk of importing goods which might eventually be

\*Since this was written, the anti-Soviet uprisings, due to the cause stated, have generally failed, but Lenin has announced the modification of the Soviet policy regarding the peasants foreseen by the writer of this article.—Ed.

requisitioned. The decline in the export trade is due to the low productive power of the population and the deplorable state of the transport facilities, as well as to the many restrictions placed upon export goods by the local authorities.

A report of the Vladivostok Agency of the Chinese Eastern Railway states that on Feb. 1 the amount of export goods lying at Eggersheld Docks awaiting export was about 700,000 poods, or about 11,500 tons. Compare this figure with that quoted before the war, or even during the war, when there was always from 10,000,000 to 15,000,000 poods awaiting shipment, and you will get an idea of the decline in the export trade through the port of Vladivostok. In former times a great part of the transit export trade from Northern Manchuria passed through Vladivostok, the remainder going through the South Manchurian port of Dairen. In former times Vladivostok could freely compete with Dairen, but during the last year Vladivostok has been left a long way behind. The principal reason for the loss of this once profitable trade is found in the very heavy demands made by the Vladivostok dock laborers for the loading of cargoes; also in the very frequent strikes; the exporters had no guarantee that the cargoes would be loaded in the contracted time, and, if the loading was not done, they became liable for heavy demurrage payments for delays to vessels. A report says that during 1920 some 8,000,000 poods of export cargoes were shipped through Dairen, whereas last year only 1,500,000 poods of transit cargoes were shipped through Vladivostok.

At a discussion of the local Chamber of Commerce regarding measures to be taken for the reviving of the export transit trade through Eggersheld Docks, it was found that the principal obstacle was the absence of sufficient guarantees to the exporters that their export cargoes would not be requisitioned and confiscated, and that in the absence of such guarantees foreign insurance companies refused to insure such cargoes; that foreign banks refused to give advances against such cargoes, and that the tax of the Vladivostok dock laborers for loading was too high, and would have to be considerably reduced in order to compete with the port of Dairen. It was decided to apply to the local Government, petitioning

it to make a special law guaranteeing export cargoes from any kind of requisition and confiscation, and also to indicate to the authorities the necessity, in the interests of the dock laborers themselves, of reducing the tax for loading cargoes by 50 per cent.

With the exception of Vladivostok City and district there is no freedom of trade in Siberia, the trade of the country being monopolized by the Government and centred in the hands of its agents, the co-operative societies. These concerns receive subsidies from the Government, otherwise they would not be able to exist. In former times they received the support of the peasants, who handed to them their commodities for shipment abroad, thus supplying them with funds for the purchase of foreign manufactured goods; which they received and turned over to the peasants. But this state of affairs is ended, the peasant now having no surplus commodities, and were the Government to take away its support of these concerns they would fall to pieces. In such circumstances it is not surprising that trade steadily goes from bad to worse.

There is much talk in the press regarding the possibility of trade with Russia, but how trade can be carried on in existing circumstances it is impossible to say. There is no money in the country, excepting worthless paper money, so that business can be done only on a credit basis; but what reasonable business man would think of extending credit to the co-operative societies?

The only way in which the trade of the country could be reconstructed would be to hand it over to private enterprises, the heads of which are real business men, men who are experienced in the methods of their own particular districts.

In conclusion I would say that Siberia offers great opportunities for foreign capital. Its great stores of mineral wealth being as yet practically untouched, they constitute a great source of supply of numerous raw materials. So far only Japan has taken an active part in trying to reconstruct Siberian trade and industry, but there is room for the capital of all nations, and the first to come will receive the best pickings. For the exploitation of the riches of Siberia, capital is needed, and only the foreigner can supply it.

# SIBERIA'S NEW REPUBLIC: ITS STANDING

BY FRANCIS B. KIRBY

Member of a British Engineering Concern in Vladivostok

*A clarifying account of how the Far Eastern Republic at Chita was evolved by absorbing the powers of three other Governments—Its relations with Moscow and its local reputation—What Japan is working for in Siberia*

WHEN Kolchak's Government collapsed in Irkutsk in December, 1919, the authority in that place fell into the hands of the non-Bolshevist Socialists and Democrats. These people formed what was called a political centre, composed of various well-known social-revolutionary and democratic political workers, who conceived the idea of creating a buffer State, extending for the time being from Irkutsk to Vladivostok, the Government of which was to be of a genuinely democratic nature and to be situated in Irkutsk. This idea even met with the approval of the Moscow Soviet, as the latter hoped to use the proposed buffer State as a link with the outside world for the purpose of obtaining much-needed supplies. The reign of the political centre in Irkutsk, however, was a very short one, as the undercurrent of local Bolshevism soon became too strong for it, and its leaders were obliged to transfer their activities to Verkhne-Udinsk, leaving Irkutsk in Bolshevist hands.

On Jan. 31, 1920, the last of Kolchak's representatives, General Rozanov, was overthrown in Vladivostok by the Partisans, and the reins of government in that place were put in the hands of the Zemstvo Board of the Maritime Region. The Partisans then made their way up the railway as far as Khabarovsk, which thus came under the jurisdiction of the Vladivostok Government. Blagoveschensk, however, fell into the hands of its local Bolsheviks.

A curious situation was thus created, in that there were four Governments in the Far East—Verkhne-Udinsk, Chita, Vladivostok and Blagoveschensk. The first and third of these were democratic in character; the second, under Ataman Semenov, reactionary, and the last semi-Bolshevist. Semenov's Government in Chita naturally existed only because of the presence of

Japanese troops, and it considerably hampered the efforts of the Verkhne-Udinsk and Vladivostok Governments.

As had been the case with the Irkutsk political centre, the local Bolshevist element soon became too strong for the Verkhne-Udinsk and Vladivostok Governments' democratic aspirations, and by the end of March the controlling influence in both these centres was Bolshevist, although the nominal authority was still with the Zemstvos. It was this undesirable state of affairs which caused the Japanese to resort to strong measures on the 4th and 5th of April, 1920, in Vladivostok, Nikolsk-Ussurisk, Khabarovsk, Iman, &c., as a result of which the railways as far as Khabarovsk and Pogranitchnaia were placed under Japanese control and the towns on this line were policed by Russian militia under strict Japanese supervision.

Having drawn the teeth of the local Bolsheviks and Partisans, the Japanese left the Russians to work out their own political salvation, merely reserving to themselves the right to maintain law and order in the zone occupied by Japanese troops. Although their methods were at times clumsy, and misunderstandings were frequent owing to their lack of knowledge of the Russian language and to their regarding many things from a viewpoint quite incomprehensible to the European nations, the Japanese displayed great forbearance, cool-headed judgment, and unselfishness in their handling of the Russian problem. In judging the actions of the Japanese, one must compare them with those of the many other nations who have taken a hand in this Russian business, and not treat the Japanese as a nation apart from the rest without a right to any ambitions or aims of their own. There are very few among the "interventionaries" in Russia's affairs who can con-

scientifically throw many stones at the Japanese.

In April, 1920, Krasnochekov—alias Tolbelson—a well-known Bolshevik leader from Khabarovsk, turned up in Verkhne-Udinsk and formed a new Government of distinct Communist tendencies. Krasnochekov claimed precedence for his Government over all other Governments in the Far East.

On the other hand, the Vladivostok Government by this time was making genuine efforts to get rid of its Bolshevik element

present at the first sitting it could hardly be called a great success.

The first sitting of the Vladivostok National Assembly took place on June 20, 1920. The number of delegates present was 113, the majority representing the peasants.

Following on the formation of the National Assembly, efforts were made by the Vladivostok administration to persuade the moderate and conservative elements to enter the Government, and a coalition Government was formed which lasted until the middle of October, when it collapsed ignominiously, owing to the moderate elements withdrawing on account of the treacherous behavior of the Bolsheviks.

Since that time no Government worthy of the name has existed in the Far East, and judging from the efforts of the present Chita and Vladivostok régimes, it is improbable that they will ever develop into anything of a sound and lasting nature.

The next important event in the existence of the buffer State was the election of the Constituent Assembly. This was led up to by an exchange of delegations between Vladivostok and Verkhne-Udinsk, Vladivostok and Chita, and Vladivostok and Blagoveshchensk. These delegations were exchanged during the month of October for the purpose of discussing the question of joining the Far Eastern buffer State, determining the nature of its government, and deciding where the seat of government was to be. Nothing very much came of these preliminary delegations, as naturally Semenov's régime in Chita could not agree with that of Verkhne-Udinsk, and neither could agree with Vladivostok. However, by the end of October the Japanese had evacuated Transbaikal and Semenov's régime in Chita had come to an end. The Verkhne-Udinsk administration moved to Chita, and the work of unifying the Far Eastern State began in earnest by the appointing of a temporary Cabinet in Chita, consisting of five communists. This was done without even consulting Vladivostok, and from that time on Chita began dictating terms to the other centres of the buffer State, Vladivostok being relegated to the position of a mere district administration. The elections to the Constituent Assembly took place in January, 1921, and on the whole resulted in a victory for the communists, as the Peasant Party, under the in-

*Provisional President of the Far Eastern Republic*

and was preparing for the convocation of the National Assembly or Pre-Parliament, which was to take place on June 17. Chita remained in the hands of Semenov and the Japanese, while Blagoveshchensk was sitting on the fence claiming no precedence for itself, but waiting to see whether it should throw in its lot with Vladivostok or with Verkhne-Udinsk.

In order to forestall the Vladivostok National Assembly, Semenov opened a so-called National Assembly in Chita on June 5, but as only fourteen genuine delegates were

fluence of fear of foreign aggression and reactionary adventures, joined them.

The Constituent Assembly was opened on Feb. 12, 1921, and at its first sitting elected as its President and Vice Presidents, Shilov, Borodavkin, and Klark, all communists. Since that date the Assembly has been in session, but has done nothing to improve the financial or economic condition of the State. It has been clear throughout that Chita's policy is dictated by Moscow, and in fact many of the so-called representatives of the Chita Government who have come to Vladivostok have been sent direct from Moscow.

There is little more to say about the Government of the Far Eastern Republic. That it is Bolshevik through and through is clear to every unbiased observer, but in order to get on friendly terms with the outside world and so obtain much-needed supplies of first necessities of life, it can doubtless be forced to adopt a democratic system, and this is what Japan is at the present moment trying to bring about.

The economic condition of the buffer State is deplorable and its towns are actually on the verge of starvation. Discontent is rife amongst all classes of the population, and it is difficult to see how any improvement can be reached without outside assistance. Soviet Russia has quite enough trouble of her own, and, in fact, looks to the buffer State for help in the way of supplies, so aid must come from Japan or America or both. Financially the country is completely ruined, and the various administrations, State and municipal, are hard put to it to find money to pay their employes. Industry and commerce are at a complete standstill. The value of real estate has fallen to ridiculous levels, as even foreigners are afraid to invest, not knowing when the Bolsheviki may be all-powerful in the buffer State and everything nationalized. So far, the Japanese are the only people who are taking serious advantage of this situation, and they are gradually getting an economic grip on the country by buying houses, land and commercial enterprises at low prices.

As regards the Japanese remaining in Vladivostok permanently, as many people have got into the habit of predicting, this is hardly probable. There are other reasons apart from the climate which prevent the Japanese from making a colony of the Far

East of Siberia, but it is improbable that they ever had any such intention. From all their actions it is quite clear that what they intend to capture is the Siberian market for their cheap manufactured goods,

and, by diligently buying property and securing all kinds of concessions, get the economic control of Eastern Siberia. This will undoubtedly prove to be a good investment, provided the Japanese are able to make use of their opportunities and produce salable goods, and combined with the possession of Saghalien and the fisheries will satisfy the appetite of Japan.

The Japanese will evacuate Siberia just as soon as they are satisfied that the Government of the buffer State intends to follow a democratic policy and will not indulge in Bolshevik habits of requisitioning other people's goods or nationalizing private enterprises. The most optimistic observer cannot truthfully say that the Far Eastern republican Government has yet reached this state of perfection, consequently it is not surprising that the Japanese remain.

*Vladivostok, April 12, 1921.*

# THE PEACE TREATY BETWEEN POLAND AND RUSSIA

*Text of the compact between Poland and Russia, which reflects the relations of the two peoples from 1772 down to the present—All expropriated property to be returned to Poland, which also receives new territory and 30,000,000 gold rubles—Political amnesty and abstention from propaganda agreed upon*

THE treaty of peace finally concluded between Soviet Russia and Poland, as the principal high contracting powers, and with the Soviet Ukrainian Government as a minor signatory, was signed at Riga, the capital of Latvia, on March 18, 1921. Agreement between the Polish and Russian delegates on the terms eventually signed was reached only after months of negotiations, which were often threatened with disruption, and only mutual concessions made the conclusion of the treaty possible. Both Governments welcomed the signing of the compact. Moscow ratified the document on March 22. The Polish Diet formally ratified it on April 15, thus coming within the thirty days' time limit set for ratification. The ratification of the Ukraine was included in that of the Soviet Government.

This long, detailed and historically important document gives an interesting reflection of the interrelations of Russia and Poland since 1772. Poland's national pride was solaced by the Soviet pledge to return all the old Polish flags and trophies of war seized by former Russian armies and carried off triumphantly to Russia. All property seized since the European war, and especially during the recent war between Russia and Poland, is to be restored to the former owners. A general political amnesty is agreed to by the contracting parties, who also mutually agree to refrain from all subversive propaganda against each other, and to refuse support to all organizations hostile to the other. In plain words, this means that Moscow promises to cease anti-Polish propaganda, and that Poland will aid no other military ventures to overthrow the Bolshevik Government. Poland is freed from all the debts of the former Empire, and will receive 30,000,000 gold rubles to recompense her for her former economic credits.

The wavering and much-disputed boundaries between Poland, Russia and the

Ukraine are fixed, and the Moscow Government cedes to Poland some 3,000,000 square kilometers of territory near Minsk, and also the Ukrainian district of Polesia. [For Russian protests and other details, see Pages 489-90] CURRENT HISTORY is indebted to the Polish Bureau of Information, New York City, for the following translation of the treaty; also for the summary of the boundary terms which is here substituted for the long and tedious details in Article 2 of the original document. Otherwise the following is the complete text of the treaty:

## INTRODUCTION

**PREAMBLE**—*Poland on the one hand, and Russia and the Ukraine on the other hand, desirous of terminating as soon as possible the war between them, and with the aim of concluding a final, lasting and honorable peace founded on a mutual understanding, on the basis of the agreement signed in Riga on Oct. 12, 1920, concerning the preliminary conditions of peace, decided to open peace negotiations, and to this end designated as their plenipotentiaries:*

*The Government of the Republic of Poland: Messrs. John Dombksi, Stanislaw Kauzik, Edward Lechowicz, Henry Strasburger and Leon Wasilewski;*

*The Russian Socialist Federated Soviet Republic in its own name, and with the authorization of the Government of the White-Ruthenian Socialist Soviet Republic, and the Ukrainian Socialist Soviet Republic: Messrs. Adolf Joffe, Jacob Hanecki, Emanuel Quiring, Leonid Obolenski and Alex Szmulski.*

*The above-named plenipotentiaries assembled in Riga, after the exchange of their credentials, acknowledged as sufficient and drawn up in proper form, agreed to the following decisions:*

**ARTICLE 1**—Both contracting parties declare that the state of war between them is ended.

**ARTICLE 2**—Both contracting parties, conforming to the principle of the right of nations to self-determination, recognize the independence of the Ukraine and White-Ruthenia, and agree and decide that the eastern frontier of Poland, that is, the frontier between Poland on the one hand, and the Ukraine and White-Ruthenia on the other hand, shall be constituted by the following line:

[Then follows a detailed description of the frontier, which may be summarized by stating

that beginning at the junction of Latvia and Russia the international boundary follows the river Dzwina in a southeasterly direction past the town of Dzwina, where the line turns off in a southern direction, leaving the town of Orzechowno on the Polish side, and continuing south about twenty kilometers east of the Polish city of Wilejka, and about an equal distance to the west of the White-Ruthenian city of Minsk. Thence the frontier traverses the great Pinsk marshes, crossing the Prypek River about sixty kilometers to the east of the Polish city of Pinsk. Continuing south across the lowlands, the line passes well to the east of the Polish cities of Rowno and Dubno, and then follows the old Austrian frontier of Eastern Galicia to the junction of the Zbrucz River with the Dniester River. This line varies but slightly from the armistice line agreed upon in October 1920].

The exact determination and demarcation on the spot of the above frontier, and the placing of frontier marks, are the duty of the Mixed Commission of Demarkation, appointed on the basis of Article 1 of the agreement concerning the Preliminary Conditions of Peace of the 12th of October, 1920, and in conformity with the supplementary protocol on the subject of the execution of the above article, signed at Riga on Feb. 24, 1921. \* \* \*

Each of the contracting parties binds itself, not later than fourteen days after the signing of the present treaty, to withdraw its military forces and its administration from those localities which, in the present description of the frontier, have been recognized as belonging to the other side. In localities lying on the frontier line itself, in so far as in the present treaty it has not been determined to which side they belong, the administrative and frontier authorities at present existing will remain until the frontier is marked on the spot, and the appurtenance of these localities has been defined by the Mixed Commission of Demarkation; these authorities shall then be removed to their own territory, observing the principles given in paragraph 9 of the Armistice Agreement of Oct. 12, 1920.

The question of archives connected with the territory of Poland is determined in Article 2 of the present treaty.

### TERRITORIAL RIGHTS

**ARTICLE 3.**—Russia and the Ukraine renounce all rights and pretensions to territories situated to the west of the frontier determined in Article 2 of the present treaty. Poland on her part renounces, to the benefit of the Ukraine and White-Ruthenia, all rights and pretensions to territories situated to the east of this frontier.

Both contracting parties agree that in so far as the territories situated to the west of the present frontier determined in Article 2 of the present treaty include territories under dispute between Poland and Lithuania, the question of the appurtenance of these territories to the one or the other of these two States belongs exclusively to Poland and Lithuania.

**ARTICLE 4.**—From the former appurtenance

of parts of the territories of the Polish Republic to the former Russian Empire, no obligations or burdens shall result for Poland in relation to Russia, except those foreseen by the present treaty.

In an equal measure, from the former common appurtenance to the former Russian Empire no mutual obligations and burdens shall result between Poland, White-Ruthenia and the Ukraine, except those foreseen by the present treaty.

### RESPECT OF SOVEREIGNTY

**ARTICLE 5.**—Both contracting parties guarantee to each other complete respect of State sovereignty and abstinence from any interference whatever in the interior affairs of the other party, especially from agitation, propaganda and all kinds of intervention, or from supporting the same.

Both contracting parties undertake the obligation neither to create nor to support organizations having for their aim armed combat with the other contracting party, either by attacking its territorial integrity or preparing the overthrow of its State or social structure by violence, as well as organizations assuming the rôle of Government of the other party or of a part of its territory. Wherefore the two contracting parties bind themselves not to allow the presence on their territories of such organizations, their official representations and other organs, to forbid the recruiting of soldiers, as well as the import to their territories and the transport through their territories of armed forces, arms, ammunition and all kinds of war materials destined for these organizations.

### CITIZENSHIP OPTION

**ARTICLE 6—1.** All persons who have reached the age of 18 years and who are on Polish territory at the moment of the ratification of the present treaty, who on Aug. 1, 1914, were citizens of the Russian Empire and are inscribed, or have the right to be inscribed in the registers of the stable population of the former Kingdom of Poland, or were inscribed in the town or rural communes, or in one of the social class organizations on territories of the former Russian Empire forming part of Poland, have the right to make known their desire on the subject of the option of Russian or Ukrainian citizenship. From former citizens of the former Russian Empire of other categories, who at the moment of the ratification of the present treaty are on Polish territory, such action is not required.

2. Former citizens of the former Russian Empire who have reached the age of 18 years, who at the moment of the ratification of the present treaty are on the territories of Russia or the Ukraine, and are inscribed or have the right to be inscribed in the registers of the stable population of the former Kingdom of Poland, or were inscribed in town or rural communes, or in one of the social class organizations on territories of the former Russian Empire forming part of Poland, will be considered as Polish citizens if, in the form of option foreseen in the present article, they express such desire.

Equally, persons who have reached the age of 18 years and are on the territory of Russia or of the Ukraine, will be considered as Polish citizens if, in the form of option foreseen in the present article, they express such a desire, and prove that they descend from participants in the struggle for the independence of Poland in the period from 1830 to 1865, or that they are the descendants of persons who, no further than three generations back, were permanently domiciled on the territory of the former Republic of Poland, and prove that they themselves, by their activities, their use of the Polish language as their usual language, and in the bringing up of their offspring, have plainly manifested attachment to Polish nationality.

3. The prescriptions concerning option apply also to persons corresponding to clauses 1 and 2 of the present article, in so far as these persons are outside the Polish frontiers in Russia or the Ukraine, and are not citizens of the State in which they reside.

4. The choice of the husband extends to the wife and the children up to the age of 18 years, in so far as a different understanding does not take place between husband and wife on this subject. If husband and wife cannot agree, the wife has the right of independent choice of citizenship; in this case the choice of the wife extends to the children brought up by her.

In case of the death of both parents the choice is adjourned until the child attains the age of 18 years, and from that date are reckoned all time periods determined in the present article. For others incapable of legal action the choice is made by a legal representative.

5. Declaration of the choice of citizenship should be made before a Consul or other official representative of the State for which the person in question declares himself, within the term of one year from the moment of the ratification of the present treaty; for persons residing in Caucasus and in Asiatic Russia, this term is prolonged to fifteen months. These declarations will be made within these same time periods before the proper officers of the State in which the person in question finds himself.

Both contracting parties undertake the obligation, within one month from the date of the signing of the present treaty, to publish and make known, as well as to make known to each other reciprocally, a list of the authorities designated to receive declarations of the choice of citizenship. The two contracting parties also undertake to make known to each other, within the term of three months, by diplomatic procedure, lists of persons who have made declarations of citizenship, with mention both of the declarations recognized as valid and the declarations recognized as non-valid.

6. Persons making declaration of choice of citizenship do not thereby acquire the nationality chosen. When a person who has made a declaration of choice of citizenship responds to the conditions specified in clauses 1 and 2 of the present article, the Consul or other official representative of the State in favor of which the choice is made, shall give the decision thereon, and shall send his attestation, together

with the documents of the chooser, to the Ministry (People's Commissariat) of Foreign Affairs. Within the term of one month from the day of sending the attestation, the Ministry (People's Commissariat) of Foreign Affairs shall either communicate to the aforementioned representative its opposition to the decision, in which case the matter shall be decided by diplomatic procedure, or shall recognize the decision of the representative, and shall send him an attestation of the cessation of the former citizenship of the chooser, together with all the other documents of the chooser except his residence permit.

The non-reception within the term of one month of the notification of the Ministry (People's Commissariat) of Foreign Affairs shall be considered as consent to the decision of the representative.

In cases where the person choosing responds to all the conditions mentioned in clauses 1 and 2, the State in favor of which the option is made shall not have the right to refuse citizenship to the person choosing, while the State in which the person in question is residing shall have the right to refuse liberation from citizenship.

The decision of the Consul or other official representative of the State in favor of which the choice is made, shall fall within a term of two months at most from the moment of the reception of the declaration of choice; this term, for persons residing in the Caucasus and in Asiatic Russia, shall be prolonged to three months. The execution of option shall be free from stamp, passport and all other taxes, including taxes for publication.

7. Persons who have validly executed their option shall be allowed to depart without obstacle to the State in favor of which the choice was made. Both contracting parties, however, may demand that these persons shall make use of their right to leave; in this case the departure shall take place within six months from the day of notification.

The choosers have the right to retain or legally liquidate their movable and immovable possessions; in case of departure they may take their belongings with them in accordance with the rules determined in Affix 2 to the present treaty. Possessions so taken out of the country shall be free from all customs duties and taxes. Possessions exceeding the standard fixed for possessions to be taken out of the country may be taken away later, when transport conditions have improved.

8. Up to the moment of a validly executed option, choosers shall be subject to all the laws obligatory in the State in which they are residing; after its execution they shall be considered as foreigners.

9. Should the person who has validly executed his option be under accusation or under trial for a penal offense, or be serving his sentence, he will be sent under guard, together with the documents pertaining to the case, to the State in favor of which the choice was made, if that State demands his extradition.

10. Persons who have validly executed their option shall be recognized in every respect as

citizens of that State in favor of which their choice was made, and all rights and privileges without exception granted to the citizens of that State, be it by the present treaty or by future agreements, shall belong to the choosers in the same measure as if they had been already citizens of the State in favor of which they have chosen, at the moment of the ratification of the present treaty.

### NATIONAL RIGHTS

**ARTICLE 7.**—1. Russia and the Ukraine guarantee to persons of Polish nationality who are in Russia, the Ukraine and White-Ruthenia, on the principle of the equality of national rights, all rights securing the free development of culture, language, and the exercise of religious rites. Reciprocally, Poland guarantees to persons of Russian, Ukrainian and White-Ruthenian nationality who are in Poland all these rights.

Persons of Polish nationality who are in Russia, the Ukraine and White-Ruthenia, have the right, within the limits of internal legislation, to cultivate their own language, to organize and support their own schools, to develop their own culture, and to this end to form associations and unions; these same rights, within the limits of internal legislation, belong to persons of Russian, Ukrainian and White-Ruthenian nationality who are in Poland.

2. Both contracting parties undertake the obligation to refrain reciprocally from interference, either direct or indirect, in affairs of the organization and the life of the Church, as well as of the religious associations which are on the territory of the other party.

3. Churches and religious associations in Russia, the Ukraine and White-Ruthenia to which belong persons of Polish nationality have the right, within the limits of internal legislation, to the independent organization of the internal life of the Church. The above-mentioned churches and religious associations have the right, within the limits of internal legislation, to the use and acquisition of the movable and immovable possessions indispensable to the exercise of religious rites and the maintenance of the clergy and Church institutions. Following these principles, persons of Polish nationality in Russia, the Ukraine and White-Ruthenia have the right to avail themselves of the churches and institutions indispensable to the exercise of religious rites. This same right belongs to persons of Russian, Ukrainian and White-Ruthenian nationality in Poland.

### COSTS OF THE WAR

**ARTICLE 8.**—Both contracting parties reciprocally renounce the restitution of the costs of the war, that is, State expenditure for the carrying on of war between them, as well as indemnity for war losses, viz., losses that were inflicted on them or their citizens on the territory of war operations by military activities and dispositions during the Polish-Russian-Ukrainian war.

**ARTICLE 9.**—1. The agreement on repatriation concluded between Poland, on the one hand, and Russia and the Ukraine, on the other hand,

in the execution of Article 7 of the preliminary peace agreement of Oct. 12, 1920, signed in Riga on Feb. 24, 1921, remains in power.

2. The mutual liquidation of accounts and the payment of the real costs of maintenance of prisoners of war should be made at periods of three months. The mode of calculation and the extent of these costs will be determined by the mixed commission provided for in the above-mentioned agreement on repatriation.

3. Both contracting parties pledge themselves to respect and suitably to maintain the graves of prisoners of war who have died in captivity, and also the graves of soldiers, officers and other members of the opposing army who fell on the field of battle and are buried on their territory.

Both contracting parties bind themselves, after an understanding with the local authorities, to allow the erection of monuments on the graves, as well as to permit the exhumation and transport of bodies to their native country, according to the reduced tariffs, taking into consideration the legislative prescriptions of the country and the demands of public health.

The above prescriptions apply also to all graves and bodies of hostages, civil prisoners, interned persons, exiles, refugees and immigrants.

4. Both contracting parties agree to supply each other, reciprocally, the documents concerning the decease of the persons above mentioned, and to make known the number and the locality of the graves of persons who died and were buried without the establishment of their identity.

### AMNESTY

**ARTICLE 10**—1. Each of the contracting parties guarantees to the citizens of the other party complete amnesty for political crimes and offenses. By political crimes and offenses is understood acts directed against the organization or the safety of the State, as well as acts committed to the advantage of the other party.

2. The amnesty extends also to acts pursued by administrative procedure or outside the courts, as well as to infractions of regulations obligatory for war prisoners and interned persons, and in general for citizens of the other party.

3. The application of amnesty according to Clauses 1 and 2 of the present article involves the obligation not to begin new investigations, the annulment of pursuits already begun, and the non-execution of sentences already pronounced.

4. The withholding of the execution of sentences does not necessarily involve setting the accused at liberty; in case this is done, however, the persons concerned should be immediately surrendered to the authorities of their own State, together with all the requisite documents. If, however, a person should declare that he does not wish to return to his country, or if the authorities of his country should not agree to receive him, this person may be again deprived of liberty.

5. Persons who are under accusation or who

are being prosecuted, against whom preliminary proceedings are being taken, or who are on trial for common offenses, and also those undergoing sentence for such offenses, shall, at the demand of the State of which they are citizens, be surrendered immediately, together with all the documents in the case.

6. The amnesty foreseen in the present article extends to all the above-mentioned acts committed up to the moment of the ratification of the present treaty. The execution of death sentences for the acts mentioned shall be withheld from the moment of the signing of the present article.

## MONUMENTS AND ARCHIVES

**ARTICLE 11.**—1. Russia and the Ukraine will restore to Poland the following objects removed to Russia or to the Ukraine from the territory of the Polish Republic since Jan. 1, 1772:

a. All war trophies (for instance, flags and standards, all military signs, guns, arms, regimental regalia, &c.), as well as trophies taken since 1792 from the Polish nation during its struggle for independence against Czarist Russia. The Polish-Russian-Ukrainian war of 1918-1921 is not subject to such restitution;

b. Libraries, collections of books, archaeological collections, archives, works of art, relics, as well as all kinds of collections and objects of historic, national, artistic, archaeological, scientific or general cultural value.

The collections and objects described under letters a and b in this article are subject to restitution without regard to the conditions under which they were removed or the prescriptions of the authorities of that period, and without regard to what legal or personal holder they belonged originally, or after removal.

2. The obligation of restitution does not extend to:

a. Objects removed from territory situated to the east of the Polish frontier determined by the present treaty, in so far as it is proved that these objects are the product of White-Ruthenian or Ukrainian culture, and that they were brought to Poland not by voluntary transaction or by inheritance;

b. Objects which were brought to Russian or Ukrainian territory from their lawful owner through voluntary transactions or inheritance, or which were brought to the territory of Russia or the Ukraine by their lawful owner.

3. If collections and objects of the category mentioned under letters c and b in Clause 1 of the present article, brought from Russia or the Ukraine in this same period, are found in Poland, they are subject to restitution to Russia and the Ukraine on the principle mentioned in Clauses 1 and 2 of the present article.

4. Russia and the Ukraine will restore to Poland the following objects taken from the territory of the Republic of Poland since Jan. 1, 1772, and connected with the territory of the Republic of Poland: The archives, records, materials pertaining to the archives, acts, documents, registers, maps, plans and drawings, as well as plates and clichés, sealing stamps and seals, &c., of all State offices and institutions, self-governing, social and clerical.

Those of the objects above denominated, however, which, although not connected as a whole with the territory of the present Republic of Poland, cannot be divided, will be returned to Poland in their entirety.

5. Russia and the Ukraine assign the following objects dating from the period between Jan. 1, 1772, to Nov. 9, 1918, during Russian rule over territories which form part of the Republic of Poland: Archives, records, materials pertaining to archives, acts, documents, registers, maps, plans and drawings of legislative institutions, central, provincial and local organs of all Ministries, offices and administrations, as well as self-governing bodies, social and public institutions, in so far as the objects denominated above have connection with the territory of the present Republic of Poland and are in reality on Russian or Ukrainian territory.

Should the objects denominated in this clause, and which have connection with territories remaining with Russia or the Ukraine, be found in Poland, Poland undertakes the obligation to assign them to Russia or to the Ukraine on these same principles.

6. The decisions of Clause 5 of the present article do not extend to:

a. Archives, records, &c., having connection with the struggles of the former Czarist authorities with the revolutionary movements in Poland after the year 1876 up to the time of the conclusion of a special agreement between both parties on their restitution to Poland;

b. Objects representing military secrets and having connection with the period after the year 1870.

7. Both contracting parties, agreeing that the systematized, scientifically elaborated and complete collection forming the basis of a collection of universal cultural importance, should not be subject to destruction, decide the following: If the removal of any object whatever, subject, on the principle of Clause 1 of the present article, to restitution of Poland, may destroy the value of the collection as a whole, the said object, except in case of its close connection with the history or the culture of Poland, shall remain in its place with the agreement of both parties of the mixed commission foreseen in Clause 15 of the present article, in exchange for another object of equal scientific or artistic value.

8. Both contracting parties declare their readiness to conclude special agreements concerning the restitution, the redemption or the exchange of articles of the categories denominated in Clause 1 b of the present article, in cases when these objects passed to the territory of the other party through voluntary transaction or inheritance, in so far as these objects represent cultural acquisitions of the interested party.

9. Russia and the Ukraine undertake to restore to Poland the following objects forcibly or voluntarily removed to Russia or the Ukraine from the territory of the Polish Republic since Aug. 1 (new style), 1914—that is, from the beginning of the World War—to Oct. 1 (new style), 1915, and belonging to the State or its institutions, self-governing bodies, social or public institutions, and in general to all legal and physical holders:

a. Archives of every kind, records, acts, documents, registers, account and commercial books, writings and correspondence, surveying and measuring instruments, plates and clichés, sealing stamps, maps, plans and drawings, with sketches and measurements of the same, with the exception of objects having at present the character of military secrets, which belonged to military institutions;

b. Libraries, archival and artistic collections, with their inventories, catalogues and bibliographical material; works of art, relics and all collections of articles of a historical, national, scientific, artistic or in general of a cultural character; bells and all objects of religious cult of all confessions.

c. Scientific and school laboratories, cabinets and collections, scientific and school accessories, instruments and apparatus and also all auxiliary and experimental material of the same character.

d. Objects subject to restoration and mentioned in the present clause under letter c may be returned, not necessarily *in natura*, but in the form of a proper equivalent, determined with the agreement of both parties in the mixed commission provided for in Clause 15 of the present article. Objects dating from before 1870 or donated by Poles may be returned, not necessarily *in natura*, but in the form of a proper equivalent, solely with the agreement of both parties of the above-mentioned mixed commission.

10. Both contracting parties undertake the obligation reciprocally to restore on the same principles the collections and objects mentioned in Clause 9 of the present article removed voluntarily or forcibly from the territory of the other party after Oct. 1 (new style), 1915.

11. Objects denominated in Clauses 9 and 10 of the present article not forming the property of the State or of State institutions shall, upon demand of the Governments based on the declarations of the owners, be returned for the purpose of their restoration to the owners.

12. Objects denominated in Clauses 9 and 10 of the present article are subject to restitution in so far as they are *de facto*, or prove to be under the administration of governmental or social institutions of the State making the restitution. The obligation of proving that an object was destroyed or lost is incumbent on the State making the restitution. If the objects denominated in Clauses 9 and 10 of the present article are in the possession of third persons, whether physical or legal holders, they shall be taken from them for the purpose of restoral.

Also, at the request of the owner, objects denominated in Clauses 9 and 10 of the present article and in his possession, shall be formally restored.

13. Costs in connection with the return and restitution will be borne by the State making the restitution within the limits of its own territory to the frontiers of the State. Restitution shall be executed without regard to prohibitions or restrictions of export and shall not be subject to any taxes or payments.

14. Each of the contracting parties undertakes to surrender to the second party the cultural or

artistic possessions donated or bequeathed up to Oct. 7 (new style), 1917, by the citizens or institutions of the other party to its State or to its social, scientific or artistic institutions in so far as these donations or bequests were accomplished according to the obligatory statutes of the State in question.

Both contracting parties reserve the right to conclude special agreements in the matter of the above-mentioned donations and bequests made after Nov. 7 (new style), 1917.

15. For the execution of the decisions of the present article there shall be formed not later than within six weeks from the ratification of the present treaty a special mixed commission on the principle of equality, with headquarters in Moscow, composed of three representatives of each party and the indispensable experts. This commission will direct its activities according to instructions forming Affix 3 to the present treaty.

## STATE PROPERTY

**ARTICLE 12.** Both contracting parties recognize that State property of every kind on the territory of the one or the other of the contracting States, or subject to restitution to that State on the basis of the present treaty, forms its indisputable property. By State property is understood every kind of property and property rights of the State itself as well as of State institutions; property and property rights of appanage, cabinets, palaces, all kinds of property and property rights of the former Russian Empire and of members of the former Imperial family, and all kinds of property and property rights donated by Russian Emperors.

Both contracting parties renounce, reciprocally, all claims arising from the division of State property, in so far as the present treaty does not make a different decision. To the Polish Government pass all rights and claims of the Russian Treasury against all kinds of property within the frontiers of Poland, and all claims against physical and legal holders if these rights and claims are subject to execution on Polish territory, and in this connection only to the amount not offset by the reciprocal claims of the debtors based on Clause 2 of Article 17, to be settled in the clearing of accounts. The documents and acts confirming the rights indicated in this article are transferred by the Russian Government, in so far as they are really in its possession, to the Polish Government. In case of the impossibility of executing this provision within the term of one year from the day of ratification of the present treaty, these documents and acts will be recognized as lost.

## GOLD

**ARTICLE 13.**—In view of the active participation of the territories of the Republic of Poland in the economic life of the former Russian Empire, as recognized by the preliminary peace agreement of Oct. 12, 1920, Russia and the Ukraine pledge themselves to pay to Poland 30,000,000 gold rubles in coin or ingots, not later than within one year from the time of ratification of the present treaty.

THE BLACK LINE RUNNING FROM LATVIA SOUTHWARD TO RUMANIA IS THE NEW BOUNDARY BETWEEN POLAND AND RUSSIA AS DETERMINED BY THE TREATY OF RIGA

**ARTICLE 14.**—The re-evacuation\* of State railway property from Russia and the Ukraine to Poland will be executed according to the following principles:

a. Railway rolling stock of the general European gauge is to be returned to Poland *in natura*, in the quantity and on the conditions indicated in Annex 4 to the present treaty.

b. Broad gauge railway rolling stock, as well as railway rolling stock of the general European gauge, altered to broad gauge in Russia and the Ukraine up to the day of the signing of the peace treaty, remains in Russia and the Ukraine, in the quantity and on the conditions indicated in Annex 4 to the present treaty.

c. Other property besides railway rolling stock will be in part returned to Poland *in natura*, and in part will remain in Russia and in the Ukraine, in the quantity and on the conditions indicated in Annex 4 to the present treaty. The value of the railway property indicated under

\*The terms "evacuation" and "re-evacuation" are employed in the original document in the sense of "removal" and "restitution," according to the practice which arose during the war.

the letters a, b and c of the present article, is fixed by the contracting parties at the sum of 20,000,000 rubles in gold.

2. Both contracting parties undertake reciprocally to return to each other, on the general principles laid down in Article 15 of the present treaty, all State river property (boats, mechanisms, technical apparatus, landing facilities and other river transport property); also, the property of road administration, in so far as the property falling under these two classifications is at present, or will be, under the administration of government or social institutions of the State making the restitution.

The bringing into force of the decisions of the present clause and the decision of all matters connected therewith, is placed in the hands of the Mixed Commission of Re-evacuation provided for in Article 15 of the present treaty.

## RE-EVACUATION OF PRIVATE PROPERTY

**ARTICLE 15.**—1. Russia and the Ukraine bind themselves, at the demand of the Polish Government, and on the basis of the owners' declaration, to re-evacuate to Poland, for the purpose of its restitution to the said owners, the property of self-governing bodies, institutions, and physical and legal persons, which was voluntarily or forcibly removed from the territory of the Republic of Poland to Russia and the Ukraine, after Aug. 1, 1914—that is, from the beginning of the World War—up to Oct. 1 1915.

2. Both contracting parties undertake the obligation reciprocally to re-evacuate, at the desire of the Government of the other party, and on the basis of the declaration of the owners, the property of all self-governing bodies, institutions, and physical and legal persons, on the territory of the other party, voluntarily or forcibly evacuated after Oct. 1, 1915.

3. The property specified in Clauses 1 and 2 of the present article is subject to re-evacuation, in so far as it is at present, or will prove to be, under the administration of governmental or social institutions of the State making the restitution. The obligation of proving that an object has suffered damage or has been lost, is incumbent on the State making the restitution.

In so far as the property specified in Clauses 1 and 2 of the present article represents a means of production, and was formerly under the administration of Government or social institutions of the State making the restitution, but was later destroyed or lost as a result of circumstances beyond control (*vis major*), the Government of the State making the restitution is under the obligation to give a proper equivalent for these objects.

If the property indicated in Clauses 1 and 2 of the present article is in the possession of third persons, whether physical or legal, it shall be taken from them for the purpose of re-evacuation.

Property indicated in Clauses 1 and 2 of the present article and now in the possession of the owner, shall also, at his demand, be formally re-evacuated.

4. Property subject to re-evacuation on the

principle of Clauses 1, 2 and 3 of the present article, with the agreement of the parties interested, may be returned not necessarily *in natura*, but in the form of a proper equivalent.

5. A complete reciprocal settlement of accounts arising from legal titles connected with evacuated property, shall take place within 18 months from the day of the ratification of the present treaty, between the owners of the re-evacuated property and the Government making the restitution.

This settlement shall comprise, on the one hand, the subsidies, loans and open credits granted for evacuation, with the exception of credits covered by securities, and, on the other hand, the expenditures connected with evacuation, including dues for raw materials, semi-manufactures, goods and capital taken by the State making the restitution; in this settlement will also be included compensation for the partial or complete wearing out by use, in the process of production, of property subject to re-evacuation.

The Governments of the contracting parties guarantee payments based on the above-named settlement. This settlement must not put a stop to re-evacuation.

6. The costs of re-evacuation within the limits of its own territory, up to the frontier, shall be borne by the State making the restitution.

The re-evacuation of property shall be executed without regard to the prohibition or the restriction of export, and shall not be subject to any taxes or payments.

7. For the purpose of bringing into force the decisions of the present article, a mixed commission shall be formed, not later than six weeks from the ratification of the present treaty; this body will be based on the principle of equality, and will be composed of five representatives and the indispensable experts of both parties; its headquarters will be in Moscow. The duty of this commission will be especially the fixing of equivalents in cases foreseen in Clauses 3 and 4 of the present article; the fixing of the principles of the settlement of accounts between owners and the Governments of the other party, and of measures of supervision to insure its proper execution; the elucidation in cases of doubt, of the status of legal and physical persons as regards their relation to the State, as well as of problems arising from the necessity of co-operating with the proper Government organs in the search for property subject to re-evacuation.

As proof of the accomplishment of the evacuation, not only evacuation orders are admitted, but also all other documents and proofs by witnesses.

Both contracting parties undertake the obligation to co-operate fully and in every way with the above mentioned mixed commission in the fulfillment of its duties.

Property belonging to physical and legal persons of the other contracting party shall not be subject to re-evacuation.

Those stock companies in which the majority of the shares represented at the last general assembly of the shareholders preceding the

evacuation from Poland to Russia belonged to Russian, Ukrainian or White-Ruthenian citizens, shall be considered as Russian, Ukrainian and White-Ruthenian.

Those companies (stock companies or otherwise), in which the majority of the shares represented at the last general assembly of shareholders preceding the evacuation from Russia and the Ukraine to Poland belonged to Polish citizens, shall be considered as Polish.

The State apportionment of shareholders to one of the parties shall be defined on the basis of the present treaty.

Poland undertakes the responsibility for all claims of other States on Russia and the Ukraine, which may be made on account of the re-evacuation to Poland of property belonging to citizens or legal persons of these States, while Russia and the Ukraine on this basis both reserve to themselves, with respect to Poland, the right of recovery.

8. All demands for the re-evacuation of property shall be made to the Mixed Commission within the period of one year from the day of the ratification of the present treaty; after the lapse of this period, no demand will be accepted by the State making the restitution. The decision of the mixed commission is to be given within three months from the day of the reception of the demand. The re-evacuation of property is to be accomplished within six months following the decision of the mixed commission. The lapse of this period does not liberate the State making the restitution from the duty of re-evacuating property which has been demanded within the proper period.

### CAPITAL AND FUNDS

**ARTICLE 16—1.** Russia and the Ukraine undertake to effect with Poland a settlement of those accounts which arose from funds and special capital bequeathed or donated to Polish citizens or legal associations, and which, by virtue of binding regulations, were held in the Russian State Treasury, or in credit institutions of the former Russian Empire, as deposits or accounts.

2. Russia and the Ukraine further undertake to effect a settlement of accounts with Poland on the basis of the capital of Polish public institutions, which, by virtue of binding regulations, was held in the Russian State Treasury, or in credit institutions of the former Russian Empire, as deposits or accounts.

3. Russia and the Ukraine further undertake to effect with Poland a settlement of accounts with reference to property and capital of Polish origin which came under the administration of the Russian Government, and were either liquidated or confounded with Treasury funds, and which belonged to social, cultural, religious and philanthropic institutions and associations, as well as in reference to property and capital which were destined for the maintenance of churches and the clergy.

4. Russia and the Ukraine further undertake to effect with Poland a settlement with reference to special capital and funds, as well as with reference to general State capital destined for purposes of social work, which were under

the control of special administrations and were connected, according to their origin and destination, either in whole or in part, with territory or citizens of the Polish Republic.

5. The period for the fixing of the clearing balances foreseen in Clauses 1, 2, 3 and 4 of the present article, is agreed upon by both contracting parties as Jan. 1, 1916.

6. As a basis for proceeding with the settlement of accounts referring to capital connected with the accounts of the State Treasury, a previous liquidation of these accounts shall be effected. The sums assigned from the Treasury for the support of capital will not be considered as a debt of capital toward the Treasury.

Russia and the Ukraine undertake, in effecting the settlement of accounts foreseen in Clauses 1, 2, 3 and 4 of the present article, to assign to Poland the appropriate property, capital, and balance in cash.

7. Russia and the Ukraine undertake to effect the settlement of accounts referring to capital and funds which were in the Treasury as deposits, or in State or private credit institutions of the former Russian Empire, as investments, taking under consideration, to the advantage of Poland, the loss of part of the purchasing power of Russian paper money units in the period from Oct. 1, 1915, to the day when the settlement of accounts is completed.

In effecting, however, the settlement of accounts with reference to special capital and funds which were under the control of separate administrations and confounded with the Treasury accounts of the former Russian Empire, changes in the value of monetary units shall not be taken into consideration.

8. In effecting the final settlement of accounts referring to special capital, funds and property, all movable property will be returned to Poland in so far as it is under the administration of the Governments of Russia and the Ukraine. In cases where property has been liquidated by them, it will be returned in the form of a proper equivalent. This does not apply to Russian securities.

9. The above settlement will be effected by the Mixed Account-Settlement Commission foreseen in Article 18.

### LEGAL CONDITION OF INDIVIDUAL CITIZENS

**ARTICLE 17—1.** Russia and the Ukraine undertake to effect with Poland the settlement of accounts referring to Polish investments, or to deposits and securities belonging to Polish nationals or legal associations, in Russian and Ukrainian State credit institutions, nationalized or liquidated, as well as in State institutions and treasuries.

In paying sums due on the basis of the present clause, Russia and the Ukraine assign to Polish nationals and legal associations, all the rights that were formerly assigned to Russian and Ukrainian nationals and legal associations.

In effecting the above-mentioned settlements, Russia and the Ukraine will take under consideration, to the advantage of Polish nationals, the loss of part of the purchasing power of Russian monetary units from Oct. 1, 1915, to the

day when the settlement of the accounts is completed.

2. The decision on matters concerning the regulation of conditions of private right between nationals and legal associations of the two contracting States, and also the decision on matters concerning the regulation of claims of such nationals and legal associations on the Government and State institutions of the other party, and, reciprocally, which are based on legal titles—in so far as these questions are not decided by the present treaty—is placed in the hands of the Mixed Account-Settlement Commission provided for in Article 18 of the present treaty. The present clause concerns legal conditions which arose up to the day of the signing of the Peace Treaty.

### ACCOUNT-SETTLEMENT COMMISSION

**ARTICLE 18-1.** For the purpose of effecting the settlement of accounts foreseen in Articles 14, 15, 16 and 17 of the present treaty, and fixing the principles of these settlements in cases unforeseen by the present treaty, and also for the purpose of fixing the amount, manner and time of payments due in consequence of neglected accounts, within six weeks from the day of the ratification of the present treaty, a Mixed Account-Settlement Commission will be formed, composed of five representatives of each party and the indispensable number of experts, with headquarters in Warsaw.

2. Oct. 1 (New Style), 1915, is accepted as the date on which all settlements are to be accounted for, in so far as the present treaty does not decide otherwise.

3. All settlements of accounts for material values shall be effected in Russian gold rubles; in other cases, settlement will be made in conformity with the principles foreseen in Articles 14, 16 and 17 of the present treaty.

### RUSSIAN DEBTS

**ARTICLE 19**—Russia and the Ukraine free Poland from responsibility for debts and for all other kinds of obligations of the former Russian Empire, including obligations proceeding from the issue of paper money, treasury-bills, obligations, promissory notes, serial issues, Russian treasury bonds, from guarantees accorded to all institutions and enterprises, as well as from the guarantee debts of the same, &c.

### COMPENSATION

**ARTICLE 20**—Russia and the Ukraine undertake to accord to Poland, her citizens and legal associations, automatically and without any special agreement, on the basis of the principle of the most favored nation, all the rights, privileges and concessions accorded or to be accorded directly or indirectly by them to any other State, its citizens and legal associations, in respect to the restitution of property and compensation for losses during the period of the revolution and civil war in Russia and the Ukraine.

In the cases provided above, Russia and the Ukraine will recognize the binding power not only of original documents confirming the prop-

erty rights of Polish nationals and legal associations, but also those documents which will be issued by the mixed commission provided for in Articles 15 and 18 of the present treaty.

### FURTHER AGREEMENTS

**ARTICLE 21**—Both contracting parties undertake, not later than within six weeks from the day of the ratification of the present treaty, to begin negotiations on the question of a commercial agreement, and an agreement concerning the exchange of goods on the basis of compensation (i. e., barter); also to begin, as soon as possible, negotiations concerning the conclusion of a consular, post and telegraph, railway, sanitary and veterinary convention, as well as a convention concerning the improvement of navigation conditions on the Dnieper-Vistula and the Dnieper-Dwina waterways.

### TRANSIT OF GOODS

**ARTICLE 22-1.** Up to the time of the conclusion of the commercial agreement and the railway convention, both contracting parties undertake the obligation to permit the transit of goods on the conditions provided for below. The principles of the present article shall form the basis of the future commercial agreement in the parts concerning transit.

2. Both contracting parties accord to each other, reciprocally, the free transit of goods on all railways and waterways open to transit. The transport of transit goods will take place in accordance with the prescriptions determined in each of the contracting States for traffic on railways and waterways, and taking into consideration transport facilities and the needs of interior traffic.

3. By free transit of goods, both contracting parties understand that goods transported from Russia or the Ukraine, or to Russia or the Ukraine through Poland, as well as from Poland or to Poland through Russia or the Ukraine, shall not be subject to any transit duties or any other payments arising from transit, whether these goods pass straight through the territory of one of the contracting parties, or are unloaded on the way, stored for a time in warehouses, and reloaded for further transport, on condition that these operations are carried out in warehouses under the supervision of the customs authorities of the country through which the goods are passing.

4. Poland reserves to herself liberty in the regulation of the conditions of transit for goods of German and Austrian origin, imported from Germany and Austria through Poland to Russia and the Ukraine.

The transit of arms, military equipment and objects, is prohibited. The restriction does not extend to objects which, although military, are not intended for military purposes. For the transit of such objects, the declaration that they will not be used as military material will be demanded of the respective Governments.

Restrictions are also permitted in connection with goods to which, for the protection of the public health, and the prevention of the spreading of epizootic and plan epidemics, may be applied exceptional prohibitive measures.

5. Goods imported from other States in transit through the territory of one of the contracting parties to the territory of the other party, shall not be subject to other or higher payments than those which might be levied on such goods coming straight from their country of origin.

6. Freights, tariffs and other payments for the transport of goods by transit shall not be higher than those which are levied for the transport of such goods in interior communication on the same line and in the same direction.

As long as freights, tariffs and other payments are not levied for the interior transport of goods in Russia and the Ukraine, payments for the transport of goods from Poland and to Poland through Russia and the Ukraine may not be higher than the payments determined for the transport of goods by transit through the most-favored country.

7. In view of the necessity to provide proper equipment for frontier stations at connecting points of the railways of both of the contracting parties, there will be assigned temporarily, for transit traffic from Russia and the Ukraine through Poland, and the reverse, from Poland through Russia and the Ukraine, delivery stations at the sections Baranowicze-Minsk and Rowne-Szepetowka, namely, on the territory of White Ruthenia and the Ukraine; for the reception of goods coming from the west, the Minsk station (until a special station is prepared), and the station of Szepetowka (until the station of Krzywín is prepared), and on the territory of Poland for receiving goods coming from the east, the stations Stolbec and Zdobunowo.

The manner and conditions of transit traffic will be determined in the railway convention which is to be concluded by both contracting parties immediately after the ratification of the present treaty.

The contracting parties will also take the proper steps for the speediest possible adaptation of other directions to transit traffic, providing the connecting points of the railways are determined by a special agreement.

The delivering points from other States on the frontiers of both parties for transit traffic will be all frontier stations which are, or will be, open for international communication.

For the loading of transit goods arriving or

departing by water, there will be opened a transfer depot in the town of Pinsk or on the Prypec siding, and at this point there will be constructed a railway line to the wharf for the purpose of placing the cars for loading.

### TERRITORIAL CLAUSE

**ARTICLE 23**—Russia and the Ukraine declare that all obligations undertaken by them toward Poland, as well as the rights they have acquired by the present treaty, apply to all the territories situated to the east of the State frontier defined in Article 2 of the present treaty, and formerly part of the Russian Empire; these territories, by the conclusion of the present treaty, are represented by Russia and the Ukraine.

In particular, all the rights and obligations above specified extend to White Ruthenia and to its citizens.

### DIPLOMATIC RELATIONS

**ARTICLE 24**—Diplomatic relations between the contracting parties shall be inaugurated immediately after the ratification of the present treaty.

**ARTICLE 25**—[In all copies of the treaty received in the United States to the time when these pages went to press no Article 25 appeared.]

### RATIFICATION

**ARTICLE 26**—The present treaty is subject to ratification, and shall come into force from the moment of the exchange of the documents of ratification, in so far as the treaty or its annexes do not contain other dispositions. The exchange of the documents of ratification shall take place in Minsk within the period of forty-five days from the day of the signing of the present treaty. In every instance, in the present treaty or its annexes, where the moment of ratification on the Peace Treaty is mentioned as a period of time, the moment of the exchange of the documents of ratification is understood.

**IN FAITH WHEREOF** the plenipotentiaries of both contracting parties have signed *m. p.* the present treaty, and affixed thereto their seals.

*Done and signed in Riga, March 18, 1921.*

## WHAT POLAND GAINED FROM RUSSIA

**B**Y the signing of peace with Soviet Russia on March 18, Poland obtained a sorely needed guarantee for her future tranquillity and progress. By the terms of that treaty she secured an increase of territory which delighted the Poles as much as it displeased the Russian factions now exiled from Russia. Under the boundary clauses of the treaty Poland obtains, over and above the Curzon line established by

the Peace Conference, fifteen counties of the Provinces of Volhynia, Grodno, Vilna and Minsk in their entirety, and also portions of eleven counties in the Provinces of Volhynia, Minsk, Vilna and Vitebsk. This means, in short words, that Russia loses about 140,000 square kilometers, or 87,000 square miles, of her national territory, which, as Alexander Kerensky, the former Premier of Russia, pointed out in Paris, is enough territory to make a whole country

in Europe. The Russian Nationalist leaders, headed by Kerensky, contend that of the 7,000,000 people who inhabit these regions, not more than 400,000, or about 6 per cent., are Poles, mostly of the land baron class, and that the rest of the population consists of White Russians, Lithuanians and Ukrainians. Kerensky and his faction, recently united in a Constituent Assembly in Paris, foresaw the forcible Polonization by these Polish landlords of all the districts taken over by the Warsaw Government. In contradiction to this M. Dombiski, the chief Polish delegate to Riga, declared after the signing of the treaty that it would be Poland's aim to give freedom and the exercise of all civic rights to the people of non-Polish stock to be incorporated with Poland under the Riga Treaty.

Unmoved by the prediction that these boundary terms would be a menace to the future peace of Europe, the Poles continued to exult over the increase of territory, and there were many evidences that the treaty had wrought a revulsion of feeling toward the Soviet Government, the fall of which in future would not be to Poland's advantage. Early after the signing at Riga, however, problems arose relating to the execution of certain provisions. Among other difficulties was that of bringing Poland's relations with Simon Petlura, the Ukrainian nationalistic leader, in line with those clauses of the treaty under which Poland, like Soviet Russia, pledged herself not to tolerate on her territory organizations hostile to the other party.

The Riga peace, it will be noted, was concluded not only between Poland and Soviet Russia, but also with the Soviet Ukrainian Government. Petlura, however, has established his own Ukrainian Government at Tarnov, and still possesses some 15,000 available troops to use against Soviet Russia whenever the time may seem to him propitious. The Polish Government has hitherto acknowledged the existence of Petlura's Government so far as to recognize passports issued by it, and has shown it in other ways a certain degree of unofficial courtesy. A diplomatic mission representing Petlura has for some time been resident

at Warsaw. This situation, however, is in no way compatible with the terms of the new treaty, and there is no doubt that the permanent Bolshevik representative who arrived in Warsaw in May will draw it to the attention of the Polish Government.

A decision on the final allocation of the Vilna territory still remained pending, since the new agreement was reached by the Poles and Lithuanians at the behest of the League of Nations to abandon the idea of a plebiscite, to which both parties were opposed, and to reach a settlement by means of direct negotiations. A Polish delegation left Warsaw for Brussels toward the end of April, empowered to negotiate with the representatives of Lithuania under the Presidency of Paul Hymans.

Poland's relations with Germany were somewhat improved, at least officially, by the signing on April 21 in Paris of the Germano-Polish Convention regulating communication between East Prussia and Germany on the one hand, and between Poland and the Free City of Danzig on the other. By this convention, communication by railway, telephone and telegraph was granted to Germany over intervening Polish territory, while Poland received similar facilities with Danzig over intervening German territory on the right bank of the Vistula. The nationals of both parties were furthermore empowered to move about within these areas without passport formalities, and German goods in transit were freed of all customs duties while crossing Polish territory.

The situation between Poland and Germany, however, became greatly strained in the first two weeks of May, owing to the insurrection of Polish residents in Upper Silesia which, under the recent plebiscite, decided in the main to adhere to Germany. This insurgent movement, which was caused by a false report that the Allies would disregard the plebiscite result where it was favorable to Poland, was led by Korfanty, a Polish agitator not recognized by the Polish Government, and proved so formidable that the interallied forces found themselves unable to cope with it. The whole situation in Upper Silesia will be found treated of elsewhere in these pages.

May 1 was the date set for Germany to carry out certain provisions of the peace treaty relative to disarmament and reparations. These provisions had been met inadequately, and the Allied Premiers gathered in London to deliberate on measures that would guarantee their fulfillment. Germany was then given till May 12 to accept without debate or reservation the terms finally laid down, in default of which acceptance the Ruhr district would be occupied and other measures taken to compel compliance.

# ENGLAND'S STRUGGLE WITH COAL MINERS

*The whole nation's industries and activities crippled by lack of fuel—Government's refusal to pool earnings of all mines results in deadlock and new threat of a general strike—Attempt of unions to stop all coal importations*

[PERIOD ENDED MAY 15, 1921]

THE coal miners' strike, though for a time overshadowed by the German reparations problem, continued to be a very serious cause of worry for the Government and of discomfort for the public. As the month progressed, it was increasingly apparent that the trouble was far from settlement, and that the danger of a general strike was still imminent. Had it not been that Summer was approaching, the rapid diminishing of the coal supply might have produced a disaster; as it was, the Government felt compelled to order the further curtailment of train service, the rationing of fuel, and the mobilization of food supplies as precautions against the uncertainty of the future.

By April 21 the coal shortage had become so acute that the Great Eastern Railway Company suspended its entire suburban service on Sundays, while the train service on all railways on week days was greatly reduced. In many districts there was no coal left for domestic consumption, and no coal was being delivered to any house where a gas range was installed. In some districts twenty-eight pounds of coal a week was the maximum distributed to each household, and in some of the mining regions physical distress became evident. Importations of coal from foreign countries grew to such an unprecedented extent that actually sending coal to Newcastle became no commercial absurdity. On May 3 The London Gazette announced that the Secretary for Home Affairs had authorized setting the clocks forward two hours, instead of one, as at present, as a measure for coal conservation.

Somewhat singularly, gasoline, which is not generally supposed to be a friend of the horse, came to that animal's assistance by enabling the Government to permit certain race meetings, provided they involved no use of railroad facilities. Thus the New-

market meetings, thanks to the astonishing success with which they were served by automobile transport, had an attendance that broke all records.

On May 5, after six weeks of the strike, it was pointed out that in the manufacturing districts thousands of hard-working men were learning by bitter experience how interdependent are modern industries. Big works were idle because they could not get castings to go on with. Ships were held up because there were no exports to fill them. Factories were cutting down to two or three days a week, and then stopping altogether, because they were short of essential raw material. In London the slump in industry became evident when customers in the large department stores were informed that no further supplies of well-known everyday goods could be obtained because the factories could not get coal to keep going. For lack of coal the Royal Academy banquet and the first Court of the season were not held. Similarly, many social functions had to be dropped because of the consumption of coal they would have caused and the increasing difficulty of moving about either by rail or by other transport. Following the example of the King at Windsor, those who had a surplus of coal in their cellars shared it with their less fortunate neighbors. The effect of the strike on commerce began to make itself apparent in the large daily falling off in exports.

On April 26 the coal situation was again aggravated by the action of the National Union of Railwaymen in instructing its members not to handle coal from sidings or from overseas. Subsequently the union excluded coal for hospitals and some other public utilities from the embargo. After a conference on May 2 between Edo Fimmen, President of the International Transport Workers, and Robert Williams, general secretary of the transport workers, the latter

said that Mr. Fimmen had given every guarantee that the Dutch, French, Belgian, German and Austrian workers were determined to prevent the export of coal to Britain, and would cause an entire stoppage of work in their ports if attempts were made to ship coal to England.

An appeal to the whole labor movement to support the miners was issued on May 3 by the Joint Committee of the Parliamentary Labor Party, the National Labor Party Executive and the Parliamentary Committee of the Trades Union Congress.

For the Government, Premier Lloyd George, speaking at Maidstone on May 7, went into the economics of the situation to assert that miners' wages must depend on the profits of the industry. He attacked the principle of a national pool on the ground that it would put a premium on inefficiency and imply the employment of an army of inspectors. He declined emphatically to subsidize the industry at the expense of the taxpayers, and declared the miners' leaders were trying to starve the nation into submission. The Premier ended as follows:

I appeal here and now to the nation to endure with the stubborn courage which has piloted us through much worse troubles. What Britain will be tomorrow depends on its attitude today. If we surrender to threats of starvation, we may irretrievably damage the industries of the country. In this great conflict, where great national issues are involved, we have either got to end or endure. Our duty is to see that the country does not starve. The Government will do that, and in doing so we may want your assistance. The Government means to do its duty. I feel convinced that, when an appeal is made, you will do yours also.

With the decision of the National Transport Workers on May 10 to ban the handling of all foreign coal, the situation again became alarming. It was further aggravated on May 13, when a meeting of the Executive of the National Union of Railwaymen, called to consider the old Triple Alliance project of a general strike, passed a resolution forbidding its members to handle any foreign coal, whether for public utilities or not, and also forbidding them to handle "coal of any description which has been loaded or handled by black-leg labor." Later the Railwaymen's Executive conferred with the Transport Workers' Executive; the result of this was an appeal sent out to trade unions in other

countries not to assist in forwarding coal to England.

The Government promptly met the new challenge by announcing that it intended to import coal for carrying on services essential to the life of the country, and that it would take all necessary measures to that end. The degree of public sentiment supporting the Government in this attitude was indicated by the fact that, when these pages went to press, coal was being unloaded by volunteer labor from ships in all the chief ports, and some of it was being hauled by railway workers who dodged trouble by not asking questions as to the origin of the coal.

In introducing the budget to the House of Commons on April 25, Austen Chamberlain announced a reduction of the national debt from £7,829,000 to £7,573,714, and a cutting of the foreign debt from £1,278,714,000 to £1,161,560,000. The debt to the United States had been reduced by nearly £75,000,000, which included half of the Anglo-French loan liquidation. Great Britain now owed the United States and Canada £826,000,000, but had paid off her debt in Japan, Argentina, Uruguay and Holland. The surplus of revenue over expenditure during the last year totaled £230,500,000. While the heavy income tax of 6 shillings in the pound remained, the excess profits duty was dropped as hampering trade, as were also the duties on imported cigars and sparkling wines as prohibitive, and therefore unremunerative. Mr. Chamberlain further announced a big debt conversion scheme by which holders of £632,000,000 5 per cent. national war bonds would be invited to exchange their holdings for participation in a new 3½ per cent. conversion loan, not redeemable until 1961.

An alarming increase in unemployment was reflected in figures given out by the Ministry of Labor on May 4. Excluding striking miners, the number of registered unemployed men was 1,865,682, and the half-time men and women, 1,074,682. Including an estimated 1,000,000 idle coal miners, the total of unemployed or half-time workers reached nearly 4,000,000. Speaking of disaster looming ahead from these figures, Secretary Cheesman of the National Union of Manufacturers said: "One of the most alarming features of the situation was the stoical calm with which the manufacturers faced the gradual paralysis of their work."

# IRELAND AND THE HOME RULE PARLIAMENTS

*Sinn Fein Sweeps Southern Ireland in the elections, naming 124 out of 128 members, but they will not take their seats—Ulster nominates 40 Unionists, 20 Sinn Feiners, 12 Nationalists and 5 Unionist Laborites—Warfare of reprisals continues*

[PERIOD ENDED MAY 15, 1921]

SOUTHERN Ireland again registered its determination to stand by the Sinn Fein republic on May 13, when the primary elections were held for members of the new Parliaments of Ireland under the Home Rule act. Except for four imperialist candidates who were returned unopposed for Dublin University, not a single opponent was nominated against the Sinn Fein candidates, who, therefore, would be returned unopposed in the southern constituencies. These Sinn Feiners had announced that they would refuse the oath of allegiance to the Crown, and that therefore the new Parliament would never function. Thus it will devolve upon the Viceroy to nominate an executive on the lines of Crown colony administration, unless the Government should decide to recognize all the members elected in the North and South as a constituent assembly. More than half the members selected in the South are in jail and others have at some time been in prison.

The elections were the quietest ever known in Ireland. No polling was necessary, as, according to the British custom, when only one candidate is nominated, the polling is dispensed with. In this way the 128 seats in the Southern Parliament were filled, as the four imperialistic nominees, who were named for Dublin University, also were unopposed. Two of the latter, Thrift and Alton, are fellows of Trinity College, Dublin, while the other two are Sir James Craig of Trinity College and Gerald Fitzgibbon, member of the Irish bar.

Those elected include Eamon de Valera, for Clare; Michael Collins, Commander-in-Chief of the Irish Republican Army, for County Cork; Arthur Griffith, founder of the Sinn Fein; Alderman Cosgrave, and many other men prominently connected with the Sinn Fein movement.

Those elected in Cork city and county include Sean MacSwiney, brother of the late

Lord Mayor of Cork, who recently escaped from the Spike Island internment camp, and Mary MacSwiney, his sister, who is now in America. In Monaghan and Cavan, two Ulster counties which are included in the Southern Parliament, the Sinn Feiners won overwhelmingly.

For the Northern Parliament 77 candidates were nominated and the Unionists expected a majority of 12. In County Down, 6 Unionists, including Sir James Craig, Premier Designate of Ulster; 3 Sinn Feiners, including Eamon De Valera; 2 Nationalists, including Joseph Devlin, and one Labor candidate were nominated for the eight seats. De Valera had the remarkable number of 900 nomination papers, many of them signed by Catholic priests. His chief Unionist opponent was Sir James Craig. Devlin was nominated also for Antrim and West Belfast. Altogether there were 77 candidates, the parties being represented as follows: Unionists, 40; Sinn Feiners, 20; Nationalists, 12, and Unionist Laborites, 5.

This degree of co-operation of the warring factions had been made possible by a truce which had aroused new hopes of peace. An unexpected message, coming from Sinn Fein sources on May 5, stated that "President de Valera and Sir James Craig, Ulster Unionist leader, held an informal conference, in which their respective points of view were interchanged and the future of Ireland was discussed." This meeting was characterized as the most important political event in Ireland since Easter, 1916. The chiefs of the opposed parties had talked the Irish question over and made each other's point of view perfectly clear. Immediately after the meeting, both leaders remained uncommunicative, though Sir James Craig said that, whether good came of the meeting or not, the only safe course "was for Ulster to sweep the six counties at the polls, and it

was up to the opponents of the Ulsterites to use the same methods."

After Sir James Craig's return to Belfast it became clear that his interview with de Valera had mainly to do with the situation which would arise after the elections, and not with the existing situation. This implied that the elections for the Irish Parliaments were to proceed, and that the Ulster Parliament would come into existence. On May 6, after a meeting of the Ulster Party, Sir James Craig gave out the following statement:

My conversation with de Valera having taken place, and Ulster having already by acceptance of the provisions of the Government of Ireland act, and by her undertaking to work them, reached the limit of concession, no further discussion will be entered into. When the Parliaments have been established and the Council of Ireland has been constituted there will be the necessary constitutional link between Northern Ireland and Southern Ireland.

At a public meeting the same evening, however, Sir James Craig reiterated that neither he nor any other Ulster Loyalist would consent to a republic or any weakening of the ties between Ulster and Great Britain. "Nothing had been surrendered or would be surrendered," he declared in reference to his meeting with de Valera, "and the Sinn Fein knew it."

Mr. de Valera's attitude was stated thus in the Irish Independent of May 7:

We shall never cease to maintain that there is a community of interest between our countrymen of the northeastern corner of Ireland and our people of the south and west for all their misunderstandings and prejudices, artificially created for the most part. We believe that the men of Ulster, reft from us by statute but retained to us by higher laws, look upon Ireland as their country and in their hearts cherish the Irish name. In the eighteenth century Ulster felt profoundly her unity with the rest of Ireland. She will do so again. May that day be soon.

With considerably less of a sensation than might have been anticipated, the retirement of Sir Edward Carson from the leadership of the Ulster Unionist Party was announced on April 26. The reason given was ill health. Subsequently he was appointed a Lord of Appeal in succession to the late Lord Moulton.

In an impassioned address in the House of Commons on April 28 Sir Hamar Greenwood, Chief Secretary for Ireland, denounced the Irish Republican Army as

"murderers," and declared that deeds were being perpetrated which it was difficult to believe could be done by human hands. The Chief Secretary went on to instance the recent murder of fifteen Protestants as a deliberate plan "without rhyme or reason and under revolting circumstances," though it was not a case of Roman Catholics against Protestants. Further, documents had been captured showing that an offensive was being opened in Ulster to interfere with the coming elections by various methods of sabotage; and that Sinn Fein threats against newspaper men had become pronounced to the extent of compelling one of them to leave the country under the menace of death. On April 30 the Government made public the captured documents referred to, detailing the formation of military bodies, together with suggestions as to methods and objects of attacks on Ulster.

A proclamation was issued on April 30 by Augustin Stack, Minister for Home Affairs in the Irish Republican Parliament, declaring that while the Home Rule act was illegal as a foreign statute, it would be recognized for the elections in order to enable the people's will to be demonstrated again.

The nomination of Eamon de Valera as successor of the late Archbishop Walsh in the Chancellorship of the National University of Ireland was officially announced by the university on May 1. No opposition to his candidacy was anticipated. Mr. de Valera issued a manifesto to the Irish people on May 3 appealing to them to uphold the standard of the Irish Republic in the approaching elections. In declaring the Irish people were advancing steadily toward a final settlement of the controversy, he made use of a picturesque metaphor by way of a precautionary warning when he said: "Blossoms are not fruit, but the precursors of fruit. Do not pluck them." With regard to purely home affairs, however, Mr. de Valera seemed to tender a blossom to Ulster when he referred to provisions for such devolution in the administration of home affairs as to make for satisfaction and contentment.

Notwithstanding Government statements that a more pacific state of affairs existed, the number of outrages and reprisals continued with little, if any, abatement. On April 14 Dublin recalled a sensational theft

of the Irish Crown jewels several years ago on the news that Sir Arthur Vicars, former Ulster King of Arms, was shot to death at his Listowel residence. On a label pinned to the body was written: "Traitors, beware. We never forget. I. R. A." Sir Arthur Vicars was custodian of the Crown jewels at the time of their disappearance, and the fact that they were never recovered and that no one was found guilty of the theft created a great stir in both London and Dublin.

Another apparently similar incident occurred in the Scotstown district of Monaghan on the 17th, when Sinn Feiners killed Kitty MacCarron, the first woman executed for treachery. About midnight a party took her from her home, in a wild, mountainous part of the country, and in spite of her struggles and pleadings led her forth to death. The body was found with a bullet wound through her cheek, the customary sign of a Sinn Fein execution, and a card attached which bore the inscription:

"Spies and informers, beware. Tried, convicted and executed by the Irish Republican Army."

Executions on the other side took place at Dublin on April 25 and at Cork on April 28. Thomas Traynor, who was convicted by courtmartial for participation in a Dublin ambush on March 14, suffered the death penalty while a great crowd offered up prayers outside the Mountjoy Prison gates. A similar scene was witnessed in the roadway fronting the Cork military barracks when Patrick O'Sullivan, Maurice Moore, Patrick Bonayne and Thomas Mulcahy fell before a firing squad for "making war against the British Crown." This made a total of eleven men executed in Cork during the last few months.

As the month of May advanced, the activities of the Sinn Feiners increased, until the deaths on both sides in the two week-end days at the middle of the month numbered at least thirty-three—an evil record mark.

## CANADA AND OTHER DOMINIONS

*Retaliatory duties against the United States proposed by Canada—Australia is determined to keep American friendship—Egyptian Nationalists seeking a compromise*

[PERIOD ENDED MAY 15, 1921]

THERE will be no general revision of the Canadian tariff at this time. Sir Henry Drayton, Minister of Finance, made that clear in presenting the budget in the House of Commons on May 9. Of total imports during the fiscal year of \$1,240,125,056, those from the United States, he said, aggregated \$856,592,470, or 69 per cent. of the whole. Temporary tariff legislation of the United States would place a barrier against Canadian exports to that country amounting to \$168,000,000. Sir Henry said of this:

Such or similar action made permanent, of necessity would require a careful and thorough revision of the Canadian tariff for the purpose of insuring the proper continuance of Canadian business, of insuring employment and Canadian stability. \* \* \* Under the circumstances, having special regard to the fact that there ought not to be a general revision of the Canadian tariff now, and another after the close of the United States Congress, no action will now be taken.

Sir Henry announced the dropping of the business profits tax, the receipts from which in the last year were \$40,000,000. The few remaining luxury taxes are dropped. Confectionery—candies especially—will benefit from this. Duties will, however, be levied on playing cards; cards not exceeding \$24 a gross of 8 cents a pack, exceeding \$24 a gross 15 cents a pack. The excise duty of \$3 and the luxury tax of \$2 per gallon on imported spirituous liquors are abandoned and a straight customs duty of \$10 per gallon is to be collected. Spirits of Canadian manufacture will be subjected to an excise of \$9 a gallon in place of the \$4.40 duty and luxury tax previously imposed. On all except sparkling wines an excise tax of 30 cents a gallon will be collected. Champagne and other sparkling wines when taken from Canadian manufacturers but not exported will be subjected to an excise tax of \$3 per gallon and dis-

tilled spirits of \$9 per gallon. In the latter case provision is made for a rebate of 99 per cent. to hospitals and the like where spirits are actually used for medicinal purposes.

The anti-dumping clauses are strengthened by changes which in effect are designed to still further protect the home market against flooding by foreign-made goods at slaughter prices. In this connection new regulations are also provided relative to valuation for customs purposes of foreign currencies. The present practice is to convert the foreign depreciated currency into Canadian on the basis of existing exchange rates. Hereafter no reduction in excess of 50 per cent. of the standard or proclaimed value will be allowed. Where the rate of exchange is adverse to Canada the value for duty will be computed at the rate of exchange existing at the date of the shipment of the goods.

It is also provided that all goods imported into Canada capable of being "marked, stamped, or branded or labelled without injury, shall have indicated on them legibly in French or English the country of origin". This provision comes into force on September 1st next.

The tax on sales of manufacturers, wholesalers, jobbers and importers, is increased from one and two per cent. rates on domestic transactions to one and a half and three per cent. respectively, and the import rates from one and a half and three per cent. to two and a half and four per cent. The exemptions are foodstuffs in their natural state, initial sales of farm produce by the farmer himself, and the first products of fisheries, mines and forests. A two-dollar license fee will also be imposed on every manufacturer and business man affected by the sales and excise tax, all of which went into effect on May 10th.

The outlay for the current fiscal year is estimated at \$591,437,697. Of this, railway investments call for \$165,687,633, a large part of it accounted for by maturing capital obligations, which will be refunded. In cash payments for the year, it is estimated that \$435,360,971 will be made. For this, the estimated receipts under legislation prior to the budget is \$372,600,000, leaving \$62,760,971 to be met. The Finance Minister counts on the new taxes to fill this gap.

The country's debt amounts to \$2,350,236,700.00.

#### AUSTRALIA

Premier Hughes was defeated in the Australian Parliament on April 14 by an adverse majority of two, which, however, was purely accidental. In a plea to the members, he stated that the vote made his position impossible, and that he could not attend the coming British imperial conference unless there was a clear indication that the vote did not mean censure or an attempt to take the control of business out of the hands of the Government. He received an emphatic endorsement on April 20, when resolutions reiterating confidence in the Government and declaring in favor of Premier Hughes as Australia's representative at the imperial conference were passed by a vote of 46 to 23.

Debate on the Empire's foreign policy has occupied the attention of Parliament. Premier Hughes emphasized his belief that the British navy was the most powerful influence for the world's peace, and that the whole Empire should contribute to its maintenance. He favored a renewal of the Anglo-Japanese alliance in terms acceptable to America, saying: "We cannot in our efforts to secure the friendship of Japan make an enemy of America."

Mr. Tudor, leader of the Labor Party, preferred to spend money on the League of Nations to keep peace, rather than on a navy to prepare for war. The Labor Party's proposal to withhold approval from the Japanese treaty until it had been sanctioned by a referendum, was decisively rejected. Some members insisted that it should be unequivocally declared at the conference that Australia would not surrender on the question of "White Australia." The commonwealth has been steadily drifting away from any idea of a legislative union of the dominions with the United Kingdom, in this respect differing from both New Zealand and South Africa. In the Australian point of view, if such a proposal were made at the imperial conference it would disclose only the weakness of dominion support for it.

Final figures in the South Australia State elections show a sweeping victory for the Liberals. The result is interpreted as a severe check to the anti-empire tendencies

of the Labor Party, which has only sixteen members in a House of forty-six.

Premier Hughes was asked by a deputation of Anglican and non-conformist churches to try to persuade France to hand over to Great Britain the control of the New Hebrides, where joint rule, they said, was working most unsatisfactorily. Under the Anglo-French convention of 1906 the New Hebrides are administered jointly by British and French officials.

The Australian Government announced on May 9 that it had instituted a civil government in former German New Guinea, thus taking its first official action in connection with mandated territory. Australia's representation in the League of Nations to the end of the present fiscal year will approximately total \$340,000.

Anzac Day, the sixth anniversary of the landing of Australian and New Zealand soldiers in Gallipoli, was celebrated in both countries on April 25 by parades and religious services. Lieut. Gen. Aylmer Hunter-Weston telegraphed from Chanak, on the Dardanelles, that he had caused wreaths of wild flowers to be laid on the graves of those who fell on each of the main beaches in Gallipoli.

#### NEW ZEALAND

Mr. W. F. Massey, Premier of New Zealand, who is on his way to the imperial conference, in his farewell speech at Wellington, stated that he did not propose a legislative body for the empire, but one following the model of the War Cabinet, which, he maintains, was an imperial executive. He predicted that there would be another war; possibly it would not come for twenty years, but the time was coming when New Zealand would have to assist the imperial navy.

A decision rendered at Wellington on May 5 by the New Zealand Court of Appeals in a patent case was to the effect that the United States, not having assumed any obligations under the Versailles Treaty, could not claim for itself or its nationals any rights conferred by that treaty.

Co-operation is becoming general on the part of agriculturists in New Zealand. The farmers have their own department stores, from which they are supplied with nearly everything for their domestic needs as well as for their farms. There are sales yards

all over the country, which deal with the farmers' surplus live stock.

#### EGYPT AND THE NATIONALISTS

Both British and Egyptian statesmen are beginning to recognize that the policy of immediate independence of a country of 14,000,000 people, 92 per cent. of whom are illiterate, is, to say the least, dangerous. Even Lord Milner himself said a few years ago: "The withdrawal of Great Britain, if it is not to end in disaster, can only be a gradual process." Zaglul Pasha, the Nationalist leader, is becoming more amenable to the necessity of unity in the demands to be presented at the negotiations in London. He has had almost daily conferences with the Premier, Adly Pasha, with a view to recognizing their differences, which were to some extent a matter of precedence.

At a tea party given by students in Cairo on April 18, Zaglul Pasha made his first public statement, affirming that he was whole-heartedly ready to co-operate with Adly Pasha's Cabinet provided it would declare that negotiations were to be opened for the purpose of abolishing the protectorate and securing the internal and external independence of Egypt, and if the Milner proposal be made to conform to the Nationalist reservations.

These reservations were made to the acceptance of the draft agreement of Aug. 18, 1920, outlining the terms of a treaty between Egypt and Great Britain. The chief reservation is that Great Britain should expressly abolish the protectorate. Others concern the limitations of the functions of the financial adviser and of the British officials in the Ministry of Justice and the abandonment of the provision that the proposed treaty should not come into force until the régime of the capitulations had been modified so as to satisfy the interests of foreign powers.

Adly Pasha hopes to see Egypt free to control her own affairs while remaining the friend of England, with trade open to all nations on an equal footing; a democratic régime, education of the people, improvement of sanitation and carrying out of the Nile irrigation project. He hopes Egyptians will learn foreign methods and form organizations to handle cotton and other exports now chiefly in the hands of Greeks.

A decree was issued extending the activities of the mixed tribunals until Nov. 1. They were established in 1876, and have jurisdiction in civil matters between natives and foreigners and between foreigners in cases where matters in dispute relate to land in Egypt. As the United States failed to reply to the Government circular asking for the agreement of the capitulatory powers to the extension of the tribunals' existence the Sultan signed a decree specifically excepting the United States from the extension, and thus Americans in Egypt now are deprived of their legal rights other than consular. The United States Judgeship in the mixed appeal court has been vacant for several months, and there has been a diplomatic question between Washington and Cairo regarding the new appointment.

There is a general impression in Cairo that the worst of the business depression owing to the decline in cotton has passed and gradual improvement is expected. Another drawback to trade is lack of racial unity, Egypt being a five-language country. Most extended and most popular, of course, is Arabic. Next comes French, which is the commercial tongue. Italian is third, owing to the large Italian colony, which has grown so that the Banca di Roma in April organized the Banca di Levante, with a capital of £1,000,000 and head offices in Alexandria, forming an economic and business link with Egypt. Greek comes next and lastly English, even the British banks carrying on their correspondence and accounts in French.

#### SOUTH AFRICA

At the forthcoming meeting of the British Imperial Dominions in London in June South Africa will be represented by General Smuts, the Premier; Sir Thomas Smartt, head of the Unionist, or English-speaking, Party; Colonel Mentz, Minister of Defense, and Sir Roland Bourne, Secretary of Defense. They were expected to sail from

Cape Town on the new Union Castle Line steamship Arundel Castle on May 28. While in England General Smuts will conduct an inquiry into the Government contract for the conveyance of mails and produce from South Africa. Some of the party will remain over to attend the Assembly of the League of Nations in September.

The centennial of the landing of British settlers in Algoa Bay in 1820 was celebrated at Port Elizabeth and Grahamstown on April 9. In answer to an appeal from Lord Charles Somerset, Governor of the colony, Parliament voted £50,000 to send out emigrants and called for applications. No fewer than 90,000 were received, but only 3,500 were selected and shipped to South Africa. These were the settlers who made the Eastern Province a garden and replaced barbarism with civilization. Their descendants today number 150,000. Prince and Princess Arthur of Connaught attended the centennial celebration at Port Elizabeth, and General Smuts paid a tribute to the settlers and their descendants, who had been fused with the Dutch descendants in the crucible of suffering of the great war and now form the South African nation. Sir Charles Crewe, Chairman of the 1820 Memorial Settlers' Association, also spoke, referring to the need of more settlers. Already 275 farmers had agreed to take settler pupils and seventy-one such pupils had brought £186,450 fresh capital into the country. Sir N. F. De Waal, Administrator of the Cape Province, addressed the gathering at Grahamstown, appealing to South Africans to unite in bringing about the permanent fusion of the Dutch and British races.

That there is still considerable barbarism in settled parts of South Africa is shown by the fact that two native witch doctors were sentenced in April at Johannesburg to eighteen months in prison after pleading guilty to a charge of stealing the body of a European woman from a grave on the Swaziland border to make charms.

# DEMOCRACY AND UNION IN THE BALTIC STATES

*How the young nations wedged between Soviet Russia and Western Europe are struggling to build for their future prosperity in Democracy, and how the shadow of Red Russia is leading them toward union*

[PERIOD ENDED MAY 15, 1921]

CENTRAL EUROPE has its Little Entente, based on the idea of mutual support and protection in case of aggression from without. One consequence of this political rapprochement has been, naturally, the establishment of closer commercial and economic relations. Will a similar association of even smaller and weaker States occur in the Baltic region, where mutual economic support and perhaps mutual protection against aggression seem even greater? Already these new States, but recently recognized de facto by the allied powers, have come together in council on several occasions to formulate a common policy, and there is no doubt that a mutual understanding is developing which may yet prove a solid foundation for the creation of a new Baltic Entente. Such is the belief of Dr. Voyt, the Latvian envoy to Germany, who on April 30 said in Berlin:

The Baltic States are seeking to form a closer union for mutual protection. The coming conference of Esthonia, Latvia and Lithuania will deal, above all, with the question of an economic union in these States. We hope the conference will lead to an entente cordiale among the Baltic nations.

Asked if this coming union was aimed against Soviet Russia, the Latvian envoy replied that if Russia sought to deal with the Baltic States as she had dealt with Georgia and the other nations of the Transcaucasus, the Baltic States would undoubtedly unite for resistance, as they would undoubtedly unite to aid the cause of Western culture if it should be again endangered by Bolshevik aggression.

## ESTHONIA

One of the three Baltic States, Esthonia, has in the past months made considerable progress. Since the signing of peace with Soviet Russia trade has begun and the Esthonian ports of Reval and Narva have as-

sumed an unwonted activity. Three freight trains loaded with machinery and goods daily cross the border into Russia. Other trains coming daily from Russia are bringing back thousands of Esthonians to their homeland. The allurements of life in Bolshevik Russia have not been strong enough to hold them there. In Esthonia, at least, there is order, a semblance of democracy, a hope of existence, despite the difficulties under which this little country still labors. One of the greatest of these difficulties is the interruption of traffic and intercourse with the sister States, Latvia and Lithuania. So jealous of their independence are these new, small States that they have barred themselves off from one another with customs barriers which make free circulation impossible. Dr. John Finley, the American educator, now of the New York Times staff, during a recent visit to the Baltic, was especially struck by this, and referred to it while speaking with the Prime Minister of one of these infant republics. The latter retaliated by recalling that with a like population (all the Baltic States combined have a population no greater than that of New York City), the American colonies had interstate practices quite as absurd and vexatious. He added, however, that all three republics were learning, and much more swiftly than the American colonies, the lesson of experience; had begun to co-operate in economic matters, and were holding conferences of the utmost value in bringing the Baltic group together. The barriers, however, have not yet been permanently lowered, either by Esthonia or by her sister States.

## LATVIA

But all these little States are "playing safe." Red Russia is vast and powerful, and friendship and open trade is the best

policy. The example of Esthonia has been followed by both Latvia and Lithuania, and all three have acted as Moscow's entrepot and intermediary in forwarding much needed commodities from abroad, even from far-off America. Politically, the Governments of Latvia and Lithuania have been greatly strengthened by the de facto recognition of the allied powers. The Latvian Government, under the able direction of Karl Ulmanis, the Premier, and of M. Meijerowitz, the Foreign Minister, is now bending all its efforts toward economic reconstruction; one step in this direction was the recent decision to give to all Latvian harbors the status of free ports. An interesting account of Latvia's Premier given by Dr. John Finley is quoted here:

It will be interesting to Americans, especially to those who have not the vaguest notion of what and where Latvia is, to know that this Prime Minister was a few years ago a student and then a teacher of agriculture in the University of Nebraska. On the walls of his official room in the castle at Riga, instead of the ducal arms, there hang side by side the emblem of the Latvian Republic and the pennant of the University of Nebraska. This man, of massive frame and with a head such as Rodin would have cut out of stone, had acquired a habit from his association with an eminent Nebraskan, for he had just returned with a husky voice from a tour of his country, which is not so difficult as "swinging around the circle" in America, for Latvia is not so large as Nebraska. He had made twenty-six speeches in all, speaking to 40,000 people, not on political, but economic and agricultural, subjects, in an effort to bring greater areas under cultivation and so produce enough rye bread for all, instead of importing wheat flour, which he lamented when I spoke of white loaves and cake in the market. I have seen other Prime Ministers, Ministers of Foreign Affairs, Ministers of Education, university professors, editors and business men in these republics, and they have all something of the spirit and **hopefulness of our pioneers** of the Middle West, though lacking somewhat of their aggressive enterprise.

Both the Latvian Premier and Foreign Minister, according to the Temps political correspondent in Riga, are in favor of the union of the Baltic States for mutual protection against the danger of Sovietization.

One great satisfaction to the Latvian Government has been the fixing of the republic's hitherto vague and undefined boundaries. The frontiers with Esthonia were fixed by an agreement concluded on July

2, 1920, with Soviet Russia, by the peace treaty signed on Aug. 11, 1920, and with Lithuania, as the result of negotiation, on March 31, 1921. Polangen, a Lettish town on the Baltic, was given to Lithuania, as well as the contested territory of Moscheiki, an important branch of the Libau-Riga railway line. A railway agreement for five years was almost concluded. In exchange for these cessions, Latvia received approximately 28,000 hectares of forest land along the Courland frontier, representing a considerable value.

#### LITHUANIA

Lithuania was no less pleased by the fixing of her boundaries with Latvia. The cession of Polangen gave her an outlet on the Baltic which she urgently needed, and which it is by no means certain she will receive in the case of Memel, the fate of which port is still uncertain. Memel is at present garrisoned by French troops, pending the decision of the allied powers. The Lithuanian boundaries with Poland will depend on the decision reached by the respective delegations of Poland and Lithuania who opened their first session in Brussels, on April 21, under the Presidency of M. Paul Hymans, the Belgian statesman. A settlement by negotiation was agreed to by both parties at the urging of the Council of the League of Nations when it became apparent that both parties in dispute were averse to the holding of a plebiscite. The irregular Polish forces of General Zeligowski are still in occupation of Vilna by *force majeure*. A curious feature of life in Vilna under present conditions is that it has absolutely free trade with outside nations. The Lithuanian delegation at Brussels is headed by M. Galvandkas, the Polish delegation by Professor Askenasy.

#### FINLAND

The overshadowing event of the past month for Finland was the decision of the Commission appointed by the League of Nations to decide whether the Aland Islands should belong to Finland or Sweden in favor of Finland (given more in detail under the head of Scandinavia).

Though Finland's relations with the Soviet Government remained strained, the prospects of a renewal of negotiations for

the conclusion of a trade treaty were not unfavorable. (See the article on Russia.) That the general Finnish State policy would be maintained was assured by the reappointment of M. Holsti as Foreign Minister in the new Cabinet. The Ministerial crisis brought about by the efforts of the pro-German Finnish reactionaries to have M. Holsti overthrown was resolved around April 10. After the failure of M. Kallio, of the Agrarian Party, to form a Cabinet, Professor Vennola, a Progressive, was asked to undertake the task, in which he suc-

Premier of the Latvian Government, and one of the republic's most forceful personalities .

ceeded. The new Government, which contains eight Progressives and four Agrarians, is made up as follows:

- Prime Minister—Professor Vennola.
- Foreign Affairs—M. Holsti.
- Interior—M. Ritavuori.
- Justice—M. Helminen.
- Commerce—M. Makkonen.
- War—Colonel Hamalainen.
- Communications—M. Pullinen.
- Public Education—M. Liakka.
- Finance—M. Ryti.
- Social Affairs—M. Joukahainen.
- Agriculture—M. Kacio.
- Assistant of Agriculture—M. Niukkanen.

# THE BALKANS AND EMANCIPATED CENTRAL EUROPE

*New steps toward a closer union of Jugoslavia, Czechoslovakia and Rumania in their policy toward Austria and Hungary—Predominance of Italian influence in the Balkans—Rumania's demands for representation on the Straits Commission—Croatia's attitude*

SINCE the ultimatum sent by Jugoslavia, Czechoslovakia and Rumania to the Hungarian Government, on April 2, asking it to get rid of the importunate Charles of the Hapsburgs, the fortunes of the "Little Entente" have moved on apace. Although its chancelleries later realized that there was no real need for the ultimatum after all, as the economic condition of neither Austria nor Hungary would have permitted them to try an experiment in reactionism, and France and Italy would not have permitted it to materialize, nevertheless, the act revealed the cohesion of the emancipated States of the Dual Monarchy with those Balkan States which had profited territorially by the partition of the Dual Monarchy; it also revealed their attitude toward the new Austria and Hungary.

The only two States which, although tentatively included in the great scheme of Take Jenescu and Dr. Benès, did not share in the advancing fortunes were Greece and Bulgaria. These can hardly expect to do so until the first has settled its differences with the Turk and the second has assured its neighbors as well as the Supreme Council that its actions meet its words in executing the Treaty of Neuilly.

There was celebrated at Prague, on April 21, the third anniversary of the Italo-Czechoslovak military convention, which placed a Bohemian and Slovak division on the Piave by the side of the Italian troops. At Belgrade, on the same day, an Italo-Jugoslav commercial pact, in accordance with the Rapallo Treaty, was negotiated. Then there was the conference of plenipotentiaries at Porto Rosega, near Monfalcone, northwest of Trieste, April 30-May 8. There finally was the adjourned conference of the same plenipotentiaries at Rome.

In all these places, save at Belgrade, possibly, Italian influence was paramount. France, the other patron of the "Little Entente," particularly in its anti-Bolshe-

vist phases, was absorbed with Germany, both on the Rhine and in Silesia, and the Consulta made the most of her distraction.

The Prague celebration was an imposing affair. The Italian delegation, headed by Prince Pietro Lanza di Scalea, was warmly welcomed by General Husák, Minister of National Defense, and later by President Masaryk, whose health did not permit him to participate in the opening ceremony. The speeches which were exchanged, while praising the military unity which had defeated Austria-Hungary, also gave promise of mutual economic support for the future. Between the two States lie Austria, Hungary, and the Croatian and Slavonian parts of Jugoslavia; these must be bridged by freight service, which will not be without profit to them in the transit. Two days later the Italian delegation took part in the military burial of the forty-two martyrs of Hapsburg tyranny.

At Porto Rosega the report of the Financial Commission of the League of Nations on the financial and economic condition of Austria, with suggestions for its remedy, was debated; the subject was also discussed in the light of the Vienna Government's reply to the report. The suggestions practically amounted to a receivership for Austria to be held by the finance section of the Provisional Economic and Financial Committee of the League, with the institution of the Ter Meulen scheme as a method for liquidation and rehabilitation. The reply of Austria advised the unification of certain Government monopolies with some of the customs and mortgages as a guarantee for credits, but insisted that the whole banking system be overhauled before the sources of revenue could be pledged. All agreed that the malady from which Austria was suffering required a treatment *sui generis*; but, with the success of this treatment in Austria, the same might be applied with similar results elsewhere.

The conference at Rome was the complement to that at Porto Rosega. In the Eternal City the application of the Treaty of Rapallo was expounded by the Italian and Yugoslav delegates, while suggestions for mutual economic benefits were made by the representatives of the emancipated States.

First of all, Austria, Hungary and Czechoslovakia need prepared and raw food products; the Balkans need and are already receiving from America agricultural machinery—Croatia and Rumania, especially, mining machinery; Italy needs raw material for her great metallurgic plants. When this triangular road for an exchange of these products can be opened the old equilibrium will be restored with augmenting advantages for all concerned.

But, although diplomats and economic experts may propose, execution by the interested Governments is more or less at the disposition of the propagandists. While Bulgaria is accused at Belgrade and Bucharest of not making restitution in accordance with the terms of the Treaty of Neuilly, propagandists in Budapest continue to issue literature against Czechoslovakia and Rumania, and in Yugoslavia agents from Budapest are actively stirring up resentment among the Croats at Agram and against the Serbs at Belgrade. Even Rumania has shown her concern over the projected modification of the Treaty of Sèvres, and has so informed the Entente powers.

The Dnevnik of Sofia, in answering the demands of Rumania, Yugoslavia and Greece for a settlement under the treaty, says simply that Bulgaria has not got the goods to deliver, so its creditors must be patient until they can be secured. The Bulgarian budget of 1921-22 shows a deficit of 531,979,803 leva, without counting the extraordinary budget, which shows a net deficit of 1,062,085,000 leva. [A leva in normal times would have the value of a franc.] In 1914 the expenditures were about the same, but then the revenues produced a balance of 225,000 leva, and there was no extraordinary budget.

On May 5, when Parliament reconvened, the text of the new Yugoslav Constitution was debated article by article.

The Rumanian Government, through its Legations in London, Paris and Rome, has informed the Supreme Council that in the

event of acceptance of the Entente proposals, submitted to Greece and Turkey at the London Near East Conference, it reserves for itself, in the matter of the Straits (Dardanelles, Sea of Marmora and the Bosphorus), the right of submitting amendments to the modification, designed to guarantee Rumania's vital interest in and right to an absolutely secure passage from the Black Sea to the Mediterranean. The memorandum was drawn up by Take Ionescu, and the amendments which will also be his work are understood to embrace the following points:

1. A Rumanian representation on the Straits Commission equal to that of Turkey.
2. That, with the raising to 75,000 men of Turkey's armed forces, guarantees be given the Bucharest Government for their good behavior.
3. That there be no passage of Turkish troops between Asia Minor and Europe without the consent of the Straits Commission.
4. That no mobilization of Turkish warships take place without the consent of the Entente powers.

#### CROATIA'S ATTITUDE TOWARD SERBIA

The attitude of the Croats toward Serbian domination of the Yugoslav group was clearly defined by M. Raditch, leader of the Croatian Peasant Party, in an interview published in the Prague newspaper, *Cas*, and republished by the *Journal des Débats* on April 22. The exact attitude of this leader has long been in doubt, and both the Italian imperialists and the Magyars had hoped to find in Raditch an instrument for breaking up Yugoslav unity. The Croat peasant leader's views, frankly yet firmly expressed, will probably act with the force of a manifesto on Yugoslav political life. M. Raditch said:

We recognize the union of Yugoslavia, and herein we differ from the Frankovatzki Party. This union is our definite goal, and we do not wish to destroy it. Our dispute with Serbia is an internal affair without international significance. The Serbs and the Croats are indeed a racial unit, but they are not one people. In the future we may become one people, but we are not one at present. We shall not act against Serbia, but we do not wish to be with Serbia; we wish to stand beside Serbia. The question is whether or no Serbia will subjugate Croatia. We do not fear this struggle, for we are the stronger.

The Croats want a republic, and in this matter we wish to come to an understanding

with Serbia. Serbia could continue as a monarchy; the Prince Regent Alexander can remain King of Serbia, but he might at the same time be head of a Yugoslav federation. We have nothing against him, and we shall not settle our dispute with Serbia by means of a revolution. Revolution is war and we are opposed to wars. For this reason I am equally opposed to a peasant revolution. If a revolution broke out in Croatia it would be against my will, and the responsibility would rest with the people and not with me. I am also opposed to revolution because we have no arms. If foreigners were to supply arms it would involve obligations on our part, and in that case we should be fighting for foreign interests. All reports, therefore, about revolution are incorrect.

We shall probably not go to the Constituent Assembly. I propose that the Constitution be voted by a qualified majority composed of separate majorities: Serb, Croatian and Slovene. But it seems that Belgrade does not accept my proposal. If the Constituent Assembly passes M. Pashitch's draft

Constitution, we shall not, of course, recognize it, but we shall make use of it and shall submit to it. We shall wait till the next elections, and then it will be seen whether we have on our side a majority, not only of Croats, but also of Slovenes and Serbs. And then we shall alter the Constitution in accordance with our wishes.

Granted that we are carrying on a struggle against Serbia, it is by deliberate intention that we do not pay taxes. I always say to my peasants: "Pay up only when the authorities compel you to by selling your goods; do not give a farthing of your own free will." The result has been that in Croatia only one-twentieth of the taxes has been paid. I am the instrument of the people's will; I do nothing to alienate the sympathies of the people. We have left it to the people to decide for themselves in internal affairs; only the foreign policy of my party has been confided to me. In this connection my program is to advocate the alliance of all Slavs with the Germans in place of the Franco-British alliance.

## GREECE IN NEW DIFFICULTIES

*End of the military offensive against the Turkish Nationalists leaves King Constantine's Government in a serious predicament—Beginning of a diplomatic campaign to save some remnants of Greece's share in the treaty of Sevres—An important crisis*

[PERIOD ENDED MAY 15, 1921]

THE Greek offensive has been adjourned sine die, while the Greek Government is believed to be feverishly importuning England to intercede for it at Constantinople and Italy at Angora, that something may be saved to Hellas from the wreck of her interests in the Treaty of Sèvres. While both the treaties negotiated by France and Italy with the Turkish delegates at the recent Near East conference have been held up by the "Grand Parliament" at Angora, both there and at Constantinople a favorable answer is being prepared to the Entente proposals presented at the conference modifying the Treaty of Sèvres. In a word, Greece is seeking a formula by which she may become a party to the proposals and still save the face of the Constantine Government before the people of Hellas.

But all this is not on the surface. Superficially, we have both the Athens and the Angora Governments actively preparing to renew the war, yet even in these prepara-

tions conflicting events may be noted: General Metaxas has been sent to the field to advise or supersede General Papoulas, the Greek Commander in Chief of the Smyrna front. There the entire staff has been replaced. In Athens there is a new General Staff headed by General Dousmanis, whose chief aid is Colonel Stratigos. There is great activity behind the Greek lines, with heavy concentration of troops from Ushak toward Kutai, as though an attempt would be made to recover Eskishehr. Appeals to the Greeks in Asia Minor to volunteer have been met with enthusiasm, and over 15,000 had been enrolled up to April 30. In Greece proper, however, mobilization has been suspended and martial law declared, while in Crete recruiting has been abandoned altogether.

On the Turkish Nationalist side Rafet Pasha has been replaced by Kiazim Karabekir Pasha, formerly commander on the Armenian front, but his army has been returned to the Eastern frontier.

Both Greek and Kemalist proclamations sound as if the armies were preparing to leap at each other's throat. The latter are fierce in their denouncement of the Greeks as being the only obstacle to peace with the Entente. The temper of the former is shown by a statement made by General Dousmanis, the new chief of the Greek General Staff. He said:

Greece finds herself engaged in a serious war, and it has been necessary therefore to reconstitute and reorganize her Supreme Command to meet the grave situation. The supreme commander is the King, and he is assisted by his General Staff, which now directs the general army organization. General Papoulas, for whom we have the highest esteem, remains Commander in Chief of the army in the field. I may add that we are fully determined to conduct the war with the greatest energy. Both in the northern sector, where we occupy Ismid and Brusa, and in the southern sector our position will be maintained and preparations will be pushed on rapidly for resuming the offensive.

The international aspects offer the same conflicting interpretations. The Greek Navy attempted a blockade of the Straits in order to prevent the Turks in Europe from joining the Angora Army. A Japanese steamship, the Heimei Maru, bound for Constantinople from Siberia with 1,000 ex-Turkish prisoners, including 100 officers, on board, was stopped by a Greek torpedo boat and ordered detained at Mitylene. Later, on May 12, on representations from the Japanese Government, the Interallied High Commissioners proclaimed the neutrality of Constantinople, the Bosphorus and the Dardanelles, "while the warfare between Turkey and Greece continues." Aside from practically opening the path to Turks from Europe to Asia, the proclamation legally closes to Greece Constantinople as a supply base for her troops on the Ismid and Brusa fronts and forces her to use only Rodosto on the southern side.

The Turks established a supply base at Eneboli, on the Black Sea, which is connected with Angora by a direct road. A considerable quantity of war material and supplies for the Kemalists army is stored there, having been unloaded from ships carrying on a regular contraband trade. In the Aegean, at Scalanova, the ancient Ephesus, which is under the Italian mandate, there is alleged to be an official delegate of the Kemalists—Manoud Essad—who is receiving large consignments of contraband under

the eyes of the Italian authorities. The papers of Athens insist that the Turks are allowed full facilities for both transit and anti-Greek propaganda in Adalia. One incident is said to be typical of all: The Turks at Adalia had asked the permission of the Italian Governor to hold a public meeting, and they assembled in great numbers on the afternoon of April 16 in the vicinity of the mosque. A Turkish hodja delivered a violent speech against the Greeks, inciting the fanaticism of his hearers against them. After his speech the crowd scattered in the streets, smashed the windows of Greek shops, broke into them, stealing or destroying their contents. In the rioting, which lasted three hours, fifty Greeks were killed and 150 injured, among the victims being the Greek parish priest Sermos, his daughter and son-in-law. The Italian Carabinieri finally established order after the Turkish authorities had declared their inability to do so.

Again, according to the Athens press, the Armenians fare no better. Armenians who have escaped from Kutaya and have reached Smyrna declare that at Kutaya there were 2,500 Greek families, 1,200 Armenian families and 300 Catholic families. Out of this Christian population the Turks left only the women and children. The entire male population from the age of 15 to 45 years was transported to Sivrihissar, Beypazar and Angora. Men from the age of 45 to 60 were taken to Eskishehr, where they are compelled to work in the ammunition factories established by the Turks under German direction during the great war. Kutaya, seventy-five miles southeast of Brusa, has railway connections with both Constantinople and Angora.

The papers of Athens also print stories of the most frightful atrocities practiced by the Turks on the Greek population. In the Athenian Boulé, on April 18, there was a debate on the subject. The speakers showed from letters and official reports that the traditional hatred of the Turks was never really extinct, and as little of their doings was known to the Western world at the time they were allied to the Germans it may be proper to recall them.

Deputy Boukalas, speaking, read a number of official reports, corroborated by witnesses, concerning the massacres of Greeks and Armenians during the war. Among

them were the Turkish reports of Halide Edib Hanoum, the Turkish authoress, who is at present a member of the Angora Government, Mustapha Kemal having made her Minister of Public Instruction. Damid Ferid Pasha, the leader of the Old Turk Party, in the Turkish Senate said: "The destruction of the Christian population in various parts of the empire during the war was an unpardonable mistake and a crime." According to statistics gathered by the Oecumenic Patriarch of Constantinople the number of Greeks alone killed during the war and after, up to June of 1920, amounted to 725,000. Damad Ferid Pasha admits that the number was 550,000, but says that the total includes all Christians.

We now come to the diplomatic phases of the subject as they emerged from the London Near East conference, Feb. 2-March 12—the Entente proposals for a modification of the Treaty of Sèvres and the pacts negotiated by France and Italy with the Angora Government—most of which are beneath the surface. On their return to their posts both the Grand Vizier, Tewfik Pasha, the head of the Sultan's delegation, and Bekir Sami Bey, the head of the Angora delegation, issued statements to the press. The first was:

If the London Conference could not assure peace in the Orient, it has at least given us certain palpable results. Justifying our Nationalist efforts, it has justified the existence of the Nationalist movement in Anatolia. An unaltered execution of the Treaty of Sèvres has been recognized as impossible in its ensemble. The present war is a struggle between Greece and Turkey, in which the fate of all the Greeks and all the Turks is at stake. We are determined to defend our rights to the extremity, and we can look to the future full of confidence.

The statement of the Grand Vizier reads:

I am personally satisfied with the results of the London Conference, which have yielded results qualified to satisfy Ottoman aspirations on certain points. Thus the sovereign rights of Constantinople are assured, and our economic claims to a large degree have been recognized. The conference, however, was rendered sterile by the attitude of the Greek delegation. We are now preparing our reply, which we shall present whenever we are invited to do so. I am persuaded that the leaders of Angora will realize that the salvation of the empire requires union, which I hope will be achieved as soon as the modifications of the Sèvres treaty have been realized. We demand the evacuation of Thrace and Smyrna unreservedly.

The facts upon which the declaration is based that Greece has asked Italy to intervene at Angora are not so well founded as those upon which British intervention at Constantinople are based; they are, nevertheless, worthy of consideration. They do not concern either the King or the Government of Greece, or even the people, but the person of the new Premier and his conversations with Count Sforza, the Italian Foreign Secretary, while at the London Conference. At the beginning there are the past relations between the Gounarists and Italy. The Gounarists throughout the parlous times of 1915-17 possessed no better friend in the allied camp than the Italian Minister at Athens, Count Bosdari. Before and during the elections last Autumn which restored King Constantine and made Venizelos an exile the Gounarists remained *personae gratæ* at the Italian Legation at Athens. The Italian Minister officially observed the same attitude as did his English and French colleagues, but at Rome the Constantinian envoy, M. Metaxas, was treated as a full-fledged and accredited plenipotentiary. Thus the open and resolute opponent of Greek territorial expansion was also the most open and resolute upholder of King Constantine's régime, simply because, in the Consulta's view, that régime connoted, at an early date, the reversion to an anti-Venizelos policy—the policy of the Little Hellenes, with its renunciation of the Dodecanese.

There is no doubt whatever in regard to the British intervention, for this was announced in the Ikdam of Constantinople on May 2, in which the Greek proposals that the British Government had undertaken to transmit to the Turkish Government and to Paris and Rome were given as follows:

1. The evacuation of Asia Minor by the Greek troops.
2. Smyrna and its hinterland, recognized as autonomous, shall be placed under the common control of France, England and Italy.
3. The rights of the unredeemed Greeks resident in Asia Minor shall be guaranteed by these three powers.
4. Greece surrenders to the same three powers the regulation of the question of Constantinople and the Straits.
5. The rights of Greece to Thrace and the Aegean Islands shall be maintained.

It is also reported that the Gounaris Government would consent to the abdication of

King Constantine if such a measure should become necessary in order to secure the acceptance of the foregoing proposals. It will be observed that the proposals even go beyond those made by the Entente at the London Conference. They meet the Turkish objection to the latter by indicating the removal of the Greek garrison from Smyrna, although they fall short of the agreements made by France and Italy with the Angora delegation.

On April 28 Prince Omer Faruk Effendi, son of the Heir Presumptive to the Turk-

ish throne, Abdul Medjid Effendi, left his palace at Stamboul and departed for Angora to join the Nationalists. His departure and the letter he left for his father, saying that he could no longer restrain himself from fighting while the homeland was being invaded, would be very significant were it not for the really unimportant status of Omer and the fact that the rapprochement between Stamboul and Angora is daily growing closer.

[See also "What the Greeks are Fighting For," Page 407.]

## SOVIET RUSSIA'S RETURN TO CAPITALISM

*How Lenin's speech before the Tenth Communist Congress aroused a storm within the Communist ranks—His attempt to justify his new policy of concessions to the peasants, notably freedom to sell and buy—Moscow's efforts to reopen commerce with Europe*

THE speech made by Lenin, the Moscow dictator, before the Tenth Congress of the Communist Party, held in Moscow in March, which, as reported throughout the world press, seemed to amount to a renunciation of Bolshevik principles, had the effect of creating a storm within the ranks of the Russian communists themselves which Lenin had some difficulty in allaying. It may be said, in fact, that Lenin has been explaining ever since. Petrograd papers commented on the confusion that was added to the already confused life of Soviet Russia from the first month's application of the concessions granted to the peasants in respect to free trade. It was stated that new decrees were constantly being issued by Lenin and Kalinin—a member of the Soviet Central Committee—to modify conditions arising from the changes. One decree sent out by Kalinin on April 20, for example, revealed the fact that workmen in the war munitions factories, misunderstanding the concessions, turned from war work to the making of plows, for the purpose of engaging in personal trade. The decree forbids such diversions without the specific consent of the War Commissary.

Vorovsky, Lenin's emissary in Italy, ad-

mitted that pure communism had failed in Russia, and that the concessions granted by Lenin could not be avoided. Granting to the peasants the right to sell and buy on their own initiative, he conceded, was a step backward, but circumstances had compelled it. The State, which should nationalize and distribute all the means of production and exchange, had nothing but salt and petrol to dispense. "We have made an experiment on too vast a scale," said Vorovsky, "affecting 150,000,000 people. We are going to return to the limits of the possibilities of the moment. The rest will come by degrees."

Lenin, under fire before the Moscow railwaymen's conference on April 16, answered several bitter attacks based on charges that he had yielded to a compromise with the bourgeois elements, and combined his defence with a vigorous counter-attack against "socialist babblers" and ranting orators of the opposition. Lenin's speech was in part as follows:

Three and a half years of continuous and unprecedented fighting are now behind us. It is time to balance our accounts, to confess frankly and openly that the International proletariat has practically not supported us at all, and now we are being accused of wishing to return to the old capi-

talist state of affairs. But our accusers forget one thing—the bourgeois class does not exist any more in Russia. We have completely destroyed the Russian bourgeoisie. Only peasantry is in a position today to conduct and continue the struggle against the victorious proletariat, and I ask you: Do you want to fight the peasantry, a new war to the bitter end, or would you not prefer peace by mutual agreement?

As far as I personally am concerned, I know only too well how badly organized are the Russian peasants, how little class consciousness they have. In such circumstances they do not represent a serious menace to the dictatorship of the proletariat. Therefore we must by all means strive to attain union with the peasantry and meet them half way with regard to their justifiable demands.

The peasants have suffered during the last few years from military requisitions, famine, poor crops, epizootic, and now do not forget those new troubles, those new cares that the demobilized soldiers are carrying back with them to their village homes.

The soldiers do not wish to go back to cultivate their land and become peaceful workers. The demobilized soldiers are our greatest enemies. They have been accustomed to rob and pillage and murder. They have been accustomed to satisfy only their own needs and desires. This anarchical characteristic of the demobilized soldiers has found a favorable echo in the dull discontent and dissatisfaction of the peasant masses, and these two combined factors may destroy our republic.

In these circumstances we cannot go too far in our game with the bourgeoisie, which is impatiently awaiting our downfall, but the hopes of world capitalists will not be realized. The Soviets today are powerful and strong enough both to admit their mistakes of the past and to overcome all new difficulties to sane communism by paying the price of renunciation of certain theoretical precepts.

Again, speaking at Moscow on April 24, Lenin said:

The majority of our population now consists of peasants, and we must take them into account if we want to do productive work. Of course, free trade means the introduction of capitalism, but you cannot escape that. Capitalism, however, is no danger to us if most of the factories, transportation and external trade are in our hands. Concessions also will mean a state of capitalism that will help us to improve our economic condition, which we alone cannot do. If the greater number of factories and the general control remain in our hands, concessions, likewise, do not constitute a danger for us.

Further explanations and justifications of his new policy were embodied by Lenin in a long article published by the Moscow

Pravda on May 3. In this article Lenin sought to appease the communist workmen, who, having nothing to barter in the open market, are rapidly losing the considerable privileges which they enjoyed three years ago, when the Bolsheviks took power; these workmen are greatly alarmed, and accuse the communist leaders of favoring the peasants, to the detriment of the working class. The rest of Lenin's article is devoted to a defense of his policy to revive capitalism in Soviet Russia. The way to true Socialism, he declares, lies through State capitalism—German State capitalism.

M. Lomov, Chairman of the Committee on Concessions of the Russian Supreme Council, dwelt upon the vast concessions which Russia was willing to make to induce foreign capital to come in:

We have radically changed our policy regarding concessions [said M. Lomov]. At first we were ready to grant concessions only in such domains as we could not hope to work economically with our own resources for some years. Now we are negotiating to grant concessions in the most vital of our industrial centres—like Baku and Merosny for oil, Donetz for coal and Krivoyrog and Kertch for iron ore. We are ready to grant concessions in the Donetz basin of lands hardly touched, and possessing enormous deposits of our best coal. \* \* \* Russia will need foreign capital and technical help for years. As we shall be increasingly dependent upon the good will of concessionaires, they may feel sure that we will be scrupulously careful to respect our obligations toward them. No political guarantees can be more potent than our own self-interest.

Regarding the much-discussed concessions in Kamchatka to be granted to the American financier, Washington B. Vanderlip, M. Lomov stated that all details had been completed by the Soviet Government, which had assured itself that Vanderlip had solid American financial backing, and that the closing of the deal was delayed only pending the resumption of trade relations with the United States. When such a resumption would occur was left veiled in obscurity by the uncompromising reply of Secretary Hughes to the note from Moscow offering to reopen trade relations. Lenin, it appeared, was pleased, more than otherwise, by the charge embodied in this note that the Bolshevik Government had in no way changed its principles, and was still striving for world revolution. This was received with a chuckle by the saturnine dictator, who saw in it a good counter-

active for the remark made by Lloyd George that Lenin had abjured the Bolshevist theories and aims, and that his speech before the Tenth Communist Congress might have been made by Winston Churchill, whose anti-Bolshevist attitude is well known.

The actual text of this speech, received in New York in May, is the best contradiction of Lloyd George's assertion, for it shows plainly, out of Lenin's own mouth, that all modifications are a mere temporary expedient to help the Soviet régime to continue its existence until the world revolution has come to pass. What the Bolshevist leaders are doing to hasten that revolution was reviewed in full detail by Zinoviev, the Bolshevist dictator of Petrograd, in a speech before the executive committee of the Third International, summarized by The London Daily Telegraph on April 14. The status of Bolshevist propaganda in Germany, France, Italy, Austria, Czechoslovakia, Rumania, Bulgaria, Norway, Sweden, England and the United States was reported on by Zinoviev, who defined this propaganda as a turning movement threatening the bourgeois countries surrounding Soviet Russia.

Meanwhile the Moscow dictators continued their plans to reopen trade relations with these bourgeois countries, whose Governments they are seeking to overthrow. Although Secretary Hughes, in a letter to Samuel Gompers, the labor leader, on April 16, called Soviet Russia an economic vacuum, and emphasized the futility of reopening trade relations under present conditions, there were evidences that at least a part of Europe was not of this opinion. Great Britain in March ratified a trade agreement with Moscow, and an important decision of the British Court of Appeals on May 12 held that, since this treaty was an official recognition of the Soviet as the de facto Government of Russia, such Government had a right to confiscate and own the gold which it was sending to England to cover its commercial transactions. This test-case decision apparently opens the way for extensive British trade with the Bolsheviki. Russian newspapers on April 27 had already reported the arrival of the first British trading vessels at Novorossisk, South Russia, bringing cargoes of grain and agricultural machinery. Great Britain,

furthermore, appointed Robert McLeon Hodgson, one-time British consul in Vladivostok and subsequently in charge of the British High Commission at Omsk, Siberia, to act as British trade representative at Moscow, charged to watch the developments of Anglo-Russian commerce and to assist Britons to do business with the Soviet Government.

The preliminary trade treaty between Moscow and Berlin, which so long hung fire, was at last concluded by energetic mutual action on May 6. A time limit of three months was set for withdrawal from this provisional arrangement. The compact authorizes Germany and Russia to exchange commercial delegations, which will enjoy full diplomatic privileges, and will be given the full consular powers necessary to legalize contracts and facilitate business. Merchant ships of both countries are to be granted the customary privileges relative to territorial waters, and radio, telegraph and postal communications. Both parties pledge themselves not to conduct propaganda through their respective delegations or otherwise, and assume responsibility for those delegations' acts. The agreement was signed by Aaron Scheinemann for Soviet Russia and by Gustav Behrendt and Baron von Maltzen for Germany.

Official figures of trade transit through Latvia for the first twenty days of April, combined with official Soviet announcements, show that Soviet trade, or at least import trade, had sprung into considerable activity during the first month of open navigation on the Baltic. It is estimated that some 35,000 tons of foreign goods came in by way of Latvian and Esthonian ports. This is the largest amount that has entered Russia in any month since the blockade was lifted. British trade, as noted, has begun through the Black Sea ports, and it was announced on May 8 that Italian lines were organizing for commercial transport to the Black Sea region. All business done was on a cash basis, and covered by the Soviet gold reserve. It was reported from Stockholm that Soviet gold shipped to Sweden for melting and reminting totaled \$120,000,000. A trade agreement was being pushed with Norway, although, as in the case of Great Britain, public opinion was not favorable to a resumption of commercial relations.

Trade relations with Finland have not yet been resumed, the Bolshevik trade delegation having left Finland and returned to Russia owing to irreconcilable difference of views. Since the conclusion of peace, relations between the two nations have been strained by disputes over alleged violations of the common frontier. In an aggressive note M. Tchitcherin, the Soviet Foreign Minister, threw the whole onus on the Finnish Government, and defended the Bolshevik invasion of the district of Rapolz and Porajaervi, which had been granted autonomy under the treaty. The Finnish reply, made public on May 3, threw the whole blame back upon the Bolsheviks, and declared that a real peace, including commercial relations, could not begin until the Soviet accepted the responsibility for the attacks upon the Finnish frontier guards, and likewise took effective steps to prevent further incursions of armed gangs into the Finnish Legation in Moscow. Despite this interchange of courtesies, the Finnish Government decided to allow the Soviet trade delegation to return to Helsingfors, in view of the progress made in the repatriation of Finns from Russia, although the Finnish Minister for Trade declared that, before trade relations could actually begin, the question of Finnish claims in Russia must

be satisfactorily settled. While thus preparing for the opening of unrestricted commerce with the outside world and for a revival of capitalism in Russia itself, the Soviet Government was taking active measures to rebuild its war fleet and to increase its army. Apart from peasant revolts in Siberia, the Moscow leaders have had to contend for some time with a somewhat widespread anti-Soviet movement in South Russia and the Ukraine. One movement in the Tambov Government, south and southeast of Moscow, reported to be assuming formidable proportions and led by General Antonov, a former Bolshevik commander, was declared by Moscow on May 8 to have been crushed; many of the "bandits" were killed, though Antonov himself managed to escape. Antonov's defeat added one more to the long list of anti-Bolshevik liquidations which the Soviet Government has to its credit. Only the ubiquitous bandit leader Makhno and the tenacious General Petlura still remained to be disposed of. As for the peasant revolts that spring up in all directions and at all times, the Moscow leaders expected that the new concessions, granted to the peasants, including the right to dispose of all but 10 per cent. of their crops in trade, would automatically eliminate these uprisings.

## FEISAL SEEKS TO RULE MESOPOTAMIA

[PERIOD ENDED MAY 15, 1921]

IN Mesopotamia the people are still wondering who is to reign over Irak as Emir or King. In England they are wondering how much more it will cost the Empire before the Arab Government gets down to business. As to the first, Prince Feisal has attempted to hasten matters by declaring to European correspondents at Cairo that unofficial proposals had been made to his Royal Highness to accept the throne, thus stealing a march on his brother, Prince Abdullah, supposed to be favored by Lord Allenby, who is believed to have the controlling vote in the matter.

In London the cause of Feisal has been espoused by General Haddad Pasha, the representative of the King of Hedjaz in Europe. The Arabs all over the East, he said, believe that the time has come to

make a definite settlement of their particular problems, and they look to England to lead the way to the solution. He then offered the following statement to the London press:

It is well enough known that the inhabitants of Mesopotamia would gladly have a member of the Sherifian royal family as King, and the choice of the Emir Feisal, I think, could not but be acceptable to the British Government, who are aware, also, how loyally his Royal Highness served the Allies during the war. The solution of the Arab question that is sought is one that will give satisfaction to the Arabs themselves and that will safeguard the interests of the allied powers. The enthronement of Emil Feisal, I believe, would give such a solution.

The General adds that his Royal Highness harbors no resentment toward the

French for the way they treated him in Syria, by dethroning him after he had been elected by the Syrian Congress:

I am certain that the Emir cherishes similar feelings toward the English and the French, that he wishes that the Allies may work in cordial agreement in the East, because he considers that the alliance of the great powers will yield good results to his country, whereas a conflict would be most harmful to the Arab nation. I earnestly hope that a settlement similar to that reported to have been arrived at in Mesopotamia will be attained also in other Arab countries.

Although since Winston Churchill's return to London he has done no more than show a considerable reduction of expenditure in Mesopotamia as well as in Palestine,

it is understood that at the Cairo Conference, which he attended, it was decided to find prominent places for all the available sons of King Hussein in the new Arab States to be created out of the British mandates, the only objection being that France would not consent to the use of Syria for that purpose.

The London Daily Sketch, whose Colonial Office news is usually considered authoritative, confirmed, on May 6, the foregoing intelligence in regard to the creation of a number of Arab States, adding:

"This would secure a new overland aerial route to India under British protection. Mesopotamia is to become the great depot and training ground for military aviators in the service of the British Empire."

## ARAB RIOTS IN PALESTINE

[PERIOD ENDED MAY 15, 1921]

THE report to Winston Churchill, British Secretary of State for the Colonies, delivered to him in Jerusalem, by the President of the Third Palestinian Arab Congress, mentioned in these columns last month, turns out to be a rather pitiful yet formidable document—pitiful, because the Arabs say that they are now being punished for their loyalty to Englishmen, and formidable, because they demand the abrogation of the British mandate in its present character.

The report emphasizes the resentment of the Arabs that their country "has been sold to the Zionists," while they deplore greatly the appointment by England, in complete disregard of the feelings of the inhabitants, of a Jew as High Commissioner. It condemns the famous Balfour Declaration, and on this condemnation bases the following demands:

That the principle of a National Home for the Jews be abolished.

That a National Government be established which shall be responsible to a Parliament elected by the Palestinian people who existed in Palestine before the war.

That a stop be put to Jewish immigration until such time as a National Government is formed.

That laws and regulations in force before the war shall be still carried out and all others framed after the British occupation be annulled, and no new laws be made until a National Government comes into being.

That Palestine shall not be separated from her sister States.

As British High Commissioner, Sir Herbert Samuel has authority to grant and to maintain different forms of government in the various districts of Palestine, in accordance with the race, political aspirations and intelligence of the population. Thus east of the Jordan he has created the State of Trans-Jordania, and it was announced by the Jewish Telegraph Agency on April 30 that Prince Zeid, a brother of Prince Feisal, son of the King of Hedjaz, was about to be officially proclaimed as its ruler, under the High Commissioner.

Early in April intelligence was received by Sir Herbert that Bolshevik agents were on their way from Angora to stir up strife in Palestine, either on orders from Moscow or at the instigation of Mustapha Kemal Pasha, the Turkish Nationalist leader. They first attempted to intimidate the farmers on the Plain of Philistia, which runs north and southeast of Jaffa and Gaza. But the people on the Plain would have none of them, although they spoke their language, for here dwell the original Zionists, Russian Jews who had left Russia several years before the war, and had even prospered under the old Turkish régime. Besides, they were too busy with their farming to give ear to the Bolshevik doctrine. So the agents of Lenin

sought the cities and met with better success among the disaffected Arabs.

All this is confirmed by a dispatch dated April 21, sent *The London Times* by its Jerusalem correspondent. What then happened is told by dispatches received by the Zionist Organization of America, supplemented by the regular news agency dispatches from Jerusalem to Paris and London:

On May 1 the Jewish laborers of the old section of Jaffa, with the full permission of the authorities, were marching in procession. Some communists tried to break up the procession. As the rioting increased an attempt was made to preserve order by the Jewish Defense Corps, which a few days later was to be demobilized at Tel-Aviv, a suburb of Jaffa. Thereupon the rioters freely used knives, pistols and rifles, killing 27 Jews and wounding 150. There were no Arab casualties. It has been evidenced before the investigation conducted by General Deeds and Judge Norman Bentwich that the Arab police participated in the rioting and actually led the rioters into the houses of the Jews, particularly in the at-

tack upon the Immigrant House, where the incoming Jews stay until work is found for them.

On May 7 another disturbance between Jews and Moslems took place near the new agricultural colony of Petah Tikvah. There were some casualties before the military intervened. On the same day at Jaffa the Moslem longshoremen refused to allow Jewish immigrants to disembark until marines were landed from a British man-of-war. On the same day, also, some isolated Jewish farming colonies recently settled beyond the Jordan were attacked by Bedouins, who were ultimately driven off by British troops. Both in London and Paris grave concern is felt in Government circles.

The new budget contains an appropriation of 100,000 Egyptian pounds for national defense. In speaking of this item, Sir Herbert said that the recruiting for Jewish and Arab defense units would be begun at an early date. The budget estimates revenues for the year at E. £2,214,000 and expenditures at E. £2,185,133. Today an Egyptian pound is worth about \$3.85.

## PERSIA'S NEW ALIGNMENT

[PERIOD ENDED MAY 15, 1921]

**T**O abrogate the treaty with Great Britain was the first act of the new Government installed at Teheran by the coup d'état of General Reza Khan, leader of the Persian Cossacks. On Feb. 26, six days after the installation, the Persian Envoy at Moscow, Ali-Guli-Kahn Moshaverol Memalek, and two representatives of the Government of the Russian Socialist Federated Soviet Republic, Georgii Vasilievich Chicherin and Lev Mikhailovich Karakhan, signed a treaty between their respective States which must be ratified by both within three months.

The text of this treaty was immediately sent abroad by the head of the Soviet propaganda bureau, not through the usual diplomatic channels, nor yet to foreign agents of the bureau, but directly to persons and publications supposed to be in sympathy with the spread of Bolshevism of the academic or parlor variety.

The document is based on the declarations

of the Moscow Government, made Jan. 14, 1918, and June 26, 1919, which renounced any attempt to pursue the invading and denationalizing practices by the late Czarist Government.

In striking contrast to the coercive treaties made by Moscow with other Transcaucasian States, it pretends to be constructive and helpful instead of destructive and dominating. This probably accounts for the manner in which it was dispatched abroad. The former arrangements between the late Imperial Government and Persia are thus abrogated in the first clause:

Accordingly, wishing to see the Persian people independent, flourishing, and freely controlling the whole of its own possessions, the Government of the R. S. F. S. R. declares all tracts, treaties, conventions and agreements concluded by the late Czarist Government with Persia and tending to the diminution of the rights of the Persian people completely null and void.

Then there are clauses for mutual de-

fense, which guarantee to both immunity from use of their territory by a third power aiming to attack either; others surrendering to the Persians "the financial sums, valuables, and in general the assets and liabilities of the Discount Credit Banks," in order to repair the losses sustained through the Czarist régime. Further clauses abolish the religious and political missions established for the Russification of Persia and now alleged to be used for reactionary propaganda, and turn the buildings of these missions, lands and other property "to the establishment of schools and other cultural educational institutions." Others condemn the policy of imperialism and capitalism, which causes the exploitation of undeveloped countries by the rich, and, wishing Persia to stand upon her own feet, the high contracting power at Moscow hands over to Persia all the foreign-owned railways, docks, ships and lines of transportation and of communication, whether the Czarist share was a controlling share or not.

The persons who received copies of the

document abroad are expected by the Moscow Government to contrast it not with other treaties made by the same Government but with the "capitalistic" treaty made by Great Britain with Persia.

On April 9, Zia-ed-Din, the new Premier, entertained foreign officials at a dinner in Teheran and explained the foreign policy of his Government, as some of his guests had taken offense at the abrupt language employed in the published programme. (See CURRENT HISTORY for May).

He declared that the relations with Great Britain were now completely cordial, owing to the "disappearance" of the Anglo-Persian agreement, which "had bred clouds of misunderstanding." Persia, he continued, depended on sincerely good relations with Russia and England. In addition she turned to America, who had ever opposed the Anglo-Persian pact, for agricultural and to France for legal advisers, and she also contemplated employing Belgians and Swedes.

On May 1 the British troops left Teheran just as a Russian diplomatic mission entered it.

## THE NEW SYRIAN BOUNDARY

To the Editor of Current History:

In the article entitled "Secret Pacts of France and Italy With Turkey," in your May issue, it is stated: "The frontier between Turkey and Syria will start from a point to be chosen on the Gulf of Alexandretta, immediately south of Payas, and will extend on a straight line toward Meidan-Ekbese, the railroad station and the town being assigned to Syria."

Now, there is no such town as Meidan-Ekbese, although there is such a town as Meidan, and

there is another, on a line almost due west, called Ekbese. These two towns are about four hours' horse ride from each other, and are supplied by the one railroad station, about half way between them. This station is called Meidan-Ekbese, and I had the misfortune to be stationed there for three months.

The towns are situated on the foothills of the Amanus Mountains and on the old boundary between Cilicia and Syria that the Turks acknowledged before the war. In conceding this terri-

THE NEW NORTHERN FRONTIER OF SYRIA, ESTABLISHED BY THE FRANCO-TURKISH AGREEMENT, GIVES TURKEY A NEW SLICE OF TERRITORY EXTENDING SOUTHWARD TO THE BAGDAD RAILWAY

tory to the Turks the French must have been entirely governed by the strategic military advantages to be gained therefrom.

This treaty apparently leaves them the railroad junction of Mouslinie, situated to the north of Aleppo; without this the Turk cannot cause any trouble to the French project of extending the Bagdad Railway to Bagdad, one of the pet dreams of Georges Picot. It was the capture of this junction by the British troops that brought about the capitulation of the Turkish armies in Mesopotamia. While it would be possible for the Turks to build a new line from Islahe to Chobenbeg, the expense would be enormous and the return infinitesimal, although the military expediencies of the future might make it necessary for such an excursion.

As will be seen, the French really control the famous Berlin to Bagdad Railroad, a dream that has been theirs for many years. During

the period that the ultimate mandating of these territories was in doubt to the general public our ally used every means of secret diplomacy at her command to persuade the other nations that it was she alone who could control these areas. Agents sent out seemed to suffer from a severe attack of Anglophobia, and would not take advice from men who had been in intimate touch with the Turks and Arabs for many years. I venture to say, had the French been willing to accept advice then, the massacres in Adana and Aintab would never have taken place; they would still retain Cilicia, and Mustapha Kemal would not now be the power he is.

I have called your attention to this little matter as a point of information, thinking it may be useful to you, perhaps, at some future date.

H. SHAW.

354 Seventy-fourth Street, Brooklyn, N. Y., May 1, 1921.

## INDIA'S WELCOME TO HER NEW VICEROY

*Lord Reading's arrival in Bombay and the spirit in which he assumed the vast responsibilities of his new office—Views of the retiring Viceroy on the present situation—The attitude of Afghanistan*

INDIA, early in April, was the scene of an event of national and international importance. Lord Reading, former Chief Justice of Great Britain and now the new Viceroy of England's Indian dominions, arrived in Bombay on April 2. He took over formal possession of all official functions from Lord Chelmsford, the retiring Viceroy, and auspiciously began his administration with addresses in which he expressed his deep desire to get close to the heart of India during his coming term of office. He further made an appeal to all classes and parties for co-operation in the gigantic task of solving India's momentous problems.

The new Viceroy, on landing at Bombay, received a cordial welcome from a brilliant throng of high officials, including Sir George Lloyd, the Governor of Bombay; General Lord Rawlinson, the Commander-in-Chief of the Indian Army; the members of the Viceroy's executive council, high naval, military and civil officials, and a number of Indian Princes. The Municipal Corporation presented an address, to which Lord Reading replied. He then inspected the guard of honor and proceeded forthwith to the Government House with an escort of cavalry. The route was lined by troops and

by crowds of spectators, who heartily cheered the new Viceroy as he passed.

In his reply to the Municipal Corporation's address of welcome Lord Reading declared that he fully recognized the seriousness of his undertaking and the vast responsibilities which would devolve upon him. He referred to the allusion made by the Corporation to the ancient race from which he was descended (Lord Reading is of Hebrew origin) and expressed the hope that this Eastern blood might quicken his appreciation of the aims and aspirations of the Indian people and enable him "to catch the almost inaudible cries, the inarticulate whispers of the multitudes." He concluded by stressing his belief in justice administered with rigorous impartiality. These words created a strong and favorable impression, which was enhanced by the new Viceroy's subsequent utterances.

In an extemporaneous speech made before the Indian Merchants' Chamber of Commerce of Bombay on April 3, in response to an address of farewell presented by that body, the Viceroy referred to the fact that members of this body had called on him and presented a detailed list of what they considered their legitimate political and

economic grievances, from which they asked relief. Lord Reading's comment on these grievances was cautious in the extreme, and in the course of his address he emphasized again and again his view that he should not yield to the temptation to discuss any of these or other problems before he was able to give to them the fullest and most thorough study. He also pointed out to the association that many of India's present economic and financial difficulties were but a common heritage with the nations of Europe of the consequences of the European war. Speaking of the welcome which the people of Bombay, as well as the high officials had given him, he declared that this had been to him an encouragement, as tending to show that "the people have not set their hearts against the new Viceroy, but rather that they gladly welcomed a Viceroy who wished to be in sympathy with them." He added:

It is from this that I take some comfort to myself. It leads me to study the situation with hopefulness, which I trust I shall carry to the end of my responsibilities. If only Indians throughout India and the British, with myself, all work in union for the closest co-operation in the development of India's resources, for India's prosperity, there can be no doubt that India will become prosperous and happy.

The general tone of Indian press comment was reflected by the Pioneer of Allahabad, which said:

Every thoughtful person will appreciate Lord Reading's determination to study conditions before committing himself to a definite line of action. He comes to India at a singularly difficult time. It will tax all his statesmanship to set the new Constitution firmly on its feet and to guide India's destinies safely through the period of transition, but he may rest assured of the cordial sympathy and co-operation of every loyal subject and well-wisher of India in the great task lying before him.

After a short visit at Delhi the Viceroy went to Lahore in the Punjab, still smarting with the sting of the Amritsar "massacres." Replying at a garden party to an address of welcome, Lord Reading, after speaking in terms of high appreciation of the part played by the Punjab in the war and voicing the great interest felt by the King-Emperor in the welfare of the province, passed to a frank reference to the Amritsar controversy. Repeating the view of the Duke of Connaught he urged that bygones be bygones, and announced that

the Governor had appointed a committee to recommend adequate compensation for the victims of the Amritsar troubles, as well as for their families. Again the Viceroy urged co-operation in order to give the fullest effect to the King-Emperor's promises to India, of which the reform laws and the new Legislature were the first earnest. In the course of the next day or so the Viceroy paid a flying visit to Amritsar, where he inspected the Jallinwallabagh (Sunken Gardens), scene of the shooting of 1919.

The situation that confronted Lord Reading, difficult as it was, with Mr. Gandhi's formidable movement for non-co-operation still very much alive, and a large body of popular discontent to cope with, had some compensating features. One ray of hope was the excellent record which the new Legislature at Delhi had made in the few short weeks since its opening. Lord Chelmsford, the retiring Viceroy, referred to this hopefully on his arrival in England. The movement of Mr. Gandhi, he said, whatever its influence among the lower classes, was losing ground with the educated element, who had already given signs of being much impressed by the new advisory council at Delhi and the other reforms being instituted, according to the Montagu-Chelmsford legislation.

One source of anxiety was the outcome of the political mission of Sir Henry Dobbs to Kabul, the capital of Afghanistan. The Amir Amanullah had made the following demands as conditions for the making of a new treaty: Payment of subsidy arrears due to his late father, Amir Habibullah; permission to import arms free of duty; the cession of the territory of Waziristan; the right to admit Soviet representatives into Kandahar, Ghazni and Jalalabad, and the grant of a seaport. Of these demands, that regarding the admission of the Bolshevist consulates presented most difficulties, in view of the intensity of Bolshevist propaganda in Afghanistan. Simultaneously with the publication of the Anglo-Russian trade agreement on March 17 there was made public in The London Times a sharp letter sent by Sir Robert Horne for the British Government to the Soviet emissaries, calling their attention to the Bolshevist activities in Afghanistan, declaring them in flagrant contradiction to the terms of the trade agreement, and insisting that the

agreement could not become effective unless such propaganda ceased immediately. Whatever may be the Amir's desires, affected by the ties which he has made with Moscow, it was considered scarcely probable that Great Britain would consent to the establishment of official nests of Bolshevist intrigue on the very border of India. It seemed likely toward the middle and end of April that the negotiations would be considerably protracted. Severe fighting with hostile Afghan guerrilla leaders went on sporadically throughout this period.

Sweeping demands were made by Mr. Chotani, the head of the Indian Moslem delegation to London, and Sheik M. H. Kidwai, in a joint letter sent by them to Mr. Montagu, the British Secretary of State for India, on April 16. They asked no less than that the whole mandate for Jerusalem should be changed to conform to the Moslem view, that the British army should be with-

drawn from the Ismid Peninsula on the ground that it hindered the union of the Turkish Nationalists with their kinsmen at Constantinople and also because "Indians of all schools of thought and creed strongly disapprove of Indian soldiers being now employed beyond the frontiers of their country when no colonial soldiers are so employed and when no Indian interests are threatened." Other representations blamed England for the Greek occupation of Smyrna and for the bloodshed which it occasioned, and demanded that the Dardanelles and the Bosphorus should be closed to all States but Turkey. This letter was a noted example of the spirit of solidarity which now unites the Indian Moslems with their Turkish brethren against Great Britain, a feeling which Mr. Gandhi has turned to great advantage in enlisting the co-operation of the Moslem brothers Ali in his anti-English campaign.

## JAPAN'S CROWN PRINCE IN ENGLAND

*How Prince Hirohito was received by King George and all the great dignitaries of the British realm—The troubles of the Japanese Government at home*

FROM the English port of Spithead on the morning of May 7 watchers glimpsed through leveled telescopes the glint of steel far off on the horizon; then, as they continued watching, they distinguished the flutter of a flag showing a red orb against a white background. "That is the Katori!" they exclaimed. Soon afterward the Japanese battleship Katori, bearing Prince Hirohito, the Japanese Crown Prince, with an official party of eighteen prominent Japanese, entered the port and the British battleships drawn up to welcome the heir to Japan's throne boomed forth a thunderous welcome from their biggest guns, which the Katori answered.

So Prince Hirohito, representing the throne of one of the five great powers of the world and of the greatest military power of Asia, began his historic visit to Europe. This was the first time in history that a Japanese Crown Prince had left the shores of Japan to visit the nations of the West.

Political wiseacres declared that Prince Hirohito's visit was timed to predispose the

British favorably to the permanent renewal of the Anglo-Japanese alliance. An official explanation was offered by Premier Hara in presenting to the Diet on March 18 last an estimate of the expenses required for the projected tour. "The imperial visit," he said, "has for its aim an inspection of the general condition of the Western powers, and the opportunity will, of course, be utilized of visiting different European monarchs. The trip will be of great benefit, not only to his Highness, but also to the Japanese Nation in various respects."

Most of the British press comments on the Prince's visit were complimentary in the extreme. The London Daily Telegraph, in referring to the danger of war between Japan and the United States and the possibility that the Anglo-Japanese treaty might be invoked to gain British support for Japan in such a war, expressed the conviction that Great Britain would never join the Japanese against America, and declared that the danger of war between the two great rival powers of the Pacific could be

averted "by a full and complete understanding between America and Japan," adding: "Such an agreement could nowhere arouse deeper satisfaction than in Great Britain, the sincere admirer and friend of both."

London on May 9 accorded to Prince Hirohito a tumultuous welcome. This was the first visit of a foreign dignitary to the English capital since 1914. Full honors of State were extended to the Japanese heir-apparent. Accompanied by the Prince of Wales, Prince Hirohito arrived at Victoria Station on a special train from Portsmouth and was greeted cordially by King George, the Duke of Connaught and the Duke of York. The King wore the uniform of a Field Marshal and the sash of the Japanese Order of the Rising Sun; the two Dukes were in naval uniform. The brilliant suite of British officialdom, which included Earl Curzon, Secretary for Foreign Affairs; Admiral Beatty, commander of the Grand Fleet; Sir Henry Wilson, Chief of the British Imperial Staff,

and the Lord Mayor of London, and the personnel of the Japanese Embassy in London stood at salute while the bands intoned the solemn strain of the Japanese national anthem. Through streets lined with cheering multitudes and cordoned with troops the Prince was finally driven off in a State carriage, where he sat side by side with the British King. The military escort and Household Cavalry rode into position at the rear of the royal coach, while the bands at the station played again the Japanese anthem. The dense throng of sightseers standing behind the cordon of troops sent forth stormy greetings, waving hundreds of handkerchiefs as the Prince rolled by. To all this welcome the Prince responded with salutes.

All the pre-war brilliance of great state functions was invoked at the state banquet at Buckingham Palace the same afternoon. One hundred and thirty distinguished guests sat at the banquet, which was held in the state ballroom. Besides many members of the royal family, Mr. Lloyd George, Earl Curzon, Mr. Balfour and Mr. Asquith were present. The German Ambassador also attended.

In toasting the royal guest, for whom Viscount Chinda, the former Japanese Ambassador to England, acted as interpreter, King George said that the visit was symbolic of the friendship which had so long united the two island empires. The King referred to England's economic, industrial and political difficulties quite frankly, saying: "Because Prince Hirohito is our friend we are not afraid for him to see our troubles. We know his sympathy with us and he will understand." Through Viscount Chinda, Prince Hirohito expressed his profound gratification at the warm welcome he had received and for the harmonious relations that united his country with England.
